Appendix so that it may be brought before this great forum of the American people through the RECORD of this Congress:

OUR PROGRESS IN PUERTO RICO

(By Luis Muñoz-Marín, Governor of Puerto Rico)

Just 3 years ago Puerto Rico celebrated a momentous occasion. For the first time in its history, industrial production surpassed agricultural production and we had arrived at a most important milestone on our long road to a better life for our people.

We have been passing other progress markers steadily in the past 3 years, and if the modest prosperity we are seeking is not exactly just around the corner, it is at least on the horizon. We hope and expect that by 1975 the standard of living will be as high in Puerto Rico as it was in the United States in 1950.

Puerto Rico today is vastly different from the Puerto Rico of 1940 because the people of Puerto Rico realized that they had to solve their own problems and because they had those qualities necessary to solve them.

To be able to appreciate the changes today, it is necessary to know something of conditions as recently as 1940. Puerto Rico was then a stricken land or, as a U.S. Senate commission concluded after a factfinding visit, "a hopeless case."

Beset with overpopulation, bereft of natural resources, besieged by hunger, illnesses of the body and a grave malady of the spirit, we seemed destined to a poverty-stricken existence derived out of one important crop—sugar. The cane season supplied 6 months of employment a year for the bulk of our workers but left them and their families idle and hungry the other 6 months. The annual per capita income was only $121, among the lowest in the world.

In the next few years, using the one natural resource we had plenty of—the hope and resourcefulness of our people—we began to climb out of that mire of hopelessness and poverty. Operation Bootstrap was born, a product of the mating of imagination with will.

Bootstrap had, and still has, one basic doctrine. That is, to be nondoctrinaire, to be hospitable to all ideas and to have a heart. We are not capitalistic nor are we socialistic—we are merely realistic, willing to try anything so long as it does not compromise our freedom and dignity.

One of our most important decisions, arrived at through trial and error, was to use Government funds as a catalyst to stimulate private investment in Puerto Rico.

We built factories to prove that they could be run at a profit and then sold them to private enterprise. We erected plants and invited companies to lease, rent or buy them. We put up hotels and engaged private operators to run them.

And, finally, we developed a tax program which exempts qualifying companies from commonwealth taxes for a period of 10 years.

Incidentally, qualifying for our tax program is not an easy matter. We have set up stringent requirements, prime among them being that we shall never accept a "runaway" plant.

We grant no inducement to any firm that is to close a factory anywhere in the States in order to open it in Puerto Rico. We are not luring runaway capital. We only want, and need, our proportionate share—and it is relatively infinitesimal—of the new capital that is generated each year in the United States so that we can provide the jobs, the decently paid jobs, our people need.

We contribute appreciably for our size to the economy of the United States. Our purchases from the United States have increased over fourfold in the past 15 years. We are now buying more the $600 million worth of U.S. goods every year.

Today we have 565 Operation Bootstrap plants in operation. Our per capita income has risen to $470, less than one-half that of Mississippi, the lowest of the States, but a great improvement nevertheless. Perhaps the greatest single proof of Puerto Rico's progress is that the average span of life has increased from 46 years in 1940 to 68 years today. We also have one of the highest literacy rates in the world.

Politically, Puerto Rico is a commonwealth, freely associated with the United States. This is a result of a compact between the people of Puerto Rico and the Congress of the United States approved in 1952.

Under this compact the people of Puerto Rico wrote their own constitution. It contains a bill of rights which not only incorporates the traditional American guarantees to the individual but also reflects recent advances with respect to social and economic matters, carefully adapted to the social and economic realities of Puerto Rico.

Prominent in our constitution are the rights of workers "to organize and to bargain collectively with their employers through representatives of their own free choosing" and "to strike, to picket, and to engage in other legal concerted activities."

The constitution of Puerto Rico also guarantees the right to choose one's occupation freely, to receive equal pay for equal work, to reasonable minimum wages, to protection against industrial risks to health and safety, and to an 8-hour workday with at least time and a half compensation for overtime.

Beyond these basic guarantees, we have developed a program of labor legislation that contributes more expansively to the climate of healthy labor union practices.

These constitutional provisions are supported by legislation on minimum wages, employment security, workmen's compensation with full coverage including agricultural workers, industrial safety, group insurance for small farmers and vocational rehabilitation of injured workers.

In January, after 2 years of collection to build the fund, we began our first unemployment insurance payments. We now also have a bureau of unemployment insurance for sugar workers, which provides compensation during the offseason.

Workers' education in Puerto Rico is provided freely through seminars and conferences organized by the department of labor and the Labor Relations Institute of the University of Puerto Rico. We teach the principles of democratic unionism, labor-management relations and every phase of labor legislation.

Our department of labor is giving full and honest accounting service and advice to any union that requests such service by a majority vote. Most of the unions affiliated with the AFL–CIO are requesting such services.

Our labor legislation, to a great extent, parallels our legislation granting 10-year tax exemption to new industries. To understand this parallel, it must be realized that the company with an operating loss is exempt from income taxes anyway. Therefore tax exemption does not mean anything if there are no profits. By the same token, our labor legislation will be meaningless if there are no jobs to protect, improve, and multiply.

With its right to strike fully protected, labor has the power to nullify the meaning of tax exemption for any employer. Similarly, with the freedom to cease operations and leave, management can drain good labor laws of all significance to the workers.

During our arduous struggle to lift our people out of poverty, both of these self-defeating extremes have, save for a few exceptions, been avoided.

We have continued to create jobs. Our economic development program has changed Puerto Rico from a one-crop economy to a predominantly industrial economy. Industrialization has brought 41,000 new jobs, and real wages in manufacturing rose by 57 percent between 1953 and 1958. About the same number of jobs has been created indirectly through the operation of the economic development program.

Average hourly wages in Puerto Rico are not only higher than in other countries in Latin America and all of the Near and Far East, but they are also higher than in most of Europe. In the 30 months following January 1956, hourly earnings in manufacturing rose over 40 percent in Puerto Rico while in the United States they rose only 7 percent.

With these gratifying accomplishments under our belts, we realize that we have made a good beginning. But that is all we have made. There is yet very much to be done.

Many of our people still live in substandard housing. There is still much unemployment. We still have an average of 80,000 totally unemployed people—13 percent of our entire work force.

Despite our progress we have only started to make inroads against unemployment. In the transitional period industrialization makes better jobs, better income, and a better standard of living before it provides full employment.

By 1975 we expect there will be enough jobs and sufficient pay to keep our people at home. Until that time, as U.S. citizens and with traditional American get-up-and-go, some of them will continue to move to places that offer a better chance of making a living for their families.

Some of them, I am afraid, will suffer from the prejudices, rackets, and exploitations that have afflicted every wave of migration to the United States. Because of their democratic background and inherent sense of liberalism, they will look to unions to safeguard their rights, and as long as unions do not let them down, they will make loyal and dependable members and, eventually, valuable leaders of the labor movement.

Puerto Rican workers today depend too much on the Commonwealth and Federal minimum wage laws. The ideal minimum for employees and management alike, to my way of thinking, is a minimum of government participation in the fixing of wages; but this is possible only where the workers are properly represented and able to negotiate for themselves.

That is the potential for unionism in Puerto Rico, and our laws and our disposition leave the door open for it to pursue its opportunity.

As I told the recent meeting of the AFL–CIO executive council in San Juan, there is a kind of union, undeserving of the name, that the people of Puerto Rico will not welcome. For the dealer in fraudulent contracts, the gangster, and the racketeer growing rich on labor's funds, there is no room in this Commonwealth. Our people do not tolerate dishonesty in government and they will not tolerate crooks in the guise of labor leaders.

The proud record of the AFL–CIO proves without doubt that the true spokesmen of American labor equally abominate these people and their practices and are willing to fight and sacrifice to wipe them out, as they must. Our government stands ready to give honest unionism our full support in that struggle.

Steel Imports

EXTENSION OF REMARKS

OF

HON. JACKSON E. BETTS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1959

Mr. BETTS. Mr. Speaker, for many years it has been fashionable to label

those who attack the Federal Government's tariff giveaway policies as spokesmen for marginal, inefficient industries or for selfish industries whose workers were poorly paid or for stagnant industries which resisted the trend to diversification.

Recent developments, however, have proven beyond question that those who fought against free-trade philosophy were far closer to the facts of economic life than their opponents. For in spite of systematic tariff whittling, in spite of our dogged devotion to multilateral trade councils, this Nation's trade posture has slumped to a point where the current outlook is for a $5 billion balance-of-payments deficit in 1959.

Equally significant is the fact that injury traced to abnormal foreign competition is no longer confined to our smaller industries. Would anyone call our automobile industry small? Is the steel industry small? Or the lumber and wood products industry? Is the textile industry small?

The steel industry provides one of the most dramatic instance of market penetration by imports. The United States, world's greatest steel producer, now buys more steel abroad than it sells, although the industry's capacity would have far exceeded production even without a strike this year.

These and other aspects of the steel import problem were explored by the magazine Business Week in its edition of August 1, 1959. Under leave to extend my remarks, I include this timely article as recommended reading for my colleagues:

STRIKE GIVES FOREIGN STEELMAKERS A WEDGE TO WIDEN U.S. MARKETS—STEEL IMPORTS HAVE BEEN SEARCHING, ESPECIALLY INTO HOUSTON, BUT SELLERS MAY NOT BE ABLE TO HOLD ALL GAINS

While the steel industry sweats out its nationwide strike, both the companies and the steelworkers are casting many an anxious glance over their shoulders. They are watching to see if foreign steel suppliers will seize the opportunity to nail down a piece of the huge U.S. market for themselves. In the past couple of years, the industry has learned that oversea competition is not given to missing any bets.

SPARE CAPACITY

The U.S. steel mills—all but a handful of them now shut down—have plant capable of turning out 147.6-million ingot tons of steel a year. Even if the United Steelworkers had not gone on strike, no one in the steel industry expected all that capacity would be used this year; they figured there would be 30 million tons to spare.

Yet, in the first 5 months of this year, steel from foreign mills came into the United States at an average rate of 300,000 tons a month—or 3.6 million tons a year. (You can figure that 300,000 tons of steel products equal 400,000 ingot tons of mill production.) The imports themselves are only a small percentage of the steel used in the United States. But, say men in the industry, what justifies their worrying about steel imports is that foreign steel is coming into the country at all—despite the substantial gap between U.S. production and capacity.

RECENT SURGE

Imports have leapt lately: from 118,000 tons in May last year to 384,700 tons in May this year. Meantime, the United States has lost its longheld position as a net exporter of steel: in May it imported twice as much as it shipped abroad. This, the steelmen say, makes apprehension even more justified.

There's no disputing the fact that steel imports are up sharply; their rise came right along with U.S. industry's scramble to build up steel inventories as a hedge against the strike. But outsiders who know the steel industry say it's still too early to tell the true impact of foreign steel on the U.S. market. The spring of 1960, when industry should be well along on rebuilding depleted steel inventories, will be the earliest time for a clear reading on how much of their inroads foreign steelmakers will be able to retain. It will have to sell then in a well-supplied market.

BUSIER PORTS

Steel imports have been climbing fast. It's not possible to tell how much more is entering the country now than in May (the last month for which there are official figures). But it's plain from a survey made this week by Business Week reporters in the Nation's ports and industrial centers that imports in June and July surpassed those in May.

On the west coast, the amount of foreign steel unloaded at the ports of Los Angeles, Long Beach, and San Diego doubled in the 6 weeks from June 1 to the start of the steel strike; the week before last the three ports combined were handling foreign steel at a monthly rate of 35,000 tons. West German producers shipped most of the west coast's foreign steel until a few months ago. Now more and more is coming from Japanese mills. In Boston it's estimated steel imports so far this year are double those of last year. Toledo, which handled virtually no foreign steel until the Seaway opened, has unloaded 7,000 tons so far this year. Traffic up the Mississippi is growing heavier: In the first half of 1958, some 4,000 tons left New Orleans for upriver cities, so far this year 15,000 tons of foreign steel have been shipped upriver.

BEST CUSTOMERS

Probably the hottest place in the country for foreign steel sales is Houston. There, at least four agents of foreign steel companies have set up offices, and at least another dozen brokers are handling sales of other foreign mills. In the first 5 months of this year 300,000 tons of foreign steel (mostly reinforcement bars and oil country goods) came into the port of Houston compared with U.S. produced tonnage of 461,000 tons. In the same time last year, foreign steel ran to 83,800 tons and domestic to 359,000 tons. It's estimated that steel users in the Houston area buy 20 percent of all steel imported into the U.S.

The biggest man in this business in Houston is Andre Crispin, a 35-year-old Belgian, who holds the post of Belgian consul in Houston as well as running his import business. Some Southwest steel producers say that no matter what prices they charged, Crispin and the mills he represents would undercut them. Crispin, though, insists he's not trying to run anybody out of business. "There's simply not enough European steel available for export for it to become a primary source of supply in this or any other area of the country," he says. Nevertheless, he estimates that even after paying duties he is undercutting domestic prices by 2 percent to 5 percent.

WHO SELLS WHAT?

The American Iron & Steel Institute's import records show that the bulk of steel imports (79 percent in May) comes from Europe and that more than a third of European steel shipped to the United States comes from the mills of Belgium and Luxembourg. Steel producers in those two countries live almost wholly from exports. Their U.S. salesmen and agents are probably the most aggressive in the business. But in the competition to get a share in the U.S. market for imported steel, the West Germans and the French are selling harder; from April to May this year the West Germans boosted their steel exports to the United States from 57,800 to 84,000 tons, and the French from 59,000 to 74,500 tons.

Until this year, the bulk of the business done by foreign steel producers in the United States was in concrete reinforcement bars, pipe and tubing, rods, and wire nails. Some 52 percent of the barbed wire used in the United States last year came from foreign mills. The foreign mills' business in the United States is still heavily in those lines. But in the last few months they've boosted sharply their business in the generally more lucrative lines of plates, sheets, and strip steel.

UPWARD PRICES

Despite the hard selling that's going on, prices quoted for foreign steel have been bounding upward since the strike began. In almost every industrial center, Business Week's reporters found that foreign steel brokers and agents are offering prices now that are little different from those normally charged by domestic producers. Before the strike, the difference between U.S. and foreign mill products was, on the average, $40 to $50 a ton. Now it seems to be $10 a ton at best.

While prices have climbed, orders have gone down. There may be no firm connection between the two, though. It's much more likely that orders have slipped from their peaks in May and June because of the time lag between order and delivery of a shipment of foreign steel. This lag is rarely less than 6 to 8 weeks and for some products runs 3 months.

This dip in orders—several steel import agents say their bookings are 20 percent less this month than last—might give heart to some of the domestic producers who are apprehensive about foreign steel's inroads. But the domestic producers point out that in the last 6 months foreign steel mills have learned a lot about doing business in the United States and that their next step probably will be to set up stocks in warehouses here. (Apart from foreign specialty steelmakers, few do this at present.) So far, there's little indication from Business Week's survey that this is happening.

It's a Great Day for P. J.

EXTENSION OF REMARKS

OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1959

Mr. PUCINSKI. Mr. Speaker, we have been so busy here in Congress, pondering the great problems which confront our own Nation and the world in general, that too often we overlook some of the truly great events which occur in our own backyard.

I should like to take the opportunity today to call my colleagues' attention to an editorial which appeared in the Chicago Sun-Times on August 14. It is significant to me that this great Chicago newspaper would also pause in its reflections on world events to pay tribute to one of the most beloved citizens of Chicago, P. J. Cullerton.

Mr. Cullerton has just been honored by the Irish Fellowship Club, of Chicago when he was elected this organization's president last Wednesday. I wish to

commend the Irish Fellowship Club for its excellent selection. This honor bestowed upon Mr. Cullerton is particularly significant to those of us in public service because it proves that the citizens of this country know how to reward dedicated service to a community.

Mr. Cullerton indeed exemplifies the very essence of public service. Through all the years that he has held public office, he has served as a shining example of all that reflects the highest of standards in serving the people.

Since we Irish of all nationalities must stick together, I am indeed proud to be able to include the Chicago Sun-Times' editorial in today's RECORD.

The editorial follows:

IT'S A GREAT DAY FOR P. J.

Breathes there a Chicago Irishman with soul so dead, who never to himself has said, in this, my own, my native land I want to be No. 1 Irishman in the No. 1 Irish city in all the world—the city that put St. Patrick's Day on the calendar—Chicago?

And so Parky Cullerton has made it. Glory be, the Cullertons and the O'Donnells of Tipperary can now be singing that it's not a long way to Chicago when Bridget O'Donnell's grandson is the king of the Irish in that wonderful place where a Daley is mayor and a Ryan runs the county.

A county assessor is important, but anyone who knows anything about Chicago knows Assessor P. J. Cullerton didn't "arrive" as a VIP until Wednesday when he was elected president of the Irish Fellowship Club of Chicago.

The club has summoned many important men to bang its March 17 gavel and to introduce important men as speakers—and not all of the chairmen and not all of the speakers have been Democrats, as Parky is.

Parky has two important tasks to tackle. First, he should get the club listed in the phone book. Next he must get agreement on a speaker for next St. Patrick's Day. Senator JOHN F. KENNEDY, Democrat, of Massachusetts, and Vice President NIXON have spoken in the past and the Chicago Norske Club should have first call on Governor Rockefeller.

The problems of the leader of Chicago's Irish are not trivial, believe us, and Parky has our sympathy as well as best wishes.

Panamanian Politicians Exploit Anti-U.S Surge

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1959

Mr. FLOOD. Mr. Speaker, for some months there have been almost daily news dispatches of ominous character from Panama or other parts of the Caribbean littoral and islands.

The latest news story from Panama by Mr. Ralph K. Skinner, well-informed special correspondent of the Christian Science Monitor, in the July 30, 1959, issue of that paper, describes the current status in the deteriorating situation on the Isthmus.

As such, it merits reading by every Member of the Congress, especially those on committees dealing with Panama Canal questions.

The indicated new story follows:

PANAMA POLITICOS EXPLOIT ANTI-U.S. SURGE

(By Ralph K. Skinner)

PANAMA, PANAMA.—Anti-Americanism is burgeoning here. It comes out in such indirect, as well as direct ways.

In a recent broadcast, former Foreign Minister Aquilino Boyd called on the Panamanian public to "invade" the Canal Zone on November 3, Panama's Independence Day.

His colleague, former Deputy Foreign Minister Ernesto Castillero furnished newsmen with more details of the plan. It was that Panamanians should "enter the Panamanian territory known as the Canal Zone" and occupy it symbolically and effectively. While Dr. Castillero said this should be done without violence, he offered no guarantees.

With such proposals coming from educated men, recently associated as top officials with the Panama Government, it is not difficult to understand the growing anti-America nattitude of the underprivileged, unemployed, badly oriented masses of Panama's people.

Feeling keenly their economic inferiority, the people of Panama see the Canal Zone as an island of prosperity in an ocean of distress. Under such circumstances, envy is not remarkable. The economic tragedy of Panama is attributed to the United States.

INCIDENT HINTED

Their emotions aroused, and feeling sorry for themselves, the people of Panama are ready to believe virtually anything their press and radio tell them. Almost without exception, they are fed a diet of anti-American propaganda.

There is strong evidence here that ultranationalist forces in Panama believe the next move is to provoke an international incident with the United States in the Canal Zone. It is their stated intent to bring Panama's case before an international group, even as the Suez Canal crisis eventually was brought before the United Nations. Such an incident may come even sooner than the threatened November 3 invasion of the Canal Zone.

President de la Guardia, Jr., says Panama-U.S. relations are deteriorating and that he regrets it sincerely. But he attributes the deterioration solely to the United States.

The President says the two principal causes of friction are inequality of wages in the Canal Zone and failure of the United States to purchase more in Panama.

Panama alleges that Panamanian citizens employed in the Canal Zone by the U.S. Government do not receive the same wages as U.S. citizens. This is termed discrimination and violation of the 1955 Treaty.

EXPLOITATION CHARGED

Washington replies that the treaty is being complied with to the letter. It is stated that negotiators of the treaty, both Panamanian and American, knew that wages for employees in categories plentifully available locally would be based on prevailing wages in Panama. Actually Canal Zone wages for such jobs average from 30 percent to 200 percent higher than in Panama. Panama asserts that its citizens should receive wages based on U.S. scales.

A leading Panama capitalist said the United States is taking advantage of the low wages in this capital city caused by 30,000 unemployed adults out of a total city population of 200,000. Traditionally wages are low in Panama because the family political oligarchy has refused to pass minimum-wage legislation, thus protection vested interests here.

The U.S. Government-owned stores in the Canal Zone usually purchase supplies from Panama and the United States. Purchases of some items are made from other countries. Panama says this violates the treaty, that everything humanly possible of being obtained in Panama should be purchased here, regardless of price.

As an example, the best rice grown in Panama does not meet minimum U.S. standards in the Canal Zone. Therefore rice is purchased elsewhere. This has been going on for several years, but Panamanian producers have not improved the quality of their rice.

The situation in beef is similar; choice quality is not available at any price in Panama. Rather than meet competition, Panamanian monopolists clamor for the Canal Zone to be made a captive market for inferior products, informed sources say.

When Panama's demands were not met by local U.S. officials, President de la Guardia wrote a personal letter on this matter to President Eisenhower and had it delivered to him in Washington.

It was several weeks before Mr. Eisenhower answered. This disturbed Panamanians who expected an immediate reply. The reply stated that the matter would be investigated and a report furnished.

Later, the acting American chargé d'affaires delivered to the Foreign Minister of Panama an aide memoire (an unsigned statement used in diplomatic circles) on the matter.

After deliberation, the Foreign Minister refused to accept the aide memoire, alleging that another personal letter from President Eisenhower should be forthcoming as this was on a President-to-President basis.

The Panama press was encouraged to consider the delivery of the aide memorie as a slap at Panama's dignity. One of the most influential men in this capital, who controls many avenues of propaganda, said the slight to the President was an insult to every citizen of Panama.

Newspapers blazed with the alleged affront, which offended the dignidad of Panama. Wire services reported the Panamanian reaction widely.

Washington reconsidered and, belatedly, there came a personal note from Mr. Eisenhower to President de la Guardia. Panama claimed a moral victory; Washington had been shown it could not trifle with Panama, the newspapers crowed.

If the United States erred in not understanding Latin-American dignidad, Panama may have erred in overplaying the incident, raising anti-American sentiment to a new high pitch.

Bernard Abrams, Elected National Commander, Jewish War Veterans

EXTENSION OF REMARKS

OF

HON. CORNELIUS E. GALLAGHER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1959

Mr. GALLAGHER. Mr. Speaker, my constituent, Mr. Bernard Abrams, of 60 Glenwood Avenue, Jersey City, N.J., has just been elected national commander of the Jewish War Veterans. I would like to call this fact to the attention of my colleagues and to insert in the CONGRESSIONAL RECORD an article about him which appeared in the Jersey Journal, of Jersey City, N.J. The article follows:

NEW JEWISH WAR VETERANS COMMANDER MADE DECISION AT SEA

(By John Hoffman)

Bernard Abrams, of Jersey City, whose vigorous campaign led to his election as national commander of the Jewish War Vet-

erans is a man who doesn't believe in half measures.

Though a lawyer he was assigned as a medic in the Army in World War II and served 14 months in the European theater.

On the *Queen Elizabeth* returning from Europe in September 1945, he remembers then that he decided to join the Jewish War Veterans.

"I thought I'd give it a try and if it turned out to be everything I hoped, I'll stay with it and give it my best," Abrams remembers himself thinking.

Abrams joined the newly formed Lieutenant Grover Post in Jersey City and found that the JWV was all that he expected it to be.

He rose from post, to county, State, and finally the national levels in the organization, giving his best all the while.

His associates describe him as a fighter. The symbol with which he carried the JWV convention was a tiger which Abrams says describes the ways he goes after things.

Though not bombastic, Abrams doesn't think too much modesty about oneself is the greatest of virtues, especially about what one thinks.

There's no doubt about what he believes in as the delegates to the JWV convention learned.

Abrams platformed a strong and unrelenting civil rights program, and a dissent to the policy of Saudi Arabia which keeps American Jewish servicemen from being stationed in that country.

In the coming visit of the top Soviet, Nikita Khrushchev, Abrams is characteristically adamant.

"We cannot trust them, we must never let our guard down."

Abrams, who has been a resident of Jersey City since he was 2, graduated from Lincoln High School and was one of the top men in his class at John Marshall Law School. His law office is on Jackson Avenue.

Abrams, 45, is married to the former Clara Wolfson, of Bayonne. They have a 15-month-old son, Alan.

Letter: Educational Program of National Science Foundation

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 13, 1959

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting letter from Mr. Richard B. Knott, superintendent of Consolidated School District No. 30 at Warrenton, Oreg., in which he expresses his reaction to an educational program of the National Science Foundation. I hope that all Members will take the time to read the letter as it is an excellent grassroots report on the work of the Foundation:

SCHOOL DISTRICT NO. 30, CONSOLIDATED,
Warrenton, Oreg., July 30, 1959.

Hon. WALTER NORBLAD,
House of Representatives,
Washington, D.C.

DEAR WALT: It has been my privilege this summer to attend Brigham Young University on a National Science Foundation stipend. The physics institute that I attended was well conceived and well executed. It is the first time I have been able to return to a college campus since 1940. It has been a rewarding experience.

I have been interested in talking to nearly all National Science Foundation participants on the B.Y.U. campus this summer. Besides the physics institute previously mentioned, the college is also carrying on institutes in general science and radiation-biology.

All told, on this campus alone, there are in excess of 100 teachers in attendance. Over 90 percent of these teachers have indicated that they would not have been able to attend on their own. If the same situation holds true at the other 299 colleges holding institutes, you can imagine the ultimate effect of the program on science and mathematics teaching.

I also examined to some extent the manner in which these NSF institutes are being administered. I find conditions very healthy.

The National Science Foundation is presently assigning institutional responsibility to the Dean or head of the appropriate science or mathematics department, and the schools of education are used in a consultant basis only. This is most wise, as it insures teachers of true content courses. Comments would indicate that this feeling in our ranks is practically universal.

We received approval this spring of our application under Public Law 864 for $4,400 of science equipment, and we are thankful for the opportunity to attend institutes such as the ones observed here at Brigham Young University, that we may be of more service.

We heartily approve of the educational program presently being carried on under the direction of the National Science Foundation.

Sincerely,

RICHARD B. KNOTTS,
Superintendent.

Red China and the United Nations

EXTENSION OF REMARKS
OF
HON. LAURENCE CURTIS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 14, 1959

Mr. CURTIS of Massachusetts. Mr. Speaker, in extension of my remarks, I enclose my newsletter of May 27, 1959, which discusses the admission of Red China into the United Nations, as follows:

Should the United States recognize Red China and support her admission to the United Nations? Certainly not for the present, in my opinion. The question was discussed in a recent speech by Hon. Walter S. Robertson, Assistant Secretary of State for Far Eastern Affairs. He described the situations as follows:

The Chinese Communists conquered the mainland of China in 1949, and the Government of the Republic of China withdrew to Taiwan (Formosa). The Chinese Communists were at first mistakenly thought by some to be merely agrarian reformers, but proved to be ardent Communists. "The Peiping (Communist) regime was imposed by force with the volition of only an infinitesimal fraction of the Chinese people. * * * It has kept itself in power by blood purges and the liquidation of some 18 million mainland Chinese in 9 years."

The Far East is a critical area in the global struggle between East and West. American policy there is to encourage the newly independent, lesser developed countries to make progress in the ways of freedom, without falling within the orbit of the Communist bloc, and to build up our Far Eastern allies and friends. It opposes the further spread of Chinese Communist influence, and supports the non-Communist Government of Nationalist China.

Our recognition of Red China would on the contrary strengthen Red China by greatly enhancing her international prestige, and would weaken Nationalist China. "It would, as a practical matter, mean the liquidation of the Republic of China." From this would flow the following results:

(1) The strategic position of the free world would be weakened by the loss of Nationalist China's 600,000 troops in Taiwan, with resultant Communist military threat to Japan, the Philippines, and southeast Asia.

(2) Other Asian nations would feel that they could no longer rely on the protection of the United States against the Communist threat, and would have no alternative but to come to terms with the Red Chinese colossus. There would be a rapid expansion of communism throughout Asia, and America's moral position would suffer irreparable damage.

(3) It would blot out any rallying point in the world for non-Communist Chinese, and deliver Taiwan's 10 million people to the slavery of the mainland.

Of the 13 countries of the Far East, only 3 have recognized Red China. It has long been our policy in granting recognition to consider whether such action would be in the best interests of the United States, and whether the country seeking recognition had shown a willingness to live up to her international obligations.

Recognition of Red China would not be in the best interests of the United States for reasons given above, and Red China has not shown a willingness to live up to her international obligations.

When the Red Chinese gained control of the mainland of China in December 1949, they repudiated the international obligations of China, and confiscated, without compensation, properties of other nationals valued in the hundreds of millions of dollars. Communist China has flagrantly violated her armistice agreements both in Korea and Indochina, and her agreements for the release of American prisoners.

The admission of Red China to the United Nations is governed by the terms of its Charter. After due consideration, those terms were framed to provide not for universal membership, but for membership of "peace-loving nations willing to assume and live up to the obligations of the Charter."

The record shows that Communist China is not a peace-loving nation, but is an outlaw regime. It invaded Tibet. It took part in the aggression against South Korea. It is still threatening war in the Taiwan Strait.

Space Secrecy

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. BROOKS of Louisiana. Mr. Speaker, recently the gentleman from California [Mr. Moss] addressed this House on the subject of executive branch secrecy in the field of space research and space programing. It was his conclusion that if this House cut the appropriations of the National Aeronautics

and Space Administration, the responsibility should lie with the executive branch because the House could not be expected to grant automatically requests for funds for agencies which were not keeping the appropriate committees of the Congress fully infomed of their activities and plans. He used as proof of this hampering secrecy the recent report of the Senate Subcommittee on Government Organization for Space Activities, Committee on Aeronautical and Space Sciences.

Let me say that the continuing battle which Congress fights to keep itself fully informed of what the executive branch is doing is an important one, and that the gentleman from California has made a great contribution by his efforts in this field. But at the same time, I wish to make clear that the House Committee on Science and Astronautics has insisted on being kept fully informed of the activities of the National Aeronautics and Space Administration, and that agency has been fully and frankly cooperative in its efforts to comply with the wishes of this committee.

The extensive records and material presented to this committee in the authorization hearings before this committee, and all other contacts we have had on virtually a daily basis with the NASA reflect credit on Dr. Glennan, the Administrator, Dr. Dryden, the Deputy Administrator, and Mr. Gleason, the Assistant Administrator for Congressional Relations, together with their staff. I am safe in stating that when the Committee on Science and Astronautics recommended to the House the authorization program it did, that these recommendations were on the basis of complete and thorough study. The action taken by the House on the appropriations whatever the reasons, represented the judgment of the Members by majority vote, but were not a reflection of any lack of study or gaps in information on the part of the committee of which I am chairman.

Now I also want to say that the report of the Senate subcommittee to which I have referred is an important study which deserves close attention for the thoughtful conclusions which it presents. It would be my view that the Senate report is correct in directing attention to the needs for Congress to have greater knowledge of how the detailed programs of the NASA and the Department of Defense relating to space are coordinated in the President's National Aeronautics and Space Council. Despite the similarity of name, the Space Council is separate and distinct from the Space Administration. This committee has not received a clear report of what the Council has been doing.

Because I have been well satisfied with the cooperation received from NASA, I would be greatly surprised to discover that there has been any serious gap in information supplied to this committee. If there are any such gaps known to the Members of this House. I should appreciate having them called to the attention of the chairman of the Committee on Science and Astronautics, and we shall move swiftly to fill them.

Report From Moscow

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mr. LINDSAY. Mr. Speaker, the following will be of interest to my colleagues. It appeared in the most recent issue of the weekly News Focus, volume II–32, edited and published by Charles L. Bartlett, who is also the Washington reporter of the Chattanooga Times:

REPORT FROM MOSCOW

(The following is excerpted from a report by a U.S. labor economist, Vladimir D. Chavrid, on his observations at the U.S. exhibition in Moscow. Mr. Chavrid, who was born in Russia, was assigned to the exhibition by the Labor Department to answer questions about the worker's life in America.)

I wish there were 20 American labor economists here familiar with American economic life. All of them could be busy answering thousands of questions of how the American people, and especially the average American worker, live. For the average Russian the hunger for knowledge, for facts about Americans, must be far greater than his hunger for food.

The questions most frequently asked deal with unemployment, wages, hours of work, living conditions, social security, unemployment insurance, and many others in this general area.

The attacks on the American way of life have been quite frequent and severe since the beginning of the exhibition. For the last few days, however, these have ceased for some reason or other. (The report was written just prior to the announcement of Khrushchev's visit to the United States.) To all of us, however, these attacks are one of the real indications of the success of our exhibition.

Do the Russian people believe what we tell them about America? After being here for several weeks and discussing with them our way of life, both at the exhibition and at other places, I am sure that the overwhelming majority believe what we tell them and what the exhibits show them.

At the Labor Department exhibit in the dome when some controversial matter develops between myself and some Russian professional propagandist, the crowd invariably will side with me rather than with him. These professional agitators invariably show up as soon as a sizable group of people begin to listen to my presentation.

For example the other day at the Labor exhibit I was explaining to a group of some 50 Russians the American social security programs. The group was vitally interested. Immediately a professional agitator broke in and told the crowd that this social security program did not apply to Negroes or foreign-born persons, that opportunities for these people in America were very poor.

This was an excellent opportunity for me to tell the crowd about myself—how I came from Russian some 30 years ago and how I was able to obtain an education in the United States and also a responsible job in the Labor Department. The agitator kept breaking in that I had already answered his question, but the crowd kept saying I should tell about myself and other groups like myself in the United States.

Frequently the agitator becomes embarrassed and disappears. It may be of interest to know that as soon as the Russian visitors learn that I was born in Russia of modest parentage they are extremely sympathetic and I could stay and talk there, as I often do, for as long as 4 hours at a stretch. It is often physically impossible to break away from the crowd.

When I leave the stand, many continue to follow me asking questions that they might have been uneasy to ask in the presence of the professional agitators. Many thank me most profusely for answering their questions while others apologize for their professional agitators. It is literally impossible to stop and answer a single question of 1 Russian without attracting a crowd of 50 or more Russians within a few seconds. Such is the hunger for knowledge about the United States.

Conservation Reserve Program Booms Production of Game Birds

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 5, 1959

Mr. REUSS. Mr. Speaker, it is interesting to note that at least one of the agricultural programs of relatively recent establishment is gaining support and producing good results. I refer to the soil bank conservation reserve program. While there is room for more progress, the following article from the Milwaukee Journal of Sunday, August 9, 1959, by conservation writer Russ Lynch, shows the beneficial results of the conservation reserve program in Wisconsin:

SOIL BANK'S RESERVE LAND PROGRAM BOOMS PRODUCTION OF GAME BIRDS

(By R. G. Lynch)

Pheasant populations are up in almost every State. And it is no coincidence that cropland has been going wild on farms in the soil bank's conservation reserve at the same time that the birds have been increasing in the last 2 or 3 years.

Wisconsin this year has a sizable conservation reserve acreage for the first time (the 1959 signup tripled the total for preceding years). So Wisconsin game managers and sportsmen have reason to wonder what effect nearly 500,000 acres of "wild" grass, scattered over 9,000 farms, will have on upland game in the next 5 or 6 years.

The answer depends in part on the extent to which they can induce the landowners to delay weed control until after nesting time, to plant food patches and shrub cover, and in ruffed grouse country, to seed clover along with grass.

HELPS PHEASANTS

J. R. Smith, State superintendent of game, said last week that the most important impact of CR land would be to help restore the pheasant population in the southeastern counties, where last winter's heavy snow killed off perhaps a quarter of the breeding population. He also expects the rabbit population to benefit.

Pheasants are down in the area southeast of a line roughly drawn from Manitowoc to Dodgeville. This includes intensively farmed country where more grass cover could be important, particularly if it was undisturbed during nesting.

Rock County, a top agricultural area, will have more than 12,500 acres of grass, distributed over 203 farms, that cannot be grazed or harvested for 5 years. In this

county, 158 whole farms have been retired from production.

Jefferson County will have some 10,600 acres in CR grass on 231 farms; Walworth County, 5,100 acres on 94 farms. Other pheasant producing counties have comparable CR signups.

QUAIL COUNTRY, TOO

Some sample counties in the quail country include Grant, 13,800 acres on 284 farms; Crawford, 9,100 acres on 127 farms; Richland, 3,200 acres on 73 farms.

So far efforts to enlist CR farmers in a wildlife program have been spotty and not very successful. When county meetings were held last fall to discuss CR regulations, the conservation department and local clubs were invited to participate. Despite bad weather, 3,211 persons attended the 71 meetings. Some game managers proved to be salesman but more were not. A few clubs offered help for farmers who would apply wildlife practices.

But all the signups game managers and sportsmen's clubs obtained in the 71 counties totaled only 907 acres, including 200 or 300 food patches, mostly of one-half to 5 acres. Half as many more were carried over from preceding years.

Nick Calabresa, who is program specialist in charge of the soil bank, said, "I'm sure the local clubs can get a lot more cooperation from the farmers if they make a real effort, particularly if they offer some help."

UP TO SPORTSMEN

Smith, the State game chief, intimated that it would be chiefly up to the clubs, saying that conservation department personnel already had more programs than they could handle effectively. "But we have put in some time on the soil bank," he said, "and will find men to work on it."

A landowner who did not want to be named told the writer that he had put in a food patch and wildlife shrubs and from his experience judged that not much would be done by farmers without some help.

"It's a lot of bother and work," he said. "I think it will take something like the tree planting program. That didn't make much headway with farmers until it was organized and planting machines were available locally. If the Department or the clubs would set up a definite program, and help, for food patch and shrub planting, they'd maybe get some results."

MANY HELP SHARPTAILS

Smith said that CR land was not so important for quail or ruffed grouse, although clover seeding along with grass could benefit the grouse.

"There'll be a gain in nesting areas and edge," he said, "but the loss of grazed woodland will more than offset it. Woodland grazing increases ruffed grouse habitat as much as 10 to 1.

"But the CR may help sharptails, particularly along the Lake Superior shore in the clay country. Acre for acre that land is more productive of sharptails than the sand country, but the increase of farming has driven the birds out. Now they may come back."

A Matter of Dollars and Cents

EXTENSION OF REMARKS

OF

HON. J. CARLTON LOSER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I am inserting an article from the Nashville Tennessean, written by an excellent reporter and editorial writer, Mr. Gene Graham, who is beginning a series of interpretative articles designed to explain subject of local and national interest.

This article deals with a lawsuit in the U.S. District Court for Middle Tennessee, at Nashville. Three Federal judges, all Tennesseans, will conduct the trial and rule upon the matter of reappointment in Tennessee which was not decided by the State general assembly.

The article follows:

A MATTER OF DOLLARS AND CENTS—TEN AND ONE-HALF MILLION DOLLARS IS SIPHONED FROM DAVIDSON TAXPAYERS EVERY YEAR—THREE JUDGES MAY HOLD THE ANSWER

(By Gene Graham)

A lawsuit of historic and national significance will begin in Nashville shortly.

It is one which is destined to keep the eyes of a nation riveted firmly upon a solemn, mahogany-paneled courtroom on the eighth floor of the Federal building here.

For at issue in this milestone American legal clash are problems complex and common among all the Nation's States—even the two new ones which moved from territorial to statehood status this year.

Basically, the issue is one of equity. It is commonly known by the somewhat cumbersome name of legislative reapportionment.

Vast population upheavals growing out of the postwar years in America are behind it, although the trend really began to a less noticeable degree before World War II.

EXPLODING URBAN CENTERS

That population has expanded—and it has shifted as the desert sands, forming huge human drifts upon the archaic governmental structure of America's exploding urban centers.

With the mechanization of farms and the rapid industrial expansion of two and a half decades now, humans in massive numbers have left a rural society to become dwellers of large metropolitan centers, once-small cities which now move toward the metropolitan status, and once-rural towns which can no longer be so classified.

But they have left their State governments behind.

All over America—not just in Tennessee—they have left the same number of legislators representing the same territorial limits, limits within which, unfortunately, the people no longer live in such proportions as they did when States were being hewn of a wilderness.

OLD SAM CRIED "TYRANNY"

By the same token, the same number of legislators represent the narrow territorial confines of modern metropolises which once were not. In truth, it is a condition similar, if not identical, to the one which caused old Sam Adams to cry out "Taxation without representation is tyranny" upon colonial streets, sparking the tinder of revolution.

The world is calmer today. This issue is thus joined in the hushed forum of American juriprudence. The trial, as announced Thursday, will be conducted by three distinguished Federal judges, all Tennesseans.

They are Federal Sixth Circuit Judge John D. Martin, Sr., Memphis, who only last week stepped down as presiding judge of, though remaining upon, the Cincinnati-based appellate court; District Judge Marion S. Boyd, Memphis; District Judge William E. Miller, Nashville, whose rejection of a State motion to dismiss the lawsuit earlier in the week set the stage for the legal test.

"We look forward to this lawsuit with the notion that Tennessee is upon the threshold of a great and long-overdue governmental reform of pioneering proportions and national implications," said Z. T. Osborn Jr., Nashville attorney and one of three who will represent the parties suing the State for fair play.

NO COMMENT

George McCanless, State attorney general, declined comment yesterday. McCanless, in his official capacity, will defend the State, which has insisted reapportionment is a matter for the legislature alone to decide, just as the Tennessee Supreme Court previously held.

The suit will be adjudicated, of course, on the grounds of equity and that alone. But behind the issue of equitable representation is one of tax dollars and cents, just as it was taxes which prompted Adams' outburst against Great Britain two centuries ago.

Using Davidson County as an example, here is that story:

Perhaps few people realize today the degree to which the State has become a tax-collecting agency for local governments. Not counting its receipts last year from Federal sources, the State collected—in State taxes—$270,914,354. It redistributed to counties, cities and local school districts more than half of that amount, $140,442,548.

Part of this was what is called local-share taxes, e.g., gasoline, income, alcohol, beer, etc. A much larger portion, not strictly State-share in nature, is doled out for education in the form of State grants-in-aid.

And due to the balance of legislative power being firmly entrenched with rural counties, those shares—the plaintiffs complain—are grossly out of kilter.

In Davidson's case, just how much is this true—or is it?

Davidson County, according to the studies of the nonpolitical and statewide Tennessee Taxpayers Association, paid $38,178,924 in taxes last year. That represented 14.1 percent of the total—or 14.1 cents of every State tax dollar collected.

Of this, the State returned to Davidson (including the cities of Nashville, Belle Meade, Berryhill, and Oak Hill) $9,882,834—or 2.6 of those 14.1 cents. Retained by the State was 11.5 cents.

Since 48 percent of the State income was not redistributed, this means 5.5 of Davidson's 14.1 cents was used by the State as Davidson's strictly percentagewise share of financing such statewide functions as welfare, roads, etc. That leaves 6 of Davidson's pennies to be accounted for.

WHO TRADES WHERE?

The TTA also estimates, based upon its studies, that 15 percent of Davidson's 14.1 cents was paid by outlying counties, by trade area shoppers who converge upon their natural trading center, which obviously desires that trade. This accounts for 2.1 cents, leaving 3.9 cents as the nearest figurable amount which Davidson County invests in State government without direct return.

Reduced to pennies, this sounds small. But when considered in the light of total State collections—$270.9 millions—it amounts to $10,565,100 a year.

Davidson's local governments, forced this year to make vast increases in its tax rates, look upon that money with a view to what just a portion of it could do in meeting the community's great problems—sewers, expanding schools, parks, slum eradication.

Some argue the TTA's estimate that outlying counties pay 15 percent of Davidson's contribution to State taxes is too low. No exact figures can be given, but the TTA counters with the argument that the biggest chunk of the sales tax, for example, comes from the sale of food, which almost invariably is purchased at home. And it can be shown, too, that the 1-cent share rebated to cities from the 7-cent gasoline tax does not approach the amount actually collected in Tennessee's cities and growing towns.

The most pertinent question, then, would seem to be whether Davidson and the metropolitan centers should, in keeping with the so-called equalization theory, subsidize the admittedly poor counties of the State to the extent of $10 million a year.

"We recognize this obligation," urban leaders say, "but $10 million a year is too much to ask when our own tax burdens, our own community needs are so great."

Whether such arguments can be sustained is a moot matter before a legislature which has resisted all efforts, since 1901, to give the city folks a louder voice in State affairs, tax distribution being but one of them.

So the issue was removed from the legislative branch and dropped before the Federal judiciary to resolve. And that's where the matter lies—while a nation watches—today.

HOW THEY STACK UP

Here is how the four largest Tennessee metropolitan counties fare in sharing State taxes collected within their boundaries. Roughly half of the taxes collected from them are redistributed by the State in either grants-in-aid or local-share taxes.

Hamilton County pays $22,540,074; gets back $7,220,792; or 32 percent.

Knox County pays $22,594,257; gets back $7,053,052; or 31.2 percent.

Shelby County pays $57,569,304; gets back $16,823,099; or 29.2 percent.

Davidson County pays $38,178,924; gets back $9,882,834; or 25.9 percent.

The four counties pay approximately $140.8 million—or roughly 50 percent—of the State's $270.9 million in taxes.

The Labor Bill Battle in Congress

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 10, 1959

Mr. ALGER. Mr. Speaker, now that the House debate is over and the Landrum-Griffin substitute bill overwhelmingly approved, on reflection I feel sure that all the problems have not been solved. Somehow I feel we are only treating the outward evidences of trouble and not the inner or basic difficulty that will continue to plague the labor movement, the consumer and free enterprise. This basic problem is the fact that labor organizations are still above and beyond the law because they are not subject to the same ground rules as are business enterprises; namely, antitrust law.

So I was quite interested to read the article by Mr. Arthur Krock in the New York Times of August 14, 1959 on the final day of debate on labor reform legislation. I believe his conclusion supports the views I expressed during debate on pages 14196–14198 of the RECORD of August 11 in presenting my bill, H.R. 8003, as a possible amendment to the labor reform bill.

Surely other Members of Congress share this concern over the need for antitrust legislation.

The article is as follows:

THE LABOR BILL BATTLE IN CONGRESS
(By Arthur Krock)

A balanced analysis of the truth and consequences of the struggle over labor union reform legislation, now coming to a climax in Congress, may have to await the competence in research and the perspective of some future Edward Gibbon. But the stakes of the battle are plain in contemporary view. The most powerful, and in some respects the only, monopoly in the United States is fighting to preserve its control of the national industrial machine.

The monopoly was founded in the first years of President F. D. Roosevelt's New Deal by prolabor laws of Congress and by even more prolabor interpretations of these laws by administrators and judges appointed with that expectation. The results included a political alliance between union labor leaders and the candidates of the Democratic Party in which one interest promoted the interest of the other—an alliance to which liberal Republicans on the northeastern seaboard sought and were granted a sort of second-class membership.

The moral and spiritual animations of this prolabor movement were generated by a prior monopoly which the Republican Party had fostered and protected. This was a combination of financial and industrial management power which operated politically through campaign contributions to submissive political candidates and through influence over the President's choice of administrators and judges. But the subsequent transfer to organized labor of power over the economy and industrial liberty of the United States, which was initiated by President Roosevelt and nailed home by President Truman, has been followed by the usual abuses of monopoly. These have included corruption and some excesses the robber barons of American industry never ventured.

Now for the first time since the pendulum of monopoly hit the reverse top of its arc a President of the United States is trying to unstick it for a moderate downswing. The legislation President Eisenhower favors represents a very moderate backswing because it does nothing to cover labor unions under the antitrust laws that effectively restrain a management monopoly. And this legal immunity is the principal of several which are basic sources of the power of union leaders, both corrupt and otherwise. Yet the bill the President is supporting—proposed by a Democrat and a Republican in the House of Representatives—is the pending legislative draft that would provide effective restraints on the legalized social coercions of the economy by labor unions that also are important sources of their monopoly. These coercive activities are the secondary boycott and picketing, often deserving the administration's tag of "blackmail," which the labor chiefs prefer to call organizational.

The House committee bill, a milder corrective measure of union corruption and union coercive practices than the easy-going Senate measure, was officially opposed by the mergey AFL–CIO, which endorsed a third draft with even less corrective effects. Though a large number of the Members of Congress have publicly quailed under union threats of reprisal at the polls, this third measure had no chance of approval, and that was as well known at Meany-Reuther headquarters as it was in the private rooms of the Democratic and Republican leaders of Congress. But whether or not designed as strategy to make support of the House committee bill appear as bold independence of the AFL–CIO, its draft was so employed by legislators who knew that the union leaders would have been glad to settle for the House committee bill and would have regarded as another political triumph the rejection of the measure endorsed by the President.

One of the possibilities attributed to this latter bill is that its restraints on the secondary boycott and organizational picketing will hamper honest unions in their legitimate concerns.

But it could readily be safeguarded against by conference change in which the fundamental restraint of secondary boycotting could still be preserved. In all likelihood this safeguard would appear in the event of the final passage of a bill which will correct the basic abuses of the labor monopoly.

But, undisturbed by this administration, this Congress and the next one, will be union power to dominate collective bargaining, paralyze nationwide industries if this domination is resisted, elude the laws and ordinances against violence and coercion and suspend vital public services, including the sources of public information.

A Tribute to Mr. Herbert C. Hoover on His 85th Birthday

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, August 14, 1959

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include an open letter to former President Herbert C. Hoover which appeared in the St. Joseph, Mo., News-Press extending congratulations, and was written by the editor, Arthur V. Burrowes:

TIMELY OBSERVATIONS

Mr. HERBERT C. HOOVER,
Waldorf-Astoria Towers,
New York City.

DEAR MR. HOOVER: The News-Press congratulates you on this, your 85th birthday. The News-Press feels it has a right to send you these congratulations as an open letter, not alone because of the personal esteem in which you are held by the editor of this newspaper, but because of the proud record this newspaper holds as regards your personal self.

The News-Press was keenly alert to the world tension in that fateful summer 45 years ago. It was June 28, 1914, a Bosnian Serb, Gabriel Princep, assassinated Archduke Francis Ferdinand, heir to the Austrian throne. You, Mr. Hoover, were in England when that tragedy occurred in Sarajevo, Bosnia. Sarajevo caused World War I.

It was the News-Press privilege to commend editorially the generosity of you, Mr. Hoover, nearing 40 years of age, who so gladly financed stranded Americans in London. You made it possible for them to get home, starting in late July, when chancelleries feared the negotiations to prevent a world war would be futile. They were futile, Mr. Hoover, as you so well remember. Germany declared war against Russia August 1 and against France August 3.

You read your London Times and saw, Mr. Hoover, as did we in our paper, that Britain asked Germany to guarantee the neutrality of Belgium by midnight of August 4. Germany refused and Britain declared war on Germany August 4. You were still in London when German troops entered Leige. Our News-Press called that the rape of Belgium. We were probably the first newspaper of the whole Middle West to so severely castigate the German Emperor, the mad Kaiser. For that and following editorial conduct of our newspaper, Albert, King of the Belgians, conferred the Medaille du Roi Albert on Louis T. Golding, our editor and publisher.

Mr. Hoover, that editor and publisher still lives. He was 94 on May 9 last, so he is your own contemporary and no two men ever saw more eye to eye in those far away years

when it seemed God let the very light of the heavens go out one by one.

This newspaper time and again commended you for your great work in feeding Belgium. No man in all world history, singlehanded, had ever to that time, or has since, so endeared himself by a single act to so many millions of people. It was inevitable, Mr. Hoover, that you were Chairman of the American Commission for the Relief of Belgium from 1914 to 1919. It was inevitable your friend, Mr. Woodrow Wilson, name you his U.S. Food Administrator, where you served so well from June 1917 to July 1919.

Your course as Secretary of Commerce under two Republican Presidents was hailed by the St. Joseph News-Press, not once but many times. It was the privilege of the News-Press to support you for President in victory in 1928 and in defeat in 1932. It was our joy to commend Mr. Harry S. Truman when he recalled you to public service after the cruel, willful conduct of Mr. Truman's predecessor.

The News-Press and sister paper, the St. Joseph Gazette, acclaimed you to the world for both the first Hoover Commission and the second Hoover Commission. The good of the Hoover Commissions will live long after you are gone to God.

Your step is slower, your face is more lined, your head more bowed, sir, but you bear that same mark of individual initiative, proud Americanism you had when you were in two Presidents' Cabinets, when you yourself were President. Or when you broke bread in St. Joseph, Mo., in that home of Mr. and Mrs. John Wyeth at 2916 Frederick early in 1933. Yes, even to just this summer when you so hospitably received our friends, Mr. and Mrs. James E. Josendale, of this city, in your home in Waldorf Towers.

The tangible proof of your goodness, your accomplishments, Mr. Hoover, sir, are for all to see: The honorary degrees from 81 institutions here and abroad, the 296 medals and other awards from here and abroad, the honorary citizenship of 24 European cities, 56 honorary memberships in scientific and technical societies. Mr. Hoover, you are the living exemplar of individualist America at her best, from that humble home in Iowa where you were orphaned to the plaudits of the world. It is a rare privilege to know you, sir. God bless you. God keep you for His very own.

Economic Advantages Motivate Support for Labor Bill

SPEECH

OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 13, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 8342) to provide for the reporting and disclosure of certain financial transactions and administrative practices of labor organizations and employers, to prevent abuses in the administration of trusteeships by labor organizations, to provide standards with respect to the election of officers of labor organizations and for other purposes.

Mr. SANTANGELO. Mr. Chairman, the labor bills before the House have disturbed many legislators and voters and the speeches in favor of and against the bills have created a great confusion in the minds of a great majority. I believe that we must have labor legislation. Last year I supported and voted for the Kennedy-Ives labor reform bill which passed the Senate and was defeated in the House by eight votes. The Kennedy-Ives bill regulated the internal union affairs without undue meddling in the administration of unions and without weakening the collective bargaining powers. The Kennedy-Ives bill was defeated by a combination of Republican Members and southern Representatives.

This year there are three bills before the House. The combination which defeated the Kennedy-Ives bill last year has once again combined and supports the Landrum-Griffin bill. I oppose the Landrum bill, which, in my opinion, is "buckshot" legislation, injuring the guilty and innocent alike. I favor the Shelley bill and shall support this bill.

The labor situation as we all know it is not all black nor all white. There is a great need for reform and for improvement, but no necessity to destroy labor. The support for the blunderbuss Landrum-Griffin bill comes mainly from Republicans and southern Democrats. Why? Why do these bills go beyond the reform of unions and seek to adopt methods which punish labor? It appears to me that selfish economic and political reasons motivate the support for this bill more than a desire to chase out the crooks from the House of Labor.

The Elliott bill, H.R. 8342, known as the committee bill, and the Shelley bill, H.R. 8490, introduced by Representative JACK SHELLEY, of California, and 14 other Members, have provisions to get rid of the crooks in labor, but the Shelley bill contains no provisions which bust unions or destroy their legitimate gains obtained through sacrifice. What does the Shelley bill do and is it effective? The Shelley bill requires financial reports by unions covering 90 percent of the labor force in unions and gives the Secretary of Labor discretion to compel the remaining small unions to file reports if the Secretary thinks it is necessary or that there is a violation of law or any corruption within the union. False filing under the Shelley bill carries severe criminal penalties. Embezzlers of union funds are subject to Federal prosecution and embezzlers, Communists, and convicts are denied the right to hold union office for a period of 5 years. Employees whose rights are denied can sue in Federal courts after they exhaust their remedies within the union. Employees' rights to vote and participate in union activities are protected. The subversive, the neurotic, and the troublemaker are subject to union discipline by reasonable regulations. The Shelley bill provides further that union financial officers must be bonded and they are required to account for their stewardship. No conflict of interest must appear in their conduct and officers are required to report any conflict of interest. No loans in excess of $2,500 can be made and loans above $250 must be reported. The crooks are controlled, the employees are protected, and the ban on secondary boycotting, as provided for in the Taft-Hartley law, is continued. The Shelley bill is not an antilabor bill. It is a fair and effective bill, and under its provisions crooks are controlled, employees are given a bill of rights, and dishonesty is punished. Why not the opposition to the Shelley bill, and why then the support for the Landrum-Griffin bill?

During the amendment stage of the bill, the combination of Republicans and southern Democrats ganged up together to deny the Secretary of Labor and the Attorney General to bring an action to restrain any union officer who was about to violate the provisions of title I of the bill and left the remedy to the union member without the support of the Secretary or the Attorney General. This amendment was overwhelmingly supported by the combination and became part of the Landrum bill.

Let us analyze the motives for the Landrum-Griffin bill. This measure was sponsored by Congressman LANDRUM, a Representative from Georgia, and Congressman GRIFFIN, a Republican Representative from Michigan. The Republicans who helped defeat the Kennedy-Ives bill last year are not seeking a solution, but want a political issue. Their votes in my opinion are politically inspired without regard for the economic effect on the industrial East, North, and West. Congressman LANDRUM, the Representative from Georgia, comes from a State which is antiunion. Georgia is 1 of the 19 States in the Union which has adopted "right-to-work" laws, recognized by many as "right-to-wreck unions" laws. Organizational or recognition picking is one of labor's traditional practices to unionize a plant and to raise workers' wages. Bar all organizational picketing and recognition picketing by statute and you authorize and empower employers to exploit and to pay indecent wages and require longer hours. Where picketing is for the purpose of blackmail, then such picketing should be made a crime and prohibited. The Landrum bill, however, outlaws all types of picketing except where a plant is on strike.

The Shelley bill outlaws blackmail picketing, but provides that where picketing is carried out for the purpose of unionizing and obtaining decent wages and decent working conditions, such activities should not be condemned or curtailed. When picketing is carried on by a rival union when a legitimate union represents a plant or a business, an employer should have the right to go before a labor board for relief. Many workers throughout the United States are still not covered by a Federal minimum wage law, and these groups who are not permitted to organize by picketing will be compelled to work at slave wages. Inasmuch as Georgia has no minimum wage law, these unprotected workers are at the mercy of predatory employers. The advantages of cheap labor are recognized by industry and it flees locations where there are strong unions so they can pay cheap wages and make exorbitant profits at the expense of labor. It is a well-known fact that industry has fled from the industrial East and North to find haven in States like Georgia, South Carolina, North Carolina, and other localities, which provide right-to-work laws and do not provide any minimum wage protection and labor legislation.

The following are some of the Southern States which have right-to-work laws: Alabama, Arkansas, Florida, Mississippi, Tennessee, Texas, and Virginia. Their Representatives supported almost unanimously the Landrum-Griffin bill.

What is the situation in Georgia with respect to its labor conditions? Georgia, in my opinion, is an antiunion State. While it has compensation laws on its books, it pays a miserable maximum of $30 per week to an injured worker as compared to $45 per week in other States. Georgia provides no minimum wage law for employees not covered by the Federal minimum wage law and the amount an employer pays may be insufficient to provide the bare necessities of life. In Georgia, where unions seek to help themselves by picketing, statutes prohibit mass picketing. Georgia and other Southern States have a competitive edge against northern industrial States. Their edge lies in the unfair advantage these States enjoy in the form of nonunion shops, lack of compulsory insurance, and lack of minimum wages.

For example, the States of Alabama, Florida, Georgia, North Carolina, South Carolina, Tennessee, and Texas do not have any compulsory law for workmen's compensation. An injured worker is left to the whim and bounty of his employer and is not protected by statute when he is injured. When it comes to the question of wages, many of the Southern States who by their support of the Landrum bill are seeking to steal away and lure Northern industry into their area have no minimum wage laws. The Southern States which have no minimum wage law are Alabama, Florida, Georgia, Mississippi, North Carolina, South Carolina, Tennessee, and Texas. Arkansas has a minimum wage law, but the minimum is pathetically low and amounts to a minimum of 16 cents per hour; hardly sufficient to keep body and soul together. These States do not have minimum wages in the retail trades, the hotels and restaurants, and in the laundry and drycleaning establishments. They afford no protection to the workers, and if the workers are denied the right to organization which the Landrum bill takes away from them, then certainly they are at the mercy of the ruthless employers and they are permitted to starve with the sanction of the State.

This is the story behind the support of the Landrum bill. It is an economic drive by a section of our country to continue their practices of indecent wages and to attract business from fleeing industry. The Republicans for political gains have betrayed the industrial sections of our country and have joined with the southern Representatives to pass the Landrum bill over prostrate labor. The philosophy of the Landrum bill is found in the attitudes of Georgia statutes and the statutes in the Southern States. Thus, the Landrum bill is motivated incidentally by a desire to eliminate the crooks, and in my opinion, primarily for selfish economic reasons, to continue nonunion shops, and thereby to maintain for Georgia and other Southern States their competitive edge of cheap labor, thus being able to steal industry from those industrial States which have high standards of working conditions for the working man and high wages.

The Landrum bill bans the "hot cargo" provisions while the Shelley bill does not. The ban on hot cargo is another device to maintain nonunion conditions in Southern States. A hot cargo provision in a contract means that an employer and a union agree that an employee or a truckdriver shall not be compelled to handle his employer's goods which come from or go to a struck plant. It guarantees an employee the right not to be a strikebreaker or cross a picket line. A ban on hot cargo provisions means that nonunion shops which endanger a union worker's standard of living may continue on its merry way and union employees are compelled not only to handle their goods, but cross their picket lines if necessary. Why should a truckdriver be required to handle goods for a nonunion company or a struck company which pays slave wages and compels workers to work under onerous conditions? The Landrum bill with its ban on hot cargo and its provisions make the hot-cargo stipulation an unfair labor practice, forces truckers to cross picket lines of secondary employers who pay indecent wages and provide substandard conditions to the workingman. Must this truckdriver cross a picket line with goods when he knows and recognizes that crossing a picket line will help an employer whose plant is struck and who seeks to undermine his own standard of living and lure away business from industrial States? The Landrum bill requires that action on his part and this is the vice and meanness of the Landrum bill. It is in substance a fight by antiworker States to maintain their competitive advantage by destroying the effective tools which labor has to maintain its gains in this jungle of business rivalry. The Landrum bill alines Government on the side of employers and denies labor unions the right and the opportunity to protect themselves against predatory practices by ruthless employers.

I support the sentiments of knowledgable and responsible leaders who are not antilabor or anti-industry, but are anti-crooks, and who seek a true labor reform bill. What we seek is to guarantee the worker his right to vote, choose and participate in union affairs, to guard union funds from dissipation through loans or larceny, to punish unioneers who steal or who default in their position of trust, to disqualify Communists and convicts from holding office for a stated period of time, to protect employees in their right to refuse to cross picket lines while prohibiting concerted activities by employees to force any person to cease doing business with another person, to prohibit blackmail picketing while preserving the right to picket for legitimate union aims. What we seek in substance is support of a bill which will accomplish these objectives. I believe that the bill which best accomplishes these objectives is the Shelley bill which I support. I favor the defeat of the Landrum-Griffin bill which would press down upon the back of labor a yoke of tyranny.

A Salute to Herbert Hoover

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mr. McDONOUGH. Mr. Speaker, no man in American public life has served so unselfishly and has earned and deserves the respect and high regard of the people of the United States and in fact the people of the free world for the great services he has rendered to suffering human being whenever he has been called upon to help.

Herbert Hoover has lived to see the day when those that scorned and ridiculed him have had to eat their words. He stands today as one of the great humanitarians and great statesmen of the generation.

I submit herewith the following article by George Sokolsky which is a tribute to Herbert Hoover:

HOOVER AT 85

(By George E. Sokolsky)

There have been plenty of changes in this world since 1874 when on August 10 Herbert Hoover was born in an Iowa village called West Branch. His parents were Quakers; his father a blacksmith, his mother a seamstress. The parents died young and Herbert was sent to live with relatives, finally settling down in Oregon. This, then, is a proletarian beginning for a man who has been described during most of his career as the stereotype of American capitalism.

AT STANFORD

No State aided him. No government supported him. He was what we today like to call underprivileged, but he was a strong farm boy, sturdy, and willing to work, with a sharp mind and a capacity to make his way.

He managed to get enough education to go to what was then called Leland Stanford University, and he worked on all sorts of projects, many of his own devising, so that he could pay for his needs.

Typically, he ran a newspaper route and a laundry route, and he worked summers for the Geological Survey of the United States.

Thus, Herbert Hoover became a mining engineer. He married a geologist, Lou Henry, and together they set off to work in all parts of the world. His success in his own field and in business was immediate and continuous.

Herbert Hoover got into politics by accident rather than by design.

He was the leading American permanently domiciled in London at the outbreak of World War I and was, therefore, invited by Ambassador Walter Hines Page to assist the large number of American refugees who were stuck in England because of the beginning of the war and who had no means to take care of themselves.

BELGIAN RELIEF

He handled this job so ably that he was invited to undertake Belgian relief. He, who had been a mining engineer, found himself a social worker all of a sudden.

And here the simplicities of Quaker upbringing intervened.

Herbert Hoover could tolerate no conflict to interest.

When he was working for himself and his family, he did well and amassed a fortune. Now that he faced public service, he felt it essential to divest himself of conflicting assets.

From that day in 1914 when he undertook to serve the people and governments, he avoided private involvements of any kind. Fortunately, he could afford to work without compensation and that he has done ever since.

Hoover was an unpopular President, although he received an enormous vote.

The times required him to compromise his judgments and when once or twice he did compromise, particularly with the late Senator Borah, it turned out that he erred.

DEFEATED MAN

A man who has a philosophy of life, must guide himself according to those principles.

I can recall the days in 1933–34 when Herbert Hoover was sittig often alone in his rooms in the Waldorf-Astoria, avoided by those whom he helped on the road of life.

He was a defeated man and the smart boys run from a defeated man.

In contrast today, a quarter of a century later, Herbert Hoover is one of the most beloved men in the Nation, above partisanship, above rancor. He continues to work steadily, writing a series of books which will clarify the record of many otherwise uncovered situations.

Herbert Hoover stays young by working and by his constant interest in affairs. At 85, he refuses to give up to doctors, nurses and the impedimenta of age.

He can still argue a point refreshingly, his head full of details and his philosophic viewpoint clear and always guiding constructively.

SENSE OF HUMOR

His sense of humor never fails him.

Never one to be vengeful, in his old age he knows no rancor.

How he manages to clear the slate of all the little incidents which hurt a man's feelings, I do not understand.

There must be something in early Quaker teaching that does that or perhaps he has grown so big in spirit that the pin-pricks of politics become like the sting of a gnat.

One of the developments of his years is his friendship with Harry Truman: The two ex-Presidents really like each other.

It will be interesting to see Herbert Hoover at the Republican convention in Chicago in 1960, standing before his party, delivering his address. His truth goes marching on.

An Idea for Peace

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, August 3, 1959

Mr. PORTER. Mr. Speaker, when I was at the World Affairs Institute in North Carolina recently I met Mr. and Mrs. Dabney White of Greensboro, N.C. They, like so many people, are much concerned about preserving peace in the world. They, unlike many people, have worked out an idea which they think would help lead to peace. They want the East and West to compete in the area of research.

Under unanimous consent previously granted I am including hereafter their plan for peace. It is entitled "A 10-Year Plan for Preventing World War III":

A 10-YEAR PLAN FOR PREVENTING WORLD WAR III

(By Charlotte and Dabney White)

If the Russian and American people permit themselves to be caught in the death-trap of world war III because of the bait fate has placed in Berlin, then they have no more right to claim intelligence than a doomed rat caught in a cheese-baited rat-trap.

Taking a firm stand in Berlin is not enough. We once took a firm stand with Japan and got Pearl Harbor. Nor is it enough merely to take satisfaction in our own achievements and virtues and to condemn the evils and shortcomings of others. Events demand we propose some way out of today's dilemma that can bring benefit not only to ourselves but to all the world.

Russia and China, today, proud of their great strides in catching up with the West, compete with us for allies, raw materials, and markets. In so doing they force us all to play a dangerous cold war game. It is a very old game, a game that in the past brought on nearly all the wars that have been fought. If continued this cold war game can quite easily explode into world war III. The starting incident may occur in Berlin. It may occur almost anywhere. The world today is a tinderbox and war is very near.

But war will not solve today's basic problem. World Wars I and II and the Korean war did not solve it, nor will another bloodletting. To solve that basic problem we need to find some new game that can be substituted for the present cold war game * * * some new game that can be played with more profit and less danger.

Before the dawn of history, man discovered a new idea of world-changing importance; the very simple idea that we can plant seeds and grow crops. Because of that discovery great civilizations became possible, other invention-discoveries became practical and world population increased from less than 10 million to more than 2,500 million. If that great idea were to be forgotten and remain unknown for just 3 years nearly all of those 2,500 million would be dead at the end of that time. The idea is that important.

However, in recent times, man has discovered an even greater idea, the idea that "by planting enough money and manpower in research we can find the answer to almost any problem." This is an idea that can do for man today even more than the first idea did for man in the past. It is an idea whose importance is fully realized by no one, and of such vastness as to stagger the imagination.

This mighty, godlike force of research, which can so easily be used to create a paradise on earth, it today being employed chiefly to discover deadlier and deadlier weapons for the Russians to use against us and for us to use against them. This is a sinful, shameful thing. Too long have we used research chiefly to discover new ways of killing. It is a force, far too wondrous to be used chiefly for such purpose.

It is man's chief key, given him by God, for unlocking all the shining wonders of the world and universe that man is heir to. As such it should be made into a great and ever expanding international enterprise devoted to bringing new knowledge to benefit all men everywhere.

International research on a grand scale, each year discovering vast stores of new knowledge and new ways to increase wealth; organized upon a highly competitive basis to keep all research workers doing their best, yet with the competition wholly within the organization and entirely divorced from national ambitions * * * can give us a new game to substitute for the dangerous cold war game now being played between East and West.

It can give us a new game played by competing research teams, a game highly publicized, strenuous and dramatic, turning world interest more and more toward man's ever enlarging conquest of the unknown and diminishing interest in profiting at a neighbor's expense.

Properly organized and adequately financed, research into all the fields of human thought and action and including not only research proper, but also invention and development, should grow and grow and grow until one day it becomes the greatest industry in the world, greater than farming or manufacturing, greater even than all other industries put together, providing a new field where men compete under just laws and without fear of war or enslavement. Such work under law can pioneer a pattern for control by law of all world affairs.

The plan is a profitable plan. It will bring us material wealth, a vast new wealth of knowledge and new understanding, dynamic peace and soaring progress.

It is suggested herewith that we wrest the initiative in the present cold war from the Soviets, by proposing that we at once set up an International Agency for Research into all fields, and that we finance that Agency by levying on each nation 10 percent of the amount that nation is now spending on its military, and that this percentage be doubled each year until the whole world is spending on cooperative research at least 10 times what it is spending on war preparations.

It is suggested that we propose that a world truce be declared for the next 10 years to give a decade of peace for getting the research program underway and that any nation using armed force as an instrument of national policy be declared an outlaw and an enemy of the rest of the world and dealt with appropriately.

The above are bold proposals. Perhaps in their very boldness they offer more real chance of averting war and achieving dynamic peace than can be offered by any more traditional and less bold proposal.

If our Nation makes these proposals to the Soviets, and the Soviets turn them down, we will still have won a great ideological victory.

However, the Soviets may not turn them down. They may find in them a meeting ground for East and West and for the devising of a saner, freer, and wiser world order.

If so, we may in a few short years create more real progress for the good of all men and all the future, than will otherwise be created in the next 10,000 centuries.

The Fabulous Fiscal Fiasco

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, August 14, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article which appeared in the Democratic Digest, August 1959 issue:

THE FABULOUS FISCAL FIASCO

The Republican Party, loudly trumpeting farewell to the second Eisenhower recession, is trying to brush under the rug the consequences, past, present, and threatened, of its own fiscal irresponsibility. The Democratic Party, thunders the GOP, is the party of budget busters, of inflationists, of financial hooligans. The din created by the Elephant has reached such a pitch and volume as to persuade the unwary that the fellow might have something there. The Digest therefore desires to submit some sobering truths about the Eisenhower administration and its banker-minded fiscal policies.

(The last five paragraphs of this article list certain indisputable facts which the Elephant is having great difficulty hiding under that rug.)

President Eisenhower, a fiscal innocent who was putty in the hands of his first Secretary of the Treasury, Industrial Titan George M. Humphrey, and who is equally malleable for the greatest Secretary of the Treasury since Humphrey, namely, Robert B. Anderson, appears to be as trustful today as ever.

If he found it galling that the results of the Humphrey-Anderson advice forced him to ask Congress in June to raise the ceiling on the public debt, and ask it also to abolish the historic 4½ percent limit on Government bond interest, he took solace in the cry of "Inflation, inflation"—a magic word used by all Republican fiscal wizards to explain why they have got the Government's financial affairs into such a stew.

The Cabinet of millionaries, inheriting from the Democrats a high prosperity without inflation, had scarcely taken the oath before Secretary Humphrey, with a let-George-do-it nod from Ike, started raising interest rates. The Treasury upped the rate on Government bonds far above the requirements of the market—from the previous Democratic rate rate of 3½ percent to a charitable 3¼. (Charitable to the banks and corporations, that is.) The effect on interest rates in general was electric—and a vicious circle began to rotate, generating inflation as it turned. "Why I can remember," Humphrey mused fondly, "when 7 percent interest was normal. We thought nothing of it." (Today the banks' "prime rate," the interest charged gilt-edge commercial borrowers, has climbed to 4½ percent—and the price of money is scaled up rapidly for the less favored.)

Humphrey also sponsored a $7 billion tax cut, of which three-quarters was given unfairly and foolishly to corporations and higher income individuals. Foolishly, because this policy caused investment in productive capacity to outrun consumption, with unhappy results. Columnist Joseph Alsop wrote last month: "There would be no budget-balancing problem today, as there would be much less inflationary pressure too," if Humphrey had not put over this "profligate" tax cut.

Humphrey presided over the first Eisenhower recession (1953–54), and converted the recovery of 1955 into the stagnation of 1956–57. The second recession was leering around the corner as he bowed out and returned to his countinghouses in the summer of 1957.

The Republicans choose to blot the recessions from memory, and to assure us that all is now rosy. They blithely advise Congress that the fiscal policies under which the recessions occurred should be not only ratified but intensified. To be sure, the vast Eisenhower deficits have cooled off the GOP's infatuation with tax cutting, but the ardor for tight money is unabated. The balanced budget is given precedence by a veto-brandishing President over (1) adequate defenses against an opponent of unexampled might; over (2) the encouragement of a swifter growth by the economy, and over (3) the urgent needs of a multiplying population in such fields as education, housing, urban blight, and conservation of natural resources. (Creeping socialism.) Fiscal management under Eisenhower continues to follow classic Republican theory—as imaginative as Calvin Coolidge, as dynamic as Herbert Hoover, as progressive as the trickle-down philosophy of McKinley's day.

The Democratic Party is just as devoted to a balanced budget as the Republicans profess to be—despite their mammoth deficit of fiscal 1959. Speaker SAM RAYBURN pointed out July 2, in a sharp rebuke to GOP propagandists, that the Democratic Congress had already cut $353 million off the Eisenhower budget requests, and he predicted the cuts would reach $500 million to $1 billion. But those savings, basically, are no more than a prudent overseeing of the routine housekeeping of the Government. Let us look beyond such details to the big picture.

In the House of Representatives a few weeks ago Representative CHESTER BOWLES, Democrat of Connecticut, noted that "our annual output of goods and services remains more than twice that of the Soviet Union." But he quoted Allen W. Dulles, head of the Central Intelligence Agency, as warning that a much greater rate of growth is enabling the U.S.S.R. to close the gap rapidly. He cited this somber statement by Dulles:

"If it is true that our industrial growth (between now and the end of the new Soviet 7-year plan) will be only 2 percent a year, the United States will be virtually committing economic suicide."

The truth is, the average growth rate of our economy in the first 6 Eisenhower years was only 1.3 percent annually.

TIGHT MONEY STOPS GROWTH

Growth is faster this year, but already the administration (abetted by the Federal Reserve Board) is applying the brakes of tight money. Economists of the top rank[1] reported in July that the "repressive policies now in effect might well lead to an average annual growth rate" for 1958–64—the approximate term of the Soviet 7-year plan—of less than half of the 5 percent annual rate which "we need an can readily achieve."

In 1953–58, these economists said, "we fell more than $150 billion short of full production, and suffered about 10 million man-years of unnecessary unemployment. In addition, Federal, State, and local governments collected about $30 to $35 billion less in revenues than a full rate of economic growth would have generated at existing tax rates."

The economists commented: "The erroneous methods used to fight inflation have contributed greatly to this poor economic performance. Especially, the tight money policy and successive retrenchments in the Federal Budget have been powerful factors in the deficient rate of economic growth."

They continued: "Now in 1959, we are moving upward again as we did in 1955. And once again, we are misreading the signs and applying the wrong policies. The Federal Reserve Board is not reactivating with a vengeance the tight money policy, which has proved to be economically repressive and socally regressive, and a very frail weapon against inflation. In accord with the misguided FRB policies, the administration is asking for the removal of ceilings on interest rates. Budgetary retrenchment is again being given precedence over the neglected priorities of our national and international needs.

"Few, if any, of the fundamental maladjustments which contributed to the erratic and low growth rates of recent years have been corrected. Some of them are now being further aggravated—for example, the further forced decline of farm income, and the immense drive against wage adjustments."

But the President seems content. The oracles of the White House stoop, Messrs. HALLECK and DIRKSEN, are radiant. The Republican National Committee's mimeographs brim with happy tributes to prosperity. The money lenders are happy, too—

The Federal Reserve Board reports that profits (after taxes) of its member banks rose 25 percent in 1958. Since the last Truman year, bank profits (again, after taxes) have increased by 75 percent.

George Champion, president of New York's biggest bank, the Chase Manhattan, says a "prime rate" of interest even higher than the 4½ percent established last May is possible. (He awaits it with open arms.) Henry Clay Alexander, chairman of the Morgan Guaranty Trust, "looks for a continuing rise in the cost of money." (His welcome mat is out.)

Government programs to help home building have felt the hot breath of tight money. Congress a few weeks ago had to raise from 4¾ percent to 5¼ percent the interest allowable on housing loans guaranteed by the Veterans' Administration. Similarly, the Federal Housing Administration is said to be pondering a raise to 5½ percent in the interest permitted on FHA-guaranteed loans. (Even at the existing rate, a typical FHA mortgage negotiated today would cost $5,700 in interest, against $4,500 in 1952.)

But the GOP, although it has given us more inflation than we ever had before except as a result of war, still insists that high-priced money is the best weapon against inflation. Is it working that way? Perhaps it has deterred some people from buying homes. But look at this—

In May alone, consumers increased their outstanding installment debt by $443 million (seasonally adjusted), the Federal Reserve Board reported in July. That was the biggest jump since September 1955. We may be sure that there was a hidden tax on much of that buying—for higher interest is in effect a tax, imposed by the Government's tight money policies, and payable to lenders rather than to the Government. But the point is, tight money did not dampen the buying urge—hence did not work against inflation.

Actually, higher interest rates are of themselves inflationary, since they increase costs without increasing production. "Few things have contributed as much to inflation as rising interest rates," Senator LYNDON B. JOHNSON, Democrat, of Texas, said recently.

A budget deficit is supposed to be inflationary. Yet Mr. Eisenhower, who loves to denounce inflation, told Congress in June, as casually as if he were asking it to pass the butter, that higher rates necessitated his requesting $500 million more to pay the interest on the public debt than he had asked in his budget message only 5 months earlier.

One penny and part of a second penny out of every tax dime now go to the unproductive cost of carrying the Federal debt. The effect of tight money and inflation are reflected also in the debt burdens of the States and cities, of school districts and of public utilities, of home and automobile buyers—indeed, in one way or another, of every American.

And the Republican Party, failure going to its head, is proud of it!

On June 30 last, the fiscal year ended with the biggest peacetime Federal deficit in history—around $12.5 billion.

Total 6-year Eisenhower deficit—$19.4 billion versus record of first 6 Truman years—$3.7 billion surplus.

Public debt: When Truman departed, $267 billion. On June 30 last, $284 billion.

Cost of interest on public debt: In Truman's last full fiscal year, $5.8 billion. Requested by Eisenhower for fiscal 1960, $8.6 billion (up half a billion from his January estimate). The total Federal budget in 1939 for all purposes was $7.9 billion.

---

[1] "Inflation, Cause and Cure," a study directed by Leon H. Keyserling for the Conference on Economic Progress, Washington, D.C.

Public Opinion Has Shaped the Record of Accomplishments of This Session of the 86th Congress

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 5, 1959

Mr. PELLY. Mr. Speaker, we are close enough to adjournment to be able to evaluate the record of this 1st session of the 86th Congress.

In this connection, recently the question was directed to me in a press interview as to whether the record of accomplishment was good or bad.

My reply was, "Not bad."

Then I was asked whether the credit for this record should be given to the Democrats or the Republicans.

"The credit should go to the public" was my answer, because, as I said, it was public opinion, most of all, that wrote the record of this Congress and kept it from being bad. I also attributed great credit to President Eisenhower for his leadership and the fact that by his press conferences and otherwise he stimulated discussions in the press and the expression of public opinion.

The question was raised following this remark as to whether the 86th has been a budget-busting Congress, and with proper and due recognition of the efforts of the House Appropriations Committee, I said we could have a balanced budget in fiscal 1960, especially if the present high rate of prosperity continues so that the Federal revenue from taxes will exceed $80 billion.

Also, I expressed the belief that, thanks to public opinion favoring the President's "hold the line" on Federal spending programs, the threat of inflation has diminished. I responded also by stating my opinion that the best bulwark against inflation is public ownership of U.S. Savings Bonds.

Mr. Speaker, recently on the NBC radio and television program "Meet the Press" the distinguished former President of the United States, the Honorable Herbert Hoover, expressed the opinion that our country is in more imminent danger from internal causes than from the cold war.

He cited inflation, unbalanced budgets, and overspending by Congress as being some of the domestic dangers.

Mr. Speaker, I agree with Mr. Hoover that those are dangers, and that is why I have constantly resisted pressures to increase Federal spending. Moreover, as I have just inferred, I believe the net result of the efforts of those of us in Congress who have opposed new programs calling for excessive expenditures have been successful overall in this Congress.

Herbert Hoover was on the eve of his 85th birthday at the time of that TV interview. His appraisal of the domestic situation is worth noting. He mentioned the dangers from within, but he was not pessimistic; and we can all take a lesson of courage and faith out of his experience and words of wisdom

He was asked:

Have these things weakened us so much that we can't stand out strong against Russia?

To which he replied:

No, I wouldn't want anybody to think for a moment that the American people are not capable of solving any crisis. As a matter of fact, this Nation is now in its 183d year, and it has lasted longer than any representative Government. It has gone through seven wars, has gone through three great depressions.

Mr. Hoover mentioned that we have had some bad administrations in Washington, and we have had evil days on account of wars which produced a series of crises. But he concluded as follows:

And yet, after all that, we still have of the original heritage of the American people a very large part of what the forefathers established. We still have a freedom of religion, freedom of press, freedom of assembly, freedom of enterprise within the limits of some socialistic tack; freedom of speech within the limits of very mild laws on the subject. Generally we possess today the same vitality that gave us the initiative and the ability to solve these crises that we have had in the past.

Mr. Speaker, like Mr. Hoover I have faith in the American people. Perhaps sometimes I feel Congress is not acting wisely. However, as this session of Congress indicates, generally the thinking of the public prevails and I believe the judgment of the people, where they are given the facts, is sound. Yes, I give credit for the accomplishments and record of this Congress and this session to the force of public opinion. As to partisan credit or criticism, I think Republican and Democratic Members of Congress alike can be counted on to debate that issue after adjournment. Instead, I conclude these remarks with the personal comment that service in this House this session, as it always is, has been a privilege and challenge. Individually and collectively we are honored beyond measure to be Members of the greatest legislative body in the world. For that honor I am grateful and only hope my service has merited and justified the judgment of the fine friends and people who sent me here.

Labor Reform Legislation

EXTENSION OF REMARKS
OF
HON. SAMUEL N. FRIEDEL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Friday, August 14, 1959

Mr. FRIEDEL. Mr. Speaker, to eliminate any misunderstanding of my position, which may have resulted from my votes on the labor reform legislation passed by the House of Representatives, I think an explanation is in order.

I would like to begin by saying that I am well aware that labor reform legislation is necessary to prevent the continuation of the racketeering and corruption brought to light by the McClellan committee hearings. However, it must be borne in mind that this condition exists in only a minority of the unions; the vast majority of unions, their leaders and members are, like most people, fine, upstanding, law-abiding citizens.

The House Committee on Education and Labor held extensive hearings on all pending labor reform bills and considered them for approximately 4 months. The bill finally reported by the committee, H.R. 8342, was the result of comprehensive consideration and was designed to do away with the evil practices of corruption, boycotting, hot-cargo handling, and blackmail picketing. It was also designed to protect the union members from being victimized by unscrupulous leaders and the general public from unscrupulous racketeers.

The Landrum-Griffin bills were introduced after the committee reported its bill and did not have the benefit of committee hearings and consideration. Although these bills were widely discussed and debated, I sincerely doubt that they were given sufficient consideration to secure a comprehensive understanding of their impact. Personally, I believe this is a punitive measure.

Passage of the Landrum bill was, I believe, a result of appeal to emotions, rather than logic and commonsense. These were my reasons for voting against this measure when it was offered as a substitute for the committee bill.

When the Landrum bill came up for final passage, I voted in favor of it, knowing that some labor reform legislation was needed and should be enacted. This bill will now go to conference to iron out the differences between the Senate- and House-passed versions. I hope a reasonable and sensible solution to the problem will be achieved which will result in a bill that is fair and just to the unions, union members, and the welfare of the Nation. Such a bill should not penalize the vast majority of unions and union members who are not guilty of illegal and reprehensible practices and, at the same time, should curb the evils pointed out by the Senate Rackets Committee.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Appendix

Greenville: Industry and Water

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, August 17, 1959

Mr. JOHNSON of Texas. Mr. President, a willingness to tackle and solve local problems at the local level is always commendable.

Citizens of Greenville, Tex., with courage and foresight, faced the problem of assuring an adequate supply of water for domestic and industrial use.

Through their elected city officials, citizens of Greenville successfully attacked the problem.

The story of this achievement is related in an editorial entitled "Greenville: Industry and Water," that appeared August 9, 1959, in the Greenville Herald-Banner. I ask unanimous consent, Mr. President, that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GREENVILLE: INDUSTRY AND WATER

Economic and marketing experts have joined the industrial forecasters in proclaiming that water supply and availability are great factors and will become even greater factors in industrial development during the next few years.

In the race for industry, Greenville need not take a back seat to any community when water flows into the picture.

Thanks to the foresight of Greenville city councils who have served in the past and the men now serving, this community will be able to boast of a supply of upward of 30 million gallons daily and can point now to storage of almost 2 billion gallons in reservoirs today. That's beacoup water.

Greenville is to build soon an intake structure at Lake Tawakoni (formerly known as Iron Bridge Reservoir). It has an agreement whereby we have first call on up to 21 millions of gallons daily once the gaping hole that will be the reservoir takes on water. While the cost to build a line from the reservoir site to Greenville will run between $1½ and $2 million, the future industrial development it promises makes the amount somewhat significant.

Industry is already looking at Greenville and the eye they turn toward this community becomes increasingly favorable. Some will be users of tremendous amounts of water. Others are looking for water, location, highway and rail facilities. Greenville has all of these and additional assets not on the list of many communities.

But competition for major industries and industry of any substantial size and payroll is intense. That means that community attitude and desire again rears two heads and Greenville has the right attitude and an intense desire to grow.

While the city administration is currently engaged in a money saving and an efficiency program at some levels, only an idiot would begin to harbor the illusion that Greenville can meet the needs of expansion demanded by the future with a pinchpenny budget and a pennywise, pound-foolish attitude. Progress does cost money, and we can only say it is to the credit of Greenville to save money being spent foolishly or without return and direct it into channels that will return dividends. Growth dividends to include new industry, more families and payrolls. More good, solid citizens and improved facilities and services.

The United Nations and a Bold Suggestion for the Use of Surplus Food Commodities for Economic and Social Development

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, August 17, 1959

Mr. IRWIN. Mr. Speaker, much has been written of late concerning an international food for peace plan and I would like to call the attention of Congress to a bold yet practical suggestion advanced on this subject by Mr. Glen Leet, program director for the Save the Children Federation, with offices in Norwalk, Conn., and New York City.

Recently, Mr. Leet testified in behalf of a suggestion that the United Nations should assume a role of great importance with respect to the use of commodities in ways which will hold many millions of people at a minimum standard of living and some marginal level of productivity.

Under leave to extend my remarks, I woud like to introduce into the CONGRESSIONAL RECORD the following excerpts from Mr. Leet's testimony in support of his suggestion:

Through the U.N. there can be accomplished the international discussion of the problems, principles, and methods which are involved. There can be multilateral discussions and hearings in which all nations will have an opportunity to study and discuss the plans brought forward by individual countries. The outcome to a contributing country is that they would have assurance that the plans to which they contributed were those based on a thoroughgoing study, that there would be plans that have survived in an international discussion and plans in which any objections from other countries could have already been taken into consideration. The U.N. is in a unique position to exercise a role of value both to the surplus-producing countries and to those which can utilize such surpluses in their development programs. It can—

(a) Provide a forum for the formulation of internationally accepted and generally applicable policies;

(b) Provide a center for receiving applications;

(c) Refer applications to appropriate U.N. agencies for technical appraisal;

(d) Hold hearings enabling interested governments to express themselves on specific proposals;

(e) Transmit to the executing governments internationally approved courses of action, with respect both to commodities and to the use of local currencies derived therefrom, and with indications of available relevant U.N. technical services for economic and social development.

The provision of such international facilities is a very great service to any nation concerned with the constructive use of surplus commodities. Actions taken by such a process, by either donor or recipient countries, will be much less subject to suspicion and distrust. They would remove much of the criticism directed against the contributing country when such arrangements are made on a bilateral basis.

The U.N. should not become involved in the complexities of receiving, storing, and transporting, or in any way physically handling or paying for the handling of such surpluses. Surplus-producing countries already have facilities for this which should not be duplicated.

MAJOR RESPONSIBILITIES

The creation of any new agencies is undesirable. The existing facilities should be used. Within the U.N. framework the major responsibilities should be with those instrumentalities of the U.N. which are primarily concerned with economic and social development. The major concerns are hunger and the need of the underdeveloped areas to eliminate the causes of underprivilege through development.

The major responsibility should not be delegated to FAO because its chief concern is not with economic and social development. The problem will not be solved if the central focus is on agricultural commodities. It can be effectively solved only if surpluses are considered as but one of the resources to be utilized in a comprehensive approach to development.

The use of commodities for development is sound only as a supplement to general development programs reinforced with adequate technical services. Therefore, surpluses cannot be considered as a substitute for member country contributions to the U.N. Special Fund, the expanded program of technical assistance or to the specialized agencies.

It is desirable that local currencies resulting from the sale of such commodities should be made available for economic and social development purposes and for technical assistance services provided by the U.N., the U.N. Special Fund, or the U.N. specialized agencies. Such local currencies should be available to the U.N. in addition to and not as a substitute for normal commitments.

An unprecedented opportunity presents itself at this time for utilization of U.N. facilities in a way which can greatly magnify the effectiveness of the U.N. and the U.N. Special Fund.

Parallel Between Highway Bridges at Mackinac Strait and Columbia River

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, August 17, 1959

Mr. NEUBERGER. Mr. President, a great discussion prevails in the Pacific Northwest over whether or not to construct a $27 million bridge across the mouth of the mighty Columbia River between Astoria, Oreg., and Megler, Wash.

My own State of Oregon has taken the lead in authorizing bonds to help finance this huge structure on U.S. 101, the Pacific coast highway, but thus far our sister State of Washington has been reluctant to do likewise.

As a member of the Roads and Highways Subcommittee of the U.S. Senate, I have tried to do my best to encourage construction of the great structure because I believe it would do wonders for our seacoast economy in the region. Proof now is demonstrated of this belief, in the economic gains brought to Michigan's Upper Peninsula by the $99,800,000 bridge recently opened across Mackinac Strait.

An illuminating article in the New York Times for August 16, 1959, has described how the Mackinac Bridge attracted 1,390,390 automobiles during its first partial year of operation as contrasted with only 938,282 cars in the last year that ferry boats served the area. Furthermore, the Mackinac Bridge Authority is encountering no difficulty in meeting interest charges and all the necessary operating costs.

Because of the parallel with the proposed Astoria bridge across the mouth of the great Columbia River, Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, the New York Times article entitled "Mackinac Bridge Spurs Economy."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MACKINAC BRIDGE SPURS ECONOMY—TRAFFIC RUNNING 11 PERCENT BEHIND 1958, BUT BUSINESS ON PENINSULA IS BOOMING

ST. IGNACE, MICH., August 15.—In its first 25 months Michigan's Mackinac Bridge has operated in the black, pumped new life into the economy of the upper peninsula and established itself as the State's No. 1 tourist attraction.

Despite an almost universal feeling in Michigan's northland that the 5-mile-long steel span over the Mackinac Strait has brought a new era of tourism, it must be noted that bridge traffic this summer is running about 11 percent behind that of a year ago.

But the traffic is about 50 percent greater than that carried by State ferries that formerly provided the only access to the upper peninsula from lower Michigan.

This means that several hundred thousands more tourists are pouring into the small upper peninsula communities amid the green forests, hundreds of lakes and trout streams and areas connected by generally good highways.

ROOMS HARD TO GET

Responding to this relatively sudden influx, businessmen have built numerous new motels, restaurants, gift shops, and tourist attractions. But in this northern terminus of the bridge, motel rooms are still hard to get and visitors often have to stand in line while waiting for a table in restaurants.

"I can fill my 40 units by 11 a.m. every day," said one St. Ignace motel operator, who refuses to hold reservations for late afternoon arrivals.

At Ste. Paul Marie, a chamber of commerce official commented, "Oh, brother, if you wait until 6 p.m. to get a motel room, you're in trouble."

W. Stewart Woodfill, chairman of the Mackinac Island State Park Commission and owner of the Grand Hotel, a showplace on the island, estimates that the number of persons visiting the island has increased about 35 percent since the bridge was opened.

MANY TOURISTS DRIVE

Steamboats for that scenic spot leave from Mackinaw City, at the southern terminus of the bridge, or from this city at the northern terminus. But many tourists drive northward across the bridge—with an auto toll of $3.25—and take a trip to the island from St. Ignace before going elsewhere on the upper peninsula. A ferry line is operating this year also, providing a tremendously increased capacity for island travelers.

In July the Mackinac Bridge Authority grossed nearly a million dollars in tolls and showed signs of catching up with last year's traffic, according to Prentiss M. Brown, chairman of the authority.

The traffic total in July was 273,558 vehicles and revenues were $987,336. By comparison, traffic in July, 1958, the first month after the bridge's dedication, was 307,838 vehicles and revenues were $1,082,885. The bridge was opened in November 1957, but was not dedicated formally until the following June.

In 1958, the first full calendar year of the bridge's operation, traffic totaled 1,390,390 cars and brought in revenue of $5,132,958. This compared with traffic of 938,283 and revenues of $3,664,047 for 1957, including 10 months of ferry operation and 2 months of bridge traffic and revenue.

Engineering studies prior to the bridge's construction estimated that traffic during the first year would reach about 1,850,000. Although this forecast proved too optimistic, the authority is having no trouble meeting its interest charges and operating costs.

Interest on the bonds for the $99,800,000 bridge amounts to $4,242,000 annually. This includes $79,800,000 in 4 percent bonds and $20 million in 5¼ percent bonds. Operational costs are budgeted at $600,000 but $417,000 of this total is paid by the Michigan State Highway Department.

OUTLOOK IS GOOD

Last year the authority spent $588,000 in operating the bridge and thus had to pay $171,000 above what the highway department provided.

Interest charges and operating expenses of the authority totaled $4,413,000, nearly $720,000 less than incoming revenue.

Lawrence A. Rubin, executive secretary of the bridge authority, is optimistic about the future. He thinks the original traffic bulge resulting from curiosity is decreasing and normal tourist traffic is increasing.

"I can't see anything ahead that would jeopardize our financial position," he said. "Our traffic should grow as new recreational facilities and tourist attractions are developed."

Lyndon Johnson Reviews Sound Spending Policies of Democratic Congress

EXTENSION OF REMARKS
OF
HON. JACK BROOKS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 17, 1959

Mr. BROOKS of Texas. Mr. Speaker, in the face of unwarranted charges of wasteful spending by the Democratic Congresses which have served during the present administration, the Senate majority leader has helped give the American people the true facts about fiscal responsibility.

Senate Majority Leader LYNDON JOHNSON has forcefully outlined that during the last 5 fiscal years Congress has reduced the President's budget requests by more than $10 billion. It is estimated that the House and Senate will add substantial savings to that figure for fiscal year 1960.

Senator JOHNSON has also reminded the American people that the Democratic Congress has not approved one single dollar's spending by any backdoor procedure that the President himself did not request or approve.

Commending the Senate majority leader for setting the record straight, the Beaumont (Tex.) Enterprise has reviewed Senator JOHNSON's statements for the past few years regarding the national budget. Under leave to extend my remarks, I submit this editorial of August 11, 1959, in today's RECORD so that every Member of the House and Senate may have an opportunity to review this constructive record compiled by our Democratic leadership:

CONGRESS AND THE SPENDING RECORD

Senate Majority Leader LYNDON B. JOHNSON is increasingly resentful of having the Democrats labeled the party of spending, a common practice of the Republicans these days.

It must also make him unhappy to have the same accusing finger pointed at him as an individual. He is convinced that, in both instances, some of the GOP backers of President Eisenhower's budget-balancing campaign are engaging in talk that cannot be justified at all.

Furthermore, the Texan is jealous of the good name of Congress, a commendable attitude, and it irks him no end to have the executive branch laying so much blame for the country's financial difficulties at the door of the National Legislature.

Senator JOHNSON said months ago that more than $10 billion were whittled by Congress from budget recommendations in the last 5 fiscal years. And he has cited both figures and personal remarks that give convincing support.

Here are some CONGRESSIONAL RECORD reports of budget statements made by the Texas lawmaker back in 1957:

March 8: After indicating that a survey made in Texas favored a reduction in the budget, Senator JOHNSON said his efforts would be directed toward that end.

May 1: Senator JOHNSON pointed out the inconsistency in statements made by members of the executive branch; some responsible Cabinet officers recommending that the budget be cut, but when cuts were made in the House, asking the Senate to restore them. He further said he was going to vote his convictions and not vote for any grant that could not be fully justified.

May 8: In commenting on the budget Senator JOHNSON said, "We cannot cut the budget without cutting spending, and we cannot adopt one course in January and another course in May."

July 11: Senator JOHNSON, in discussing the battle of the budget, provided figures which indicate reductions approaching $4 billion—or 6.4 percent—from the President's budget that was submitted to us in January.

Following are some CONGRESSIONAL RECORD reports of budget statements by the Senate majority leader in 1959:

January 20: Senator JOHNSON, in referring to the President's budget message, stated: "This is not a balanced budget. It is a propaganda budget. * * * This budget would spend substantially more than current income. * * * Both prudence and candor require that this budget be given a most searching study by the Congress."

February 5: Senator JOHNSON said: "I am going to work as diligently as I can, as leader of the majority, as a member of the Appropriations Committee, to get the budget in balance."

February 9: Senator JOHNSON stated: "I ask unanimous consent to have printed in the RECORD at the conclusion of my remarks a summary of the President's budget estimates and the appropriations of the Congress * * * showing that the Congress has reduced the budget estimate in each one of the last 6 years. The total appropriation was $22.6 billion less than the Congress was asked to appropriate."

February 9: Senator JOHNSON said: "I do not think that either party should be labeled as the party of the savers or the party of the spenders, but the record does show that the Congress as an institution has been much more saving in its appropriations than the Executive has been in its requests for appropriations."

February 16: Senator JOHNSON stated he felt that a distorted picture was being presented of one branch wanting to hold the line on spending—and the other branch wanting to spend. He pointed out the President has asked for increases in budget estimates—such as 26 percent for foreign aid, 80 percent for OCDM, and many others.

May 26: Senator JOHNSON, following final action on the Treasury-Post Office appropriation bill for 1960, stated: "The Committee on Appropriations has made many reductions, in fact the committee has taken such action each year since the President assumed office. The President of the United States, good, kindly, economical man that he is, has never submitted to Congress a budget which Congress has not reduced."

June 9: Senator JOHNSON assured Senator BUSH that, "It is not a new-found desire of the majority leader to stay within the budget. The majority leader stated last fall that he hoped we could stay within the budget. * * * I have stated on the floor of the Senate and in public meetings all over the country that I hoped this Congress would appropriate less money than the President asked the Congress to appropriate."

June 16: Senator JOHNSON inserted in the RECORD his newsletter, dated February 10, 1959, in which he had recounted over a $10 billion budget cut by Congress during the last 5 fiscal years. The newsletter promised that: "The Senate this year will take the same hard look at the budget recommendations."

July 9: Senator JOHNSON, during a discussion of the housing veto, stated: "Let me say a word about the appropriations bills. * * * In some cases, as I stated last fall when I met with the President, I believe the Congress will actually vote appropriations less than those the President recommended. That prediction has been borne out by the appropriation bills passed thus far."

The majority leader is still convinced that this session of Congress will appropriate less money than requested by the President, since it has been done in the past without jeopardizing national security and without illogical spite work.

Domestic Surplus Property Donations for Education, Health, and Civil Defense

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. McCORMACK. Mr. Speaker, under leave to revise and extend my remarks, I am placing in the CONGRESSIONAL RECORD a recent press release of Secretary Flemming of the Department of Health, Education, and Welfare which indicates that personal property in the amount of $126,822,683. Acquisition cost, was made available to the States for purposes of education, health, and civil defense during the period April 1 through June 30, 1959. During the same period real property in the amount of $3,211,895 was donated for these purposes.

This is the largest quarterly program we have had and indicates better organization at all levels and the continued declaration of surplus property by the military agencies. It is to be noted that the State of New York had the highest total of $16,065,988 for the quarter and this, with the overall increase in volume, bespeaks the added impetus given to the program by my colleagues on the Special Subcommittee on Donable Property, the gentleman from New York [Mr. BARRY], and the gentleman from Connecticut [Mr. MONAGAN].

Mr. Speaker, though the domestic donable surplus property program is large, with allocations of $361 million for the entire fiscal year 1959, it should be larger. Our eligible institutions need much more property which is being sold at small return to the taxpayer.

Unfortunately, we have not yet developed a program to utilize excess overseas property for purposes of education and health. It is expected that the volume of this excess property will amount to $1.4 billion acquisition cost in the current fiscal year.

The release of Secretary Flemming follows:

Surplus property for which the Federal Government paid $130,034,578 was made available to the States for educational, public health, and civil defense purposes during April, May, and June 1959, by the Department of Health, Education, and Welfare.

Real property accounted for $3,211,895 and personal property for $126,822,683.

Secretary Arthur S. Flemming announced the totals in making his quarterly report to Congress on the Department's surplus property program.

Property no longer needed by the Federal Government is distributed, under the provisions of the Federal Property and Administrative Services Act of 1949, to educational and public health agencies and civil defense organizations of State and local governments, and to eligible nonprofit health and educational institutions exempt from Federal taxes. Regional offices of the Department of Health, Education, and Welfare and various State agencies channel the surplus property to the institutions.

Property transferred to the States includes such items as school and hospital building sites; buildings suitable for college dormitory or faculty housing; motor vehicles; hospital, school, and office furniture; hand and machine tools; motion picture projectors; laboratory equipment; and school and office supplies.

The following is a State-by-State list of real and personal property distributed, April–June 1959. State surplus property agencies can furnish details on the operation of the program within their States.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

Personal property made available for distribution to public health and educational institutions and civil defense organizations and real property disposed of to public health and educational institutions, Apr. 1 through June 30, 1959 (acquisition cost)

[In accordance with sec. 203(o), Public Law 152, 81st Cong., as amended]

States	Personal property	Real property	Total
Total	$126,822,683	$3,211,895	$130,034,578

Traffic Safety

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, August 17, 1959

Mr. JOHNSON of Texas. Mr. President, traffic safety is a matter of national interest and national concern.

With increased interest in this problem has come growing recognition of a new facet of highway travel. This is called turnpike driving.

The Abilene Reporter-News, in an editorial carried August 10, 1959, discussed this matter. I ask unanimous consent, in the interest of promoting safer driving, that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TURNPIKE DRIVING

As the new network of superhighways spreads (despite temporary slowdowns such as now threatens) all of us motorists around the country will need to change some driving habits, the safety experts tell us. We'll need to learn how to be turnpike drivers.

Here in the Abilene area we have more than the average number of miles of new roads already in use. As soon as the redtape is untangled, Highway Engineer Jake Roberts and his fellow workers will have our town astradle big Interstate 20.

Enough of Interstate 20 has been in use long enough for us to realize that you can't build a highway which will be accident-proof. Not as long as you let automobiles driven by human beings use it. You can divide the traffic lanes, control the access, make it wide and straight as you please, and still you'll have wrecks.

There's more to being a good turnpike driver than just fighting off monotony. For one thing, the superroad automatically steps up the average speed of the cars on it—legally, as in some cases; illegally in many others.

The students of safety point out that one of the commonest mistakes in driving on the turnpikes is in the technique of passing another car. In city traffic or in traffic on an old-style highway a driver usually has little choice but to pass from close behind another vehicle. You dart around when you can.

That tactic can be dangerous, even fatal, on a turnpike. At high speed, a motorist has no business being close on another's heels. Turnpikes are designed for lane traffic. If you swing out sharply from behind a car to pass it from a close position, you run the risk of suddenly blocking the path of a fast car coming up in the left-hand lane.

The main thing to remember in driving on a turnpike is that the average speed is faster and the smallest error can, therefore, be magnified almost instantly into a tremendous crash.

Alabama Department, American Legion, Supports Roberts Bill, H.R. 6671

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 17, 1959

Mr. ROBERTS. Mr. Speaker, on April 27 I introduced H.R. 6671, to amend title II of the Social Security Act to provide that the child of an insured individual, after attaining age 18, may receive child's insurance benefits until he attains age 22 if he is a student attending school.

This to me is sensible legislation which would greatly aid a number of young people and their families all over the country, and which would contribute to educational achievement.

I was delighted to learn that the Department of Alabama of the American Legion has adopted at its annual convention a resolution strongly approving this bill, and urging congressional approval.

Under leave to extend my remarks, I include this resolution:

RESOLUTION 5

Whereas there is pending before Congress a measure, H.R. 6671, to amend title II of the Social Security Act to provide that the child of an insured individual, after attaining the age of 18, may receive a child's insurance benefits until they attain the age of 22 if he is a student attending full-time school and making satisfactory grades; and

Whereas the youth of this Nation are the very backbone and most precious resource that God has given our country; and

Whereas the Legislature and Alabama Senate has passed a similar resolution: Therefore be it

Resolved, That the Alabama Department of the American Legion in its annual convention in Birmingham, Ala., meeting July 19 through 21, 1959, send letters over the signature of the department commander to our Congressmen and Senators in Washington, D.C., to endeavor to their fullest extent that H.R. 6671 be passed and that a copy of this resolution be mailed to each of of the Congressmen and Senators and the Honorable Speaker of the House of Representatives and the President of the Senate, the Honorable RICHARD NIXON.

This resolution was presented by Post No. 105, Goodwater, Ala., and adopted by the resolutions committee.

Statement by U.S. National Student Association

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Monday, August 17, 1959

Mr. KENNEDY. Mr. President, during the debate upon the bill introduced by Senator CLARK and myself, to repeal section 1001(f) of the National Defense Education Act, the question was asked whether the students themselves objected to the oath and affidavit requirements of this act. Since that debate, the U.S. National Student Association, which represents over 1,300,000 students, has adopted a resolution opposing the oath and affidavit requirements. The resolution expresses the hope that the Senate will see fit to reconsider the action by which it referred the bill to committee.

In order that the attitude of the representatives of American students should be called to the attention of this body, I ask unanimous consent that the statement made by the association be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

U.S. NATIONAL STUDENT ASSOCIATION STATEMENT CONCERNING SECTION 1001(f), NATIONAL DEFENSE EDUCATION ACT

The U.S. National Student Association, a confederation of over 390 student bodies and representing over 1,300,000 students, continually has supported efforts to strike from the National Defense Education Act section 1001(f) which requires students entering into the terms of the act to pledge an oath of allegiance and to file an affidavit disclaiming any membership in an allegedly subversive group or belief in allegedly subversive principles. The Senate's recent action in referring consideration of the desirability or necessity of section 1001(f) back to committee, rendering further Senate consideration of the section highly unlikely during the present session of Congress, is considered by USNSA as irresponsible and lacking in the fortitude expected of the U.S. Senate.

By its action, the Senate effectively rejected three viable, realistic alternatives to section 1001(f)—the proposals of Senators KENNEDY, MUNDT, and JAVITS; in doing so, it clearly dictated against the desires of students, student groups, educators, and educational groups, who have for months clearly indicated their distaste for and opposition to the section in question. The referral back to committee clearly ignores the fact that complete committee hearings have already been held and that these hearings indicated strong public support for the amendment of section 1001(f). The committee itself, in fact, voted 12 to 3 to recommend passage of Senator KENNEDY's proposal which would have stricken the section from the act. The Senate's decision, at best, indicates only the unwillingness of the Senate to face a fundamental question directly related to the freedom of the individual.

Because section 1001(f) apparently is meant to remain in the National Defense Education Act, it is safe to assume that a significant number of students, otherwise eligible under the terms of the act, will be dis-

criminated against, not because they are subversive, but because they are opposed in principle to the Federal Government requiring or restricting certain actions or beliefs vis-a-vis a disclaimer affidavit. Such a measure enacted on the part of the Government seems to the USNSA to be an example of employing totalitarian methods to oppose totalitarianism. Democracy, thus weakened, is a poor opponent of totalitarianism itself or of the processes of subversion.

USNSA's 12th National Student Congress, which meets at the University of Illinois during the last 2 weeks of August, will be asked to consider and bring its full weight against the Senate's action. USNSA hopes that the Senate will see fit to reconsider its action, to face the controversial section 1001(f) directly, and to revise it in the light of the fundamental principles of freedom and democracy.

Religious Education and Democracy

EXTENSION OF REMARKS
OF
HON. DALE ALFORD
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, August 17, 1959

Mr. ALFORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following outstanding address by the Reverend John L. Murphy:

RELIGIOUS EDUCATION AND DEMOCRACY

(Address delivered on the program "This Nation Under God," over WMAL radio station, Washington, D.C., Sunday, July 19, 1959, by Rev. John L. Murphy, S.T.D., department of religious education, associate editor, the American Ecclesiastical Review, the Catholic University of America, Washington, D.C.)

A number of years ago, the U.S. Supreme Court issued a judgment concerning the released time program. This proposal would permit children in public schools to take religious instruction elsewhere during school hours. Among other things, the decree contained this thought-provoking statement:

"We are a religious people whose institutions presuppose a Supreme Being. * * * When the state encourages religious instruction or cooperates with religious authorities by adjusting the schedule of public events to sectarian needs, it follows the best of our traditions. For it then respects the religious nature of our people and accommodates the public service to their spiritual needs.

"To hold that it may not, would be to find in the Constitution a requirement that the Government show a callous indifference to religious groups. That would be preferring those who believe in no religion over those who do believe. * * * We cannot read into the Bill of Rights such a philosophy of hostility to religion." (*Zorach* v. *Clauson*, Apr. 28, 1952.)

This statement of the Court was greeted as a welcome relief by those who have been terrified by the inroads of Godlessness into our national way of life. For many years, those who have been openly opposed to God and religion have been waging a battle against the foundations of faith, and they have, to a large extent, won the day.

America still faces the unsolved problem of the moral training of its young. On all sides we hear complaints that the younger generation is an unmanageable generation—it wallows in crime and delinquency, it has no ideals, no moral code, no standards. There is, granted, a good amount of exaggeration in these complaints, but they are not entirely untrue. Quite the contrary, they ought to be expected. As people become less and less interested in religious and moral standards, it only stands to reason that they will eventually give up that more acceptable manner of living that is supported by those standards. When the religious creed is cast aside, the moral code soon follows; when a man no longer believes in God, he eventually begins to act as if there were no God. And no other force has ever been able to replace the rejected Deity: not fear of punishment, dread of public opinion, nor even love of country. When the true God has been cast aside, no faint image can take His place.

There have been some solutions proposed toward alleviating these problems. Released time instruction has been one; the denominational school is another. It is interesting to consider the purpose of the religious school in American democracy. The question, we must note, is not, as some would phrase it, a question of "Catholic schools" and "public schools." While Catholic education looms larger than others in this regard, it does not stand alone. Other religious groups foster their own denominational schools, and—what is most important in the democratic way of life—they do so because of the same basic principles as the Catholic populace. They do so because they have within them, the deep, personal conviction that education and religion cannot be treated in separate spheres.

The problem is a far deeper one than many people might suspect. It is not simply a matter of "doing things in a certain way." Quite the contrary, we are faced here with a question concerning the basic interpretation of our American way of life. Beneath the outer layer of legal disputes or emotional disagreements, or even at times, of bigotry, we can put our finger on a gigantic struggle that is going on between two completely different ways of thinking.

Fundamentally, as far as the basic principles are concerned, the struggle is between religion and irreligion; a way of faith versus secularism; God versus no-god. It is an attack upon the beliefs of all those who believe in God, and see Him as an important element in the democratic way of life.

Traditionally, America has been a religious-minded people. This belief is something which pertains to the law of the land, reaching back to those scripture-like phrases of the Declaration of Independence: "We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness."

Creation and Creator are words of deep implication. They give evidence of a grasp of reality among our forefathers that penetrated to the very depths of their being, and became so much a part of them, that it overflowed into their labor of organizing a new nation upon this earth.

The denominational school, actually, exists as a living request that these religious ideals may not be cast aside. It is an alarming thing for the believer to realize that there are men and women in highly influential positions who believe that religion is not important, and that democracy can do very nicely without God.

He realizes, of course, that there are many people who chose to place God and religion in the same class with old wives' tales and savage superstitions. According to our democratic principles, they are entitled to such opinions. But the believer asks only that such an unwanted conclusion be not forced upon others who happen to disagree with it. The man of faith is thoroughly convinced that to separate religious tenets and American democracy is to be guilty of an error in fact. The American way of life took root in the heart of a Christian people; it was formulated in terms that reflect those Christian principles. It was not a case of a Christian people who just happened, as it were, to fashion the American form of democracy. The connection between their faith and their form of life is far more intimate; the two are intertwined.

This is why the believer fears this denial of religion, not only for the sake of religion, but for the sake of democracy as well. Can we hope that our democratic way of life will continue unhampered, if we throw aside this element of religious belief that was originally so basic a part of its groundwork? That is the precise question.

Those American Christians who support a denominational school do not do so because they feel that the public school system is bad. It is not, by any means. But what they do fear, is the conspiracy of silence that has been built up around the public school system—a conspiracy of silence concerning God. Some will speak of it as a religious neutrality, but it is far more. As some would interpret our laws, the public school system would not only be indifferent to the differences between various religious groups; it would be indifferent to God Himself.

In many respects, this can be seen in the pattern of many a modern university as it exists in some circles. The sacred name of God has almost become a dirty word. He must not be mentioned. There is really a double standard involved in this procedure. A teacher in a modern State-run university (or even high-school) may include anything whatsoever in his view of life; and under the shield of "academic freedom" he may teach it—provided, however, that what he sees does not include God. He may, it is true, teach the true worth of man and the democratic way of life, as far as he is able to without mentioning God. But he must work within this limitation.

On the other hand, he may also teach atheism, communism and free love, and find defenders for his stand. Should anyone object, he will cry out "academic freedom," and claim that he is being persecuted and unjustly deprived of his rights. But should the professor in the adjoining classroom see as an essential part of reality, the existence of God and the need of religion, he is forbidden to say so. The banner of academic freedom is run down, and that of separation of church and state unfurls in its place—spelling out, in reality, separation of state from God.

There are those, therefore, who would not ask that our schools be turned into pulpits; but they do ask if God might not be given an equal chance on the campus and in the classroom, if God might not have the right to be mentioned and defended along with free love and communism.

As it can happen in practice, an agnostic may complain if a teacher in a public school mentions God; he has embarrassed his child. But is there not an equal right for the believer? If a teacher ridicules God and religion (either in an open manner or indirectly), can the devout Christian or Jewish parent not complain? Indeed. American education will be in a sad state if one teacher may proclaim in the classroom that God is a myth and religion a fraud, and do so under the banner of "academic freedom," while if a teacher openly indicates that God does exist and is important, he will be stopped by these defenders of freedom, who will cry out that he has broken the law of separation of church and state.

These are the problems of the present age, the concerns of mothers and fathers, of teachers and ministers of religion, of all those who must look to the coming generation and its needs. As Dr. Edward McCrady, then president of the University of the South at Sewanee, Tenn.—an Episcopalian institu-

tion—remarked in 1955: "I ask no more for religion than I do for geography in the educational process; but I also ask for no less." This is the mind of many another in this field. In these days when such matters as personal hygiene and table manners are taught in schools, without the children ever hearing religion seriously considered there, they almost invariablye will get the impression that religion, as Dr. McCrady expressed it, "isn't important enough for the Government to bother to pay anyone to discuss it."

In such a situation, there is at least a tacit assumption that religion and God are unimportant or unreal. It is this that disturbs the man of faith. For him, religion is not simply a part of life, a hobby, as it were. It is an all-consuming truth. It is his answer to the problems of the age, to the question of low moral standards, of delinquency, of failure to respect authority. Religion is important to man, and it is important to American democracy. It was so from the beginning and has continued to be important for many centuries.

Precisely because his faith is this all-consuming truth, the believer realizes that it must come to influence the whole man and pervade his entire view of human life. And as such, it has an essential role to play in the educational system of a God-given democracy.

Milwaukee Mayor Zeidler Answers Chicago Pollution Charge

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, August 17, 1959

Mr. PROXMIRE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the reply of the mayor of Milwaukee, Frank Zeidler, to Chicago's pollution charges.

Their being no objection, the statement was ordered to be printed in the RECORD, as follows:

In response to charges by Chicago officials that Chicago should have the right to divert water from Lake Michigan because Milwaukee has a beach pollution problem—a nonsequitur argument, I have the following observations to make:

Milwaukee is not alone with a lake pollution problem. Chicago probably has its own lake pollution problem. I have seen a very dirty flotsam and jetsam off Navy pier after a heavy rain and had no difficulty in identifying materials in the grayish, cloudy water. The Chicago River pollutes the lake also at times.

As for the suggestion by the sanitary district officials that the sanitary district engineers visit the Milwaukee area, as far as I am concerned, they are welcome any time to come to the city hall to discuss with me their and our problems. I feel sure sewerage comission officials would welcome them also.

However, I would expect, in return, an opportunity to visit their plants and to have our experts tell them how to treat their sludge, how to meter their water, and how to stop much of their industrial pollution so that at least they reach our level of purification, which they do not now do. Perhaps the exchange of visits might be mutually helpful. In the interim Chicago officials should agree with us that they will not seek additional water diversion.

The Sanitary District of Chicago persists in its efforts to divert more water from Lake Michigan, thus aggravating the pollution problem of every other Great Lakes city which must return its effluent to the Lakes after purification.

It should be pointed out that the sanitary district (by its demand for diversion, is proposing to flush still greater quantities of untreated or partially treated sewerage down the Illinois River, thus avoiding a nuisance for itself by creating one for the helpless neighbors down the river. They are making the downstream situation continually worse.

Milwaukee, it must be emphasized, has achieved the highest degree of purification possible under existing technology, and we recognize a water pollution problem exists; however, this is no justification for any community on the lakes demanding that it can therefore lower lake levels. Milwaukee will solve its problem without lowering lake levels and it is reasonable to expect Chicago to try to do the same.

Alabama Legislature Commends Congress on Farm Acreage Bill

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 17, 1959

Mr. ROBERTS. Mr. Speaker, the Legislature of Alabama has gone on record as wholeheartedly endorsing the action of this House in passing H.R. 7740, the cotton acreage allotment bill.

Having strongly supported this legislation, I am pleased to call to the attention of the Members this resolution:

HOUSE JOINT RESOLUTION 29

By Messrs. Gilchrist, Solomon, Branyon, Harvey, Johnson (J. T. Tom), Oakley, Adams (Tallapoosa), Gilmer, Lee and Nichols.

Whereas House Resolution 7740, a Federal measure of vital concern to southern cotton farmers, has now been passed by the Congress of the United States; and

Whereas the provisions of House Resolution 7740 were recommended and endorsed by the Alabama Legislative Cotton Study Committee and many farmers, ginners, processors, and others, and is considered by them the most important piece of legislation introduced to remedy the grossly inequitable system of transferring cotton allotment acreage away from the South, the traditional cotton-growing area, to the new cotton-growing areas of the far war; and

Whereas the Members of Alabama's congressional delegation have worked diligently, unceasingly, and tirelessly to secure the passage of this measure by the Congress: Now, therefore, be it

Resolved by the Legislature of Alabama, the Senate and House of Representatives jointly concurring, That we hereby express our grateful appreciation to the individuals composing Alabama's congressional delegation for their herculean and tenacious efforts, and congratulate them heartily on their momentous contribution to the welfare of the cotton farmers of the South.

Resolved further, That we extend special thanks to the press of Alabama, to the publishers of the Progressive Farmer, and to the many farmers, ginners, processors, and others who promoted and supported this important Federal legislation.

Resolved also, That duly attested copies of this resolution be sent to the Members of Alabama's congressional delegation, and that copies be released forthwith to the press.

Adopted by the house of representatives August 7, 1959.

Concurred in and adopted by the senate August 11, 1959.

Approved by the Governor August 12, 1959.

Soil Conservation

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, August 17, 1959

Mr. JOHNSON of Texas. Mr. President, the importance of soil conservation is widely recognized.

The Gilmer (Tex.) Mirror on August 6, 1959, carried a story relating the work of a soil conservationist, John Tolbert, who is now engaged with other scientists in a statewide project mapping the soils of Texas.

Because of the significance of this work in conserving our natural resources, I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HE'S MAPPING WIDE AREA—SCIENTIST STATIONED HERE SAMPLES SOIL

A soil scientist is now stationed in Gilmer and is serving Upshur County and six surrounding counties.

The soil scientist, John Tolbert, 23, came here from the Northeast Texas area headquarters office in Mount Pleasant. He is currently working on a statewide project to block-mapped Texas soils and to convert the process of survey to the standard soil survey map.

A more detailed survey than the soil conservation method, the standard soil survey gives each type soil a name and detailed description, Tolbert explained. It's a soil inventory.

Of some 14 counties in the northeast Texas area. Gregg and Upshur's are the only counties that have not been converted to the standard soil survey, Tolbert said. However, he added, these two counties are expected to be converted sometime during the fall. Only six counties in the State have been completely converted.

A soil scientist's study of soil begins with the use of aerial photographs.

Then with samples of earth from selected spots he then determines the type of soil by measuring the texture and permeability, slope of the ground, and the amount of erosion, Tolbert explained.

A soil scientist works in cooperation with the work unit in each district, which in Upshur County is the Sabine River-Cypress Creek Soil Conservation District personnel. With information provided by soil scientists, the work units make recommendations to landowners for the best type of grass or legume for a particular type soil. Or if the land would grow trees better, that is suggested, Tolbert added.

This service, he said, is available for any farmer who is interested in and seeks help in improving his farm either by building ponds, sowing cover crops, or planting trees.

Of further aid to the farmer and rancher will be published reports containing detailed descriptions and characteristics of each type soil in the area with a complete coverage of the area in block maps.

Also containing lists of adaptable crops, recommended fertilizers, and expected yields, these reports will be available at the same time that the area adopts the standard soil survey. Tolbert commented.

There are two other soil scientists in the northeast Texas area—one at Clarksville serving the northern section, and another at Mount Pleasant serving the central counties. Besides Upshur, Tolbert's southern area includes Marion, Gregg, Smith, Wood, Rains, and part of Van Zandt Counties.

Prior to Tolbert's coming here, Upshur County was always served by soil scientists stationed in neighboring towns. Bill Walters, who is now area soil scientist in Gainsville, served this area from Tyler until January of this year.

Tolbert began work with the Mount Pleasant office in 1957 immediately after graduation from Texas Tech with a major in agronomy, a study of crops and soils and their relationship one to another. He is orginally from Sherman and attended Tarleton State College in Stephenville for 2 years.

Tolbert assumed duties in the Gilmer office in early May. He and his wife moved here July 25 and are living in the Ira Gunn garage apartment on the Pritchett Highway.

Another Tirade Against TVA Answered

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 11, 1959

Mr. EVINS. Mr. Speaker, we are all aware of the strong feeling of our colleague from Iowa [Mr. JENSEN] on the TVA. I am sure we all respect his right to hold and express his opinions on this and any other subject. But, Mr. Speaker, in his most recent expression under the heading "Khrushchev Would Feel at Home at TVA" appearing in the Appendix of the RECORD August 10 last, the gentleman from Iowa makes certain implications which as a Representative of the people of Tennessee, I cannot overlook and leave unanswered.

The people of Tennessee yield to no one in their devotion to the fundamental principles of our country and in their abhorrence of communism.

The people of Tennessee are patriots to the core. In fact, Tennessee has won the nickname of the "Volunteer State" because her sons have volunteered in such great numbers in all our wars to preserve our Nation and the principles for which it stands. Mr. Speaker, the people of Tennessee are notable for their rugged individualism and their devotion to liberty, freedom, democracy, and our great American way of life.

Tennessee is the Nation's most enchanting State. With TVA and our industries and agriculture we are building a sound economy and a high standard of living.

We are proud of our history, our traditions of the past—and we are proud of our present-day progress and our contributions to the future.

The implication in Mr. JENSEN's statement that the people of the TVA area are accepting and living with a Communist institution in our midst impugns both the patriotism and the intelligence of our people, not only of Tennessee, but also of the other States served by the TVA and even their Representatives in the Congress. Therefore, in answer I denounce the implications of the statement placed in the RECORD by the gentleman from Iowa on August 10, last.

The people of our country, through their Congress, established the TVA some 25 years ago. Recently the Congress has voted by decisive majorities to continue this great institution in the service of our Nation.

Two years ago the Senate voted 61 to 20 to continue the TVA by providing a means for self-financing its power operations.

This year the Senate voted again in favor of TVA by a vote of 73 to 17. During this session the House voted for the TVA on two occasions by margins of 245 to 170 and 242 to 167.

A few days ago the President signed into law the new self-financing bill approved by the Congress. Thus, the people of this Nation have repeatedly endorsed the TVA over the years and, on recent occasions, in spite of Mr. JENSEN's opposition.

This victory was won in spite of the opposition of the gentleman from Iowa [Mr. JENSEN]—and in fact his prediction that the bill would never become law. It is the law of the land today.

Mr. Speaker, I am sure that every one of those who voted in favor of the TVA bill and the President as well, in approving the measure, will resent strongly the implication that his vote and participation indicates any acceptance of any Communist ideas, as Mr. JENSEN would imply.

Mr. Speaker, I have my own reservations about Mr. Khrushchev's visit to our country. Personally, I do not think Mr. Khruschev should have been invited to the United States. I see no reason why we should roll out the red carpet to those who have denounced our way of life and have dedicated themselves to the overthrow of democracy and our way of life. However, Mr. Khrushchev has been invited to become a guest of our country and should the President and the State Department include a visit to Tennessee in his itinerary, I will say to my colleague from Iowa that our people will proudly show the TVA to him—the world's greatest example of water resource development—where floods have been harnessed, navigation and commerce promoted and where great hydroelectric power dams produce low cost electricity for sale to the people and for the defense of our country. The TVA is one of the greatest showcases in America of democracy in action. Thousands of interested visitors annually come to visit and see this great system of rivers harnessed for the benefit of all the people of our Nation.

The TVA is not all that the people of Tennessee can show Mr. Khrushchev. We could proudly show him the great atomic energy plant where the atom was harnessed and where atomic energy was developed and the atomic bomb produced—the bomb that ended the war and saved the lives of millions of our own soldiers and those of our allies.

We could show him our great industries, farms and factories.

We could proudly show him our great educational institutions—the University of Tennessee, Vanderbilt University and a score of other great public and private colleges.

We could show him our great religious institutions—for ours is a State where religious freedom abounds to the fullest.

In Tennessee we could show him the homes and shrines of three great Presidents of the United States—Andrew Jackson, Andrew Johnson, and James K. Polk.

We could show him the mountains and hills and valleys from which the Volunteers marched forth to King's Mountain with Sevier to New Orleans with the immortal Andrew Jackson, and from which the sons of Tennessee have marched to every war for which our country has fought for freedom—freedom for ourselves and others.

In short, if Mr. Khrushchev comes to Tennessee we could show him at every turn a State where freedom is as natural and necessary to the lives of our people as the very air they breathe. We could show him a land of God fearing people, and churches and homes where Christianity abounds and communism is abhorred.

Thus, the implication in Mr. JENSEN's statement that if he visited the TVA area Mr. Khrushchev would find a little communistic island in our country is one which I highly resent, not only as an individual, but as the representative of the people of Tennessee.

I should point out that a few years ago a group of Soviet Russian agricultural experts, headed by the Soviet Minister of Agriculture, Vladimar Matskevich, visited the State of Iowa to inspect the great farms of that State—Mr. JENSEN's State. I recall that these officials, guests of our Nation, were accorded every proper courtesy while visiting in Iowa; and knowing the natural courtesy and hospitality of the fine people of Iowa, I am sure that these Soviet visitors were made to feel at home as much as possible under the circumstances.

Reports in the press at the time stated how much the visitors from Soviet Russia were impressed with the farms of Iowa. It would be ridiculous for anyone to imply that this common interest in farming evidenced any common interest on the part of the people from Iowa for collectivized farming or any other communistic ideas; but no more ridiculous than the aspersion about TVA which Mr. JENSEN makes in his statement.

The controversy about the TVA is old and has been bitter at times. I would be the first to defend any member's right to express himself fully and completely

on this subject—whether he is for the TVA or against the TVA. Mr. JENSEN is a known extremist on this subject and we have respected his right to be extreme. But, Mr. Speaker, I submit that there are limits to intemperance on this or any other matter; and in this instance, the gentleman from Iowa, in my opinion, is exceeding those limits. In so doing he has not only impugned the good people of my State and the South, and the Members of this body, but has also done a disservice to the people of his own great State of Iowa—whose Governor recently publicly stated that the views of Mr. JENSEN did not represent the views of the people and citizens of Iowa. Tirades and extremism and attacks on our American institutions must be answered and stopped in the interest of preserving America.

Increasing Our Cultural Relations With Eastern Europe

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, August 17, 1959

Mr. HUMPHREY. Mr. President, the visit of Vice President NIXON to the Soviet Union and Poland and the announcement of the exchange of visits between Mr. Khrushchev and Mr. Eisenhower have created a new international climate in which anxiety and expectation are mingled. On balance I am convinced that the exchange of visits between the heads of state of the two chief adversaries in the world struggle will be a good thing. I believe Mr. NIXON'S visit to Poland has strengthened the ties between that country and our own. Recently I have proposed as an amendment to the Mutual Security Act the building of a children's hospital in Kraków with counterpart funds credited to Poland.

In our preoccupation with the increased tempo of interchange with Poland and the U.S.S.R., we may be in danger of overlooking the other countries of Eastern Europe such as Czechoslovakia and Hungary. On August 5, an editor in the Washington Post and Times Herald said that "this newspaper hopes that the [Nixon] visit to Warsaw will be the beginning of an American policy of paying more attention to the countries of Eastern Europe."

Mr. President, I think the time has come for use to explore the possibility of increased cultural and intellectual contacts with all eastern European countries. The opportunities for this are not, of course, so great as those in Poland, but I believe that an approach can and should be made.

A few days ago a proposal for strengthening American-Hungarian cultural relations came to my attention. It was written by Dr. Bernadotte E. Schmitt, professor emeritus of modern history of the University of Chicago. I think this modest proposal, which recommends donations of books from the United States to Hungarian libraries, the exchange of publications and eventually the exchange of scholarships between the two countries, is worthy of most serious consideration.

Mr. President, I ask unanimous consent to have Dr. Schmitt's proposal and the editorial from the August 5 Washington Post and Times Herald printed in the Appendix of the RECORD.

There being no objection, the proposal and editorial were ordered to be printed in the RECORD, as follows:

PROPOSAL FOR STRENGTHENING AMERICAN-HUNGARIAN CULTURAL RELATIONS

(By Bernadotte E. Schmitt)

In the last several years it became apparent that there is a deep feeling of need for a development of organized cultural relations on broader scale between the United States and Hungary. The encouraging success of the present American program in Poland suggests a similar approach in Hungary. Although the present Hungarian Government follows a different course from that of the Polish Government in relation to official contacts between the two countries, this does not preclude the possibility of a cultural approach with official Hungarian cooperation.

I submit the following proposal for the serious consideration of the U.S. Government.

I. BOOK DONATIONS

I propose that a selected group of Hungarian libraries should receive, as a gift of the United States, a well-balanced selection of American books and serial publications ranging in number from 500 to 2,000.

I would suggest that the Library of the Hungarian Academy of Sciences and the National Széchényi Library, both in Budapest, receive the largest contingent, perhaps 2,000 books each. The 14 university libraries should be given 1,200 to 1,500 titles and some 40 other important libraries, including the National Medical Library, the National Technical Library, the National Agricultural Library, and the National Pedagogical Library (established in 1958) should receive 500 selected titles.

The selection of these materials could be done by a small committee of scholars who know both American resources and Hungarian needs.

The following scholars have expressed their willingness to serve on such a committee if they are requested to do so:

Dr. Elemer Bako, Hungarian reference librarian, Library of Congress.

Prof. William Columbus Davis, department of history, George Washington University.

Dr. William Harlen Gilbert, Jr., anthropologist, legislative reference service, Library of Congress.

Prof. Wood Gray, department of history, George Washington University.

Mr. Edmund C. Rowan, director, Hungarian refugee scientist project, National Academy of Science.

This book donation proposal was prompted by increasing evidence of interest in American culture, literature, history, and the American way of life in general, on the part of Hungarian scholars, librarians, etc. The Hungarian events in 1956 produced considerable educational reform in the country. English language and literature are being taught again in Hungarian universities which unfortunately do not have the necessary books for teaching and research purposes, much less the financial means to purchase valuable and well-balanced collections.

II. EXCHANGE OF PUBLICATIONS

Exchange of current publications and retrospective materials between American and Hungarian institutions (academies, universities, research institutions, funds, societies, etc.) should be encouraged and channeled along the lines indicated in the book donation program.

The library of the Hungarian Academy of Sciences and several other libraries have already expressed their eagerness to develop such contacts, especially with American university libraries.

This type of voluntary and institutional contacts would be extremely fruitful in further strengthening of cultural ties, common research interests, personal and other bonds as envisioned by the "People to People" program. There is a general trend in Hungary to evaluate traditional historical ties between the United States and that country, and in a growing number of cases in an appreciative form. Cultural exchange contacts as described above would encourage and broaden this sort of trend in publishing and research activities in Hungary.

III. EXCHANGE SCHOLARSHIPS

Exchange scholarships of the same character and volume as provided under the foreign leadership program between this country and Finland could be extended for Hungarian scholars, and if possible, for graduate students and young researchers. (If we can accept Russian scholars and representatives of different fields of knowledge, art and interests in this country without endangering our internal and international security, we should express at least the same degree of recognition to representatives of the cultural life of a country which just recently proved how far its intellectual circles are from being taken in by Communist ideas.)

This part of the program could be developed through the National Academy of Science and other proper channels in this country which have a staff for administrating such programs.

IV. WELFARE AND CULTURAL ACTIVITIES

The possibility of a more comprehensive program of cultural exchange should be considered. In this area opportunities may soon present themselves for welfare programs and exchanges in the performing arts.

Perhaps American agricultural products could be sold to the Hungarian Government for local currency. This would provide at least a considerable part of the budget for financing modest programs of exchange and may open the door to further cultural and welfare activities.

MR. NIXON IN POLAND

In many ways it is too bad that Vice President NIXON'S visit to Warsaw has been overshadowed by the news of the Eisenhower-Khrushchev meetings. The tumultuous welcome Mr. NIXON received in Poland could not have been staged; it demonstrated the great reservoir of genuine good will for Americans among the Polish people. Mr. NIXON'S task has been an extremely delicate one: to replenish this reservoir without complicating the problems of Poland's precarious independence. In essence his job has been to convey American support but to avoid ostentation that could provoke a new Soviet squeeze on the limited freedoms under Polish communism.

That Mr. NIXON was the first high Western official to talk with Communist Party Leader Gomulka is in itself something of a feat. The Vice President did well to show special concern for Polish fears of a new war. Perhaps in private conversation he was able further to allay any apprehensions that the United States is promoting German

expansionism, and to encourage some sort of Polish understanding with West Germany. A quiet agreement between Warsaw and Bonn could do a great deal to relieve fears and help the solution of other problems.

This newspaper hopes that the visit to Warsaw will be the beginning to an American policy of paying more attention to the countries of Eastern Europe. Of all the Soviet-bloc countries Poland is by all odds the freest—Yugoslavia is no longer part of the Soviet bloc—and there are some extraordinary reasons for the position of the Warsaw regime. But the cause of more independence and freedom elsewhere would best be served in present circumstances, not by urging an overthrow of communism and return to the old social system, but by indicating that the United States thinks these countries important and does not believe that Moscow invariably speaks for them. To ignore them is merely to strengthen Mr. Khrushchev's hold.

Public Works Appropriations Bill of 1960 Rejects "No New Starts" Policy

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 11, 1959

Mr. EVINS. Mr. Speaker, we have passed and sent to the President the public works appropriation bill for the fiscal year 1960. In view of the continuing interest of Members of the House and others in the results of our action, I believe it is appropriate to point out further that in enacting this bill the Appropriations Committees of both Houses, and the Congress itself, did not accept the "no new starts" policy which was expressed in the budget presented by the Budget Bureau and the President. The action of the Congress in approving this bill evidences a rejection of the "no new starts" policy and a firm approval of a reasonable program of continuing construction of worthwhile and needed projects and studies of other future projects by both the Corps of Engineers and the Bureau of Reclamation of the Department of Interior.

It will be recalled that in submitting the public works budget the President and the Budget Bureau favored a policy of continuing the construction of projects already begun but of not undertaking any new starts or even the planning of new projects. The Appropriations Committee of this body disagreed with this policy and expressed itself in favor of carrying on the program of water resource development in an orderly and uninterrupted manner. The Subcommittee on Public Works Appropriations approved and recommended funds for 37 new construction starts and for the planning of 11 other projects. The House approved this recommendation in passing the bill.

The Senate added 30 additional starts and 33 new planning studies of other projects. The conferees compromised on 52 new starts and 30 planning studies. This decision by the conferees was accepted by both bodies in the passage of the public works appropriation bill for 1960.

It should be noted that the additional new starts and studies involve an added cost of less than $25 million over the budget as submitted to the Congress. So that, although the funds appropriated are close to the recommendation of the President, the policy underlying the use of the funds is quite different.

Apparently it is the philosophy of the Budget Bureau and the administration that the principal function of the public works program is to provide employment in poor times and that in good times we should stop or delay the development of the Nation's water resources.

In passing this appropriation bill, the Congress has refused to take such a narrow and limited view, and has, instead, looked upon our water resource development program as a positive program to develop the capabilities of our Nation for the continued growth and prosperity of the entire country. These programs are more than expenditures—they are investments in America. Our Nation must have a well-planned and continuing program of both construction and planning; in the long run this is more economical, practical, and represents sound policy.

Granting that in times of economic stress we can also use this program as an economic stimulant, it would nevertheless be foolish to restrict the surveying and planning of any new projects. Only with intelligent and deliberate planning can we make sure that we have on the shelf, as it were, well-thought-out projects that the Nation will need if an economice emergency should develop.

Therefore, in repudiating the no-new-starts policy, the Congress in my view acted wisely and with a forward-looking perspective, to provide for an orderly development of our resources at this time in step with the growth of our Nation.

Campaign of Postmaster General To Eliminate Obscene Material From the Mails

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Monday, August 17, 1959

Mr. CARLSON. Mr. President, the Postmaster General, the Honorable Arthur Summerfield, is conducting an intensive campaign for the elimination of smutty material from the mails. This campaign is of interest to every citizen concerned about the distribution of this material as it affects our youth.

Those of us who are familiar with the type of pornographic material that is sent through the mail share the views of the Postmaster General and urge him to intensify his campaign against this type of material. Our decent citizens are requesting it.

The Postmaster General has authority to open and inspect second-class, third-class, and fourth-class mail, but is prevented from opening and inspecting first-class mail.

There are indications that much of this material is being distributed through first-class mail.

I am hopeful that the Senate Post Office and Civil Service Committee and the Congress will take another look at the handling of this type of mail; and I also hope that we may be able to write additional legislation, if necessary, to eliminate it.

In a recent issue of the Christian Science Monitor there appeared an excellent article entitled "The 'Smut Campaign' Via the Mails," written by Josephine Ripley. I ask unanimous consent that the article be made a part of these remarks and be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE "SMUT CAMPAIGN" VIA THE MAILS
(By Josephine Rip'ey)

There has been public debate in recent weeks over whether Postmaster General Summerfield is riding a broomstick, or whether he is merely wielding it in the manner for which it was designed.

As the Postmaster General sees it, nothing but a "clean sweep" will rid the mails of an unprecedented flood of "obscene and pornographic materials."

The distribution of this material is a $500 million racket, he has warned. He is particularly alarmed because the racket is directed primarily at young people. From what the Post Office Department already knows of the operation, and from material confiscated, there is reason to believe some 1 million young people will be approached in this way during the coming year.

While the Postmaster General has been provided with a broom for keeping the mails clean, in the form of laws which make him responsible for preventing their misuse, he may use that broom only under certain conditions.

Some feel that the Post Office Department does not have sufficient authority to deal with the problem; others feel that the jurisdiction should rest wholly with the courts.

For while the Post Office Department is charged with keeping the mails free of obscene and indecent material, there is no clear-cut definition of these terms. The determination must lie with the individual responsible for making the ruling.

This first determination is made within the Department, by its lawyers, then by the examiners, and finally, after it has passed through various processes and hearings, by the "judicial officer."

At this point, if the publisher is still on the negative end of the decision, he may appeal to the courts. Congress passed its first antiobscenity law in 1873. Since then there have been various changes and amendments. Today it is a Federal crime to use the mails in interstate commerce to sell or distribute anything that is obscene, lewd, lascivious, filthy, or indecent.

This material, in general, takes the form of pictures, films, cartoons, or questionable magazines. It is generally transmitted by second-, third-, or fourth-class mail.

The Post Office Department has authority to inspect such classes of mail if there is reason to suspect it contains matter of this kind. It may also check mail of this type if

it suspects the content ineligible for the class in which it is dispatched.

But the Department has no authority, without obtaining a search warrant, to open first-class mail, even though it knows that letter-class mail is being used for transmitting obscene material.

In fact, the Department has evidence that the peddlers of indecent material to teenagers are actually distributing their wares by letter mail. The Postmaster General does not ask for censorship authority, but he is appealing to parents and teenagers themselves to report the receipt of such material to the postal authorities.

Although the Post Office Department has been much in the news in recent weeks over its ban on the D. H. Lawrence book (later reversed by a Federal court judge), it is rarely that the Department takes action on a novel.

In the first place, the Post Office Department does not have the personnel to review books. Moreover, books are not, generally speaking, transported by mail, at least in bulk. There are other and cheaper modes of transportation.

The Department had plenty of warning, however, in the case of the Lawrence novel. In fact, it was the publisher who sounded the warning—in loud tones.

Thus the Postmaster General was forced to either ban the book or, in effect, approve it. In any case, the publisher could hardly fail to gain from the publicity. And obviously did.

But what the Postmaster General would prefer to publicize is what he calls the "smut campaign" being conducted by means of the mails on a wholesale scale, and in a far more sinister way.

He is deeply disturbed about this, particularly since it is being aimed "more and more at the Nation's children—teenage boys and girls."

This Is What the People Want

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 17, 1959

Mrs. ST. GEORGE. Mr. Speaker, the following editorial appeared in the New York Herald Tribune of August 16, 1959. It is the best analysis of the vote on the Landrum-Griffin bill in the House of Representatives that I have seen, to date.

The House of Representatives is nearest to the people and more likely to reflect their true thinking. The people are not often roused, having many worries and responsibilities of their own that have nothing to do with government and politics. But, when they are truly aroused they speak with a mighty voice and this voice the House of Representatives heard and responded to.

Let us not forget that there are still 144 million of our population who do not belong to any labor union and their rights must be considered and protected.

[From the New York Herald Tribune, Aug. 16, 1959]

THIS IS WHAT THE PEOPLE WANT

The wave of public opinion which carried the Landrum-Griffin labor bill high and wide through the House last week is still at full crest. This is the central fact confronting a House-Senate conference which will shortly determine whether the country is to be granted genuine labor reform in 1959.

The victory won in the House on Thursday, and repeated overwhelmingly on Friday, means that the Nation as a whole will no longer tolerate the claims of certain shabby labor leaders and their unscrupulous cohorts to be above morality and the law. It was an extraordinary display of the popular will, led by the President and reflected by the Representatives. There is now no longer any doubt about the issues or the means of resolving them.

But the bill is not yet law. In April, the Senate passed a reform measure of its own under the sponsorship of Senator KENNEDY, and the two must be reconciled by conferees of both Houses. The Kennedy bill is much the weaker piece of legislation, compromised from the start by an attempt to avoid the disapproval of the unions. Although it took color at the last moment from the impaisoned efforts of Senator MCCLELLAN, it is a poor substitute for the Landrum-Griffin bill.

So there is still one more battle to fight. It has been suggested that the conference accept the House bill without further ado, but we dare not hope it will be as easy as that. The chief points of debate are likely to be the curbs the House has imposed on secondary boycotting and blackmail picketing, curbs which are anathema to Jimmy Hoffa but which would put a stop to some of the most blatant Teamster brigandage. The Kennedy bill is largely innocent of such restrictions. Where the bills do agree is the necessity for unions to disclose their financial affairs and the protection of union democracy.

These curbs on practice are the controversial provisions. The House conferees will support them in the spirit of their victory there. The Senators are expected to balk, but just how strongly and for how long? Senator KENNEDY, who will set the keynote for his colleagues, says that compromise will be difficult, but that it must be achieved. Otherwise, as he knows, there will be no labor legislation whatever this session. Is there a hint here that the Senator's antenme are also registering the shockwaves of public opinion?

Let us hope so. For this is Congress' great opportunity to set in order the house that labor cannot set in order for itself. And this reform is what the country demands.

Unemployment in State of West Virginia

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Monday, August 17, 1959

Mr. BYRD of West Virginia. Mr. President, on several previous occasions this year, I have inserted in the CONGRESSIONAL RECORD information to the effect that, while the national employment picture is brightening, the picture in my own State of West Virginia is not wholly one of rosy improvement.

As a further illustration of this unpleasant reality, there appeared on the front page of last Wednesday's Charleston Gazette two adjoining stories—one of them proclaiming that American employment in July was the highest in history, and the other pointing out that unemployment claims in West Virginia are rising.

In order that the Members of Congress may be reminded that our country still has depressed areas, and that the need for an area redevelopment program to deal with technological unemployment is still with us, I ask unanimous consent that the two items from the newspaper be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Charleston Gazette, Aug. 12, 1959]

U.S. JOB TOTAL HITS PEAK IN JULY

WASHINGTON.—More Americans had jobs in July than in any previous month. There were 67,594,000 employed.

The Government's monthly job survey showed 252,000 more employed than in June, which also was a record. There are 2,415,000 more jobs than a year ago.

Unemployment declined by 238,000 from June to 3,744,000 in July. This is a decline of 1,550,000 from July 1958.

Seymour Wolfbein, Deputy Assistant Secretary of Labor for Manpower, said in releasing the new data Tuesday that they showed a further and continuing improvement in the overall employment picture.

The seasonally adjusted ratio of workers idle, but seeking jobs, to the rest of the work force rose in July to 5.1 percent from 4.9 in June. The long-term unemployed—those idle 15 weeks or longer—dropped by 110,000 in July to 820,000. This is less than half the figure a year ago.

One sidelight to the new report is that unemployment among Negro workers is 11 percent, or more than double the 4.5 idle rate among white workers.

The July employment increase came despite a more than seasonal decline in farm employment attributed to bad crop weather in many areas—primarily in the South.

Farm employment declined by 406,000 to 6,825,000. But nonfarm employment reached a record 60,769,000, up 658,000 from June.

Many of the youngsters who flooded the labor market in June seeking temporary jobs during their summer vacation, found work in July. Unemployment in the 14-to-24-year age category dropped 364,000 over the month.

The factory workweek declined slightly to an average 40.4 hours. This is still more than an hour longer than a year ago and represents the longest July workweek since 1955.

UNEMPLOYMENT RISES IN STATE BY 5,006 CLAIMS

Unemployment in West Virginia is on the upswing with a total of 21,662 claims being filed under the State's unemployment compensation program, the Employment Security Department reported Tuesday.

The figure compares with 19,311 claims filed last week, compared with 3,431 for the report shows that 5,006 initial claims were filed last week, compared with 3,431 for the previous week. Continued claims equaled 16,656 for the week ended last Saturday, against 15,880 the week before.

A total of $538,095 was paid in unemployment compensation last week, leaving the cash balance at $37,756,997.

James L. E. Jappe

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, August 17, 1959

Mr. MINSHALL. Mr. Speaker, yesterday, Sunday, August 16, Mr. James L. E. Jappe of Cleveland, Ohio, died at

his summer home on Sheep Island in Rideau Lake, Ontario. He was 68 years old and one of the best known personalities in the State, as well as one of its most influential. Jimmy was an attorney, publicist, politician, and lobbyist extraordinaire. Among the many posts he filled in his lifetime were secretary to the Republican National Convention committees in Cleveland in 1924 and 1936, assistant secretary of the Republican National Committee, legislative representative in Columbus for the Cleveland Chamber of Commerce, the Cleveland and Ohio State Bar Associations, and many other State and local organizations. He was the friend and confidante of many Members of this Congress, and I cannot put into words the tremendous help and inspiration he has been to me. It is impossible to estimate the great personal loss his passing means to literally hundreds of people, and I know that every Member of this body who knew him will agree with the sentiments expressed in an editorial from the Cleveland Plain Dealer which follows:

[From the Cleveland Plain Dealer, Aug. 17, 1959]

JAMES L. E. JAPPE

Jimmy Jappe probably had more friends than any other man in our town. The first tenet of the creed he lived by was to help other people; he enjoyed doing it, and the people he did favors for became his lasting friends.

Jappe was also a natural born promoter, and whether he was promoting a Russian ballet at the old Euclid Avenue Opera House or a project to fill the Cleveland Stadium with the biggest baseball crowd ever assembled up to that time, he devoted his full energies to the task.

As a politician, Jappe operated behind the scenes. He helped manage national conventions of the Republican Party in Cleveland, Chicago, and Philadelphia. He was a friend of Presidents, Cabinet members, Senators, Congressmen, Governors, State legislators, councilmen and precinct committeemen, the latter category being the only political office which he ever held or to which he ever aspired.

Jappe had an intimate knowledge of Ohio politics and Ohio politicians, both Republican and Democratic. He was an effective and highly ethical lobbyist in Columbus and he was a close adviser of many a neophyte legislator who went on to achieve higher office and honors.

As a lobbyist, however, Jappe did not confine his efforts to matters in which his clients were interested. He helped to secure the enactment of many measures which he believed to be in the public interest. One of these was a project to recodify the Ohio laws. He originated it, secured legislative approval of it and became one of the members of the commission which carried it out.

His death is a loss to the city, the State, and the Nation.

Amendment of Transportation Act

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, August 17, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter, in the nature of a resolution, addressed to Mr. W. P. Kennedy, president, Brotherhood of Railroad Trainmen, Cleveland, Ohio, from the North Dakota legislative board, Brotherhood of Railroad Trainmen relating to their support of the so-called Case amendment to the Transportation Act.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

NORTH DAKOTA LEGISLATIVE BOARD,
BROTHERHOOD OF RAILROAD TRAINMEN,
Fargo, N. Dak., July 22, 1959.

Mr. W. P. KENNEDY,
President, Brotherhood of Railroad Trainmen, Cleveland, Ohio.

DEAR SIR AND BROTHER: Whereas the 1958 Transportation Act has resulted in the practical removal from the jurisdiction of the North Dakota State Public Service Commission of the authority to determine the need for railroad transportation within the State of North Dakota; and

Whereas it is the opinion of this committee that the application of said act has deprived the citizens of this State of much-needed transportation: Now, therefore, be it

Resolved, That this committee go on record as being in support of the Case amendment to said Transportation Act as one means of alleviating the impact of said act on the citizens and their requirements for railroad transportation of this State, and that this committee urge upon the two U.S. Senators and two U.S. Congressmen of the State of North Dakota that they support the Case amendment to said act.

Fraternally yours,
S. F. KALUZA, *Secretary.*
B. J. DELMORE, *Chairman.*
A. F. FORD,
State Legislative Representative.

Dancey in Russia

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 17, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks, I wish to included the 22d article of a series by Editor Charles L. Dancey appearing in the August 10 issue of the Peoria Journal Star:

FINDS BAKU HAS ORIENTAL FLAVOR

(By Charles L. Dancey)

BAKU.—Only 3 hours in the Big Russian jet from Stalingrad to Baku, following the Caspitan seacoast much of the way. Baku sticks out into the sea on a peninsula, and is cool and comfortable. No screens and no flies.

(Stalingrad was hot. About like Peoria this time of year. The only screens I've seen in the Soviet Union—and some flies.)

The camera is nix in Baku between the oilfields and the great harbor that backgrounds the whole city. Also, here were the most police I have seen anywhere, and they have always been plentiful. There is an average of three uniformed cops in every downtown city block.

There were approximately 50 MIG fighter planes on the big paved airstrip where we landed, besides commercial aircraft.

We drove to town through a fores of oil derricks and past miles of low homes built of soft limestone blocks. It looks like a Mexican countryside both in these dwellings and the parched ground.

The people are dark, with aquiline features—Arabic in appearance. The buildings of prominence, the furniture, the dress, everything seems to have an oriental flavor.

Here again, as on the boat, (indeed wherever I get away from a strictly tourist eating isolation) the Soviet "boilermaker" seems to be the most popular appetized at all meals. That is, everyone seems to launch his meal with 150 or 200 grams of vodka and a bottle or two of beer. This includes breakfast. I would guess that 150 grams would make about four shots. The book says 150 grams is 5 ounces and not infrequently they reorder when the food comes.

I also buzzed through the old city here—a veritable Casbah, with streets narrower than our snuggest downtown alleys winding every which way.

Here I managed to meet only two local citizens unofficially, both Azerbaijanese. They repeated over and over to be sure I understood that while they spoke Russian to me that they were not "Rooskee" but Azerbaijan.

I wished I could take one of these young men home, I would get rich. He is strikingly handsome, and also rugged and virile. A Gilbert Roland type only better looking, and a very mobile and expressive face with startling light green eyes flashing out of his dark face and very dark brows.

Here I attended the ballet—best entertainment I have seen. The setting was fabulous, the costuming splendid, and the dancing, of course, superb. The ballet was one enacting an old legend of Azerbaijan concerning a king who fell in love with a maiden who turned out to be the daughter of one of his many wives.

I was told that I would back-track here, flying to Tbilisi in the heart of the Caucasus Mountains, the capital city of Georgia, and the home city of Josef Djugashivili (alias Stalin). Also, that I would fly in a special plane carrying only me and a West German jazz band.

So, on to Tbilisi.

Rev. Ford Lewis, of First Unitarian Church, Portland, Oreg., Supports Mercy Fleet Proposal

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, August 17, 1959

Mr. NEUBERGER. Mr. President, I am pleased to be a cosponsor of the proposal for a Great White Fleet of hospital ships, which would take the wonders of modern healing to the backward nations of the world, where there prevails a shockingly high infant mortality rate and where millions are afflicted with congenital blindness and other tragic diseases.

Life magazine has advanced the suggestion that we take some of our hospital ships out of mothballs and send them across the seven seas with guardian angels of mercy aboard—namely, doctors and nurses and various medical technicians.

A most eloquent sermon in behalf of this proposal was preached at the First Unitarian Church of Portland, Oreg., in my home community, on August 2, 1959, by Dr. Ford Lewis, associate pastor of the First Unitarian Church. Dr. Lewis has emphasized in his message that few

legislative proposals would so circulate and translate into action the noble message of the New Testament.

I ask unanimous consent that the address in support of the Great White Fleet proposal by Dr. Ford Lewis, entitled "From Mothballs to Mercy Missions," be printed in the Appendix of the RECORD for the information of those of my colleagues who likewise are supporting this humanitarian idea.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FROM MOTHBALLS TO MERCY MISSIONS

(By Dr. Ford Lewis)

I

Perhaps no dream of the human race has been more persistent and widely cherished than the dream of universal peace. In spite of the fact that no generation since human history began has been without its quota of war, men continue to hope and believe that peace is possible. In spite of the fact that the nations of the world are now in a position to destroy more lives, more homes, more cities, and more civilization in one day than have been destroyed in the entire span of recorded history, we are bold enough to believe in peace as a practical ideal, and to work for it.

Only today our Vice President, who has been on an extended visit to Russia in the interests of peace, has left that land and started home. Representatives of the four most powerful nations in the world have been for several months engaged in discussions in Geneva, attempting to resolve the critical issues of the occupation of Berlin and German unification as well as pave the way for a summit conference to deal with all questions of war and peace.

The dream simply will not die—that the time will come when nations "shall beat their swords into plowshares, and their spears into pruning hooks: nations shall not lift up a sword against nation, neither shall they learn war any more." Not all the Bible, of course, points to peace. The early and more primitive parts of the Old Testament begin with a tribal war god leading his chosen people to bloody triumphs over their enemies. Over the centuries during which the Scriptures were compiled, the social vision broadened. The community of man was widened and made more inclusive. The idea of the brotherhood of man reached a high eminence in the writings of the Old Testament prophets and was recapitulated in the thought of Jesus and the New Testament apostles. Beginning with a god whose highest social vision was a tribal victory, the Bible ends with a God whose worshipers pray for a worldwide kingdom of righteousness and peace.

It was the persistent quest for peaceful coexistence that led during the medieval period in Europe to an arrangement called peace of God. Fighting was prohibited in churches and around all shrines and holy places. Noncombatant populations were protected. Persons who violated these prohibitions were anathematized. They were placed under an ecclesiastical curse involving excommunication from the church and damnation.

The truce of God was similarly enforced to assure peaceful weekends. It prohibited all fighting between Thursday evening and Monday morning. We may think this quaint and naive. Furthermore, when we reflect that one of the objectives of the church in enforcing these rules was to achieve a peaceful Europe in order to organize the Crusades, we may be inclined to discount the whole thing. Nevertheless, the search for peace will go on in our time with or without our cooperation, just as it has in the past.

II

In the 14th century, Dante proposed a world empire for the purpose of ending war. During the same century, Pierre Dubois put forth the idea of a permanent arbitration tribunal. History has vindicated the wisdom of this suggestion, but he was 500 years ahead of his time. In the early 17th century, Henry IV of France proposed a world confederation in the interests of peace. Toward the end of the 17th century, William Penn detailed a plan to establish an international federation between independent nations for the prevention of war. Meanwhile, Hugo Grotious laid the foundation for international law in his book, "The Law of War and Peace," written during the 30-Year War, one of the most destructive holocausts man has ever inflicted upon himself.

All the countries of the world have made their contribution to the effort for peace. Utilitarians and rationalists in England, encyclopediasts and physiocrats in France, and idealists in Germany have all worked toward this end. A half-dozen or so international peace congresses were organized in Europe during the 19th century. The history of the League of Nations, the Washington Disarmament Conference of 1921, the London Conference of 1930, the various peace pacts and pledges are well known. Altogether too well known, also, is the fact that in spite of these conscientious efforts to maintain peace, we are still trying to recover from our most recent and worst world war.

We should not be surprised, I suppose, that many persons are disillusioned. They think that a peaceful world society is a false and impossible goal. I have heard some religious fundamentalists quote the Bible to prove that wars will never cease. These people lack faith. They lack faith in themselves and the ideal of a peaceful world. There is no better evidence than this that they lack faith in God, the very God whom they purport to quote literally in support of the inevitability of war. If a man denies the possibility of achieving the highest human dream, he denies either the power or the love of God, or both. His thinking has not evolved with the Bible. He is left in the neolithic backwash of primitive tribalism in which God chooses among the nations and takes sides and supervises the slaughter of one nation by another. But the god they worship was outmoded 2,500 years ago when the Hebrew prophets elevated Yahweh above the nationalistic policies of the tribe and revealed God as a moral judge, a god of peace and justice and of all mankind.

Our question is not the academic one of whether peace is theoretically possible, but what can we do to make it probable? What can we do to advance the cause of peace? Can we do anything as "people to people"—to use the words of President Eisenhower? One specific proposal has been made which I think has great merit. Parenthetically, let it be said that specific proposals are the only kind that can be effective. Everyone is for peace in general. Everyone is against sin, but this is not enough. It was not enough when the "rich young ruler," as he is referred to compositely in the Gospels, came to Jesus to get an opinion on what he must do to share the good life to come. When Jesus proposed a specific course of action, "his countenance fell, and he went away sorrowful."

Again, when the inquiring lawyer asked "Who is my neighbor?" he was given a direct answer which involved certain concrete, if to him unpleasant, realities. He was told that his neighbor was a Samaritan, a good Samaritan, a member of a community with which the Jews had no dealings. We are left with the question of whether the lawyer's good will, which up to this point had been generalized, went to pieces on this particular ethic, or whether it survived the test of a concrete expression of neighborliness.

In any case, the lesson for us is that we must find real ways of putting our ideals into action. William Blake says: "He who would do good to another, must do it in minute particulars. General good is the plea of the scoundrel, hypocrite, and flatterer."

III

The proposal which seems to me to have such merit was discussed in the July 27, 1959, issue of Life. Here, Commander Manson of the U.S. Navy suggests that this country reactivate part of its mothball fleet for the purpose of waging an aggressive peace program. In 1907 President Theodore Roosevent sent 16 battleships fully armed and freshly painted white, around the world to impress the nations with U.S. naval power. This Great White Fleet was gone 2 years. It succeeded in its mission, but it did not succeed in preventing the next war.

The new Great White Fleet suggested by Commander Manson, consisting of fully equipped hospital ships, cargo vessels loaded with food and clothing, transport vessels converted into floating technical schools, and other auxiliary vessels, would be completely unarmed. Its function would be to bring relief to disaster victims, to carry emergency supplies and medical facilities into famine-stricken areas, and in general to bring the arts of healing into underdeveloped regions wherever emergency needs exist.

Resolutions have been introduced, both in the Senate and the House of Representatives, asking the President to take the necessary steps to put the new White Fleet into operation.

There can be no question of our ability to do this. We have the ships, we have the doctors, the money, and the commodities. The cost of putting the first six-unit fleet into operation and maintaining it for 18 months has been estimated at $30 million This is but a small fraction of the amount we now spend for any one of a dozen luxuries. Certainly it represents only an infinitesimal amount when compared with the annual expenditure for the Nation's military armaments.

We now have over $6 billion worth of dairy products, cotton, and various staples and items of food piled up in our surplus commodity warehouses. The President already has the authority under existing law to divert shiploads of these commodities to areas where emergency relief is needed regardless of the friendliness of the governments involved. Here, in the idea of the new White Fleet, is a magnificent opportunity to implement the American dream which was also the dream of the ancient prophets—of turning our swords into plowshares. What an immense appeal this program would have in the eyes of the uncommitted peoples around the world.

I discussed this proposal with the consul of one of the four great powers stationed in Portland. He commented that from an educational standpoint nothing could be better. He was most enthusiastic, describing the proposal as "a sound thing" and "a good plan." Other consuls with whom I discussed this matter were similarly enthusiastic. No one thought that the plan offered any hope of alleviating the age-old problems of poverty and disease. The hope was expressed that such a program could arouse people in the underdeveloped areas of the world from their apathy and hopelessness and encourage them to take steps to do something about their own condition.

As Senator RICHARD NEUBERGER has pointed out in his newsletter, Washington Calling, healing can be a more effective form of foreign aid than guns or dams or bulldozers. He cited a story told by Congressman WALTER JUDD, of Minnesota, a former medical missionary in China, of the Chinese mother who came to him with a child who had tetanus, as a result of using an unsanitary poultice on the unbilical cord. Dr. JUDD saw that he could do nothing for the child and told the mother so. She collapsed into tears. "But you are young," said Dr.

JUDD, "you can have other children." Thereupon the Chinese mother told him this was the seventh child she had lost from the same cause. A few cents' worth of clean gauze and antiseptic salve might have saved each of these children.

What is involved here is a modern application of the truth Jesus had in mind when he said, "I was hungry, and ye gave me to eat; I was thirsty, and ye gave me to drink; I was a stranger, and ye took me in; naked, and ye clothed me; I was sick, and ye visited me."

Certainly the world needs our help. Just as certainly, we need to give that help. Selfishness impoverishes those who practice it. Undisciplined self-indulgence degrades us as individuals and as a people. Even if there were an impenetrable curtain drawn around us so that the rest of the world could not witness our prosperity, we would be poorer in not sharing. In holding on to our valuable commodities, we are not just guarding these commodities from being used by other people. We are at the same time excluding ourselves from the valuable and necessary fellowship of the rest of the world. The world cannot indefinitely survive with the preponderant majority in poverty and the fortunate few enjoying prosperity. I am not suggesting that we divide all our goods among the rest of the world, but I am suggesting that in sharing our knowledge and techniques in the spirit of brotherly concern, our own real resources, which are spiritual resources, will not only be undiminished but will in fact be increased in that sharing. The lesson of the widow's mite points to the truth that he who gives sacrifically benefits in proportion to the sacrifice. What we have to give is certainly more than a widow's mite. Our obligation to share in proportion as God has blessed us is correspondingly great.

IV

There is a puzzling passage in the New Testament in which Jesus is admonishing his disciples to be perfect even as God is perfect. This has always been a mysterious admonition to me because perfection is an impossible goal. A recent translation by Dr. Torrey renders this, "Be ye therefore all-including even as your Heavenly Father includes all." This is more intelligible than the traditional translation when we apply it to the area of international good will.

One final observation remains to be made. If such a project as this is undertaken, it matters a great deal how it is done. Personnel must be chosen with a view toward obtaining people with the greatest intelligence, sensitivity, and tact. People who come bearing gifts are often looked upon with suspicion. It is imperative in the administration of any such program as this that our assistance will have no strings attached and that our motives shall be the purest.

President Theodore Roosevelt, who organized the first Great White Fleet, was fond of quoting a west African proverb, "Speak softly, and carry a big stick, you will go far." The idea behind the new White Fleet is to speak softly and carry no stick at all. It is to be devoutly hoped and expected that we will go even further.

Mary McLeod Bethune

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, August 17, 1959

Mrs. BOLTON. Mr. Speaker, nearly 100 years have passed since President Abraham Lincoln signed the great Emancipation Proclamation into law. In commemoration of this "century of freedom," the National Council of Negro Women has voted unanimously to undertake in 1963 the project of memorializing their founder, the late Mary McLeod Bethune.

I have today introduced a House joint resolution authorizing the Secretary of the Interior to grant authority to the National Council of Negro Women to erect in the District of Columbia a memorial honoring Mary McLeod Bethune, the design and location of the memorial to be approved by the Secretary, the Commission of Fine Arts, and the National Capital Planning Commission.

Among the Negro people who have truly shared the American dream of freedom none stands higher than the late Mary McLeod Bethune. Rightly called the "first woman of her race," her life work stands as a testimonial to selfless dedication in behalf of her people.

Born of slave parents in South Caroline on July 10, 1875, Mary McLeod Bethune was educated in South Carolina, North Carolina, and Illinois. Consumed with a desire to help others, she set about finding a place to teach with only $1.50 in her pocket. Through prayer, determination and unbounded faith, she was enabled to open a small school with only five girls as students. Today this little school has grown into the thriving institution of Bethune-Cookman College, in Daytona Beach, Fla.

During her 38 years as a college president, Mary McLeod Bethune participated in numerous constructive efforts of her time. Among the governmental positions she occupied were as a member of the National Commission for Child Welfare, Director of the Office of Negro Affairs, and the National Youth Administration under Presidents Coolidge and Hoover, special advisor to President Franklin D. Roosevelt on minority affairs, and special assistant to the Secretary of War for selecting candidates to the first WAC Officers Candidate School. During her useful and active life she was the recipient of eight honorary degrees from leading American colleges and universities.

Mary McLeod Bethune was affiliated with numerous literary and religious societies and served as an active officer for dozens of professional and civic associations. Next to building Bethune-Cookman College into a million-dollar coeducational institution, her greatest interest was founding the National Council of Negro Women. She considered the vast potential of organizing into one unit the woman power of 800,000 Negro women, already organized into more than 20 national groups. Her dream was accomplished in 1935 and she became the council's first president, a position she held for 14 years, at which time she became president emeritus. Untimely though her passing on May 18, 1955, her memory is enriched by her works and her rare spirit.

It is the hope of the council that the statue of Mrs. Bethune can be erected in Lincoln Park on East Capitol Street where the dramatic figure of President Lincoln and the Negro slave, known as the emancipation group, was erected by the Western Sanitary Commission of St. Louis. Dedicated on April 14, 1876, the 11th anniversary of the assassination of President Lincoln, this memorial was built with funds contributed solely by emancipated citizens.

Mr. Speaker, this is a moment of great significance in the history of mankind's progress toward social justice. Adoption of this resolution will demonstrate that America is keeping faith with its destiny, and will provide renewed inspiration to free peoples throughout the world.

Should National Education Defense Grants Be Made Available to Subversives

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, August 17, 1959

Mr. MUNDT. Mr. President, a few weeks ago the U.S. Senate devoted 2 full days of its crowded and delayed calendar to discussing the general proposition, "Should national education defense grants be available to subversives? And, if not, what legislative language should Congress employ to prevent such a perversion of public funds?"

This issue was precipitated by a bill proposed by Senator KENNEDY, of Massachusetts, which would have deleted from the National Defense Education Act the public-protecting language on this issue which the Senate committee recommended and which the Congress adopted at the time of the passage of the act. That protective language required the taking of a loyalty and non-Communist oath before applicants for grants were accepted. Some question had arisen among certain groups in the country about the advisability and the efficacy of such oaths and whether the laws of perjury would operate against offenders. I shared some of these misgivings and as a consequence, Senators will recall I sought to substitute for the Kennedy repealer, language which was admittedly effective—it would have substituted on the oath mechanism a severe fine and a penitentiary penalty against any subversive who sought and secured grants from the National Education Defense Fund by concealing his relationships with Communists or any other totalitarian agents. Ultimately the Senate decided by a narrow margin of one in a rollcall vote to adopt a watered-down substitute for my proposal. Rather than accept the weakened substitute, however, the Senate then voted to return the entire issue to the committee and thus rejected the Kennedy resolution. That is where the controversy rests today.

In that connection the following column from the August 3 issue of the Dallas Morning News, a great constructive Texas newspaper, makes both interesting and informative reading. For that reason, I am asking that it be printed in the Appendix of the RECORD together

legislative proposals would so circulate and translate into action the noble message of the New Testament.

I ask unanimous consent that the address in support of the Great White Fleet proposal by Dr. Ford Lewis, entitled "From Mothballs to Mercy Missions," be printed in the Appendix of the RECORD for the information of those of my colleagues who likewise are supporting this humanitarian idea.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FROM MOTHBALLS TO MERCY MISSIONS

(By Dr. Ford Lewis)

I

Perhaps no dream of the human race has been more persistent and widely cherished than the dream of universal peace. In spite of the fact that no generation since human history began has been without its quota of war, men continue to hope and believe that peace is possible. In spite of the fact that the nations of the world are now in a position to destroy more lives, more homes, more cities, and more civilization in one day than have been destroyed in the entire span of recorded history, we are bold enough to believe in peace as a practical ideal, and to work for it.

Only today our Vice President, who has been on an extended visit to Russia in the interests of peace, has left that land and started home. Representatives of the four most powerful nations in the world have been for several months engaged in discussions in Geneva, attempting to resolve the critical issues of the occupation of Berlin and German unification as well as pave the way for a summit conference to deal with all questions of war and peace.

The dream simply will not die—that the time will come when nations "shall beat their swords into plowshares, and their spears into pruning hooks: nations shall not lift up a sword against nation, neither shall they learn war any more." Not all the Bible, of course, points to peace. The early and more primitive parts of the Old Testament begin with a tribal war god leading his chosen people to bloody triumphs over their enemies. Over the centuries during which the Scriptures were compiled, the social vision broadened. The community of man was widened and made more inclusive. The idea of the brotherhood of man reached a high eminence in the writings of the Old Testament prophets and was recapitulated in the thought of Jesus and the New Testament apostles. Beginning with a god whose highest social vision was a tribal victory, the Bible ends with a God whose worshipers pray for a worldwide kingdom of righteousness and peace.

It was the persistent quest for peaceful coexistence that led during the medieval period in Europe to an arrangement called peace of God. Fighting was prohibited in churches and around all shrines and holy places. Noncombatant populations were protected. Persons who violated these prohibitions were anathematized. They were placed under an ecclesiastical curse involving excommunication from the church and damnation.

The truce of God was similarly enforced to assure peaceful weekends. It prohibited all fighting between Thursday evening and Monday morning. We may think this quaint and naive. Furthermore, when we reflect that one of the objectives of the church in enforcing these rules was to achieve a peaceful Europe in order to organize the Crusades, we may be inclined to discount the whole thing. Nevertheless, the search for peace will go on in our time with or without our cooperation, just as it has in the past.

II

In the 14th century, Dante proposed a world empire for the purpose of ending war. During the same century, Pierre Dubois put forth the idea of a permanent arbitration tribunal. History has vindicated the wisdom of this suggestion, but he was 500 years ahead of his time. In the early 17th century, Henry IV of France proposed a world confederation in the interests of peace. Toward the end of the 17th century, William Penn detailed a plan to establish an international federation between independent nations for the prevention of war. Meanwhile, Hugo Grotious laid the foundation for international law in his book, "The Law of War and Peace," written during the 30-Year War, one of the most destructive holocausts man has ever inflicted upon himself.

All the countries of the world have made their contribution to the effort for peace. Utilitarians and rationalists in England, encyclopediasts and physiocrats in France, and idealists in Germany have all worked toward this end. A half-dozen or so international peace congresses were organized in Europe during the 19th century. The history of the League of Nations, the Washington Disarmament Conference of 1921, the London Conference of 1930, the various peace pacts and pledges are well known. Altogether too well known, also, is the fact that in spite of these conscientious efforts to maintain peace, we are still trying to recover from our most recent and worst world war.

We should not be surprised, I suppose, that many persons are disillusioned. They think that a peaceful world society is a false and impossible goal. I have heard some religious fundamentalists quote the Bible to prove that wars will never cease. These people lack faith. They lack faith in themselves and the ideal of a peaceful world. There is no better evidence than this that they lack faith in God, the very God whom they purport to quote literally in support of the inevitability of war. If a man denies the possibility of achieving the highest human dream, he denies either the power or the love of God, or both. His thinking has not evolved with the Bible. He is left in the neolithic backwash of primitive tribalism in which God chooses among the nations and takes sides and supervises the slaughter of one nation by another. But the god they worship was outmoded 2,500 years ago when the Hebrew prophets elevated Yahweh above the nationalistic policies of the tribe and revealed God as a moral judge, a god of peace and justice and of all mankind.

Our question is not the academic one of whether peace is theoretically possible, but what can we do to make it probable? What can we do to advance the cause of peace? Can we do anything as "people to people"—to use the words of President Eisenhower? One specific proposal has been made which I think has great merit. Parenthetically, let it be said that specific proposals are the only kind that can be effective. Everyone is for peace in general. Everyone is against sin, but this is not enough. It was not enough when the "rich young ruler," as he is referred to compositely in the Gospels, came to Jesus to get an opinion on what he must do to share the good life to come. When Jesus proposed a specific course of action, "his countenance fell, and he went away sorrowful."

Again, when the inquiring lawyer asked "Who is my neighbor?" he was given a direct answer which involved certain concrete, if to him unpleasant, realities. He was told that his neighbor was a Samaritan, a good Samaritan, a member of a community with which the Jews had no dealings. We are left with the question of whether the lawyer's good will, which up to this point had been generalized, went to pieces on this particular ethic, or whether it survived the test of a concrete expression of neighborliness.

In any case, the lesson for us is that we must find real ways of putting our ideals into action. William Blake says: "He who would do good to another, must do it in minute particulars. General good is the plea of the scoundrel, hypocrite, and flatterer."

III

The proposal which seems to me to have such merit was discussed in the July 27, 1959, issue of Life. Here, Commander Manson of the U.S. Navy suggests that this country reactivate part of its mothball fleet for the purpose of waging an aggressive peace program. In 1907 President Theodore Roosevent sent 16 battleships fully armed and freshly painted white, around the world to impress the nations with U.S. naval power. This Great White Fleet was gone 2 years. It succeeded in its mission, but it did not succeed in preventing the next war.

The new Great White Fleet suggested by Commander Manson, consisting of fully equipped hospital ships, cargo vessels loaded with food and clothing, transport vessels converted into floating technical schools, and other auxiliary vessels, would be completely unarmed. Its function would be to bring relief to disaster victims, to carry emergency supplies and medical facilities into famine-stricken areas, and in general to bring the arts of healing into underdeveloped regions wherever emergency needs exist.

Resolutions have been introduced, both in the Senate and the House of Representatives, asking the President to take the necessary steps to put the new White Fleet into operation.

There can be no question of our ability to do this. We have the ships, we have the doctors, the money, and the commodities. The cost of putting the first six-unit fleet into operation and maintaining it for 18 months has been estimated at $30 million This is but a small fraction of the amount we now spend for any one of a dozen luxuries. Certainly it represents only an infinitesimal amount when compared with the annual expenditure for the Nation's military armaments.

We now have over $6 billion worth of dairy products, cotton, and various staples and items of food piled up in our surplus commodity warehouses. The President already has the authority under existing law to divert shiploads of these commodities to areas where emergency relief is needed regardless of the friendliness of the governments involved. Here, in the idea of the new White Fleet, is a magnificent opportunity to implement the American dream which was also the dream of the ancient prophets—of turning our swords into plowshares. What an immense appeal this program would have in the eyes of the uncommitted peoples around the world.

I discussed this proposal with the consul of one of the four great powers stationed in Portland. He commented that from an educational standpoint nothing could be better. He was most enthusiastic, describing the proposal as "a sound thing" and "a good plan." Other consuls with whom I discussed this matter were similarly enthusiastic. No one thought that the plan offered any hope of alleviating the age-old problems of poverty and disease. The hope was expressed that such a program could arouse people in the underdeveloped areas of the world from their apathy and hopelessness and encourage them to take steps to do something about their own condition.

As Senator RICHARD NEUBERGER has pointed out in his newsletter, Washington Calling, healing can be a more effective form of foreign aid than guns or dams or bulldozers. He cited a story told by Congressman WALTER JUDD, of Minnesota, a former medical missionary in China, of the Chinese mother who came to him with a child who had tetanus, as a result of using an unsanitary poultice on the unbilical cord. Dr. JUDD saw that he could do nothing for the child and told the mother so. She collapsed into tears. "But you are young," said Dr.

Jung, "you can have other children." Thereupon the Chinese mother told him this was the seventh child she had lost from the same cause. A few cents' worth of clean gauze and antiseptic salve might have saved each of these children.

What is involved here is a modern application of the truth Jesus had in mind when he said, "I was hungry, and ye gave me to eat; I was thirsty, and ye gave me to drink; I was a stranger, and ye took me in; naked, and ye clothed me; I was sick, and ye visited me."

Certainly the world needs our help. Just as certainly, we need to give that help. Selfishness impoverishes those who practice it. Undisciplined self-indulgence degrades us as individuals and as a people. Even if there were an impenetrable curtain drawn around us so that the rest of the world could not witness our prosperity, we would be poorer in not sharing. In holding on to our valuable commodities, we are not just guarding these commodities from being used by other people. We are at the same time excluding ourselves from the valuable and necessary fellowship of the rest of the world. The world cannot indefinitely survive with the preponderant majority in poverty and the fortunate few enjoying prosperity. I am not suggesting that we divide all our goods among the rest of the world, but I am suggesting that in sharing our knowledge and techniques in the spirit of brotherly concern, our own real resources, which are spiritual resources, will not only be undiminished but will in fact be increased in that sharing. The lesson of the widow's mite points to the truth that he who gives sacrifically benefits in proportion to the sacrifice. What we have to give is certainly more than a widow's mite. Our obligation to share in proportion as God has blessed us is correspondingly great.

IV

There is a puzzling passage in the New Testament in which Jesus is admonishing his disciples to be perfect even as God is perfect. This has always been a mysterious admonition to me because perfection is an impossible goal. A recent translation by Dr. Torrey renders this, "Be ye therefore all-including even as your Heavenly Father includes all." This is more intelligible than the traditional translation when we apply it to the area of international good will.

One final observation remains to be made. If such a project as this is undertaken, it matters a great deal how it is done. Personnel must be chosen with a view toward obtaining people with the greatest intelligence, sensitivity, and tact. People who come bearing gifts are often looked upon with suspicion. It is the hope of the council that the statue of Mrs. Bethune can be erected in Lincoln Park on East Capitol Street where the dramatic figure of President Lincoln and the Negro slave, known as the emancipation group, was erected by the Western Sanitary Commission of St. Louis. Dedicated on April 14, 1876, the 11th anniversary of the assassination of President Lincoln, this memorial was built with funds contributed solely by emancipated citizens.

Mr. Speaker, this is a moment of great significance in the history of mankind's progress toward social justice. Adoption of this resolution will demonstrate that America is keeping faith with its destiny, and will provide renewed inspiration to free peoples throughout the world.

Should National Education Defense Grants Be Made Available to Subversives

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, August 17, 1959

Mr. MUNDT. Mr. President, a few weeks ago the U.S. Senate devoted 2 full days of its crowded and delayed calendar to discussing the general proposition, "Should national education defense grants be available to subversives? And, if not, what legislative language should Congress employ to prevent such a perversion of public funds?"

This issue was precipitated by a bill proposed by Senator KENNEDY, of Massachusetts, which would have deleted from the National Defense Education Act the public-protecting language on this issue which the Senate committee recommended and which the Congress adopted at the time of the passage of the act. That protective language required the taking of a loyalty and non-Communist oath before applicants for grants were accepted. Some question had arisen among certain groups in the country about the advisability and the efficacy of such oaths and whether the laws of perjury would operate against offenders. I shared some of these misgivings and as a consequence, Senators will recall I sought to substitute for the Kennedy repealer, language which was admittedly effective—it would have substituted on the oath mechanism a severe fine and a penitentiary penalty against any subversive who sought and secured grants from the National Education Defense Fund by concealing his relationships with Communists or any other totalitarian agents. Ultimately the Senate decided by a narrow margin of one in a rollcall vote to adopt a watered-down substitute for my proposal. Rather than accept the weakened substitute, however, the Senate then voted to return the entire issue to the committee and thus rejected the Kennedy resolution. That is where the controversy rests today.

In that connection the following column from the August 3 issue of the Dallas Morning News, a great constructive Texas newspaper, makes both interesting and informative reading. For that reason, I am asking that it be printed in the Appendix of the RECORD together

with the statement which I have just made.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DO WE ENDOW TREASON?

(By Lynn Landrum)

Egghead opposition to loyalty oaths to be required of applicants for money offered under the National Defense Education Act does not appear to be reasonable, but it is all the more stubborn for its unreasonableness. When a foreign-born person applies for citizenship, he is required to take the oath of allegiance. When the citizen takes an office, he is required to take an oath of loyalty and fidelity. When a citizen becomes a soldier, he is required to take an oath of loyalty and obedience. When a man in the ranks is promoted to the status of an officer, he again faces the requirement that he take an oath. In what way, then, is it degrading, unjust or uncalled for to require an oath of a lad who asks defense money to help him get an education?

Senator KARL E. MUNDT, of South Dakota, has brought the issue to sharp focus in an amendment to the National Defense Education Act. Senator MUNDT says, in effect, if it is objected that the student is singled out from all other students with a demand for an oath, then let us skip the oath and provide as follows: Any individual who applies for cash or loan under the terms of the act—and who has within 5 years of his application been a member of a subversive organization—is subject to fine or imprisonment or both. That gets it down to brass tacks.

Subversion is conspiracy to commit sedition—treason, so to speak, in time of peace—or actual treason in time of war. Membership in the seditious or treasonable organization becomes the overt act and the Mundt amendment would impose the penalty for application for defense money by one so guilty of membership within the 5-year period concerned.

Do the eggheads demand that traitors shall be educated with defense money? Do they demand that colleges and universities shall take defense money in this way at the very time when they are harboring the active enemies of the United States of America?

Academic freedom, as advanced by these extremist eggheads, becomes more and more a demand for exemption from all the burdens and all the obligations of citizenship Freedom to plot for the end of freedom is nonsense of the most dangerous sort. And the professed disciples of a freedom so divested of all loyalty and of all love of country are sometimes more dangerous than the actual plotters of treason who meet in dark rooms and mouth moth-eaten dialectical excerpts from Lenin, Marx, and the current Soviet line.

The notion that academicians are somehow or other exempt from the responsibilities of citizenship ignores the line of difference between freedom and anarchy. Science is thinking in search of law. Without law there is no beauty, no wisdom, no justice, no freedom after all.

A Boost for Conservation

EXTENSION OF REMARKS

OF

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 17, 1959

Mr. SCHWENGEL. Mr. Speaker, it is my privilege to call attention to the third annual National Conservation Sports Tournament to be held near Davenport, Iowa, August 21, 22, and 23.

This event is sponsored each year by the Davenport Chapter of the Izaak Walton League of America in conjunction with the Buffalo Bill Council of the Boy Scouts of America.

Over 500 Explorer Scouts from all over the United States will participate in the 3-day event again this year. The purpose of the tournament is to promote among the Nation's youth the need for the wise use of our soil, woods, water, and wildlife. The sponsor's hope to influence the minds of the participants so that they will realize that only through the wise use of our natural resources can we continue to prosper.

The events of the tournament help develop physical fitness, keen competitive ability, character, sportsmanship, and a basic understanding of the constant need for conservation of resources.

A winner and runner-up will be selected in each of seven competitive vents including marksmanship, archery, mo-skeet, bait casting, fly casting, swimming, and nature trail.

Although my duties here will not permit me to attend this event this year, I have had the pleasure in the past of seeing these young Americans take part in this program which is wholesome and beneficial to all. I trust that other communities will see fit to pattern similar events after this one so that this experience can be made available to more young people all across the Nation.

Architecture of New Buildings on Capitol Hill

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, August 17, 1959

Mr. DOUGLAS. Mr. President, I ask unanimous consent that there may be printed in the Appendix of the RECORD an article by Mr. Douglas Haskell, entitled "Saying Nothing, Going Nowhere," relating to the New Senate Office Building, which appeared in the Architectural Forum for August 1959. The article expresses some of the feelings which many of us have about the New Senate Office Building. We regard it as excessively expensive and as lacking in good taste and in architectural proportions.

I think that as plans are being drawn for the third House Office Building, under the direction of the Architect of the Capitol, this article by Mr. Haskell should receive very careful attention.

Mr. Haskell has been associated with the Architectural Record and the Architectural Forum for many years, and has been editor of the latter publication since 1955. He has lectured at various universities and schools throughout the country. He was referred to by the late Frank Lloyd Wright as "The critic with a conscience." This article indicates he not only has a conscience, but a very caustic pen as well.

The VICE PRESIDENT. Is there objection to the request?

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Architectural Forum, August 1959]

SAYING NOTHING, GOING NOWHERE

(By Douglas Haskell)

The controversial New Senate Office Building has faults worse than high cost and low drinking fountains: it fails to dramatize to the people how their Government works.

Understandably the angry going-over that the New Senate Office Building in Washington received from the Senators was related to practical shortcomings. It is far easier to work up a sense of frustrated outrage in the face of scandalous high cost coupled with discomfort, unperformance, and inconvenience, than it is to deal with that queazy feeling in the pit of the stomach when a building as a whole vaguely fails to come across, despite high pretensions, and gives no clear account of itself to either the mind or the emotions. The kind of thing the Senators felt they could cope with, or at least denounce, was a $2 million subway not yet leading anywhere and requiring $4 million more to finish, squawk boxes that really squawked, unworking mail chutes, air conditioning that leaked privileged conversations out of Senate offices, cafeteria equipment that challenged the user not to break his head, and things like that. The equipped building, without subways, cost $22 million, meaning that for the second time in its career the Senate had created one of the world's most expensive office buildings. (The older, 1906, Senate Office Building was labeled the most expensive in its day.) The consequence of such a building economy is that Washington is forever spending loads of money but is forever short of space.

It would be unfair to ask the Senate to deal with architectural issues, for, unlike their forefathers, Senators today only rarely come prepared with any architectural education whatsoever. Yet the problem that this building gives architecturally to Senators and to every educated American is a serious one, for what it pictures is a state of architectural illness attended by extreme mental confusion, threatening to become chronic in Washington. Everyone who sees it must be aware of a certain tired, meager, rundown impression that the building gives compared to its predecessor, the first Senate Office Building. The new one is vaguely a classical building and vaguely a modern one, but really neither: whether it was built primarily for functional purposes or for monumental ones is left amiably uncertain. The rich appearance of the older Senate Office Building across the street is missing, and the rather joyful variety of forms over there has yielded to monotonous repetition of a vertical ribbon window treatment—much like any modern jail—with here and there a classical feature tacked on. There is one consoling feature: some crisp carving. This is quite obviously an architecture on the way down. Like the costly subway, it has no terminal, but unlike the subway it is not even pointed in a hopeful direction.

Paradoxically, a still greater monotony could have been a help, if the desire was to produce a clearly market and understandable "office building." Thus, in a purely business-like modern structure, such as the projected Federal Office Building to be erected west of the Interior Building, the drawings show that large office blocks are to be given indentical windows, and the monotony of these will be so complete as to transfer all attention from the individual unit to the pattern as a whole—a clear one. The office blocks are to be lifted above a clearly marked base where the lobbies are to be found, and the larger, higher ceilinged ground-floor rooms will no

doubt be available for ceremonial or large-group purposes.

In the new Senate Office Building, on the other hand, where the classical "treatment" has been pasted on—presumably as a formality and to "match" adjacent buildings—nothing "reads." So far as official designations are concerned, the floors on which senatorial offices are found are no doubt named as a ground floor, a first floor, and so on, up to a sixth. As to exterior architectural treatment, however, the first two floors are a "basement" with basement windows and the top two floors are an "attic" with attic windows, and Senators with offices on any of these four floors are living either in the basement or in the attic.

Upon entering, the visitor does find that in fact offices and hearing rooms are intermingled at just about every level. If then he discovers his particular State represented in the architectural "basement," he is left guessing whether that was a slur on the honor of the State, or punishment for a Senator, or a sign that the Senate in its housekeeping just did not care what it did, or whether anyone ever told the Senators that classical architecture, like any other serious architecture, is an art that calls signals. In a modern building wth neither "basement" nor "attic" such questions could not arise.

Quite obviously the mixing of two completely incongruous systems, classical and modern, resulted in a building that does not give its signals clearly and that amounts to a picture building. The most thunderous architectural miscue relates to the building's one outstanding feature and ample architectural gesture: that special "portico" at the middle of the block on First Street, which by all the rules, customs, and reasoning of classical architecture ought to be the main entrance to the building. It is not. Ever since Rome the main entrance of any proper governmental or monumental building has been treated as a chief and central celebration. The reason is simple. The first thing anybody has to know after locating a building is where to go in, and the first duty of a Government building is to see that entrants are ceremoniously received. In this instance, having spotted that one big projecting "portico," central to the main facade, capped with a pediment, supported on great box piers, and facing on a ceremonial terrace, the visitor heads straight over there—and finds himself shunted away by a blank marble panel. There is neither a stair from the sidewalk to the terrace nor a door into the building, and apparently the whole costly business has been erected for the sole joy of the bird watchers and the window washers. The real entrance is found around the corner, barely marked at all, and there the visitor heads in, foregoing any remarks about "empty Senate gestures" and "the real business being done through the side door," because manifestly the Senators were innocent and counted on competent architects to guide them.

What difference does it make whether an architecture calls its signals straight or not? Simply this: that when stones are eloquent they proclaim the glory of a government forever. But before eloquence can attend either a work of architecture or a speech, the ideas within must be first coherent and then imaginative.

To begin with, there is here no imaginative realization, inside or out, of what kind of a building, and how very important a building, the architects were dealing with. This was no mere "office building"—that is sure. Now, interestingly enough, the building plan which virtually imposed itself on the architects had implicit within itself a wonderful expression of the drama of government-at-work. All but one of the 15 hearing rooms for the Senate's committees are two stories high and are flanked on either side by a Senator's suite and by a staff suite, and these have a height of only a single story. Since the two-story hearing rooms, scattered through the building, occur on six of the floors, and each of these hearing rooms pushes up through the floor above, the result is a quite wonderful interlock of one- and two-story elements, almost a Chinese puzzle. Such a plan was an opportunity virtually handmade for the devices of a dramatic contemporary architecture. There is an alternation of rooms large and small, rooms extending upward or downward in relation to any particular corridor, rows of smaller workrooms flanking the larger, more elaborate hearing rooms. All this apparatus of a mighty Senate at work had in it potentially a visual drama (both in the interior of the building and reflected on the exterior) more exciting than any scientific laboratory or industrial plant.

Even traditional architecture in its lustier days found excitment in such dramas of space interplay, for example in churches. But such an art of architectural communication seems to be lost today to all architects who have not gone through the modern revolution. The art of space in a space age belongs, like leadership in rockets, only to those who have followed their imaginations and allowed their art to develop.

This technical opportunity to give Washington a fascinating building of interpenetrating shapes and spaces was only the beginning of what was missed. With it was also missed a symbolizing opportunity. Think what the very prescence of such an array of rooms large and small would tell an archaeologist a thousand years hence about the nature and meaning of the U.S. Senate. As students of government well know, the very heart of the American legislative process lies in the committee system. These committees are where the Senators meet constituents face to face in the heat of action. Here is the arena where advocates and opponents of bills fight out their sanguinary battles. Here is the laboratory where the legislators aided by hardworking staff prepare and pursue their relentless fact-finding investigations. If the throngs of Americans visiting the Capitol find the House and Senate Chambers often virtually empty, that is because the real work is being done elsewhere in committee rooms. Yet the building where these arenas are concentrated, this veritable center of the government's performing arts, was treated by Architects Eggers and Higgins as a mere office building in an illiterate classical shell.

In a democracy, government must interpret itself to the people over and over again, and differently as times change. American government has done so. In Jefferson's day the classicism which he imported into a young New World was a romantic interpretation: ancient Greece and Rome were supposed to have been ever so much purer and nobler than the baroque monarchies of Europe as an example to follow.

There were several other very different kinds of classicism in American government building after that, among them imperialist classic, as in the Supreme Court, and penitentiary classic in the new wing of the State Department—but independently of all of them came the second revolution which turned America into an industrial society. It lived by doing exacting work. The egalitarianism of American democracy is less of a marvel now than the capacity of free people in voluntary association to carry through complicated jobs. This triumph is just what a government building such as the new Senate Office Building was fitted to celebrate.

The chance is gone now. But what of the future? The reason why government architecture is going to pieces faster, the closer it lies to the Hill, is that the buildings there are in the hands of a tight little club of architects who all wear the old classical school tie and are epigoni. They operate under a fast-talking little Architect of the Capitol who knows how to pack expensive things into buildings, but is not a registered architect at all. As long as architecture on the Hill continues to be handled without the competition of new men and ideas it will continue to deteriorate, saying nothing, going nowhere.

Birth of a Great City

EXTENSION OF REMARKS
OF
HON. THOMAS J. O'BRIEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, August 17, 1959

Mr. O'BRIEN of Illinois. Mr. Speaker, today is Chicago's 156th birthday. On behalf of the entire Illinois delegation, as the dean of that delegation, I take great pleasure in inserting in the CONGRESSIONAL RECORD today an article which appeared in the Chicago Sun-Times, briefly describing the humble beginnings of Chicago, which today, 156 years later, stands as a symbol of almost indescribable progress in America.

The story of Chicago's growth is indeed a tribute to what people can do if they are free to carry out their wishes. I can only assure you that under the dedicated leadership of our present mayor, Richard J. Daley, and the bold planning which he has drawn up for my native city, we are firm and resolute in our conviction that the next 156 years will bring even greater glory to Chicago.

Mr. Speaker, the Chicago Sun-Times article follows:

HUMBLE START IN 1803—BIRTH OF A GREAT CITY

On the sun-drenched afternoon of August 17, 1803, a weary company of the 1st Regular Infantry pitched camp at the mouth of the Chicago River. The commander, Capt. John Whistler, had orders to build and occupy a stockade, and it was to be named Fort Dearborn.

Thus, 156 years ago this Monday the bustling city of Chicago had its humble beginning.

It was a bleak scene that greeted Captain Whistler and his men.

Close by the terrain consisted of low, sandy hills dotted with scrub pine and pools of stagnant water. Westward lay windswept prairie; north could be seen thick woods. Land to the south gave way to seemingly endless swamps.

The only signs of life were four crude log cabins, occupied by French-Canadian traders—the forerunners of Chicago's merchant princes.

LOGS DRAGGED BY HAND

Lacking oxen or horses at first, the soldiers had to drag by hand, heavy logs to build the fort. Construction was slow, but by December Fort Dearborn began to function as a link in the chain of garrisons protecting settlers in the Lake Michigan region.

How was it possible that a small fort and a cluster of traders' huts could grow into the Nation's second largest metropolis?

A word provides the answer—location.

Fort Dearborn lay on 6 square miles of land that Gen. Anthony Wayne persuaded the Indians to give to the U.S. Government in 1795.

The general's choice of property was shrewd. The site lay at the intersection of important Indian trails long used by French and British traders. Later these trails became hard roads and eventually U.S. Highways 30, 12, 41, and 66.

PORTAGE EVEN MORE VITAL

Of greater importance than the trails was the Chicago Portage. This was a strip of land 1¼ miles wide connecting the Chicago and Des Plaines Rivers, and thus linking the Great Lakes region with the Mississippi and Illinois Rivers. Control of the portage meant control of the government, travel and trade of the vast untapped inland empire that stretched to the Rockies.

Despite its favored position, the settlement around Fort Dearborn did not immediately flourish. Savage Indian tribes still roamed the plains, making overland travel difficult.

In 1812 Indians attacked 97 settlers and soldiers 2 miles south of Fort Dearborn and killed or captured the entire party. They burned the fort to the ground. Later it was rebuilt and occupied until its final abandonment in 1837.

With the opening of the Erie Canal in 1825, Chicago's fortunes finally began to improve. The canal, connecting the Hudson River with Lake Erie, provided a direct, easy and inexpensive all-water route from New York to the Fort Dearborn region.

In 1832 the Blackhawk war ended, driving the tribes west of the Mississippi and opening up the way for easier settlement.

INCORPORATED WITH 350

By 1833 Chicago's population increased from 50 to 350, and it was formally incorporated as a town. Four years later, with 4,170 permanent residents, it became a city.

Continued extension of the waterways around Chicago helped its growth.

The opening in 1848 of the Illinois-Michigan Canal, which connected the Chicago and Des Plaines Rivers, eliminated the old portage route.

Real estate prices soared. By 1860 land near State and Madison sold for $300 a front foot; by 1865 the price was $500. A year later the cost had jumped to $2,000.

But in 1871 Chicago suffered a frightful disaster. Fire broke out on the West Side. Fanned by high winds, the flames swept across the dry wooden buildings, traveling 2 miles in little more than 6 hours. Before it was brought under control 27 hours later, the fire had destroyed 17,450 buildings and property worth $197 million, made almost 100,000 persons homeless and taken 250 lives.

Millions of dollars in aid poured in from all over the world. Chicago began to rebuild—this time in stone and steel. Within a year the business district was erected, and the rest of the city took shape shortly afterward.

Public confidence in Chicago's business stability was not set back by the fire. Just 2 years later in the financial panic of 1873, Chicago banks alone among financial institutions in the Nation's large cities continued to pay out current funds.

In 1890 Chicago's population topped the million mark. From this point on, the city has grown steadily until it now contains within its boundaries more than 4 million inhabitants.

The original 6 square miles obtained by General Wayne has mushroomed to 211.

Chicago's Loop is a scant 6 blocks from where Fort Dearborn once stood. This area alone now does an average retail business of $1.5 billion each year.

With the opening of the St. Lawrence Seaway, Chicago stands on the verge of another great expansion, much more than fulfilling the dreams of those who sent Captain Whistler and his men to build a fort at the portage 156 years ago.

Resignation of Dr. John Tyler Caldwell as President of University of Arkansas

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Monday, August 17, 1959

Mr. FULBRIGHT. Mr. President, it was with deep regret that I learned last week of the resignation of Dr. John Tyler Caldwell as president of the University of Arkansas to become chancellor of North Carolina State University at Raleigh. I congratulate the State of North Carolina for its good judgment and discrimination in selecting Dr. Caldwell for this important position.

Dr. Caldwell became president of the University of Arkansas in 1952, and has been an outstanding success as the chief administrator of that great institution. He is a man of boundless energy and enthusiasm, and has devoted all his great talent to the cause of higher education during these hectic years. He and his fine family will be a great addition to the State of North Carolina.

I ask unanimous consent to have printed in the Appendix of the RECORD articles from the Northwest Arkansas Times and the Arkansas Gazette concerning Dr. Caldwell's resignation. Also a statement by Mr. L. C. Carter, the chairman of board of trustees of the University of Arkansas.

There being no objection, the articles and statement were ordered to be printed in the RECORD, as follows:

[From the Northeast Arkansas Times]

NO EASY JOB

The announcement yesterday that Dr. John Tyler Caldwell is leaving the university presidency to become chancellor of North Carolina State comes as no great surprise. Stories recently have indicated that Dr. Caldwell was being considered as the favorite for the eastern school post, and he made no effort to deny he was interested.

But even with some indication that such a change was probable, the word that he has accepted the offer and asked the board of trustees of the university to release him in Arkansas comes as something of a shock. Dr. Caldwell has made a record of which he, the university, and the State can be proud.

As L. C. Carter, president of the board of trustees, pointed out in a statement, "The people of Arkansas owe much to Dr. Caldwell for his vision and courageous leadership during an important period in the development of higher education in Arkansas. He has directed the university's successful transition from the emergency GI bill days to the present high level of operation. During his presidency the regular enrollment on the Fayetteville campus has increased from fewer than 4,000 to nearly 6,000 students."

During the years he has served as president there has been much building on the campus, and also in Little Rock. The John Barnhill Field House, the Brough Commons, the Roberta Fulbright Hall (to house 400 women students this coming school term), the Carlson Terrace apartments (which are being doubled in size) have gone up during his tenure in office. The great Medical Center in Little Rock has become a reality along with the Medical Center residence hall.

"He has imparted a spirit of enthusiasm, warmth, and high moral principle to the entire institution," correctly reminded Mr. Carter.

Now it will be the job of the university trustees to seek out a worthy successor. The task comes at a difficult time, with classes due to begin next month. There must be much searching, intensive screening of candidates, and a most careful selection of a new president. It is a job that calls for diligence and patience, and the public will do well to consider this is not something which can be accomplished within a period of a few days, maybe not in a few weeks.

To Dr. Caldwell will go good wishes in his new undertaking, which he says he looks forward to "with keen anticipation." And to the members of the board to whose lot it falls to name the next president, our fullest expectation that they will choose most wisely a person who will head the thriving and fast-growing school that means so very much to the State of Arkansas.

UNIVERSITY OF ARKANSAS PRESIDENT CALDWELL GETS NORTH CAROLINA POST

University of Arkansas President John Tyler Caldwell has been named chancellor of North Carolina State College of Agriculture and Engineering at Raleigh, it was announced yesterday.

Dr. Caldwell was elected by trustees of the Consolidated University of North Carolina with only one dissenting vote—that from Trustee Edwin S. Pou of Raleigh, who had said he would like a 30-day delay in the selection so more time could be given to finding a qualified North Carolinian for the office. Pou later withdrew his vote to make the action unanimous.

At North Carolina State, Dr. Caldwell will receive $17,000 a year—$2,000 less than his salary at the University of Arkansas.

The post of chancellor is the highest at each of the colleges of the Consolidated University.

President William C. Friday of the Consolidated University, who recommended Dr. Caldwell's appointment, described him as a man of "proven ability as an educator and an administrator. He has great courage and is a strong and vigorous person who is committed to the standards of quality and excellence in higher education."

UNIVERSITY OF ARKANSAS TO BEGIN SEARCH

The University of Arkansas Board will meet at 2 p.m. today at the Medical Center at Little Rock to start the search for a successor to Dr. Caldwell, who will leave Fayetteville August 31.

Dr. Caldwell, 47, has been president of the University of Arkansas since July 1, 1952. Before moving to Fayetteville, he spent 5 years as president of Alabama College for Women at Montevallo.

"The North Carolina State College of Agriculture and Engineering is an important institution," Dr. Caldwell said yesterday, "and I look forward to the chancellorship of it with keen anticipation. On the other hand, I have invested a great deal of labor and love in the University of Arkansas and leave it and the State with regret and with memories I shall cherish.

"It has been a great honor indeed to serve the people of Arkansas as president of their university."

DEEP REGRET

L. C. Carter of Stuttgart, chairman of the University of Arkansas board said, "The board of trustees has not met since learning the news, but I know I speak for each member when I express deep regret that President John Tyler Caldwell has resigned. The people of Arkansas owe much to Dr. Caldwell for his vision and courageous leadership during an important period in the development of higher education in Arkansas. He has directed the university's successful tran-

sition from the emergency GI bill days to the present record high level of operation. During his presidency, the regular enrollment on the Fayetteville campus has increased from less than 4,000 to nearly 6,000. Physically, the university has grown at a spectacular rate.

"During President Caldwell's administration, we have seen the completion of the medical center, John Barnhill Fieldhouse, Brough Commons, Roberta Fulbright Hall, the Carlson Terrace Apartments, the Jeff Banks Student Union, and the medical center residence hall. During this time, the Animal Science Building has been partially completed and numerous other projects advanced. Important new structures are well into the planning stage. Since 1952, the annual budget of the university has been increased substantially.

"SPIRIT OF ENTHUSIASM

"President Caldwell's greatest contribution to the University of Arkansas and thus to the State isn't measurable. He has imparted a spirit of enthusiasm, warmth and high moral principle to the entire institution.

"We wish for Dr. Caldwell and his family happiness and success in North Carolina."

There was no indication yesterday of a possible successor for Dr. Caldwell.

At its meeting today the Board is expected to name a selection committee to consider possible successors.

ACTING PRESIDENT NEEDED

Also expected to be considered at today's meeting is the naming of an acting president. Normally, this job would go to the provost of the University, but Dr. Lewis H. Rohrbaugh, vice president and provost, resigned recently, and no successor has been named.

In the absence of a provost, the Board will likely appoint one of the deans on the Fayetteville campus to be acting president. These include Deans G. D. Nichols of the College of Arts and Sciences, Henry H. Kronenberg of the College of Education, George F. Brannigan of the College of Engineering, Paul W. Milam of the College of Business Administration, Ralph Barnhart of the College of Law, and V. W. Adkisson of the Graduate School.

North Carolina State College has about 6,000 students. As chancellor, Dr. Caldwell will succeed Dr. Carey H. Bostian, who resigned to return to teaching.

Dr. Caldwell, the 15th man to be president or acting president of the University of Arkansas, was born at Yazoo City, Miss.

In 1954, the Arkansas Junior Chamber of Commerce honored Dr. Caldwell as the man who had done most for the State during the year.

STATEMENT BY L. C. CARTER, CHAIRMAN, BOARD OF TRUSTEES, UNIVERSITY OF ARKANSAS

The board of trustees has not met since learning the news, but I know I speak for each member when I express deep regret that President John Tyler Caldwell has resigned. The people of Arkansas owe much to Dr. Caldwell for his vision and courageous leadership during an important period in the development of higher education in Arkansas. He has directed the university's successful transition from the emergency GI bill days to the present record high level of operation. During his presidency, the regular enrollment on the Fayetteville campus has been increased from less than 4,000 to nearly 6,000. Physically, the university has grown at a spectacular rate.

During President Caldwell's administration, we have seen the completion of the Medical Center, John Barnhill Fieldhouse, Brough Commons, Roberta Fulbright Hall, the Carlson Terrace Apartments, the Jeff Banks Student Union and the Medical Center residence hall. During this time, the Animal Science Building has been partially completed and numerous other projects advanced. Important new structures are well into the planning stage. Since 1952, the annual budget of the university has been increased substantially.

President Caldwell's greatest contribution to the University of Arkansas and thus to the State isn't measurable. He has imparted a spirit of enthusiasm, warmth and high moral principle to the entire institution.

We wish for Dr. Caldwell and his family happiness and success in North Carolina.

Labor-Managment Reporting and Disclosure Act of 1959

SPEECH

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 13, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 8342) to provide for reporting and disclosure of certain financial transactions and administrative practices of labor organizations and employers, to prevent abuses in the administration of trusteeships by labor organizations, to provide standards with respect to the election of officers of labor organizations, and for other purposes.

Mr. PRICE. Mr. Chairman, I suppose it is only natural that in discussing this legislation, we are primarily discussing the shortcomings of the labor movement. We all know those shortcomings exist, and we are trying to enact a bill that will correct them.

But in the course of this effort, I am afraid that some of my distinguished colleagues are brushing aside too quickly the evidence placed before us by the leaders of the labor movement—not those who have been exposed as crooked, unethical or dictatorial, but those whose conduct has been above reproach.

Ordinarily, I agree, it is wise to discount the arguments of special pleaders, or special interests, in writing legislation that affects them. But I submit, Mr. Speaker, that this is no ordinary case.

Older Members of this House will remember the history of previous regulatory bills. They will remember how, when we established the Securities and Exchange Commission to regulate the stock market, we did so over the bitter opposition of the rulers of Wall Street. They will remember how the public utility moguls fought against any interference with their monopolistic practices. In an earlier day, it was the railroads who resisted. And so it has been over the years.

It was the same story, for that matter, when we were in the course of amending the Wagner Act. The labor leaders of that time, the heads of the then rival AFL and CIO—though they were men of integrity—had few proposals to offer that would be regulatory as to labor. We had to proceed almost completely without their advice.

Today we have a different picture. From the very beginning, the leaders of organized labor have cooperated in the field of reform. They have made constructive suggestions. Indeed, they have insisted, time after time, that legislation was essential.

This is the first time, to my knowledge, that any group, any interest, in our society has voluntarily cooperated in a movement for the supervision and regulation of its internal affairs by government.

Therefore, Mr. Chairman, when these men of labor come to us and say, "This clause would hurt a legitimate union activity," or, "That clause would impose an insupportable burden on us," I think we should take them seriously. They are experts; and they have proved their good faith.

I do not think this is an issue that can be justly solved by legislation which pleases nobody. I admit it is tempting to say, in effect, H.R. 8400 is damned by labor as too tough, and H.R. 8490 is damned by management as too weak; neither side likes H.R. 8342, so that must be the answer.

I hope we resist the temptation. I say that to take this course would be a shabby reward for the honest union leaders who have given us their help.

We would not expect an innocent man to welcome conviction for manslaughter because his disowned brother has been charged with murder. And in this case, Mr. Speaker, the innocent man actually helped to build the case against the guilty one.

Compromise is essential in the art of government; but let us not compromise with justice.

I support the Shelly bill, and would support the committee bill properly amended if we get a chance to vote on that. As one who voted for the Kennedy-Ives bill in the 85th Congress I favor legislation that will help get the crooks, without harassing and impeding the forward progress of legitimate and decent labor unions.

The action we take here should be aimed at the crooks, not at the decent, law-abiding unions and their decent, honest, and law-abiding members.

There are unwarranted restraints on legitimate union activity in the Landrum-Griffin bill that prevent me from accepting it. The Shelly and the committee bills amended are the more fair and effective ways to meet this problem.

Let Us Pray

EXTENSION OF REMARKS

OF

HON. ANDREW F. SCHOEPPEL

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Monday, August 17, 1959

Mr. SCHOEPPEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the column written by Dr. Frederick Brown Harris, Chaplain of the U.S. Senate, entitled "Let Us Pray," published in the Washington, D.C., Sunday Star, on Sunday, August 16, 1959.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

LET US PRAY

(By Dr. Frederick Brown Harris, Chaplain of the U.S. Senate)

"There are more things wrought by prayer than this world knows of," declares Tennyson. It is an ominous symptom of the free world's creeping moral numbness that when the Congress of the United States says to all the American people "Let us pray," so many raise the question, "Is this an appropriate time to pray?" But are times for prayer to be determined by political calendars or thermometers? Yes, some reply, "but this particular prayer at this time might upset the international applecart." It is poor timing, say timid souls who themselves are quite free and comfortable—thank you!—to let the jittery world know that prayers are being offered in the United States of America for the victims of the most colossal crime of the 20th century.

There are those who declare that perhaps it is not quite polite to call attention to nauseating things in welcoming malefactors who would like to be regarded by a forgetful world as hail-fellows-well-met.

The Soviet juggernaut has invaded and seized the sovereignty of untold millions who are being denied the right of self-determination for which a host of American boys died in the Europe now enslaved. The Soviet hammer has smashed the national life of independent nations and its sickle has cut down the most cherished blooms in their garden of living.

What a sickening roll it is. Estonia, Latvia, and Lithuania, when solemn promises were broken as the cruel grip of aliens strangled their freedom. Hungary, with its brave attempt to break the hateful fetters, is kept in the police state prison, as is Rumania, only by Soviet tanks and bayonets. From captured East Germany and North Korea thousands flee constantly to the freedom of West Germany and of South Korea.

The crude and rude boss of the Kremlin recently went like a conqueror to Poland, where the one uniting emotion is hatred of the Russians. The foreign tyrant twitted that deeply religious people about their naive faith. He ridiculed their church leaders as he gloried in his gospel of dirt-without-destiny.

Of course, by putting on civilized shows in Moscow it is ardently hoped that the free world will accept the status quo as its attention is diverted from the terrible things that are being perpetrated in the captive countries—things which if not stopped will soon make it impossible ever to retrieve the national existence, as the very roots are being destroyed.

The free world needs to be told in season and out of season, of the crimes of genocide, of deportation, of torture and liquidation of those who refuse to conform. The smiles being broadcast these days are on the deceitful faces of those who even now are carrying out these almost unbelievably sadistic policies. Could Shakespeare have characterized the Soviet perfidy more accurately than is suggested by his line—"Like the smiling flower, and like the serpent under it"?

Mangled Tibet is the latest addition to the roll of captive nations caught in the tentacles of the Red octopus. Are the sounds of the ballet in Moscow to drown out the piteous pleas for liberation from ancient peoples whose very national life is being stamped into the bloody ground?

No wonder the American proposition for a Week of Prayer has evidently struck the Soviet anatomy in a very sensitive spot.

Of course the repetition in the congressional resolution of what has been said by America again and again brings protests from sycophant Quislings. But the bowed people, behind the curtain, under the taskmaster's whip stir with new hope. Through the resolution a voice which perhaps had seemed to be stifled resounds loud and strong—"Let my people go." The patriotic exiles from all these shackled nations now on our free soil are making the welkin ring with their grateful cheers. They know it is never the wrong time to pray for the right things.

And so we thank the God who hath made and preserved us a nation, that from the halls of our Congress there comes to the enslaved the assurance: "We shall continue to think in terms of your freedom, and not your thraldom. We are looking for your day of liberation, and not for any acceptance of legitimacy to be stamped on your bondage. And so, not only this year—but every year, and every day of every year—we call upon our free Nation to remember you in your captivity, with the poignant resolution of a Hebrew exile of old who, with his people under the rod of the oppressor, swore 'If I forget thee, O Jerusalem, let my right hand forget her cunning and my tongue cleave to the roof of my mouth.'"

And so when Congress says "Let us remember—lest we forget" it is but reechoing the stirring words of Woodrow Wilson: "The right is more precious than peace. We shall fight for the rights of those who submit to authority to have a voice in their own government, for the rights and liberties of small nations, until at last the world is free."

When Congress says, Let us pray for the captive people, it is but broadcasting the call of James Russell Lowell:

"Is true freedom but to break
Fetters for our own dear sake,
And with leathered hearts, forget
That we owe mankind a debt?
No. True freedom is to share
All the chains our brothers wear,
And, with heart and hand, to be
Earnest to make others free."

Dancey in Russia

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 14, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks, I wish to include the 23d and 24th articles of a series by Editor Charles L. Dancey appearing in the August 11 and 12 issues of the Peoria Journal Star, respectively:

[From the Peoria Journal Star, Aug. 11, 1959]

WEST GERMAN JAZZMEN NOT HIP TO RED TOUR

(By Charles L. Dancey)

TBILISI.—When I reached the airport at Baku, a big West German (who turned out to be the jazz singer with the band) spotted me at once and asked me if I were an American.

When I said I was, he grinned and said, "One look and I knew it had to be."

I said that was particularly funny to me, because the Russians had repeatedly mistaken me for a German.

He said that "to a Russian" there probably was a similarity between an American and a West German. On the plane, the jazz band and I were the sum total of passengers, and almost all of them spoke English in varying degrees.

All said their tour in Russia was interesting, but all were eager to get home.

They smiled "you-know-what-I-mean" smiles and said: "It's a different world." They weren't impressed. They had been touring 6 weeks.

In Tbilisi I was met by a charming guide, a college student in English, a native Georgian, whose name is Loli (Persian for "Ruby").

We skipped lightly over the two stadiums, usual big housing projects, and huge new parks building, and dropped the car on a mountaintop overlooking the whole city. Then we rode a cable car down in 3 minutes—swoosh.

We walked most of the afternoon, visiting an ancient castle where Stalin was once a prisoner in the dungeon, saw the crumbling fortress on the mountain built by Persian invaders 1,000 years or more in the past, and walked through the "old city," which dates back to 300 B.C.

Here again were the cramped, stacked Arabic or Mexican-type houses, in narrow, dark winding streets, with a good many crummy looking characters.

Loli would say, "Those people are not Georgian, they are Kurds." Or something else.

She is very proud, very intelligent, very well educated in Georgian history, and speaks English excellently and without Gregory Ratoff accent. Her Georgian accent is very soft.

At the end of one of the winding streets stood a building with blue tile front, and later I returned alone through the old city to this place and had a sulfur water bath in a huge square sunken marble pool fed by an artesian well in a great vaulted marble room with Oriental designs in tile on the floor and two great marble "couches." The water comes from the ground already hot from natural hot springs.

This is the ancient bathhouse of the ancient kings of Georgia.

The Georgians are the proudest and most likable people I have met in the Soviet Union. They are the "Iberians" of ancient Greek writings. Colchis, where the Golden Fleece was found, was a Georgian land. They created their own strange phonetic alphabet at least 500 B.C., a close rival of the budding Roman civilization.

Caesar's rival, Pompey, once marched into their mountain homeland near Tbilisi, but they withstood the Romans and often became their allies later. They are also one of the earliest Christian nations, having converted in A.D. 300.

Their whole history is one of constant war with the non-Christian hordes around them—the Moorish conquest failed to subdue them, and their nation and religion survived Ghenghis Khan, Tameriane, and the constant attacks of Turks and Persians.

Their religious art, dating to A.D. 800, is hundreds of years before that of Rennaissance Italy, and especially in the craftsmanship of their goldsmiths and silversmiths was farther advanced than Italian work of the 13th century.

It is hard to believe that from such a place and such a people came a Josef Stalin.

[From the Peoria Journal Star, Aug. 12, 1959]

TALK WITH NUN RATTLES GUIDE

(By Charles L. Dancy)

TBILISI.—Today we traveled to a little city that is the old capital of Georgia, and when they say "old" they mean old.

The capital was moved from this place to Tbilisi in A.D. 500.

Here is a tremendous cathedral with services underway. We stopped. The singing was very beautiful, and it seemed amazing to

hear such lovely singing from a handful of nondescript worshipers.

When the priest stepped out in his resplendent robes through two little swinging doors to the altar, he was a very young and handsome man with a full beard and long, flowing, curly, black hair—looking like a figure right out of the Bible.

Loli, my guide, was amazed.

"He is so young," she exclaimed. "How is it possible? Only the old people believe. And he can never marry. He is buried."

A nun came to me and asked if I were a believer but I did not understand her Georgian and Loli translated. I said "Yes," and she asked, "Why don't you kiss the cross, then?"

I said that I was a Christian but my church did not happen to include this same ceremony.

The woman replied in English, "Protestant." I nodded. "It does not matter," she said. "It is all one Christ and one God." (This in Georgian translated by Loli.) The nun spoke more.

Again, Loli was visibly shaken.

"This woman is very well educated," she said. "She knows all about Martin Luther."

A rapid-fire exchange between the two of them, and Loli turned again: "She is an engineer—with two degrees. How can it be—so educated and a believer?"

Loli could not get over these two experiences for some time. They did not fit the flat, absolute preachments of her propaganda-flavored education.

Like everyone else in Russia, she also told me that pipes are not smoked. "They are very bad for health," she said. "I know of no man that smokes them any more, except of course my grandfather."

"And how old is your grandfather?" I asked.

Loli looked at me for a moment, and then she began to laugh and laugh. With tears in her eyes she finally replied: "He is now a full century."

Inside this great cathedral are the burial crypts of old Georgian kings, some of the marble slabs shattered by the hooves of Turkish cavalry horses. In the massive walls are 200 hidden secret rooms entered through a tiny door 80 feet up over a gaint arch—where the women, children, and treasures were hidden during raids. Around the church is a battlement wall.

En route back we stopped at another state farm—100 salaried full-time workers living in 16 small apartment buildings plus a big administration building with offices and such to take care of the farm of 800 hectares—2,000 acres.

This whole area is somewhere in the borderland of what is believed to be the ancient homeland of the entire Aryan race that spread over Northern Europe, and although they are an island among darker-skinned Arabic-type Caucasians, many of the Georgians are like Loli—very fair skinned and light haired.

Two side incidences took place here of special interest that I will tell about separately instead of in chronology.

Remarkable Tree Farmer

EXTENSION OF REMARKS
OF
HON. FRANK CHURCH
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Monday, August 17, 1959

Mr. CHURCH. Mr. President, it has been only in recent years that the "Tree Farm" has become a well-known part of the American lexicon. Up in the beautiful Idaho Panhandle, near the blue waters of Hayden Lake, O. K. Smith started farming his trees back in 1925, pioneering a tree conservation program. Today, experts from across the Nation visit Hayden Lake to see his remarkable accomplishments.

The August 1959 issue of the Northwest Ruralite published an interesting article on Mr. Smith. I ask unanimous consent to have this article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REMARKABLE TREE FARMER

Little by little over the past 40 years, O. K. Smith, a craggy, youthful man in spite of his "retirement age," has acquired more than a section of woodland and brushy pasture in a picturesque vale near Hayden Lake, Idaho, and has turned it into one of the continent's most productive tree farms.

"Trees are our principal business," he says, "but we like critters, too."

Foresters come from all parts of the country to see how Mr. Smith has done it. Here's what a group of them found out about his place not so long ago: 560 acres of woodland and pasture; 50 acres of cropland.

Tree thinning operations were started in 1925 (this makes him one of the earliest tree farmers in the Northwest).

Products for home use: house, shed lumber, 15 cords of fuel per year, corral posts and poles (don't be fooled by that cordwood, Mrs. Smith has both a wood and electric range).

Grazing: Six to eighty head of cattle. (Mr. Smith says the number depends on how much time he and his sons can find free from their tree operations).

Products sold: Eight truckloads of poles; 130 thousand feet of saw logs at landing; 400 sawed ties; 1,600 cords of fuel wood; 15 cars of pulpwood.

And, as one nationally known forester has said, "All this was produced by foresight and hard work."

The secret of the tree conservation program appears to be in consistent thinning and pruning. Government agencies pay small conservation bounties to tree farmers now for pruning, but when Mr. Smith started his program, it was done not for the bounty but because it produced more salable wood.

There's a fine pine tree in the Smith front yard which Mr. Smith measures every June. It has grown 17 inches in circumference during the past 8 years. "There's about 1,000 usable board feet in that tree right now," he says. A visitor gets the feeling he can give you the same information about every tree on the place.

He took 130,000 feet of lumber off a 10-acre tract 1 year. Most of his merchantable timber is fir, tamarack, and pine.

"I came west in 1898, and I started this kind of farming because I'd seen wheat selling for 38 cents a bushel," is his comment. "We've acquired our acreage, piece by piece, and we now sell some timber every year. Currently, we've been taking it easy. We move maybe 12,000 feet per year, but we could take 40,000 to 50,000 feet without hurting anything."

Mr. Smith leaves the logging to his sons now and spends a lot of time on planning and on handicraft hobbies. He handcarves fans out of white pine in minute delicate filigree patterns. Has a showcase full of his carvings at home. He has a fine brown bearskin robe, tanned and draped over his sofa in the parlor. "Caught the bear a couple of miles from here," he says, "don't see many like it."

The Smith home is all-electric and, of course, its power supply comes from a co-op: the Kootenai Rural Electric Association at Coeur d'Alene, Idaho.

Presidential Inability

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 17, 1959

Mr. MULTER. Mr. Speaker, on January 7, 1959, I introduced H.R. 871 to provide a method for determining Presidential inability.

In this connection, I commend to the attention of our colleagues the following report on Senate Joint Resolution 40, by the Association of the Bar of the City of New York:

REPORT OF THE COMMITTEE ON FEDERAL LEGISLATION ON SENATE JOINT RESOLUTION 40, A PROPOSED AMENDMENT TO THE U.S. CONSTITUTION RELATING TO CASES WHERE THE PRESIDENT IS UNABLE TO DISCHARGE THE POWERS AND DUTIES OF HIS OFFICE

INTRODUCTION

There presently exists a defect in the Constitution of the United States relating to the situation where the President is unable to discharge the powers and duties of his office. This inability may come about because of serious illness, as it has in the past, or some other emergency. In the present day and age, the serious consequences of such an occurrence cannot be stressed too stongly. In the opinion of the committee, action should be taken to clarify the Constitution and to enact legislation dealing with the problem, prior to the advent of some future presidential inability. This report discusses the problem and recommends certain constitutional and legislative action relating thereto.

BACKGROUND

Clause 5 of section 1 of article II of the Constitution reads as follows:

"In case of the removal of the President from office, or of his death, resignation, or inability to discharge the powers and duties of the said office, the same shall devolve on the Vice President, and the Congress may by law provide for the case of removal, death, resignation, or inability, both of the President and Vice President, declaring what officer shall then act as President, and such officer shall act accordingly, until the disability be removed, or a President shall be elected."

Several times in U.S. history, when the President has been seriously incapacitated, the question of whether the "office" of President, or the "powers and duties of the said office" "devolve on the Vice President" has been forcibly raised. Does a determination of inability affect the Office, or the powers and duties of the office, and does the Vice President, if he assumes the powers and duties of the office, do so on a temporary basis, or on a permanent basis thus displacing or ousting the President?

The problem arises because of the precedent which has been established by seven Vice Presidents upon the death of the President then in office. The Vice President assumed not only the powers and duties of the Office of President but also the Office itself.

In view of the language of the clause, the question has been raised whether the same result will not occur upon the inability of the President to discharge the powers and duties of the Office, namely, that the Vice President will then assume the Office of the President, and the President will be ousted.

Although the records of the debates of the Founding Fathers demonstrate that this was not the intention of the Founding Fathers, nevertheless the precedents established by the seven Vice Presidents upon the death of the President then in office, the language of the clause, and the reluctance of Vice Presidents Arthur and Marshall to act when Presidents Garfield and Wilson were incapacitated because of the fear that by such assumption of the powers and duties of the Presidency, they would be ousting the President, has led to a constitutional ambiguity which should be clarified.

Historians believe that our Government has suffered in the past as a result of this ambiguity and that the matter should be clarified for the future. Certainly the original understanding of the framers of the Constitution that only the powers and duties of the President passed to the Vice President upon the inability of the President, could be set forth in the Constitution, and it would seem that the present congressional session affords an excellent opportunity to clarify this constitutional defect.

This committee has studied the question and concluded that a constitutional amendment should be enacted by the Congress and submitted to the States amending clause 5 of section 1 of article II. Such constitutional amendment should eliminate the ambiguity and provide, in general terms, for the establishment of a system of determining inability by the Congress. The committee further believes that upon the adoption of such amendment Congress should enact legislation (i) providing a method to determine inability; and (ii) establishing a procedure whereby the President, if and when he recovers from his inability, may resume the powers and duties of the Office of President. Throughout the period of inability, however, the President should retain the Office of President, and the Vice President should serve only as Acting President.

The committee believes that the solution to the problem may be found in Senate Joint Resolution 40, and a proposal of the Committee on Federal Constitution of the New York State Bar Association.

THE MEMORANDUM OF UNDERSTANDING BETWEEN THE PRESENT PRESIDENT AND THE PRESENT VICE PRESIDENT

President Eisenhower and Vice President NIXON on March 3, 1958, published the following memorandum of their understanding of the constitutional role of the Vice President as Acting President during the inability of the President:

"The President and the Vice President have agreed that the following procedures are in accord with the purposes and provisions of article 2, section 1, of the Constitution, dealing with Presidential inability. They believe that these procedures, which are intended to apply to themselves only, are in no sense outside or contrary to the Constitution but are consistent with its present provisions and implement its clear intent.

"1. In the event of inability the President would—if possible—so inform the Vice President, and the Vice President would serve as Acting President, exercising the powers and duties of the Office until the inability had ended.

"2. In the event of an inability which would prevent the President from communicating with the Vice President, the Vice President, after such consultation as seems to him appropriate under the circumstances, would decide upon the devolution of the powers and duties of the Office and would serve as Acting President until the inability had ended.

"3. The President, in either event, would determine when the inability had ended and at that time would resume the full exercise of the powers and duties of the Office."

Presumably in the event of inability of the present President this memorandum would be construed as establishing a procedure by which the powers and duties of the Office of President would be assumed by the Vice President until the inability had ended. The determination as to the ending of the inability would be at the sole discretion of the President. The memorandum notes that the procedures "are intended to apply to themselves only" and thus would not appear to be binding upon future incumbents of the Office of President and Vice President.

Accordingly, in the opinion of the committee, a constitutional amendment and implementing legislation to govern cases for the future are necessary.

Senate Joint Resolution 40

Annexed hereto as appendix 1 is Senate Joint Resolution 40, as reported this spring to the Senate Judiciary Committee by its Subcommittee on Constitutional Amendments, a proposed amendment to the U.S. Constitution, which is the same resolution introduced in Congress as Senate Joint Resolution 161 in 1958.

The essentials of the proposed amendment are that it:

1. Clarifies the established view that upon the removal of the President from office, death, or resignation, the Vice President actually becomes President; and

2. Provides for the case where the President is unable to discharge the powers and duties of the Office of President, but makes clear that the Vice President assumes only the powers and duties of the Office, and not the Office itself.

This committee favors enactment of an amendment to accomplish these two purposes.

In the case of inability, Senate Joint Resolution 40 provides that the President may make a written declaration to that effect; provides a method by which the Vice President, subject to the majority approval of the Cabinet, may make such a declaration; and then provides a system for restoring the powers and duties of the Office of the President to the President upon the termination of his inability. This restoration would occur under a procedure providing the maximum safeguards to insure that the President can resume the discharge of the powers and duties of his Office upon the termination of his inability.

This committee believes that the establishment of the procedure for determining inability and the system of restoration would be best left to enactment by Congress, subject to the veto power of the President contained in clause 2 of section 7 of article I of the Constitution. This committee believes that constitutional amendments should not be overly detailed, and future contingencies in the operation of the implementation of the constitutional mandate, not presently foreseeable, left to the good judgment of Congress and the President, i.e., a majority of both Houses and Presidential approval, or a two-thirds vote of both Houses overriding a Presidential veto.

A detailed analysis of the six sections of Senate Joint Resolution 40 follows:

Section 1 deals with the case of the removal of the President from office, death, or resignation. It provides that the Vice President shall become President for the expiration of the then current term. This confirms the practice which has, in fact, been the situation since Vice President Tyler in 1841 eliminated the word "Acting" from the first paper submitted to him for signature after the death of William Henry Harrison from the words "Acting President" below his signature. Since then, six other men elected as Vice Presidents of the United States: Messrs. Fillmore, Johnson, Arthur, Theodore Roosevelt, Coolidge, and Truman, likewise assumed, upon the death of the President in office, the actual Office of the Presidency and not just the powers and duties of the Office. The committee favors enactment of section 1 as part of a constitutional amendment.

Section 2 provides that the Vice President shall discharge the powers and duties of the Office of President as Acting President, if the President himself declares in writing that he is unable to discharge the powers and duties of his Office, but makes it clear that only the powers and duties of the Office shall be discharged by the Vice President as Acting President. Insofar as this provision makes clear that only the powers and duties of the Office shall be discharged by the Vice President as Acting President, this committee believes it should be included as part of a constitutional amendment, and this committee's proposal does so. Insofar as it deals with a determination of inability by the President, a matter of procedure, this committee believes it should be included in the implementing legislation of the Congress, and not frozen into the Constitution.

Section 3 provides for the situation where the President does not declare his inability. The Vice President, if satisfied that the President is unable to discharge the powers and duties of his Office, shall, upon the written approval of the majority of the heads of the executive departments in office, assume the discharge of the powers and duties of the Office of President as Acting President. Once again, it makes certain that the Office of the Presidency does not devolve upon the Vice President, but only the powers and duties of the Office. Furthermore, it vests in the executive branch of the Government, in the Vice President and the members of the Cabinet, presumably the men closest to the President and upon whom he would rely to the greatest degree, the power to determine and to confirm the President's inability to discharge the powers and duties of the Office of President. Upon such determination and approval, the Vice President assumes the discharge of the powers and duties of the Office of President as Acting President. This committee believes that this section, which deals with procedure, should also be included in implementing legislation of the Congress, and not frozen into the Constitution.

Section 4 provides for the resumption of the powers and duties of the Office of the Presidency by the President, when the President's inability is terminated. This the President may do by a simple public announcement in writing that his inability has terminated, and 7 days thereafter, "or at such earlier time after such announcement as he and the Vice President may determine," he shall resume the discharge of the powers and duties of his Office. If there should be a dispute as to the termination of the President's inability, the Vice President, again with the written approval of a majority of the heads of the executive departments in office at the time of the President's announcement, may transmit to the Congress the Vice President's written declaration that in his opinion the President's inability has not terminated. If this should occur, the Congress shall thereupon consider the issue and, if it is not in session, it shall assemble in special session on the call of the Vice President. Upon a concurrent resolution, adopted by the Congress with the approval of two-thirds of the Members present in each House, to the effect that the inability of the President has not terminated, the Vice President shall assume the discharge of the powers

and duties of the Office of the President as Acting President until:

1. He proclaims the President's inability has ended;

2. The Congress itself by concurrent resolution adopted by a majority of the Members present in each House determines that the President's inability has ended; or

3. The President's term ends.

In other words, a two-thirds vote of the Members of each House present is necessary to confirm the Vice President's declaration, with the majority approval of the Cabinet, that the President's inability has not terminated. A simple majority of the vote of the Members present in each House to the effect that the President's inability has ended, would thereafter restore the powers and duties of the Office of President to the President. Again, the President would retain the office of President and only the powers and duties of the Office would devolve upon the Vice President as Acting President.

It should be noted that clause 3 of section 7 of article I of the Constitution reads as follows:

"Every order, resolution, or vote to which the concurrence of the Senate and House of Representatives may be necessary (except on a question of adjournment) shall be presented to the President of the United States; and before the same shall take effect, shall be approved by him, or being disapproved by him, shall be repassed by two-thirds of the Senate and House of Representatives, according to the rules and limitations prescribed in the case of a bill."

However, the view of the Senate Parliamentarian seems to be that concurrent resolutions, at least insofar as the Senate is concerned, are not used for legislative purposes, and accordingly are not required to be presented to the President. In "Senate Procedure: Precedents and Practices," by Charles L. Watkins and Floyd M. Riddick, Government Printing Office, 1958, at pages 167–168, there appears the following:

"Concurrent resolutions are not required to be presented to the President of the United States unless they contain matter which is properly to be regarded as legislative in character and effect (footnote, Feb. 20, 1896, 54th Cong., 1st sess., Journal, p. 145; Jan. 26, 1897, 54th Cong., 1st sess., Journal, p. 76; see Nov. 24, 1903, 58th Cong., 1st sess., RECORD, p. 438) and under the practice of the Senate, they are not used for legislative purposes, and are not sent to the President for approval (footnote, Nov. 7, 1919, 66th Cong., 1st sess., RECORD, pp. 8074–8075)."

This committee assumes that under the procedure to be followed, the concurrent resolutions provided for in Senate Joint Resolution 40 would not require the approval or disapproval of the President, Vice President, or Acting President since the congressional action contemplated would seem to be more in the nature of fact determination than legislative in character and effect. If this were not so, confusion could arise as to whether the Vice President as Acting President could disapprove the necessary concurrent resolutions adopted by the Congress, in his capacity as Acting President. This could result in a situation where a two-thirds vote of the Senate and House of Representatives would be necessary under all circumstances to restore the powers and duties of the Office of President to the President from the Vice President serving as Acting President—a result that is certainly not contemplated and directly contrary to the intent of Senate Joint Resolution 40. The committee takes no position, however, on the general view of the Senate Parliamentarian that, under the practice of the Senate, concurrent resolutions are not used for legislative purposes, and accordingly are not required to be presented to the President.

As with respect to section 3, this committee believes this section, which deals with procedure, should be included in implementing legislation of the Congress, and not frozen into the Constitution.

The first sentence of section 5 provides, in the language of the present clause of the Constitution, that the Congress may provide for the case of the removal by death, resignation, or inability both of the President and Vice President. This language should be retained in the constitutional amendment. The Presidential Succession Act [1] provides for the situation, and spells out who shall exercise the powers and duties of the Office of President and that such person shall act as President. The Presidential Succession Act throughout makes it clear that such person as as President, using the words "act as President" and "acting as President."

The second sentence of section 5 provides for the situation where there is no Vice President. Under such circumstances, the powers and duties conferred by the amendment on the Vice President "shall devolve upon the officer eligible to act as President next in line of succession to the office of President, as provided by law." Under this committee's recommendation, the amendment will not confer any powers and duties upon the Vice President, and this sentence should accordingly appear in the implementing legislation and not the amendment.

Section 6 provides that the proposed amendment shall be inoperative unless ratified by the legislatures of three-fourths of the States within 7 years from the date of its submission. Section 6 should obviously be a part of the constitutional amendment.

The committee notes that Senate Joint Resolution 40 is silent as to present clause 5 of article II of the Constitution, but assumes that the present clause 5 would be repealed.

PROPOSAL OF THE COMMITTEE ON FEDERAL CONSTITUTION OF THE NEW YORK BAR ASSOCIATION, DATED DECEMBER 13, 1958

The committee on Federal Constitution of the New York State Bar Association, in its report of December 31, 1958, recommended an amendment to read as follows:

"In case of the removal of the President from office, or of his death or resignation, the said office shall devolve on the Vice President. In case of the inability of the President to discharge the powers and duties of the said office, the said powers and duties shall devolve on the Vice President, until the inability be removed. The Congress may by law provide for the case of removal, death, resignation, or inability, both of the President and Vice President, declaring what officer shall then be President, or in case of inability, act as President, and such officer shall be or act as President accordingly, until a President shall be elected or, in case of inability, until the inability shall be earlier removed. The commencement and termination of any inability shall be determined by such method as Congress shall by law provide."

The committee on Federal Constitution stated:

"It is felt by this committee that a constitutional amendment is necessary, and that the amendment should provide in substance:

"(a) That the commencement and termination of any inability should be determined by such method as Congress shall by law provide; and

"(b) In case of the inability of the President, that the Vice President should succeed only to the powers and duties of the Office and not to the Office itself."

It endorsed as second best to its proposed constitutional amendment, Senate Joint Resolution 161 (1958) (introduced in 1959 as S.J. Res. 40). The reason Senate Joint Resolution 161 was second best is stated by that committee as follows:

"Senate Joint Resolution 161 specifies the method and machinery for determining the commencement and termination of disability. This precludes leaving to Congress the details which might have to be changed in the future because the method selected proved to be unsatisfactory. Senate Joint Resolution 161 appears to us to be preferable, however, to other methods that have been suggested."

The executive committee of the New York State Bar Association on January 29, 1959, adopted the following resolutions:

"Now, therefore, be it

"*Resolved*, That the executive committee of the New York State Bar Association hereby recommends that the present provisions of the Constitution of the United States dealing with the death, resignation, removal or inability of the President (art. II, sec. 1, clause 5 [sic]) be amended so that (1) the commencement and termination of any inability shall be determined by such method as Congress shall by law provide; and (2) the Vice President, in case of the inability of the President, shall succeed only to the powers and duties of the office and not to the office itself;

"*Further resolved*, That said report of this association's committee on Federal Constitution is hereby approved and adopted, including the text of the proposed constitutional amendment therein set forth, and including the determination of said committee that Senate Joint Resolution 161 introduced in the Senate March 4, 1958, by Senator KEFAUVER and bipartisan sponsors (proposing a constitutional amendment which lays down a detailed method and machinery for determining the commencement and termination of disability) is favored as second best to said committee's proposal and as preferable to other methods that have been suggested."

In both the proposed constitutional amendment of the Committee on Federal Constitution of the New York State Bar Association and Senate Joint Resolution 40, it is made clear that the powers and duties of the Office of President devolve upon the Vice President in the event of the inability of the President, and not the Office itself, i.e., the Vice President does not assume the Office of President but solely the powers and duties thereof. This committee endorses a constitutional amendment making this clear.

The proposal of the committee on Federal Constitution thereafter delegates to the Congress the responsibility for enacting legislation dealing with the determination of the commencement and termination of inability. In this respect:

(1) This committee concurs with this recommendation allowing Congress to deal by law with the determination of the commencement and termination of inability. Such initial legislation would have to have the approval of the President, or be enacted by a two-thirds vote of each House. Repeal or modification would also be subject to the same safeguards. Thus, the possibility of considerations other than the President's "inability" entering into the determinations would be greatly reduced, if not entirely eliminated.

(2) This committee believes that such implementing legislation should be as set forth in sections 2, 3, 4, and the second sentence of 5, of Senate Joint Resolution 40.

As noted above, this committee is of the view that, in the case of the removal, death, resignation or inability, both of the President and Vice President, the official designated by legislation should succeed only to the powers and duties of the President, acting as President, and not become President. This is the situation under the language of the present clause 5 of section 1, of article II of the Constitution, and is retained in Senate Joint Resolution 40. The proposal of the Com-

[1] 3 United States Code Annotated, sec. 19 (June 25, 1956, ch. 644, sec. 1,625, Stat. 672).

mittee on Federal Constitution would change this to make such official the President in the case of removal, death, or resignation, but in the case of inability make such official only "act as President."

It does not seem to this committee that the precedent which has been established by the Vice Presidents on the death of the President alone, should be extended over to the cases of the removal, death, or resignation of both the President and Vice President. The President is elected as such; the Vice President is elected as such, one of his duties being to act as President, and indeed succeed to the office upon the death of the President. No other officials are elected, as the President and Vice President are, with these purposes in mind.

THE NEED FOR ACTION IN THIS FIELD

In the assembling of a bibliography of the literature concerning the question of Presidential inability, the committee was impressed by the fact that the literature ebbs and flows with the status of the health of the incumbent in the White House. Thus in 1881, at the time when President Garfield lay critically stricken, a number of articles dealing with the presidential inability question and prospective solutions appeared. In 1919 and 1920, during the illness of President Wilson, once again the question came to the forefront of the minds of the American people. Most recently, during the illnesses of President Eisenhower, the subject was revived and numerous proposals advanced, extensive hearings conducted by both Houses of Congress, and articles written.

The Republic cannot afford, in the present age of global and national problems of great complexity and vital importance, to allow the constitutional problem of possible Presidential inability to remain in its present unsatisfactory state. It would seem that the present is the time for objective analysis and appraisal of the situation, and for setting in motion the necessary machinery for the enactment of a constitutional amendment and implementing legislation resolving the question in the best manner possible.

CONCLUSION

The committee is of the opinion that a constitutional amendment embodying section 1 of Senate Joint Resolution 40, and providing for the determination of the commencement and termination of any inability as the Congress shall by law provide, affords the best means for dealing with this vital question, to the extent that a constitutional amendment is necessary. The committee believes that sections 2, 3, and 4, and the second sentence of section 5 of Senate Joint Resolution 40 should be included in implementing legislation by the Congress, after the adoption of the proposed constitutional amendment.

The committee has set out as appendix 2, the proposed constitutional amendment of the Committee on Federal Constitution of the New York State Bar Association; as appendix 3, the results of this committee's recommendations insofar as a constitutional amendment is concerned; and as appendix 4, the results of this committee's recommendations insofar as implementing legislation is concerned.

Respectfully submitted.

APPENDIX 1

SENATE JOINT RESOLUTION 40

Joint resolution proposing an amendment to the Constitution of the United States relating to cases where the President is unable to discharge the powers and duties of his office

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following article is proposed as an amendment to the Constitution of the United States, which shall be valid to all intents and purposes as part of the Constitution when ratified by the legislatures of three-fourths of the several States:

"ARTICLE—

"SECTION 1. In case of the removal of the President from office, or of his death or resignation, the Vice President shall become President for the unexpired portion of the then current term.

"SEC. 2. If the President shall declare in writing that he is unable to discharge the powers and duties of his office, such powers and duties shall be discharged by the Vice President as Acting President.

"SEC. 3. If the President does not so declare, the Vice President, if satisfied that such inability exists, shall, upon the written approval of a majority of the heads of the executive departments in office, assume the discharge of the powers and duties of the office as Acting President.

"SEC. 4. Whenever the President makes public announcement in writing that his inability has terminated, he shall resume the discharge of the powers and duties of his office on the seventh day after making such announcement, or at such earlier time after such announcement as he and the Vice President may determine. But if the Vice President, with the written approval of a majority of the heads of executive departments in office at the time of such announcement, transmits to the Congress his written declaration that in his opinion the President's inability has not terminated, the Congress shall thereupon consider the issue. If the Congress is not then in session, it shall assemble in special session on the call of the Vice President. If the Congress determines by concurrent resolution, adopted with the approval of two-thirds of the Members present in each House, that the inability of the President has not terminated, thereupon, notwithstanding any further announcement by the President, the Vice President shall discharge such powers and duties as Acting President until the occurrence of the earliest of the following events: (1) The Acting President proclaims that the President's inability has ended, (2) the Congress determines by concurrent resolution, adopted with the approval of a majority of the Members present in each House, that the President's inability has ended, or (3) the President's term ends.

"SEC. 5. The Congress may by law provide for the case of the removal, death, resignation, or inability, both of the President and Vice President, declaring what officer shall then act as President, and such officer shall act accordingly until the disability be removed, or a President shall be elected. If at any time there is no Vice President, the powers and duties conferred by this article upon the Vice President shall devolve upon the officer eligible to act as President next in line of succession to the office of President, as provided by law.

"SEC. 6. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of three-fourths of the several States within seven years from the date of its submission."

APPENDIX 2

PROPOSED CONSTITUTIONAL AMENDMENT OF THE COMMITTEE ON FEDERAL CONSTITUTION OF THE NEW YORK STATE BAR ASSOCIATION

In case of the removal of the President from office, or of his death or resignation, the said office shall devolve on the Vice President. In case of the inability of the President to discharge the powers and duties of his said office, the said powers and duties shall devolve on the Vice President, until the inability be removed. The Congress may by law provide for the case of removal, death, resignation, or inability, both of the President and Vice President, declaring what officer shall then be President, or in case of inability, act as President, and such officer shall be or act as President accordingly, until a President shall be elected or, in case of inability, until the inability shall be earlier removed. The commencement and termination of any inability shall be determined by such method as Congress shall by law provide.

APPENDIX 3

CONSTITUTIONAL AMENDMENT TO CARRY OUT RECOMMENDATIONS OF THE COMMITTEE ON FEDERAL LEGISLATION OF THE ASSOCIATION OF THE BAR OF THE CITY OF NEW YORK

Joint resolution proposing an amendment to the Constitution of the United States relating to cases where the President is unable to discharge the powers and duties of his office

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following article is proposed as an amendment to the Constitution of the United States, which shall be valid to all intents and purposes as part of the Constitution when ratified by the legislatures of three-fourths of the several States:

"Article —

"SECTION 1. Clause 6 of section 1 of article II of the Constitution of the United States is hereby repealed.

"SEC. 2. In case of the removal of the President from office, or of his death or resignation, the Vice President shall become President for the unexpired portion of the then current term.

"SEC. 3. In case of the inability of the President to discharge the powers and duties of his said office, the said powers and duties shall devolve on the Vice President, until the inability be removed. The commencement and termination of any inability shall be determined by such method as the Congress shall by law provide.

"SEC. 4. The Congress may by law provide for the case of the removal, death, resignation or inability, both of the President and Vice President, declaring what officer shall then act as President, and such officer shall act accordingly until the disability be removed, or a President shall be elected.

"SEC. 5. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of three-fourths of the several States within seven years from the date of its submission."

APPENDIX 4

IMPLEMENTING LEGISLATION TO CARRY OUT RECOMMENDATIONS OF THE COMMITTEE ON FEDERAL LEGISLATION OF THE ASSOCIATION OF THE BAR OF THE CITY OF NEW YORK

A bill to provide a method for determining the commencement and termination of Presidential inability, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the

determination of the commencement and termination of inability of the President to discharge the powers and duties of the office of President shall be made as provided in this Act:

SECTION 1. If the President shall declare in writing that he is unable to discharge the powers and duties of his office, the powers and duties shall be discharged by the Vice President as Acting President.

SEC. 2. The Vice President, if satisfied that the President is unable to discharge the powers and duties of his office, shall, upon the written approval of a majority of the heads of the executive departments in office, assume the discharge of the powers and duties of the office as Acting President.

SEC. 3. Whenever the President makes public announcement in writing that his inability has terminated, he shall resume the discharge of the powers and duties of his office on the seventh day after making such announcement, or at such earlier time after such announcement as he and the Vice President may determine. But if the Vice President, with the written approval of a majority of the heads of executive departments in office at the time of such announcement, transmits to the Congress his written declaration that in his opinion the President's inability has not terminated, the Congress shall thereupon consider the issue. If the Congress is not then in session, it shall assemble in special session on the call of the Vice President. If the Congress determines by concurrent resolution, adopted with the approval of two-thirds of the Members present in each House, that the inability of the President has not terminated, thereupon notwithstanding any further announcement by the President, the Vice President shall discharge such powers and duties as Acting President until the occurrence of the earliest of the following events: (1) the Acting President proclaims that the President's inability has ended; (2) the Congress determines by concurrent resolution, adopted with the approval of a majority of the Members present in each House, that the President's inability has ended; or (3) the President's term ends.

SEC. 4. If at any time there is no Vice President, the powers and duties conferred by this Act upon the Vice President shall devolve upon the officer eligible to act as President next in line of succession to the office of President, as provided by law.

Magazine Publisher Who Toured Russia With Vice President Nixon Says Communism Not Answer to Race Problem

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 17, 1959

Mr. POWELL. Mr. Speaker, any Negro who feels that communism is the solution to the race problem in the United States will be sadly disappointed if he takes a trip to Soviet Russia.

This is the opinion of John H. Johnson, publisher of Jet and Ebony magazines, who, with his wife Eunice, was a member of the press group which accompanied Vice President NIXON on his recent trip to Russia and Poland. There are relatively few Negroes in the Soviet Union, and Mr. Johnson agrees with the Russian claim that it does not have a race problem. However, he is quick to point out that most of the privileges which we take for granted, such as freedom of speech and the press, and the right to own property, are not enjoyed by the Russian people.

The American Negro who wants better housing, more productive employment, and more individual opportunities will find that they are not available to him in Russia because they are not available to the majority of the Russian people.

Says Mr. Johnson. He does feel, however, that even though the Communist philosophy is not a good one for Negro, or white Americans, there is no reason why the United States and Russia should not be friendly and peaceful.

Mr. Johnson believes that the Nixon trip contributed much to the development of friendly relations between the two countries and that further cultural and educational exchanges should be continued.

Need To Safeguard Our Hawk Population From Extinction

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, August 17, 1959

Mr. NEUBERGER. Mr. President, many Americans mistakenly favor or encourage the slaughter of all hawks, without realizing that these majestic birds often help to control the rodent population which could be a peril and threat to the Nation's food supply.

In the June 1958 issue of the Reader's Digest appeared a most illuminating article by Peter Farb about protecting our hawks from decimation and extinction. The article was published originally in Audubon magazine, official organ of the National Audubon Society, for May–June of 1958.

Because we of the U.S. Senate adopt appropriations for the Fish and Wildlife Service, and thus pass on policy in this area of ornithology, I ask unanimous consent that Mr. Farb's article from the Reader's Digest, entitled "The Truth About Hawks," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE TRUTH ABOUT HAWKS
(By Peter Farb)

Of all the creatures with whom we share the globe, none is more maligned or senselessly slaughtered than the hawk. There are 32 species of American hawks, but most people simply classify all of them as "big" chicken hawks and "little" chicken hawks, and are quite willing to believe that they are bloodthirsty creatures that kill for sport.

The truth is that hawks kill only when hungry, never for sport. They can be trained to the affectionate obedience of a dog, and are as mischievous in the air as otters are around a pond. "It is hawks' near-human qualities of love, anger and playfulness that have made them the favorite birds of most ornithologists," says Dr. Frederick C. Lincoln, famous birdman of the U.S. Fish and Wildlife Service.

An exhaustive study by the U.S. Department of Agriculture, based on analysis of the stomach content of 2,690 hawks and owls, revealed that few hawks preyed on chickens or speedy game birds. Most hawks, it has been found, wage a ceaseless war on rodents and destructive birds, and on insects whose fertility, if unchecked, could overwhelm our production of foodstuffs. Recently Prof. Harrison B. Tordoff, of the University of Michigan, estimated that a single hawk saves farmers $110 a year in rodent damage.

Ranging in size from miniatures no bigger than robins to majestic giants that will attack a gazelle, hawks have been endowed with skills and adaptations that make them undisputed lords of the ether. To search out their quarry, for example, they are equipped with eyes that have been called "perhaps the most highly developed organs of vision in the world." A naturalist once reported having seen a falcon, flying high over a mountain ridge, suddenly close its wings and make a long, unwavering dive for a small bird, which it snatched in its knuckled talons. When the falcon first spotted its prey the two birds were at least 1½ miles apart. If we human beings had comparable visual acuity, we could read newspaper headlines a quarter of a mile away.

Much of the hawk's amazing sight comes from the size of the eyeballs, which are often as large as ours and extend far into the skull. In addition, the retina (the tissues in the back of the eye on which the picture image is thrown) is nearly twice as thick as a human's, and is packed with millions of minute visual cells. To shut out the glare of the sky, the eyes are coated with droplets of yellow oil that act much like a camera filter.

Last summer I saw a little sparrow hawk hurtle down from a height of 100 feet and neatly pluck a grasshopper off a leaf. Astounding as the feat was, more extraordinary still was the physical transformation that had taken place inside the bird's eye during the dive. While the hawk was circling for prey, its eye lens was working like a telescope; by the time it had plummeted to the grasshopper, the lens shape had altered to that of a microscope.

Sandwiched between the two giant eyeballs, the hawk's brain is necessarily small. Regardless, hawks perform prodigious feats. It is almost unbelievable, for example, that a bird could recall the ravages caused by storms from 1 year to the next. Yet the osprey, when about to migrate south, often buttresses its nest with fresh stocks to withstand the winter blizzards. Furthermore, when these fish hawks rise above the water with a catch, they always turn the fish so that its head is pointing forward, to lessen air resistance.

And consider this example of avian generalship. A Cooper's hawk was seen on the edge of a woodlot, peering hungrily at a flock of starlings sunning themselves on a barn roof. To fly directly at the starlings would have sent them scurrying for cover. Instead the Cooper's hawk circled back through the woodlot so it could approach from the rear. Then it flew inches above the ground, using every available tree trunk and dip in the terrain to mask its flight. When it reached the barn it rose vertically up the shadowed side and took its prey by complete surprise.

Hawks exhibit just about every technique to be seen in the world of flight. Watch the master flier of them all, the peregrine falcon, also called the duck hawk. Many times I have seen one, high above me, turn its nose downward, give a mighty flap for thrust, then close its wings and plummet toward the earth like a hurled stone—sometimes attaining the incredible speed of 250 miles an hour. Suddenly there is an exploding puff of feathers as the falcon strikes a bird with its large clawed fist. The prey is usually killed out-

right. But then comes the most amazing maneuver of all: The falcon darts under the falling bird, flips over on its back and catches the prey neatly in its talons. Here is one of the great displays of controlled power in nature.

A completely different method of flight is found in the big soaring hawks we often see wheeling in lazy circles. These birds are living gliders, among the most buoyant aloft. Nearly every one of their skeletal bones is hollow and filled with air sacs that supplement the lungs and decrease weight. Too, the wings and tail are extremely broad, providing a large lifting area in relation to weight. And at the wing tips the feathers have evolved into what are really many separate little wings, resembling a hand with the fingers spread out. These "slots," as they're called, give the hawk instant control over changes in air currents. As the soarers slowly patrol their territories, they coast on deflected air currents and on columns of rising warm air known as thermals, gliding from one to the next. That a hawk can pick up tremendous momentum riding the thermals was shown when an osprey was once clocked at 80 miles an hour in a mere 4-mile-an-hour wind—and not a wing-tip was twitching.

The ability to hover sometimes results in unique methods of hunting. The little sparrow hawk, for example, coaxes mice out of their burrows by hovering a few inches above the ground and squealing loudly. When the rodent pops its head out to see what the commotion is about, exit one mouse.

When not hunting, hawks often tease other birds. Dr. Alexander Wetmore of the Smithsonian Institution has seen them driving blackbirds, herons, and avocets before them, herding them like sheep, yet never attacking. A favorite game is to force a heron, no mean flier itself, lower, and lower until the heron has no choice but to plop down in the middle of a lake and, defeated, swim to the shelter of shore.

But it is in their mating flights that some hawks put on their greatest exhibitions of aerial acrobatics. One spring in South Carolina I saw an ecstatic male marsh hawk plunge wildly downward from a height of 100 feet, flip a somersault at the bottom, bound up again like a ball, and top his rise with another somersault. Then, his mate shrieking approval, he started all over again, tossing in a few barrel rolls for good measure.

Hawks are notable for being among the most devoted of feathered parents, and are believed to mate for life. Many return to the same nests year after year. (One osprey nest was in continual use by successive generations for 125 years, and one of Britain's falcon eyries is known to go back to Elizabethan times.) Although, unlike most other birds, the female is larger than the male, the male does most of the hunting. Occasionally, however, the female joins him, and one naturalist reports having seen a pair of peregrines team up against a nighthawk and fly off with the victim, tossing him back and forth like a football.

Many thousands of hawks have been senselessly shot every year—even near Hawk Mountain Sanctuary in Pennsylvania, which some 20 years ago was set up as the first sanctuary to protect migrating hawks during their autumn passages. Here is the major eastern flyaway for hawks, a narrow 60-mile-long funnel in the mountains where the birds bunch together and boil over the peaks by the thousands. But within a 30-mile radius of the sanctuary, and despite nearly a quarter-century in education as to the practical value of hawks, there are estimated to be more than 100 shooting stands. With Maurice Broun, curator of the sanctuary, I have hiked these "bloody ridges" and seen the woods littered with dead and maimed birds. Broun estimates that upward of 1,500 hawks a day have been shot here during migration.

But hawk protection is gaining. Eight States (California, Connecticut, Florida, Illinois, Indiana, Maine, Michigan, Rhode Island) and Ontario, Canada, have model protective legislation. Pennsylvania recently strengthened its hunting laws, and 24 State conservation departments are distributing National Audubon Society leaflets which identify the various types of hawks and describe their food habits.

But laws alone cannot save the hawks. First, an alerted citizenry must be ready to plead the facts. In Lambertville, N.J., some facts were dramatically demonstrated by Paul Fluck, a physician and nature enthusiast. In a pen harboring chickens he placed a wounded red-tailed hawk. Farmers, who had frequently shot at this species of hawk, wagged their heads knowingly. But for 3 months, while the hawk's wing was healing, it lived almost affectionately with the chickens, and not a chick was lost. Gone, however, were the rats and mice which formerly fattened on the chickens' feed.

Interest Rates on Government Securities

EXTENSION OF REMARKS

OF

HON. J. W. FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Monday, August 17, 1959

Mr. FULBRIGHT. Mr. President, Mr. Marriner Eccles, for many years Chairman of the Board of Governors of the Federal Reserve System, recently made a statement on the problem of interest rates on Government securities. Mr. Eccles is one of the most experienced and, I believe, wisest men in this field, and I think his statement is well worth the attention of the Senate and the country.

I ask unanimous consent at this point in my remarks to have his statement printed in the Appendix.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

There seems to be a general lack of understanding of the economic factors which determine the interest rate. It is thought by many, including some influential congressional leaders, that the Federal Reserve can control interest rates while at the same time maintaining stable money, which is its primary objective.

The Federal Reserve can influence the growth in the supply of money as well as restrict it. To permit an expansion greater than the growth in the national product, under present conditions, would have the effect of diminishing the purchasing power of the dollar. This is inflation, and if allowed to continue will lead to ever-increasing interest rates.

Under boom conditions—when the supply of money is held in check to prevent inflation—the demand for credit exceeds the supply, and interest rates are bid up. Such is the present situation. You cannot have low interest rates in a booming economy without bringing about a dangerous inflationary situation. Only an economy in a state of declining activity produces an excess in the supply of money and credit and, hence, lower interest rates.

Of course, the Government can control interest rates temporarily, as during the war when it controlled everything else—wages, prices, etc.—but when such controls are taken off, and the excess supply of money released, inflation is inevitable.

A large part of the postwar price inflation was a result of the Federal Reserve purchasing billions of dollars of Government securities at fixed prices in order to prevent an increase in interest rates. This was during the period when the Government had a balanced cash budget.

The Treasury and White House, over the strong protest of the Federal Reserve, required this action be taken. In doing this, an excess amount of bank reserves was created which brought about an inflationary expansion of commercial bank credit and of the money supply.

The present administration and the Federal Reserve are trying to avoid making this mistake by curbing the growth of bank credit and allowing the interest rate to rise.

Under present conditions the aggregate savings by individuals and business are inadequate to meet private investment demands and at the same time finance the large public deficit of the States and Federal Government. Hence we find interest rates going up—even though there is a growth in the money supply equal to the growth in the national product, at stable prices.

There is no effective substitute for larger savings combined with curbs in public spending as a means of preventing inflation and increasing interest rates.

It is a fallacious idea to think that the bankers control this situation and are greatly benefited by high interest rates. On the contrary, this condition causes the banks to pay increasing interest rater for savings deposits and time funds—and depreciates the value of mortgages and bonds held in large amounts by the banking system. At present, this offsets any benefits arising from increased interest rates.

The real beneficiaries of the higher interest rates will be the millions of people who put their money in savings accounts in banks and building and loan companies, or those who purchase bonds and mortgages at the present high interest rates. In short—the savers.

The need is for the Congress to deal with the causes of the higher interest rate, rather than to oppose an increase. The Government cannot expect to keep interest rates from rising as long as it has to finance a large budgetary deficit in times of prosperity. The effect of this deficit under present conditions is inflationary and tends to discourage savings on the part of the public and to increase the need for credit.

A statement I made last March before the joint congressional Committee on the Economic Report bears repeating. It is this:

"I want to say again, that to achieve our objectives will always be a source of great political and economical controversy because everyone wants a greater share of the economic pie than it contains. Government and other public bodies want more money to spend—the leaders of organized labor want more pay and fringe benefits for less hours of work—business presses for further profits, and increasing ranks of oldsters call for higher pensions. However, everyone expects these benefits in dollars of stable purchasing power. Unfortunately, all the economy has to divide are the goods and services it is able to produce, and not the amount of money it could create, which is, of course, limitless.

"In our society, this situation is creating a dilemma for the Members of Congress whose constituents want easy money, lower prices, higher wages, greater profits and fewer taxes. Only a combination of the Government, Congress, and the Federal Reserve can successfully deal with these diverse forces. To do this adequately it would be necessary for them to agree on the problems and have the courage to act, regardless of political conditions."

Indian Vocational Training Gains

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 17, 1959

Mr. EDMONDSON. Mr. Speaker, almost exactly 3 years ago, on August 3, 1956, legislation passed by the Congress to provide a vocational training program for adult Indians was signed by the President and became Public Law 959 of the 84th Congress. Although this law needs to be liberalized and although substantial additional funds need to be appropriated, the program of vocational training for adult Indians is now a reality and already is proving its tremendous worth not only to our Indian people but also to the Nation as a whole.

Money spent on vocational training to qualify people to hold jobs is just about the best investment the Government can make, and this is what is being done under this program.

I am very proud of the fact that the real pioneer among educational institutions participating in training Indians in job skills under this program is located in the Second Congressional District of Oklahoma and is the Okmulgee School of Technical Training of Oklahoma State University. Mr. L. K. Covelle, director of this fine school at Okmulgee, Okla., not only followed closely the legislation authorizing the establishment of this program, but also was in close and constant contact with the Bureau of Indian Affairs relative to participating in this program long before funds to actually implement the program had been appropriated.

The Tulsa Daily World of Friday January 3, 1958, carried a picture with the following cutlines:

Another first. Being first in the Nation is becoming routine to Oklahoma State Tech, Okmulgee, with the school enrolling the first Indian to be accepted under the new adult Indian education bill recently passed by Congress. Congressman ED EDMONDSON, center, one of the bill's consistent boosters, and Jack P. Jayne, right, area relocation specialist of the Department of Interior, Muskogee, look over the application of Perry McCombs, Eufaula, the first Indian to pass examinations. Director L. K. Covelle (left) registers his approval of the school being selected and one of four throughout the United States for the training program.

It is my understanding that at present more than 400 courses at more than 160 institutions have been approved by the Bureau of Indian Affairs under this program, but Okmulgee Tech is continuing its outstanding and pioneering leadership in this field .

Mr. Speaker, Okmulgee Tech is now nearing the end of its summer semester, and among its 130 graduates will be five students who will complete their training under the provisions of the program which was established as a result of the law we passed 3 years ago this month.

Mr. Speaker, I should like to salute Okmulgee Tech, its director, Mr. L. K. Covelle, and every member of Okmulgee Tech's staff, for their fine leadership in this program which has such great worth to our Indian people and to the United States.

Mr. Speaker, I should like to insert in the RECORD at this point a news story which appeared on page 1 of Okmulgee Daily Times of August 13, 1959:

TECH'S FIRST TO STUDY UNDER INDIAN BILL

Among the 130 graduates at Oklahoma State Tech at the end of the summer semester are five students studying under the adult Indian education bill, Public Law 959.

These are the first students to complete training programs under the law which was established late in 1957, with the first funds allocated early in 1958.

Oklahoma Tech is one of the four schools throughout the United States which was approved for training the Indian youths who were to be educated under the law.

Screening by the Indian Bureau takes place before the student is allowed to enter school, and at Oklahoma Tech only about eight students of the total enrolled under the bill have dropped out of school for any reason.

About 8.5 percent of the total Tech enrollment is students under the Indian bill. However, the largest percentage of enrollment is made up of nonveteran students who enter Tech as soon as they graduate from high school.

The first student accepted at Oklahoma Tech enrolled in January of 1958.

Graduates include Wade Bucktrot, Bristow, completing a 24-month course in auto body metal and painting; Arney Foster, Cromwell and Alice Bear, Okmulgee, completing 16-month courses in secretarial training and Alexandria Cobb, Cushing, and Monica Shoptese, Fairfax, completing 12-month courses in stenography.

Bucktrot, rated as an above average student by his instructors, has had job offers from several different companies, but is still trying to decide which job he wants. Although graduates are allowed to leave Tech 30 days early if they have a job and have completed all their required work, Indian students remain until the last official day of classes.

Each of the four girl graduates have been taking a series of tests prior to accepting employment. Job offers have been made to each of the graduates and they are waiting only for the end of the classes to make a final selection.

Bring World's Fair in Washington, D.C.

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, August 17, 1959

Mr. WILEY. Mr. President, recently there has been a substantial interest in progress toward the development of plans for the observance of the world's fair in Washington, D.C., during the period of 1964, or shortly thereafter.

A world's fair in the Nation's Capital—the hub of the free world—I believe would, in itself, be a tremendouly significant event. In addition, it would focus the world spotlight on the advantages of our system—not only to friendly nations, but also to uncommitted countries and to the Communist bloc.

All in all, the fair would provide a unique opportunity to present our way of life to millions of people.

The Washington Board of Trade, local civic officials, and an outstanding committee of industrial leaders from all parts of the Nation, are moving forward in a carefull, constructive and realistic manner, toward development of plans for such a project.

Coordinated with the world's fair, I believe, a Hall of States—such as has long been discussed—to display an all-American panorama—would serve as a show place to display contributions of individual States to our national progress.

The hall would provide our 50 States with an opportunity to display individual, unique exhibits, patterned upon resources and human ingenuity which have marked their own progress.

I am aware, of course, that there are competing proposals from other places in the country. Based on available facts, however, it appears that no city has gone so far in the development of careful plans as has Washington, D.C.; the Capital offers a unique climate in which visitors could observe not only the fair itself, but also our Nation's Capital—a living example of free government, together with the shrines, museums, art galleries, and other edifices illustrating political, educational, religious, cultural, and other developments which have contributed to the creation of the great Nation.

Over the weekend, the Washington Star and the Washington Post and Times Herald carried articles commenting on the significance of Washington, D.C., as a site for the world's fair.

I ask unanimous consent to have the articles printed in the Appendix of the RECORD.

There being no objection, the articles and editorial were ordered to be printed in the RECORD, as follows:

[From the Washington Star]
HOLD THE FAIR HERE

If a world's fair is to be held in the United States in 1964, it ought to be held in Washington—for more reasons than one. The most persuasive point in favor of our city, of course, is that it is the Nation's Capital, and one of the world's most beautiful capitals, at that. But consideration also should be given to the fact that sponsors of the proposed local exposition have done a vast amount of preliminary planning and negotiating and there have been given the impression that their bid for the fair has an excellent chance of being approved.

It is a distinct jolt, therefore, to learn that Senator JAVITS and Representative KELLY, both of New York, have just introduced resolutions to designate New York City as the site of the 1964 fair. Under the identical measures, President Eisenhower would be authorized to invite foreign nations to participate in the New York show, which would commemorate the 300th anniversary of the city's founding. As District Commissioner McLaughlin has pointed out, a group of civic leaders here and a firm of consultants in New York have been working quietly for more than a year on plans for bringing the fair to Washington. These men have been encouraged by the reception their proposal has met in high quarters, including the State Department and the International Bureau of Expositions in Paris.

Mr. McLaughlin stated the case for Washington effectively, we think, when he declared that this city is generally recognized as the capital of the free world as well as of America and that the 1964 fair should be a truly national exposition, representing the country as a whole, and not a local or regional affairs, primarily promoting the interests of any given community.

[From the Washington Post and Times Herald]

UNITED STATES TO START TALKS AIMED AT SECURING 1964 WORLD'S FAIR—MEMBERSHIP IN PARIS BUREAU NEEDED; OFFICIALS FAVOR WASHINGTON'S OFFER

(By Phil Casey)

The United States soon will begin negotiations that could clear the way for a world's fair in Washington in 1964. Though the Government would not attempt to dictate what city is awarded the exposition, State Department officials are known to look favorably on Washington's bid as the most businesslike and promising.

Discussions are under way on the executive side. Next steps will be State Department discussions with congressional leaders and negotiations with the International Exposition Bureau to provide for U.S. membership under regulations that the Government can accept.

The bureau, a 23-nation body with headquarters in Paris, was set up in 1928 to determine when and where world's fairs are held. Its aim is to prevent ruinous competition among international expositions, and promote international cooperation in them by the member nations.

BUREAU APPROVAL NEEDED

Washington interests seeking the fair for this area want bureau approval in order to insure international participation and offer better prospects of success, financial, and otherwise.

But the bureau's present regulations make it impossible for the United States to join a State Department spokesman said. The bureau dictates the length and number of international expositions a country may hold in a given period, as well as the places the fairs shall be held.

This may work well enough among nations whose governments sponsor the fairs, but it isn't applicable to the United States, the spokesman said where the Government keeps hands off and leaves the fairs to private interests, the States, and municipalities.

Washington would seem to have the inside track among several other cities, including New York and Los Angeles because of the State Department's favorable view and the report by District Commissioner Robert E. McLaughlin that there is encouraging response from very high levels in the Commerce Department and in Congress.

Yesterday, Senators THEODORE F. GREEN, Democrat, of Rhode Island and ALEXANDER WILEY, Republican, of Wisconsin, came out in support of the Washington bid.

GREEN said, "Washington, as Capital of the strongest nation in the free world, is a logical and ideal location for an international exposition which can truly represent the entire country. Such an exposition in Washington would help to symbolize the tremendously important role which this country is playing in world affairs."

WILEY, saying that Washington officials and private interests are proceeding in a "careful, constructive, and sound fashion," added:

"I feel that the site of Washington, D.C., offers unique advantages for such a fair. * * * My deep interest in the foreign policy of our country convinces me that the exposition could make an important contribution to international understanding, as well as to international trade."

CAPITAL FEATURES CITED

Noting competing proposals from other cities, he said, "It would appear to me * * * that no city has gone as far nor as carefully in the development of its concepts as has Washington. And I believe that no other city is in a better position to offer the inspirational feature which the Capital offers with its great shrines of freedom, as a location for such an international assembly."

Blood on the White House

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, August 17, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very enlightening and truthful editorial written by Mr. Willima Loeb, publisher of the Haverhill Journal, Haverhill, Mass., appearing in the issue for August 11, 1959:

BLOOD ON THE WHITE HOUSE

(By William Loeb)

Nikita Khrushchev and his associates in the Kremlin have been responsible for the murder, death and torture of more human beings than any other group of tyrants in the history of the world. Well-intentioned citizens who think that a visit by this monster to the United States will improve international relations do not understand either Khrushchev or the situation.

Khrushchev doesn't need to come to the United States to understand us. Khrushchev knows all about our material success and how much greater it is than that of Russia.

But Khrushchev, like all barbarian killers from the beginning of history, knows that what is important is not the material wealth of a nation. It is what is the state of its armed forces.

Since the dawn of man's existence on this earth, cruel barbarians, with nothing on their backs but with strong swords in their hands, have conquered the well-developed nations and then plundered them at their leisure.

What Khrushchev knows better than the citizens of this country is the strong thrust of Soviet rockets, versus the weak performance of our missile armament.

Khrushchev wants to come to the United States for two reasons, both of them to his advantage.

Pictures of Khrushchev being wined and dined by Eisenhower and other U.S. leaders will be shown all over the world to indicate to the captive nations that there is no hope for them because we have made friends with their slave masters.

The second purpose of Khrushchev's visit is to sell the people of this Nation on the fake idea that, after all, he is only a fat, humorous, easygoing old gentleman and that he and his gangster cronies actually are all very nice and very friendly people who have just been misunderstood and want to be our friends.

This is all done for the purpose of having the United States cut back on its missile and defense program.

Then, little by little, after the United States has been weakened, while Russia grows stronger, will come the final Russian spring at our throats.

It will be too late to do anything then.

This newspaper believes in friendship with all nations. It believes the Russian people would like to be friends with the people of the United States. We certainly know that people in this country want to be friends with the Russian people.

But we are not dealing with the Russian people. We are dealing with the most ruthless collection of power-mad dictators the world has ever seen. They are now slave masters of a third of the world. They will never feel safe as long as the rest of the world remains free.

Cardinal Cushing, Governor Powell, Senator Bridges, and former Secretary of War Hurley and others have come out against Khrushchev's visit. We hope they will be joined by many, many more Americans before Khrushchev's arrival.

Of course, nations always have to deal with the heads of other governments at arm's length across conference tables, but you do not have to invite killers to the White House.

The spectacle of an American President crawling before Khrushchev is certainly one that must make George Washington, John Adams, and Patrick Henry roll in their graves.

President Eisenhower apparently cannot even obtain an answer from Khrushchev as to what happened to the American airmen shot down by the Russians earlier this year.

The stench of the tyrants in our land is not a smell to which most Americans will take easily. Perhaps, if enough still dare to speak out, the Khrushchev visit will be canceled.

Meteorological Research

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Monday, August 17, 1959

Mr. DADDARIO. Mr. Speaker, I should like to call the attention of this House to a resolution passed at the Governors' conference recently commending this body for its action in approving an appropriation to study the feasibility of a National Institute for Atmospheric Research.

This appropriation is contained in the funds authorized the National Science Foundation for the coming year. While the Independent Offices Appropriations bill remains a source of dispute between this and the other body, the conference committee has agreed, and this House has agreed to the necessary item.

I am convinced, as I have said before, that this is an important accomplishment for science in this session and I am pleased to note that the Governors' conference has expressed itself in this way.

METEOROLOGICAL RESEARCH

Whereas the Congress of the United States has approved the proposals of the National Science Foundation to augment and exploit the national capability for research in meteorology, including the establishment of a National Institute for Atmospheric Research: Now, therefore, be it

Resolved, That the 51st annual meeting of the Governors' conference commend the action of the Congress of the United States in supporting the National Science Foundation program to accelerate meteorological research to meet national scientific, economic, and military needs for knowledge of the atmosphere and weather phenomena.

Patent Office Pushes Grassroots Plan

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, August 17, 1959

Mr. LANGER. Mr. President, I have before me an article entitled "Patent Office Pushes Grassroots Plan" published in the Sunday issue, August 16, 1959, of the Star by William A. Millen, Star staff writer.

What particularly interested me in this article is that fact that the writer makes special reference to North Dakota and Minnesota as having organized inventors congresses and other States are interested in stimulating inventions, officials said.

Mr. President, this is another indication where the great State of North Dakota shows the way to the rest of the Nation. I know well of the activities of the North Dakota Inventors Congress and the work that they have been doing on a national level by attending conferences and conventions and explaining their program. Hon. Harold Kelly of Devils Lake, N. Dak., is president of North Dakota Inventors Congress and he and his group are doing an outstanding job.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PATENT OFFICE PUSHES GRASSROOTS PLAN

(By William A. Millen)

A triple program, to keep the United States ahead in new inventions and scientific knowledge is being pushed by Commissioner of Patents Robert C. Watson.

This comprises:

1. Encouraging the grassroots movement that has recently started to stimulate inventions. Inventors' organizations have been set up in some of the States and these are interested not only in new inventions, but in aiding the inventor to find a practical market for his product.

2. The production of a new informative pamphlet to aid and guide those seeking patent protection. This publication, which can be secured from the Government Printing Office and is titled "Patents and Inventions—An Information Aid for Inventors," gives the A B C's of applying for a patent, preparing an application and prosecuting patent claims.

3. Periodic displays in the Commerce Department lobby of the practical results of the work of inventors and of the patent office. Business cooperates in this and shows its handiwork in the form of machines, devices and other products, results of inventive genius.

IMPORTANCE STRESSED

Commissioner Watson said yesterday:

"In the light of world conditions, it is extremely important to convey the story of the American patent system and the functions and operations of the Patent Office to every person in the United States who has the capacity to invent."

Mr. Watson, a native Washingtonian, became Commissioner of Patents in 1953. He is the son of a patent lawyer, the late James A. Watson.

Are the American people as inventive as ever? The answer is "yes," Patent Office officials say.

The Patent Office is now issuing an average of 1,000 patents weekly. Every Tuesday at noon the inventors get the news. More than 350 new applications for patents are received every workday.

Recently, there has been increased activity in the chemical and electrical fields, in which inventors seek new patents. Synthetics and electronics, since World War II, have become increasingly popular. The mechanical field is holding its own.

Isaac Fleischmann is Director of the Office of Information Services of the Patent Office, which is in the Department of Commerce. He aids in arranging the business displays in the lobby of that building. These present a case history of the patent system by the inventor and by the business firms.

The Patent Office's Official Gazette contains brief descriptions and drawings of patents granted. This goes to the patent profession, directors of research in corporations, private business and libraries.

INTEREST IS PRESSED

North Dakota and Minnesota have organized inventors' congresses and other States are interested in stimulating inventions, officials said. Seattle, Wash., is organizing an effort by business, the chamber of commerce and others to assist inventors in evaluating their inventions and providing contacts. This shows a healthy grassroots movement, officials said.

About 1,000 patent examiners, who are electrical, chemical, or mechanical engineers, make the Patent Office system run.

A Patent Office spokesman said anybody is a potential inventor. "Everyone has a dream of making something new. Everyone has a bit of innate inventiveness in him—a desire to improve," he said.

The Late Mike Benedum

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 11, 1959

Mrs. KEE. Mr. Speaker, one of the grandest men it has ever been my pleasure to know was a distinguished West Virginian, the late Michael L. Benedum, who died on July 30 in Pittsburgh.

Mr. Benedum was a world famous oil wildcatter. He extracted fabulous wealth from the ground. But, Mr. Speaker, Mr. Benedum devoted a large part of his great wealth to helping others.

Mr. Benedum was born in the little West Virginia town of Bridgeport. There his heart remained throughout a busy and successful life. Close associates estimate that he spent between $3 and $4 million on his hometown. Among his many gifts were a civic center and recreational area with swimming pool, roller and ice skating rinks, badminton and volleyball courts, and a children's playground.

He did not confine his philanthropy to his hometown. On the contrary, he has given generously to churches, schools and hospitals throughout West Virginia and in other States. Close associates estimate he helped 42 colleges through scholarship funds or direct grants. He has helped financially over 600 students.

One of Mr. Benedum's last acts was to offer $62,500 for an addition to the Webster County, W. Va., hospital, providing county residents raise a like amount.

On the occasion of Mr. Benedum's 90th birthday on July 16, I wrote to him congratulating him on his long and useful life. In answer, Mr. Benedum sent to me a portion of his last will which eloquently outlines his philosophy of life. This impressive will expresses so beautifully the motives which prompted the many generous and unselfish acts of this grand old man that I insert the copy Mr. Benedum sent me in the CONGRESSIONAL RECORD:

FROM THE LAST WILL AND TESTIMONY OF LATE MICHAEL BENEDUM

The disposition of a not inconsiderable estate is never an easy assignment. It has been a thorny and laborious problem for me because, recognizing my frailty and inadequacy, I have not been able to lose sight of the awesome responsibility involved.

If I could have looked upon my material goods as personal property, belonging to me alone, my task would have been immeasurably lighter. But I have never regarded my possessions in that light. Providence gives no fee simple title to such possessions. As I have seen it, all of the elements of the earth belong to the Creator of all things, and He has, as a part of the divine purpose, distributed them unevenly among His children, holding each relatively accountable for their wise use and disposition.

I have always felt that I have been only a trustee for such material wealth as Providence has placed in my hands. This trusteeship has weighed heavily upon me. In carrying out this final responsibility of my stewardship, I have sought to utilize such wisdom and understanding of equity as the Creator has given me. No one with any regard for his responsibility to his God and his fellow man should do less. No one can do more.

I will not attempt to deny that in certain provisions of this last will and testament, I have been swayed to some extent by the tender sentiment that I have for the land of my birth and by my affection for those who are nearer and dearer to me than life itself. While I may seem to have been generous to these loved ones who are the blood of my blood, I know from experience that I am in reality merely passing a responsibility to them.

The book is not closed. The responsibility is merely lessened and divided. It is none the less fearful. I hope that these loved ones of mine will bear with me in this last word of counsel, as I again remind them of the obligation that goes with their material heritage. I have unlimited confidence that they will be faithful to this trust.

As I have seen it, life is but a proving ground where Providence tests the character and mettle of those He places upon the earth. The whole course of mortal existence is a series of problems, sorrows, and difficulties. If that existence be rightly conducted, it becomes a progress toward the fulfillment of human destiny. We must pass through the darkness to reach the light.

Throughout my adult life, day by day and year by year, I have been instilled with the conviction that wealth cannot be measured in terms of money, stocks, bonds, broad acres, or by ownership of mine and mill. These cannot bear testimony to the staple of real excellence of man or woman. Those who use a material yardstick to appraise their wealth and foolishly imagine themselves to be rich are objects of pity. In their

ignorance and misanthropic isolation, they suffer from shrinkage of the soul.

All of us aspire to a higher and better life beyond this, but I feel that the individual who seeks to climb the ladder alone will never find the way to paradise. Only those who sustain the faltering ones on the rungs above and extend a helping hand to the less fortunate on the rungs below, can approach the end with the strength of sublime faith and confidence.

At the end of life each of us must face the great teacher that we call death. Stern, cold, and irresistible, it walks the earth in dread mystery and lays its hands upon all. The wealth of empires cannot stay its approach. As I near my rendezvous with this common leveler of mankind, which takes prince and pauper alike to the democracy of the grave, I do so with resignation to the will of God and with faith in His eternal justice.

Life has been sweet to me—sweet in the loved ones that have been mine, sweet in the friends who have surrounded me, and rewarding in the opportunities that have come my way. I could not leave this earth with any degree of happiness or satisfaction if I felt that I had not tried to bring some of these joys to those less fortunate than I have been.

We know not where seed my sprout. In the poorest and most unregarded child who seems to be abandoned to igorance and evil, there may slumber virtue, intellect and genius. It is our duty to sow and to nurture, leaving it to others to harvest the fruits of our efforts.

While I am conscious that my love for the land that gave me birth has been an influence in guiding the disposition of my estate, there are other practical reasons why I have favored my native State of West Virginia. It is not that I am unmindful or unappreciative of my adopted home of Pennsylvania, but rather that I have sought to appraise and balance the needs of each and the available potential for supplying those needs.

I cannot close my eyes to the realistic consideration that Pittsburgh and Pennsylvania abound in riches, having a citizenship in which men of great wealth are more common than rare. West Virginia is in a less fortunate position. There can be no question but that its needs are much greater than those of my adopted home. Consequently, in making specific provisions for West Virginia institutions, I have done so in good conscience, with a sense of equity and with recognition of a responsibility to distribute my estate in a way that will bring the greatest good to the greatest number. This decision was not made lightly or impetuously.

Conscious that in this codicil to my last will and testament, I am figuratively speaking from the grave, and that the great book of my account with the Creator has been closed beyond change or amendment, I submit my soul to His tender mercy, and my memory to the generosity and compassion of my fellow man.

Edward W. Hatchett: Canal Zone Ambassador of Good Will

EXTENSION OF REMARKS

OF

HON. CLARK W. THOMPSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 17, 1959

Mr. THOMPSON of Texas. Mr. Speaker, for many months the people of the United States have been reading frequent accounts in the press about deterioration in the relations between the United States and the Republic of Panama. Thus, it was with singular interest that I read in the August 5, 1959, issue of the Panama Star & Herald, the well known isthmian newspaper, an account of recent high honor extended by the Republic of Panama to Edward W. Hatchett, a prominent Canal Zone teacher and civil leader.

Former residents of the isthmus who have watched the influence of Mr. Hatchett grow over the years in both the Canal Zone and the Republic through loyal former students recognize in him an effective ambassador of good will.

Because of the value of such sustained efforts on both sides of the Canal Zone-Panama boundary for the betterment of both areas, I quote the indicated news story as part of these remarks:

ZONE TEACHER IS AWARDED REPUBLIC OF PANAMA DECORATION—FORMER PUPIL, NOW CABINET MINISTER, WILL PRESENT AWARD TO E. W. HATCHETT

Edward W. Hatchett, well-known Canal Zone teacher, has been awarded the Order of Vasco Nuñez de Balboa by the Panama Government, it was announced yesterday.

The presentation of the decoration will take place Thursday at noon in the Panama Foreign Office. It will be made by Roberto Lopez Fabrega, Minister of Public Works of Panama, who is one of scores of Panamanians who were taught by Hatchett at Balboa High School.

Hatchett's citation sets forth his long years of teaching on the isthmus and his close association with many Panamanians whom he taught.

A graduate of the U.S. Naval Academy at Annapolis. Hatchett took his master's degreat Duke University. He taught for several years in a high school at Durham, N.C., and came to the Canal Zone in 1931 as a teacher of mathematics at Balboa High School. In 1957, he was made an instructor in the Canal Zone Junior College.

Hatchett is also well known in labor circles. He was secretary of the Canal Zone Central Labor Union for many years and has been president of that organization since December 1955. He was appointed a member of the Canal Zone Board of Appeals in June 1959.

Character

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 17, 1959

Mrs. ST. GEORGE. Mr. Speaker, every year, at the Military Academy at West Point, in my congressional district, the Association of Graduates gives three prizes to cadets for the best character sketches of graduates.

This year the first prize was awarded to Cadet G. S. Livingston, 1960, for his essay on the character and heroic achievements of Gen. Jonathan M. Wainwright.

This essay is of great interest to all and is one more testimonial to the high ideals, patriotism and achievements of the graduates and undergraduates of the Military Academy:

CHARACTER

(By Cadet Gordon Livingston, second class, Company K–2)

In the annals of professional soldiery there has traditionally existed a single characteristic desire or goal which represents the ultimate aim of each of the members of that profession and the basic reason for their existence. This is victory in battle. Success on the field of combat has, throughout history, remained the criterion which has established the stature of military leaders and the standard by which they are judged. To this general rule there are few notable exceptions. One of these is Gen. Jonathan Mayhew Wainwright—a victor in defeat.

A soldier of the old Army, Wainwright, after his graduation from West Point in 1906, began his career as a cavalry officer in the West of his boyhood. In the trials of his later years he often thought back to his days as a troop commander chasing bandits on border patrol—considering this the greatest freedom he had ever enjoyed. In a day when the Army sought versatility from its officers—men who could act as businessmen, diplomats or showmen, "Skinny" Wainwright was simply a soldier. His claim to distinction was a competence in his chosen profession with an ability to inspire men to the limit of human endurance and beyond.

After a succession of combat staff jobs in World War I, he went through a series of peacetime assignments and schools until September 1940, when he was promoted to major general and sent to Manila to take command of the Philippine Division and keep his rendezvous with the "defeat" which would immortalize his name. On December 7, 1941, he was the senior field commander in the Pacific under Gen. Douglas MacArthur. Together they prepared to face the overwhelming advance of about 250,000 Japanese troops with a meager force of 19,000 U.S. Regulars and about 70,000 assorted Filipino personnel. On MacArthur's removal to Australia, Wainwright assumed command of all forces in the Philippines and continued the fight that comprises one of the great pages in American military history. Paying the price of his country's unpreparedness, he was faced with the prospect of fighting a slow, retrograde action along the Bataan peninsula to buy the necessary time for MacArthur to get help from the United States and start the counteroffensive which would relieve Wainwright's beleaguered troops. This relief was not to come. One of the officers in his command spoke of the general's conduct in this extremity: "Near the end Wainwright was suffering from beriberi. Undernourishment had affected him so badly that he could barely use his right leg. Despite this, dragging himself along and leaning on a cane, he walked along the roads all the time, inspecting the final defenses. He was the only general I have ever seen actually cheered by his men on the field of battle." For 5 long months they fought their desperate delaying action until at last what remained of the general's command retreated to the offshore island of Corregidor from whence they gave the world, more particularly the rudely awakened and remorseful United States, a picture of human fortitude and tenancity with few parallels in modern warfare and reminiscent of the Spartans at Thermopylae and the Texans at the Alamo. One correspondent on the scene wrote only half in jest:

"We're the battling bastards of Bataan
No momma, no poppa, no Uncle Sam,
No aunts, no uncles, no nephews, no nieces,
And nobody gives a damn."

Subjected to a merciless artillery and air bombardment (which at one point placed one 500-pound 240 millimeter shell on the

2-square-mile island every 5 seconds for 5 continuous hours), decimated by disease and malnutrition, the gallant defenders held out for 27 days of hell until the Japs had landed and pushed to within a hundred yards of the Malinta tunnel where Wainwright and the pitiful remnants of his army had at last been forced. Only then, in an effort to spare the sick and wounded men under his command, did the weary general surrender, after a last message to President Roosevelt:

"With broken heart and head bowed in sadness but not in shame I report to Your Excellency that today I must arrange terms for the surrender of the fortified islands of Manila Bay. * * * There is a limit of human endurance and that limit has long since been past. Without prospect of relief I feel it is my duty to my country and to my gallant troops to end this useless effusion of blood and human sacrifice.

"If you agree, Mr. President, please say to the Nation that my troops and I have accomplished all that is humanly possible and that we have upheld the best traditions of the United States and its Army."

On May 6, 1942, the white flag of defeat flew over the battered island and the ordeal of 39 months of brutal captivity had begun for the men who had already drunk so deeply of the cup of suffering, many of whom would never again see the homeland for which they had so heroically fought. During this trying and seemingly interminable time Wainwright was again forced to call on all his reserves of courage and perseverance, this time in a different fight—the fight for life. During his imprisonment he lost some 50 pounds and at the time of the Jap surrender carried only 120 pounds on his 6-foot, 2-inch frame. Constantly maltreated by his captors and suffering from dysentery and assorted other ailments, he yet lived to "witness the greater misfortune of my enemy" on September 2, 1945. And so the message written in the blood of her sons had not been lost upon America, and from the ruins of Corregidor had sprung the resolve which found its culmination on the deck of the U.S.S. *Missouri* in Tokyo Bay 3 long years later.

If this was a triumph of victory, it was also a triumph of defeat, more especially the defeat of a man whose ideals of military devotion sustained and inspired his Nation in its darkest hour. The medals (CMH, DSM, DSC, and many others) awarded him by a grateful people are incidental to the real magnificence of his own victory—a soldier's victory, which all the white flags, surrender articles, or personal indignities could not dim.

He returned to receive the adulation of the American public which he so richly merited and so modestly accepted. At last, permanently weakened from the long ordeal he had borne with such fortitude, his frail body died on September 2, 1953, 8 years to the day after the Japanese surrender. He was laid to rest in the tradition of the Cavalry he loved, with an orderly leading a riderless horse behind the coffin, boots reversed in the stirrups. And now perhaps at least he could take his place in the old cavalryman's paradise of which he had often sung:

"Half-way down the trail to hell,
In a shady meadow green,
Are the souls of all dead troopers
Camped near a good old-time canteen,
And this eternal resting place
Is known as Fiddlers Green."

The motto on the West Point shield today shines with a little more luster from the sacrifice of her loyal son. In the words of one of his classmates, "He did his duty with honor for his country." One can ask no more from any man and can perhaps only add, with grateful heart, "Be thou at peace."

A Letter to Bankers and Insurance Executives

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS

IN THE SENATE OF THE UNITED STATES

Monday, August 17, 1959

Mr. SCHOEPPEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by the Honorable STYLES BRIDGES, entitled "A Letter to Bankers and Insurance Executives—Why the Nation Needs Your Activity in Politics," published in Human Events, on August 19, 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Human Events, Aug. 19, 1959]

A LETTER TO BANKERS AND INSURANCE EXECUTIVES—WHY THE NATION NEEDS YOUR ACTIVITY IN POLITICS

(By the Honorable STYLES BRIDGES)

In recent months various corporations have announced their intention of becoming active in politics. Programs have been established to encourage employees to register and work for the party of their choice. Political activity once frowned upon by many corporations as too controversial is now being accepted as one of the civic responsibilities of Americans.

Intelligence has recently been received from the great metropolitan centers of the United States that insurance and banking institutions are also becoming concerned with the importance of political activity on the part of their employees.

It seems clear that the votes of the great numbers of blue and white collar workers offer the only hope of balancing the various political pressure groups including the extremes of the labor movement.

It is encouraging, therefore, that bankers and insurance men have determined to discard the ancient antipathy toward politics which has characterized these professions and are launching a program to protect the public interest. This is a very laudable activity and in the words of Shakespeare:

"'Tis a consummation devoutly to be wished."

While the grand master plan for political activity is being designed, however, politics continues as usual in Washington, D.C. It is for this reason that I am writing to you.

It happens that the most vital problems which face our Nation at this time concern matters which lie within your domain of special competence. Never before has your guidance and sound advice been so desperately needed by our legislators.

The problems of inflation, deficit financing, interest rates, the role of the Federal Reserve System and the question of gold supply, et al, are complex and confusing to the average Senator and Congressman.

Crackpot plans and panaceas are being daily advocated by those who little realize that most of their suggestions have in the past caused economic collapse of civilizations. All too often those who are uninhibited by the facts grab the spotlight and get the publicity.

May I respectfully submit to the banking and insurance fraternity, therefore, a list of items now pending before the councils of our Government, which need immediate, aggressive and enthusiastic attention by men like yourselves who are experts in the field:

1. The President and the Treasury Department have requested permission of the Congress to remove the fixed interest rates on Government borrowings.

Demagogues have attempted to make this request appear as an insidious conspiracy against the "little man" and for the benefit of the Wall Street bankers' vested interests.

It is clear to you that if we are to have a free economy, we must maintain a free money market. Government bonds must be sold on the basis of their safety and their yield and must compete for the purchaser's dollar with other investments available. Accordingly, interest rates in a free society can never be fixed by anyone except the prospective buyer.

It would be very helpful if bankers and insurance executives would testify to this fundamental, economic truth before the various committees of Congress concerned with the problem.

It would be a great public service if bankers and insurance men all over the country communicated with their local, State and Federal representatives and dispelled the smokescreen of socialistic propaganda on this subject.

This question of interest rates is immediate and pending business before the Congress.

How many of your colleagues have made their feelings known? How many of your correspondent banks have been actively recruited in this struggle?

Certainly Congressmen WILBUR MILLS and RICHARD SIMPSON, of the House Ways and Means Committee, and Senators HARRY BYRD and JOHN WILLIAMS, of the Senate Finance Committee, would appreciate a statement of your views.

There is still time to be effective, but there is no time to be leisurely.

Every sizable community in the United States has some type of banking and insurance facility. In addition to providing a repository for the funds of the people and financing local projects, do you agree that your profession has some responsibility for the economic education of your customers?

If so, haven't we reached the time when local bankers and insurance brokers should be organized on a national basis in order to carry the message of the importance of fiscal solvency throughout their communities?

Is it not desirable for local bankers and insurance men to utilize every opportunity before the service clubs, fraternal organizations and civic meetings to emphasize the present dangers of irresponsible and socialistic monetary and fiscal policies?

Is it not necessary for informed people like you to tell the parents of your community what is being done to the legacy of their children?

In modernization programs of banking and insurance institutions, in which the business machines play such a large part, have you allowed finance to become so impersonal that the customer has ceased to be a man and is merely a number?

The traditional and honored role of economic counselor and adviser to the local community must not be lost by bankers in the whirring of electronic machines.

2. It has been said that, "Those who know better should say so."

Officials of financial and insurance institutions do not normally write letters to the editor; but who else is to challenge the fallacious schemes which are proposed daily in both editorial and news columns by persons who are generally unqualified and ill equipped to speak on monetary and fiscal matters?

A recent editorial in the St. Petersburg (Fla.) Times, for example, advocated the hackneyed, repudiated theory of escalation

clauses for Government bonds. This would provide that Government bonds at maturity would be redeemed for face value plus a sum equal to the amount of inflation which had occurred since the date of issuance.

To those who have difficulty with thinking this proposal might have some appeal: Should it go unchallenged in the public press; or should the bankers and insurance executives of Florida, independently and collectively, register their professional opinion concerning such an absurd proposition?

It is difficult to select at random a metropolitan newspaper without finding some items of false economics to which the bankers and insurance men of America should address themselves.

3. At the present time an assault is being aimed at the Federal Reserve System in an attempt to use this agency as an instrument to promote cheap money and easy credit.

The scheme is patently preposterous, but how will the people of America ever know unless professionals like yourselves inform them?

4. There is presently an organized campaign to promote a little inflation.

Left-wing economists and socialistic politicians are trying to convince the public that creeping inflation is inevitable, necessary, and desirable.

Yet, with blatant intellectual dishonesty, they add that this inflation will be controlled at a level of from 2 to 4 percent a year.

Obviously, if inflation is inevitable, once it starts spiraling it cannot be controlled at any annual percentage level. The ultimate reckoning of creeping inflation has always been collapse and chaos.

Only the bankers and insurance men of America are in a position to inform the people as to hazards of the weird economic propositions with which we are being bombarded daily.

May I emphasize that in no way do I advocate your activities be characterized as partisan politics. Your professional colleagues throughout the Nation belong to both great political parties.

In the House of Representatives and the Senate of the U.S. Congress, there are many Members from both political parties who realize the importance of the matters which we are here discussing. Unfortunately, they are not in the majority. However, they have steadfastly opposed irresponsible fiscal proposals. These individuals need all the support and assistance which you can give them.

National solvency and sound fiscal policies transcend partisan politics. They are not legitimate matters of debate. They are matters of fact. They have been established by the entire history of man's social and economic organization.

Eventually our survival may depend upon the action we take in respect to these problems.

Other nations of the world such as Japan, Argentina, Germany, Great Britain, France and, in fact, the entire European Economic Community have awakened to the necessity for putting their fiscal houses in order.

As members of the banking and insurance professions you now have the strategic opportunity to be of inestimable service to the Nation and to the world.

Please assert yourself now and speak out with vigor and authority before it is too late.

(STYLES BRIDGES, of New Hampshire, is the ranking Republican Member of the U.S. Senate, ranking Republican member of the Senate Appropriations Committee, and a member of the Senate Armed Services Committee. His most recent article to appear in Human Events was "The American Heritage," June 3, 1959.)

Progress on White House Conference on Children and Youth

EXTENSION OF REMARKS
OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, August 17, 1959

Mr. WILEY. Mr. President, the designing of a more effective program to provide ever greater opportunities for our youth is a major challenge confronting the Nation.

As we recall, President Eisenhower directed that a Sixth White House Conference on Children and Youth be held in March 1960. This golden anniversary conference, scheduled to be held here in Washington from March 27 to April 2, 1960, has been called the greatest single undertaking of our time in behalf of our young people. Bringing together some 7,000 delegates from all over the Nation, it will provide a springboard for a concerted attack on virtually every question that effects the well-being of the next generation and hope for a more rewarding tomorrow. It has as its stated purpose the promotion of opportunities for children and youth in order for them to realize their full potential for a creative life in freedom and dignity.

We remember that this forward-looking program had its beginning back in 1908, when Theodore Dreiser and James West called on President Theodore Roosevelt to discuss the plight of orphaned children. So impressed was the President that on Christmas Day he personally addressed 200 invitations requesting people from all over the country to attend a White House Conference in January, of 1909.

Recognizing the importance of a sound program to improve the outlook for the Nation's youth—its most valuable resource—it is gratifying to note that progress is going forward on the conference, designed to deal with the major problems and challenges in this field.

I am particularly happy, also, to note that not only the State governments, but also a substantial number of organizations throughout the United States are participating in the conference.

Recently, I was pleased to have forwarded to me a copy of the Conference Reporter, outlining the latest steps of progress. Well realizing that this task of brightening the outlook for the Nation's youth is a challenge of deep concern to all of us, I ask unanimous consent to have excerpts from this publication printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

EXECUTIVE COMMITTEE ADOPTS PROGRAM STRUCTURE AND DELEGATE QUOTAS

FORMAT STRESSES FLEXIBILITY

The overall program structure adopted by the executive committee for the 1960 conference expresses two important aims: (1) To achieve interdisciplinary treatment of conference theme and material; (2) to make it possible for people to meet and discuss, and to reach findings or conclusions in small, intimate groups.

Action of the executive committee at its May 7–8 meeting in Washington made official the following specific features of the program format:

A plenary session will open the conference on the evening of Sunday, March 27.

Each morning theseafter, 5 concurrent theme assemblies will open the day's sessions, each assembly accommodating from 1,000 to 1,500 delegates. The theme assemblies will permit development of major aspects of the conference theme, the issues and challenges.

Specific aspects of conference content will be introduced daily at 20 concurrent forums for 350 delegates each. The forums will include panel presentations and floor discussions dealing with facts, findings, and issues. They will be the flexible unit of the conference structure, providing for a two-way flow of thinking from theme assembly to work group and return.

The work group will afford the delegates their best opportunity for continuous participation—deliberation, discussion, and debate. There will be more than 200 work groups meeting each day. A maximum of 30 delegates will be preregistered for each of these work groups on an interdisciplinary basis and members will continue to meet in the same work group throughout 5 days.

In work groups delegates will reach findings and arrive at conclusions. When 10 work groups meet together as a forum, they will reconcile conflicts, sharpen distinctions, and reach majority and minority viewpoints.

The program committee headed by Dr. Philip S. Barba of Philadelphia was responsible for formulating details of the program structure.

NATIONWIDE QUOTAS ANNOUNCED

The executive committee has approved plans for quotas which will govern distribution of 7,000 invitations to the White House conference, March 27–April 2, 1960, in Washington, D.C.

State committees have been allotted a total of 2,900 delegates. National organizations will share 1,700 invitations. In addition, 600 invitations will be assigned to public officials, including members of the Cabinet, Congress, the Supreme Court, and Governors. International guests will receive 500 invitations. The balance will be allocated to Federal Government representatives, members of the working press, the President's National Committee and its subcommittees.

The plan for State participation, approved by the executive committee at its May 7–8 meeting in Washington, is as follows:

"States will each be allocated a minimum quota of 20, and the remainder of the quota of 2,900 for State committees will be allocated on the basis of the population of each State as a percentage of the population of the United States."

(See p. 7 for a chart of State quotas.)

This plan was based on a recommendation of the National Council of State Committes, headed by Dr. Donald S. Howard, of Los Angeles, a member of the President's National Committee.

The national organization allotment of 1,700 invitations will be distributed as follows:

Each organization in the Council of National Organizations on Children and Youth will receive a minimum of two invitations. In addition, 300 will be reserved for youth representatives from 16 through 21, and another 200 for young adults from 21 through 30. The remainder of the 1,700 organization invitations will be distributed on a formula

that takes into consideration organization size and relation to conference theme.

State youth quotas

In a recent memorandum to the chairman of every State committee, Dr. Howard explains the policy regarding youth delegates from the States as follows:

"Because of the importance attached to participation of youth in the forthcoming conference, State committees have been asked to assure attendance of at least 400 young persons (aged 16 through 20)." This would represent 14 percent of each State committee quota.

"Although it is suggested that 'youths' be interpreted as young persons aged 16 through 20, it is recognized that a State committee may want to nominate particularly outstanding young persons even if under 16 years of age. Similarly, a State committee may also want to include in its youth quota a person of 21 or more who may actually be serving as a leader of young people, such as the president of a student body at a college or university."

Criteria for delegates

The President's National Committee has urged that participants in the conference be "broadly representative of the citizens of the United States.

To achieve this end, State committees are urged to take into account a balance among and between:

(1) Youth and adults (as described above).
(2) Lay and professional persons.
(3) Men and women.
(4) Persons from rural and urban areas.
(5) Representation from various racial or other minority groups.
(6) Representation of business or industry and organized labor.

ACTION: STATE BY STATE

Alaska: Dr. R. Roland Armstrong, chairman, reports five committee members appointed in State. Governor being asked to appoint cochairman for Juneau. Each State agency asked to name resource person to provide guidelines for Alaska study.

California: 300 town meetings to be held throughout State as a result of Governor's call for citizen participation. Each town meeting asked to submit findings and recommendations to Governor by October 8.

Fact book for committee being prepared by 11 State departments.

San Francisco mayor calling meeting of youth from all junior and senior high schools, to follow meeting of Governor's White House Conference on Children and Youth in September.

Colorado: County commissioners designated ex officio members of county committees.

District of Columbia: Causes of family irresponsibility being analyzed by special subcommittee consisting of judge, educator, doctor, social worker, lawyer, youth representatives, and laymen.

Florida: Committee working for 100 percent participation of every State voluntary organization as follows: a copy of Topic Guide goes to liaison person of each State organization, suggesting that organization conduct study in area of special interest, utilizing local chapters and branches. Reports of such studies to be included in State Committee's final report.

Same procedure being followed with departments of State government and State and regional offices of Federal Government.

Hawaii: Values and ideals receiving spotlight, with philosophers, psychologists, sociologists, educators, and laymen taking part in preliminary study.

Illinois: Countywide surveys seeking to determine effect of cultural, social, and economic changes on growth and development of children.

Solid background facts provided to every county committee through "working papers" prepared by leading authorities within framework of factfinding committees.

Item from Illinois "working papers": "It is more important, in many respects, for the people of a community to be informed about the facts locally, than to have made a study of national trends."

Indiana: Richard Emery, chairman, reports that State legislature has voted financial support to Indiana Council for Children and Youth and its program * * * Conference held May 13 in Indianapolis.

Eighteen regional workshops and hearings to be held throughout State.

Iowa: Youth employment reported as a priority concern. * * * Vocational guidance and training programs being studied. * * * New services to migratory youth developed through State Youth Employment Service to be described in State report.

Louisiana: Louisiana Social Welfare Association cooperating fully with State committee. Each of association's 10 regions to sponsor workshop focusing on areas of study established by State factfinding committees. Local members of all statewide organizations to be included in these workshops.

Key persons for conference interpretation work appointed in five main regions of State. All newspaper, television and radio material channeled through these representatives, with effective results reported.

Maryland: "Little" White House conference to be held before mid-September at University of Maryland.

Massachusetts: Committee (Dr. Martha M. Eliot, chairman) held its first meeting June 12 in Boston with Governor delivering personal greetings.

Michigan: Detroit Free Press ran series of seven major feature articles, tying in local problems of children and youth with themes and topics of national White House Conference.

Minnesota: Every mayor in State has received questionnaire asking local communities for information about services to children and youth. Results of survey will make up part of Minnesota's conference report.

Missouri: Colleges playing important role: Directors of departments of sociology, psychology, philosophy, home economics, etc., formed into special committee. White House Conference topics will receive focus in discussions, papers, theses throughout next year's classroom study.

New Jersey: Outline for county committees developed by State committee offers practical suggestions for those working through county units.

Ohio: Will hold State conference on children and youth November 19 on Ohio State University campus in Columbus, open to general public.

Oklahoma: Five State colleges in different parts of State to be scenes for regional meetings, cosponsored by State committees and colleges.

Representatives from all high schools, both public and private, will attend youth conference in fall to report on activities and make recommendations to State committee.

Directors of community council throughout State serving as cochairmen of committee on change.

Oregon: Special committee formed to establish criteria for selection of State's 38 delegates to conference.

Puerto Rico: Individual members of Puerto Rico's committee will make personal visits to local committees for consulation.

South Carolina: All statewide studies completed and brought to State committee by May 1; one of first States to finish this phase of conference preparation.

South Dakota: Special subcommittee making basic study of State's migrants, with respect to problems of children and youth.

Mr. Don Rasmussen, chairman, cited in McCall's for outstanding achievement in field of education.

Texas: All junior and senior high schools throughout State will be surveyed through questionnaires prepared by the State's youth participation committee. Results will play part in Governor's meeting and in State report.

Six hundred twenty-five Texas newspapers carried questionnaire for State interpretation commitee, seeking response from all regarding areas of concern. Replies will go to Governor's office.

Texas anticipates that 1 million citizens of State will be involved in preparation for White House Conference.

Utah: 700 letters sent to organizations, youth groups, individuals, inviting them to participate in conference planning.

State department of education has loaned its director of health, physical education, and recreation to serve as executive secretary for Utah White House Conference planning.

Wyoming: The Governor has scheduled State white house conference to be held in Cheyenne latter part of August.

MATERIAL COMING FROM NATIONWIDE SOURCES

Reports and papers on a wide variety of professional and lay activities are reaching Conference headquarters from many sources. The following suggests the type of material already received or forthcoming:

1. A first report on findings of "Project Talent" is expected in time for the Conference. This project was planned and is directed by Dr. John C. Flanagan, professor of psychology, University of Pittsburgh, and President, American Institute for Research, Pittsburgh, Pa. Objectives: a profile of the abilities, skills, and interests of half a million American youngsters in grades 9 through 12, and—over a period of 20 years—a record of how they use their abilities, develop their skills and pursue their interests.

2. The Child Welfare League of America will soon publish a book-length report on its monumental study of adoption and foster-home placement. Findings from this major study will be available to the White House Conference.

3. The National Council of Girl Scouts and the National Council of Boy Scouts have recently completed comprehensive studies of youngsters in the age range served by Scout programs, and of youth leaders.

4. Through their education division, the Seventh Day Adventists are conducting in this country an experiment already run off with success in Japan. It is a method for making work experience an integral part of education from the elementary level. The objective is to teach values and ideals through personal experience of the satisfactions that come with doing a job and doing it well.

5. The World Federation for Mental Health is organizing the First World Mental Health Year (1960) and Dr. Frank Fremont-Smith, cochairman of the International Committee, reports that preliminary reports on studies relating to children and youth will be available to the White House Conference.

6. "Delinquent Behavior," a recently published report of the National Education Association's juvenile delinquency project, will provide background for the study of problems in this field.

7. The National Federation of Settlements and Neighborhood Centers has contributed studies of experiments in delinquency prevention.

8. The Anti-Defamation League of B'nai B'rith has sent in reports of field studies in prejudice and desegregation.

9. From the American Jewish Committee have come "Prejudice and Your Child" and "The Fears Men Live By."

10. The American Heart Association has contributed an interim report of a pilot project in vocational counseling for children with heart disease.

11. A study of major problems affecting the education of the mentally retarded has come from the American Association on Mental Deficiency.

12. "Child Protective Services in the United States" gives a nationwide survey prepared by the American Humane Association.

13. The American Social Hygiene Association's researches on adolescent sexual behavior, now under way, will be available before the Conference.

14. A survey of educational systems by the National Congress of PTA's will also be available.

NEW WHC LEAFLET OFF THE PRESS

A first printing of the new pocket-size White House Conference information piece came off the press the end of May. Copies already have been distributed to State Committees, national organizations and others.

The leaflet describes the themes and purposes of the Golden Anniversary Conference, explains its history, how it is organized and who will attend. It gives points for participation and lists the names of members of the President's National Committee.

A second printing has been scheduled.

FINANCE DIRECTOR APPOINTED

Ephraim R. Gomberg, Executive Director for the Golden Anniversary White House Conference on Children and Youth, has announced the appointment of Dr. Eugene Hotaling as Finance Director.

In making the appointment, Mr. Gomberg said, "The Finance Committee has specifically recommended the creation of this position in view of the very substantial proportion of Conference cost that must be met through private rather than Government sources."

Dr. Hotaling brings a wide background of experience in the field of business administration and fund raising to the White House Conference staff. For the past 2 years, he was affiliated with the Cancer Institute at Miami, Fla., and the United Fund of Dade County.

STUDIES TO PROVIDE HOMEWORK FOR DELEGATES

Before attending conference sessions in Washington next March, each delegate will have a chance to brief himself thoroughly on background data and points of view relevant to the conference program.

This homework will reach the delegate in the form of working papers, reports and volumes being prepared on recommendations of the Committee on Studies, headed by Dr. Eli Ginzberg, professor of economics at Columbia University's Graduate School of Business.

Each conference delegate will receive, when he registers, a working paper prepared for use of the work group in which he is enrolled. There will be about 50 working papers, each relevant to the topic of four or five work groups. Each paper will deal with specific, concrete and factual data, designed to serve as resource material for work group discussions. Specialists in a variety of fields will write these papers.

As further background material, the data-gathering now in process by State committees will be compiled and edited in a single, digest volume. It will give a nationwide picture of conditions affecting children and youth today.

Similarly, the work of national organizations, as reflected in the materials they are forwarding to conference headquarters, will be put into a summary report volume. This will record and evaluate what lay and professional organizations have done during the past 10 years in all fields relevant to the conference.

For further homework, the Studies Committee has planned a prospectus of research recommendations for the coming decade, which will be prepared as part of the general summary of the conference.

Dr. Ginzberg and his committee will take responsibility for compiling three additional volumes of background papers—essentially philosophical in nature—to be written by authorities in various fields. These volumes will deal with "Perspectives," "Trends" and "Issues," and will round out the delegate's study in approaching the conference.

September 1 has been set as the target date for receiving all studies source material, so as to provide adequate time for editing and printing the mass of data prior to the opening of the conference.

STATES LIST THEIR PRIORITY CONCERNS

As the State committees go about the task of preparing for the 1960 White House conference, they have been reporting the problems relating to children and youth that concern them most.

Lists of such priority concerns have come from 24 States: Alaska, Arkansas, California, Connecticut, Florida, Hawaii, Idaho, Illinois, Indiana, Iowa, Kansas, Louisiana, Michigan, Missouri, New Jersey, New York, Ohio, Oklahoma, Oregon, Pennsylvania, Rhode Island, South Dakota, Texas, and Wyoming, and from Puerto Rico and American Samoa.

The concern most frequently mentioned is the treatment, rehabilitation, and education of handicapped children, be they physically handicapped, emotionally disturbed, mentally ill or retarded. Seventeen States and Puerto Rico have listed this as a priority concern.

Juvenile delinquency ranks almost as high among major problems. Fifteen States and Puerto Rico have mentioned their concern with delinquency prevention and with the need for improving legislation and law enforcement, court procedures, social services, and correctional institutions. Four States have also listed specifically the growing number of unwed teenage mothers and the rising venereal disease rate among teenagers as aspects of delinquency.

Next in frequency of mention is the need to expand employment opportunities for middle-adolescents and to improve guidance services and vocational training, especially for school dropouts.

Education is the fourth high-priority concern among the States reporting. Eleven States and Puerto Rico are interested in better schools for all mental leavels. Five more States want particularly to provide a greater challenge to gifted children.

In 10 States the expansion and improvement of welfare services has a high priority. For many States this means especially more day-care facilities for the children of working mothers, more homemaking services and family-counseling services to maintain and strengthen family life, improved adoption and foster-placement procedures.

Other State priority concerns include the strengthening of religious and spiritual life, greater recreation facilities, the special needs of migrant children and minority-group children, community and school health services, and school libraries.

COUNCIL OF NATIONAL ORGANIZATIONS ON CHILDREN AND YOUTH ANNOUNCES ROSTER OF MEMBERS

Any national organization having a major interest, emphasis, or concern in children and youth and wishing to participate in the Golden Anniversary White House Conference on Children and Youth is urged to communicate with the Council of National Organizations on Children and Youth, Mr. Robert E. Bondy, chairman, room 300, 345 East 46th Street, New York 17.

Organizations are reminded that September 1 is the target date for completing the roster of council membership.

Those that have joined but have not yet designated an official representative are urged to do so immediately.

With this issue the Conference Reporter begins an alphabetical listing of the national organizations which have qualified for membership in the council and have designated their official representative:

AFL–CIO Community Service Activities.
Allergy Foundation of America.
American Academy for Cerebral Palsy.
American Academy of Pediatrics.
American Association of Colleges for Teacher Education.
American Association for Health, Physical Education, and Recreation.
American Association of Instructors of the Blind.
American Association for Jewish Education.
American Association on Mental Deficiency.
American Association of University Women.
American Baptist Convention, Board of Education and Publication.
American Baptist Home Mission Society.
American Camping Association.
American College of Chest Physicians.
American College Health Association.
American College of Osteopathic Surgeons.
American Correctional Association.
American Dental Association.
American Dietetic Association.
American Educational Research Association (NEA).
American Educational Theatre Association.
American Farm Bureau Federation.
American Foundation for the Blind.
American Friends Service Committee.
American Hearing Society.
American Heart Association.
American Home Economics Association.
American Humane Association.
American Institute of Family Relations.
American Jewish Committee.
American Jewish Congress.
American Legion National Child Welfare Division.
American Library Association.
American National Red Cross.
American Nurses' Association.

With Fingers Crossed

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 14, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very timely editorial which appeared in the Chelsea Record, Chelsea, Mass., on August 11, 1959:

WITH FINGERS CROSSED

The national head of the American Legion didn't think Khrushchev should be invited to visit the United States. Other prominent men also expressed disapproval.

At no time in history was such an exchange of amenities conducted under such wierd circumstances. The project is greeted by all informed Americans with fingers crossed. They do not propose to overlook the fact that the Kremlin boss is guilty of gross international crimes and that he continually promises his followers that the United States shall be eventually brought under the Communist yoke.

Very likely the Kremlin bosses also have their fingers crossed but in a different mood—that of sardonic satisfaction over what they hope to convert into a diplomatic coup. They probably depend upon a good-natured handshaking exhibition to soften up American opinion.

Landrum-Griffin Bill Would Punish Many for Guilt of Few

SPEECH
OF
HON. DENVER D. HARGIS
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 13, 1959

Mr. HARGIS. Mr. Speaker, I voted "no" on the Landrum-Griffin bill, which a majority of my House colleagues saw fit to approve as a substitute for the committee's labor reform bill. It is my personal conviction that this bill caters to industry and big business, and is strictly unfair to the rank-and-file laboring man. I promised my constituents I would vote for a bill designed to correct the abuses found in a few of the labor unions, but not for a bill which would inflict unjust punishment on those fine citizens of our working class who are trying to make an honest living by the sweat of their brow. I kept that promise.

A long and hard-fought battle, stretching over many years, gave organized labor the right to arbitrate and negotiate for a higher standard of living. Are we prepared to live with our consciences if we now turn around and take these rights away from them?

I feel certain that all of my distinguished colleagues who voted "no" on the Landrum-Griffin bill share my own sincere desire to rid organized labor of racketeering and corruption—and feel just as strongly about it as any of the Members who cast their vote in favor of this bill. But I refuse to believe that this can be accomplished only by stripping union members of their legitimate rights—rights earned and enforced through peaceful and democratic methods practiced in all free nations.

I want no part in setting a precedent for harsh, restrictive Government interference in the private and internal affairs of labor unions. There will never be a time when honest and just union functions should be endangered and curtailed by unjust Government action. We should not punish organized labor for all time to come because a few men have violated the faith of the labor union members, as well as the entire American population. If we operated on this basis, we would be equally justified in effecting governmental action to control the private and internal affairs of business and industry, where the misdeeds of a very few men also have resulted in widespread notoriety.

Another reason for my opposition to the Landrum-Griffin bill is my firm belief that its passage by the House may well destroy all chances of enacting any labor reform legislation during this session of Congress. The Senate, by an overwhelming majority, already has approved a far less restrictive bill. If they reverse this decision, even under almost unbearable pressure from outside sources, the Members of this distinguished body will leave themselves wide open to charges of hypocrisy. Our Nation may have to wait another year for labor reform, and the gangsters and hoodlums will laugh up their sleeves, free to continue their corrupt practices.

I do not feel that the backers of the Landrum-Griffin bill can honestly state that their only goal was to rid the unions of racketeering. Too many sections of the bill show total disregard for the hard-earned rights and privileges of the plain, honest, everyday, rank-and-file workmen who make up the backbone of the labor movement, and have done their earnest best to give organized labor the highly respected status it enjoys today—at least with thinking people everywhere who pay more attention to the good record of the many than they do to the bad record and bad reputation of a corrupt and arrogant few.

I want to emphasize to my many friends in business and industry that I would be just as adamant about refusing to vote for, or condone, any legislation aimed at undue interference in the lawful operations of business and industry.

It seems that too many people have forgotten that each of the three—labor, business, and industry—need each other to exist, and legislation aimed at destroying one can end by injuring all three.

I do not want labor legislation calculated to help put the economy of the Nation on a level where a few get rich, and the others get poorer. We cannot move back into the 19th century, politically or economically, any more than we could do it scientifically. This is legislation that deals with the bread and butter of millions of Americans, and it most certainly should be designed for 20th century living.

I ask the people of my home district in Kansas to judge me solely on this basis—that I consider legislation on its merits, and I do not vote in response to pressure from either side—but only on my personal conviction that the way I am voting is in the best interest of this great Nation. I firmly believe that if the Landrum-Griffin bill becomes law, we have betrayed organized labor to satisfy vested interests—and it will be something we will live to regret.

I certainly hope that House-Senate conferees will be able to present us with a just and equitable bill that will put an end to corrupt labor practices without doing massive harm to the entire labor movement.

Poland Is Thorn to Soviets

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 17, 1959

Mr. PUCINSKI. Mr. Speaker, I am today inserting in the CONGRESSIONAL RECORD what I consider to be one of the best analyses of the situation in central Europe, particularly regarding Poland, that I have seen in a long time by any American correspondent. This article appeared in the Chicago Sun-Times on August 17 and was written by one of the Nation's outstanding foreign correspondents, Miss Marguerite Higgins.

I call attention to this article because it points out so graphically what I have said here on this floor on many occasions: that America's real secret weapon in containing the Soviet Union's plans for spreading international communism; and preventing world war III is our ability to keep the captive nations of Europe at least spiritually on our side, even though today, against their will, they are forced to be ruled by Communist regimes.

Miss Higgins makes it clear that the only reason the Soviet Union has not touched off world war III is because Khrushchev and the Kremlin leaders know that they cannot count on the people of these captive nations for any substantial support, even though the puppet Communist governments in these nations may profess their loyalty to Moscow.

It is my sincere belief that Miss Higgins' penetrating analysis of the situation in Poland makes even more appropriate the resolution which I introduced last week in this House, calling for the Congress of the United States to reaffirm its belief that the captive nations must be given full freedom through peaceful means before there can be any lasting peace in Europe.

In view of this article, I renew my plea to this Congress that we adopt the resolution which would call upon President Eisenhower to make it clear to Nikita Khrushchev when he comes to this country that the West must continue to view all Soviet foreign policy moves with suspicion so long as the Kremlin insists on keeping these captive nations of Europe behind the Iron Curtain against their will.

While Miss Higgins describes primarily the situation in Poland, I am confident that the people of Lithuania, Estonia, Latvia, Czechoslovakia, Hungary, Rumania, and Bulgaria would undoubtedly display the same spirit in the cause of freedom as the Poles if they had the opportunity.

Miss Higgins' article follows:

[From the Chicago Sun-Times, Aug. 17, 1959]

POLAND IS THORN TO SOVIETS

(By Marguerite Higgins)

WARSAW, POLAND.—A Scandinavian diplomat who witnessed the outpouring of pro-American emotion during Vice President NIXON's stay in Poland had these comments:

"This demonstration was the final proof to me of something I have long suspected. It is this: If a war broke out tomorrow between the Soviet Union and America, the Russians would have no other course but to immediately put all of Poland under Red army occupation. Despite their Communist leaders, the feelings of the Polish people would make this country a liability, not a help, in any Soviet conflict with your country."

AN EXCLAMATION POINT

And in the opinion of an impressive number of neutralist observers in this part of the world, what is true of Poland is also true, though to a lesser degree, of large sections of Communist-dominated Eastern Europe.

The bold, almost disconcerting floods of pro-Western sentiments that greeted NIXON in Warsaw were but the exclamation point to the conclusions on this score that have been building for some time.

The Hungarian revolt, the explosions in East Germany and Poland itself have helped to form these opinions.

CURTAIN FILIGREED

Also, the Iron Curtain has become gradually an iron filigree letting in some light, some tourists, and permitting a few frank opinions to flow back and forth. So it is possible to see how astonishingly little all the years of Communist brainwashing accomplished in these areas which were attached to the Soviet empire after World War II.

This does not means—and this is a vital point—that a Communist leader such as Poland's Wladislaw Gomulka is not sincere in his pledge to Moscow to keep his country a loyal part of the Russian military pact. Gomulka's pledge is sincere and is possible of fulfillment in times of cold war or even when international tension boils to its occasional moments of great crisis.

"GOMULKA, A REALIST"

But as another neutralist observer put it: "Gomulka is far too much of a hard-headed realist not to understand that if the issues were halfway clear, a country like Poland in any conflict between the Russians and Americans would turn itself into a fast guerrilla movement snapping at the heels—and if possible—at the vitals of the Soviet Army.

"RECALLS SHOWDOWN OF 1956

"And the Russians know it, too. That's why you Americans are so foolish to let Khrushchev bluff you with his talk of rockets and sputniks. Do you know what deters the Russians from starting a so-called local war over Berlin or indeed over anything else in this part of the world? It certainly is not just American atomic bombs. It's the very real risk that the Russians, in the event of military showdown, might see Eastern Europe turn against them."

Short of wars, however, the historically difficult relations between the U.S.S.R. and such countries as Poland are likely to stay on the even keel that became the order of the day after the momentous showdown of 3 years ago between Soviet Prime Minister Nikita S. Khrushchev and Gomulka.

It was in October 1956 that Khrushchev sent Soviet tanks rolling in the direction of Warsaw in an effort to assert Moscow's will and the continued rule over Poland of Soviet Marshal Konstantin K. Rokossovsky. But in this case Gomulka's will proved stronger than Khrushchev's. The Soviet bluff was called when the Poles told them to call off their tanks or find themselves at war with the Polish people.

MODEL OF INCONSPICUOUSNESS

Since then the Soviet Army in Poland has been a model of inconspicuousness. To a foreigner and even to the Poles themselves it is hard to remember that the Russians are stationed in considerable force in strategic points. For the Red army soldiers stay strictly to themselves.

In Warsaw, for instance, not a single Red army officer or enlisted man is any longer to be seen on the streets. The time when Moscow set the pace for all things Polish from agriculture to architecture also has ended.

Connecticut National Guard Unit Award

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, August 17, 1959

Mr. DADDARIO. Mr. Speaker, each year the outstanding company-size unit in the Connecticut National Guard is selected to receive a special award known as the Eisenhower trophy. It is a singular mark of reward for the effort shown by members of the unit during the year toward proficiency and training in military subjects. I request unanimous consent to include a clipping from the Hartford Times on the 1959 Connecticut award:

Maj. Gen. Frederick G. Reincke, state adjutant general, Monday presented headquarters and the headquarters detachment of the National Guard with the Eisenhower trophy, given annually to the best unit in the State.

Receiving the award was Capt. William E. Meagher of Salem Street, Hartford, commander of the Hartford unit. It was given at a dress review attended by three other units also undergoing 2 weeks summer training here.

The units were headquarters battery, 1st Missile Battalion, 192d Artillery Regiment; headquarters battery, 1st Missile Battalion, 242d Artillery Regiment; and the Connecticut Military Academy.

The award, given by the National Guard Bureau, is based on training, Federal inspection, attendance, weapons qualification and overall performance.

MATS Mission, Support Our Fighting Forces—ATA Mission, Destroy MATS

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 17, 1959

Mr. RIVERS of South Carolina. Mr. Speaker, I wish to call to the attention of the House of Representatives the pressure activities of the Air Transport Association regarding the modernization of the Military Air Transport Service. In particular I refer to the latest paper they have circulated to selected persons in Congress opposing $30 million for the modernization of MATS contained in the Senate supplemental appropriations bill.

In the original budget for the Department of the Air Force there was a request for $53 million to be used for the modernization of our Military Air Transport fleet. Largely because of the efforts of the Air Transport Association this request was denied by this body and then the Senate. However, it was agreed in the Senate that such item would be included in the supplemental appropriations bill. Senate amendment No. 34 to the supplemental appropriations does contain an item for the modernization of MATS in the amount of $30 million. The amendment was introduced by Senator CANNON, of Nevada.

The Secretary of the Air Force, the Honorable Mr. Douglas, strongly supported Senator CANNON's amendment in a letter to the chairman of the Senate Committee on Appropriations dated July 22, 1959.

The Air Transport Association in its latest effort has again attempted to becloud the strategic airlift requirement of Air Force by stating that the aircraft to be obtained would be used in the "regular MATS mission which the Air Force views as an airline type of scheduled operation all over the world." Nothing could be further from the truth. The Air Force has repeatedly stated the need for modern transports capable of carrying cargo to critical areas in time to meet the requirements of our strategic and tactical jet forces.

I am amazed and disgusted that an association of the caliber of the Air Transport Association would so lower itself in such an obvious attempt to flaunt the best judgment of our military planners and congressional action resulting from classified information.

The Air Transport Association must realize that the development of modern cargo jet aircraft and suitable turbofan propulsion is of vital military necessity. At the same time they are urging ever and ever increasing participation of our airlines in Department of Defense business they must know that our Nation's airlines are not equipped to carry the multiplicity of cargoes required by our military departments at speeds required in modern warfare.

The funds which the Air Transport Association are fighting are of vital necessity to the Department of the Air Force and in turn such jet cargo development will serve to advance the capabilities of our civilian airlines. When the supplemental appropriations bill is considered I strongly urge that each Member of this House support the $30 million appropriation for the development and modernization of our military transport fleet.

In closing I ask unanimous consent that the article "MATS and the Mission" from the August 1959 issue of the Armed Forces Management magazine be incorporated in the RECORD at this point. I regard this article as an excellent summation of the Military Air Transport Service, its abilities, and its problems.

MATS AND THE MISSION

(By Bill Borklund)

(Although the importance of its mission is the key to its entire operation, the Military Air Transport Service has been caught this year in a never before equaled barrage of diversionary charges—most, if not all, of them secondary and misleading. Until the underbrush is cleared away, MATS, and the Air Force, are going to have a hard time reaching, with much desired commercial airline help, a much needed program for use of all U.S. support air power in the time of war.

Bombed, badgered and besieged as were few military outfits this year, the Military Air Transport Service enters the final round, this month, of a summer-long congressional hassle over how much money it should be spending on commercial airlift, how much of its military job it should do itself.

At the same time, undaunted by the battering it has taken, MATS is reentering the Washington, D.C., arena with two far-reaching proposals of its own. One: A $53 million supplemental appropriation request for 10 jet powered aircraft (which Capitol Hill whacked out of the original Defense money request) to start the long-overdue MATS modernization program. Two: a proposal that Defense start airlifting all personnel overseas (present levels—37 percent of Army, 50 percent of Navy, 94 percent of Air Force), double the amount of oversea shipping by air of high value hardware.

Either idea will be enough to start the whole argument again, an argument that

centers around what MATS does and why. Strangely enough, all the mountains of obfuscating manuscript produced this year have done little to clarify the MATS mission, key to the whole argument. The result: means are discussed as ends, the result is called the cause and headline-hunting critics have led a big chunk of Congress (and most of the American public) down a bramble-strewn path of misinformation.

Among the baubles: MATS is the world's largest airline. It isn't even close. Soviet Russia's Aeroflot is No. 1 among the real leaders. In addition, only about 30,000 of MATS' 120,000 Navy, Air Force, and civilian personnel and half its 1,198 assigned aircraft handle the strategic air transport mission. The rest take care of MATS' less-publicized services—Air Weather, Air Photographic and Charting, Air Rescue, Airways and Air Communitions, and Aeromedical Evacuation.

MATS runs a plushy airline. The three VC–137A jet passenger planes which prompted this blast are indeed plushy, were built for the Air Force to fly the President, Congress, and high level U.S. dignitaries around the world, are actually off-the-shelf Boeing 707's with standard executive interiors. Assigned to MATS for administrative purposes only, the aircraft are actually under control of the Joint Chiefs of Staff organization. Nearly all other MATS passengers travel the austere equivalent of commercial tourist class.

MATS is competng with commercial airlines for passengers. Total passengers carried by MATS last year amounted to less than 1 percent of the 49 million annual passenger load carried by U.S. airlines alone.

MATS, like any other military organization, has a wartime mission, assigned by the Joint Chiefs of Staff. The mission: be ready to move troops, missiles, and other heavy weapons and supplies in any war emergency to support other Air Force components, the Army, Navy, and Marine Corps. JCS estimates wartime airlift requirements specifies those that are critical, i.e., must be handled by military aircraft and crews, pegs the rest essential, i.e., can be done by either MATS or civil carriers.

Given a half-day to reach predesignated spots around the globe to cover the "critical" tasks (primarily resupplying Strategic Air Command bombers returning from their first bombing run), MATS keeps an alert force in on-the-flight-line readiness, runs the rest of its airfleet through practical training exercises. It is, in essence, a SAC-like supply operation with one exception. SAC must take pictures rather than drop its bombs. MATS can haul and process in peacetime training the same supplies it will actually carry if the big war should start.

To handle the bulk of the "essential" role, it has organized a Civil Reserve Air Fleet. Primary CRAF duty, at the moment: hauling passengers. CARF list of planes varies depending on predicted requirements, is currently (fiscal year 1960) made up of 242 aircraft under assignment from 27 different civil carriers—primarily DC–4's for cargo, DC–7's for passengers. There is a slight hooker: For MATS to use any of the CRAF planes, under current agreements with the airlines, it must take them all. Result: MATS must take care of most limited war situations pretty much on its own.

To MATS its "realistic training" program is an absolute necessity if it is to have any chance at all of meeting its wartime obligation. Said one colonel, "Letting pilots fly the aircraft is the very tiniest part of this whole training effort. We've got to train the traffic people, the maintenance men, cargo handlers, the whole crew.

"We have to know what we can move where and how efficiently. (Biggest problem right now is the terminal operation.) You can't mothball an operation like this, any more than you can SAC, then push a button and have it spring into operation in the wink of an eye—which is how fast we'd have to get going on D-day."

Requesting 6 hours originally, MATS is allowed a 5-hour per day per aircraft utilization rate for training, has reasons for believing this isn't enough. Studies by Rand Corp., and such men as Dr. Paul Cherington of Harvard Business School indicate MATS could not boost this training rate to that required if a hot war started, far less than the 10 hours demanded by JCS, and MATS could maintain this rate for at best 30 days. Their own Korean war experience tends to corroborate this finding. Asked for a 10-hour per aircraft per day operating rate MATS, in the initial and crucial stages of the war, was able to boost its 2.8-hour prewar level to only slightly over 4 hours.

Thus, they are being asked to do what some of the best brains in the country say can't be done. In spite of this, MATS maintains it has the capability the JCS says it should, but, added one officer (in reference to oft-quoted ex-Army Chief of Staff Maxwell Taylor's demand for more troop airlift), "We don't have the capability to move everything everyone wants us to move."

MATS supply backlog, one mark of efficiency, in any given airport is running less than 3-day maximum currently acceptable to MATS headquarters. They're thinking of revising that goal to 1 day. And, in response to the Capitol Hill charges that MATS is running scheduled flights overseas along the same routes as commercial carriers, one officers snorted, "A schedule is nothing more than a program any good manager uses to see if he can do what he says he wants to do. As for the routes, although we don't use the same bases, there's usually only one efficient economical way to cross an ocean. We use the same route as the airlines for the same reason."

Beyond its realistic readiness training and the supplemental CRAF program, MATS, in its role as single manager for military air transport, buys a large chunk of commercial airlift. Among the reasons: military air transport demands are higher than the by-product—airlift—of MATS training program can handle; MATS wants only to be able to do its assigned war mission, wants a strong civil air fleet ready to back it up after the first few days or weeks of an all-out war.

Of the $200 million paid by Defense to civil carriers for contract, charter and common carriage airlift in fiscal year 1959, MATS signed signed the tab for over half ($105 million). Of that qantity, $70.8 million was Congress-appropriated money spent backing up MATS own peacetime operation. The rest it spent as procurement officer for Logair, Quicktrans and the Air Force Ballistic Missile Division.

Even if the requirement for airlift does not increase (and it's likely to), MATS will soon be spending more of Defense's airlift dollar as it phases in Northeastern North America intertheater airlift overseas, eventually will be responsible for the whole $200 million. All procurements are advertised, all carriers are eligible to bid. Commented one procurement officer. "We don't care, initially, what capability they have."

When the contract is let, however, MATS keeps two things in mind:

1. Placing as much business as possible on a fixed, long-term basis (to get better pricing, make contract administration easier for both the carrier and MATS).

2. The report of MATS Capability Survey Committee which visits carriers' facilities, verifies that they can produce as they say they will. We want to make awards only to responsible and capable carriers. To a good many commanders buying airlift, performance is a lot more important than cost.

But, if MATS has as good a case as any other military organization for existing, that $70.8 million, and growing, prize has been too much for the commercial airlines to view with clearcut business acumen. Strangest twist, to MATS officers, in the whole Capitol Hill cacaphony is that the very people in Washington who should be helping MATS sell increased use of airlift are, instead, pounding MATS with every brickbat they own.

Like a recalcitrant bulldog, the commercial airlines, through their powerful association lobbyists, are leaning hard on Congress to get them a bigger share of the large MATS business—in spite of MATS boss Lt. Gen. William H. Tunner's statement that "there just is no more business—unless MATS flies its aircraft empty."

And if MATS flies empty? Ignoring for the moment its crippling effect on MATS preparedness, the cost of Defense airlift to the U.S. taxpayer would skyrocket to nearly $1 billion—something the Pentagon thinks he would take a rather dim view of. Even though MATS used 80 percent of its passenger, 74.8 percent of its cargo capacity during the last fiscal year, commercial airlines still hauled 40 percent of MATS' passengers, 10 percent of its cargo.

This is a far cry from MATS commercial augmentation in 1955 when it spent only $4.5 million on civil airlines to haul 1.5 percent of its passengers, 6.6 percent of its cargo and mail. In the past 5 years, MATS has reduced its airfleet by 107 planes, cut its personnel strength some 2,400 persons. Yet, charges of MATS' persistent expansion, to the detriment of commercial airlines, persist.

False charges are not MATS' only headache. Attracted by the mushrooming market, MATS' bidders list has jumped from 41 carriers in 1957 to 86 this year, is expected to reach 122 in 1960. Most of the additions are briefcase operators with one or two obsolescent aircraft, at most, purchased solely to get MATS business.

Operating under a part 45 certification (called one of the great rackets in the aviation industry by Oklahoma's Senator MIKE MONRONEY) and not subject to Civil Aeronautics Board control, these "tissue paper" firms come under the benevolent protection of a Small Business Administration umbrella—and most of the unreliable outfits spotted by the contract survey committee are in this category.

Said one procurement officer, "These small business set-asides are encouraging the use of old aircraft, discouraging the forward looking companies—and, on top of all that, we figure we pay about a 10-percent premium to give them business."

These quick-hit-and-die operators have prompted an intramural fight among the carriers. But, as reflected in a Congress trying to keep everybody happy, the fight has become something far more omnious. Said South Carolina's Senator THURMOND, "Excessive (governmental) concern with commercial aviation has caused us to progressively nibble away at the Military Air Transport Service."

MATS' request for 10 C-jets (estimated cost: $53 million) hit a blank wall first time around—for precisely the same reason MATS has been in trouble all summer; national defense mission keeps being obscured by politics and considerations of false economy.

To MATS the argument for C-jets seems pretty clear cut. Says Tunner, "We need both a racehorse and a workhorse." They are getting the workhorse, the C–133. For the other: "It doesn't make much sense to us to try to support a 600-knot-an-hour bomber with a 190-knot transport. We're trying to support a rocket (SAC) with a kiddie car."

Adds Tunner, "The transport plane now in the inventory, being piston driven would be many hours distant from the friendly base with needed materiel and personnel at the time the SAC bomber arrived. It is

precisely the difference in speed between a jet-propelled plane and a piston-driven plane. The SAC plane would therefore be threatened with immobilization after one strike at a target."

And there's the advantage of economy. Ten C-jets will do the same job as 42 of the C-124's which comprise the bulk of today's strategic transport fleet, are nearly obsolete and costly to maintain.

MATS has already heard, in the wings, the yells of the civil airlines. "What they tell us basically," said one MATS officer, "is they want us to do a good job—but not too good." Tunner insists that MATS is not fighting the commercial airlines: "We need them. We are counting on a strong airline industry to backstop us in time of war." But if MATS is not in a fight, it is showing a lot of unexplainable bruises.

What rankles MATS men most, and some of the most knowledgeable men in the airlift business today are in Tunner's organization is that the MATS record is about 180 degrees opposite from the picture painted of it by commercial interests; is, in fact, far better than the so-far performance in war situations of private carriers demanding they be given more of the job to do.

Among the quotable:

On claims industry could do the job cheaper: "Assuming the same operational training level, if we split the cargo-passenger business equally with the civil carriers, Defense airlift bill would jump another $300 million. If we flew empty, the taxpayers would shell out $750 million more."

Could do it better?: "Ten times during July, August, and September last year MATS went looking for commercial airlift augmentation, couldn't find it. During the Lebanon and Far East crisis, all bids in some offerings were so high they all had to be rejected. We had to haul the supplies and people ourselves working overtime. It was the tourist season, if you'll recall. During 1 week last November when they were on strike, all but four TWA scheduled flights were handled by MATS. We do not consider this the proper way to maintain military readiness."

MATS' "competitive" setup is preventing civil carriers from developing a cargo capability: "They want us to give them the money to build the aircraft, then guarantee them a profit on the business. The airlines built an incomparably efficient passenger service under a free enterprise system. Passenger business in this country is a drop in the bucket, compared to the commercial cargo they could haul. Why don't they go out and develop it instead of going to Washington looking for a Defense Department dole?"

What about Congress?: "If they buy this civil carrier idea to pare down MATS even more, they'll be behind the biggest eight ball they've ever seen. We already have letters indicating every transport outfit in the country, steamship lines, railroads, busses, will jump on the bandwagon—and you couldn't blame them."

MATS FOUR ENGINE STRATEGIC TRANSPORT AIRCRAFT

Ruinous Grain and Livestock Buildup

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 17, 1959

Mr. COAD. Mr. Speaker, under permission to extend my remarks in the Appendix of the RECORD, I would like to point out to my colleagues an editorial which appeared in the August 1, 1959, issue of the Wallaces Farmer and Iowa Homestead newspaper. Current reports show that our feed grain and livestock supply is far ahead of the demand for these commodities, and all indications point to the fact that by this fall this imbalance will become greater than ever before. For example, Iowa hogs which last year sold for over $20 a hundredweight are now priced under $14 a hundredweight, and the normal, heavy runs to market which usually drive the price down have not yet started. I believe that we should all become vitally concerned about this Nation's agricultural problems and steadfastly work for good, sound farm legislation which will correct the injustices done to the American farmer.

The editorial follows:

RUINOUS GRAIN AND LIVESTOCK BUILDUP

The farm surplus crisis is getting worse. Our unwieldy and still mounting grain stocks are just 1 to 3 years ahead of unwieldy supplies of eggs, hogs, and beef cattle.

We're headed for real trouble unless some remedial action is taken soon.

The July crop report confirmed our expectations of a huge corn crop. Total feed grain production this year will be 2.5 million tons higher than last year—enough to produce an added 5 million hogs.

Cattle numbers increased 3½ million last year, are expected to go up another 4 to 5 million head by January 1, 1960. This will give us about 102 million head, a record number, and an increase well beyond that of our human population.

Wallaces Farmer has been trying to point out the lurking danger in our productive might for some time. But some economists and agricultural leaders are still minimizing the problem, saying things will soon work themselves out.

We were glad to see Iowa Farm Bureau leaders give public acknowledgment of our looming crisis. In an open letter to Secretary Benson, the board of directors of the Iowa Farm Bureau Federation spelled out their momentous concern about the following:

"The present imbalance between the supply of food and fiber and the effective demand.

"The immediate future prospects for farm income, particularly for the livestock producer.

"The current effort to cast farmers as pampered and greedy wards of the Government."

The farm bureau letter stated that agriculture's bargaining position must be strengthened if we are to compete successfully with industries' protective tariff and labor's monopoly exemptions.

The group asked for: the reduction or elimination of Government reclamation and other programs which actually increase agricultural production;

A land retirement program large enough to balance current production with demand; the use of surplus farm commodities in a practical program to benefit our allies; a sizable transfer of USDA funds to speed research on new industrial uses of farm products.

This concern for our plight by Iowa Farm Bureau is a far cry from the stand usually taken by the American Farm Bureau Federation. We hope the Iowa group will have some influence in changing the farm policy approach taken by the national organization.

Walter Hornaday Writes About the General Accounting Office

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 13, 1959

Mr. TEAGUE of Texas. Mr. Speaker, the General Accounting Office has done and is doing a wonderful job in cooperation with the House Committee on Veterans' Affairs, of which I am chairman. They have been of great assistance to me as well as to my Committee staff in various phases of investigative work we have undertaken for the purpose of legislating certain of the veteran fields. I have from time to time conveyed my thanks and appreciation for their efforts to the Comptroller General as well as to individuals in his employ.

However, it has taken a veteran newspaper reporter, Mr. Walter Hornaday, of the Dallas Morning News, to bring their story to life, and under leave to extend my remarks in the RECORD, I wish to include Mr. Hornaday's story which appeared in the August 9 issue of the Dallas Morning News:

FOUND: A FEDERAL AGENCY WHOSE OBSESSION IS THRIFT

(By Walter C. Hornaday)

WASHINGTON.—While almost everyone in Washington connected with the Federal Government is spending money hand over fist, a little-known Federal agency is working tooth and toenail to save all it can.

The average citizen has never heard of the General Accounting Office, and if he has he usually has little or no knowledge about what it does.

But to Federal bureaucrats who tend to become careless in handing out the taxpayers' money, the GAO is a power to be reckoned with.

Briefly, the GAO is the watchdog of Congress. Its job is to see that the money that Congress appropriates is spent for the intended purposes and handled honestly and wisely.

Heading the GAO is the Comptroller General. His term is set for 15 years, so he will be less likely to yield to political pressure, and he can't be reappointed. The Presi-

dent appoints him, subject to Senate confirmation, but the Comptroller General's agency is a legislative one, not an executive.

Joseph Campbell, the present Comptroller General, describes the GAO this way:

"A nonpolitical, nonpartisan agency • • • created by the Congress to act in its behalf in examining the manner in which Government agencies discharge their financial responsibilities with regard to public funds appropriated or otherwise made available to them by the Congress and to make recommendations looking to greater economy and efficiency in public expenditures."

The sum of $67,649,522 was actually collected by the GAO during the 12 months ended June 30, 1958, in refunds for overcharges and other improper costs. It's estimated that about as much more was saved the Government by warnings, payment stoppages and the mere fact that Federal officials knew the GAO was looking over their shoulders.

Since its establishment in 1921, the GAO probably has been responsible for savings of at least half a billion dollars.

The far-flung activities of the GAO have sometimes become a pain in the neck to agencies where carelessness, even outright wrongdoing have been uncovered. Some officials feel that it is prying into matters it has no business being concerned with.

The late President Roosevelt became so irritated with the GAO that he left the post of Comptroller General vacant for 3 years by failing to appoint anyone to succeed the first GAO head, John R. McCarl, of Indiana. It was common talk then that Roosevelt hoped the agency would be abolished.

Lindsay Warren, a Congressman from North Carolina, agreed to take the job only after Roosevelt promised not to try to do away with the GAO.

Comptroller General Campbell and the 5,000 "watchdogs" in the GAO don't wait for money to be lost on Government contracts or through improper methods. Every department and agency is under constant auditing and investigation.

Reports are made throughout the year to Congress, its committees, and to agencies involved. Investigators are regularly assigned to committees of the House and Senate to aid them in their duties.

The Defense Department is the GAO's biggest headache. The sheer size of military spending (Congress recently appropriated almost $40 billion for the next 12 months) is partly responsible for more wasteful methods being found there than in other agencies.

But GAO officials have learned that many military people are inherently careless about money. The Defense Department also is riddled with contracting officers who are not fitted for the job because of lack of training, in the opinion of some GAO investigators.

A recent report on 12 prime contracts negotiated by the Navy noted that prices $12,200,000 in excess of actual costs had been accepted. The GAO was able to get back much of these excessive costs.

The GAO and Congress had clashed head-on with President Eisenhower over refusal of the International Cooperation Administration, which handles foreign aid, to furnish requested information.

Congress tacked on a provision to the foreign aid appropriations bill requiring the ICA to supply all information wanted by Congress, and to cut off funds if the data is not furnished. The bill is now before the Senate appropriations group.

The White House has given notice that it won't permit the mutual aid agency to comply, on the basis such a law would be unconstitutional and invade the Executive's power to withhold such matters as evaluation reports, which House and Senate committees and the GAO want to see.

Incidentally, the White House and the Budget Bureau are subject to GAO audits, all except the special fund of the President.

Congress' watchdog agency itself is not immune from congressional probing. The GAO maintains offices all over the world where Federal money is spent.

Regional offices for field operations also are located in 19 American cities, including Dallas.

Strong Support for No Supports

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. ROBISON. Mr. Speaker, with reference to my bill, H.R. 7692, to remove Federal controls from agriculture in an attempt to end the current madness in the field of farming, I include a letter to the editor of the New York Times by the distinguished economist, Prof. Sumner H. Slichter, published in the New York Times of August 14, and an editorial from the Wall Street Journal of August 17, 1959, quoting President Charles B. Shuman of the American Farm Bureau of Federation:

TO CURTAIL FARM SURPLUSES—ENDING SUBSIDIES WITH ECONOMIES USED TO CUT TAXES PROPOSED

To the EDITOR OF THE NEW YORK TIMES:

Five of the most overproduced commodities in the United States are wheat, cotton, corn, rice, and tobacco. And yet we persist in paying large subsidies to keep up the overproduction of these goods.

The Government takes the surpluses off the hands of the producers and stores them at enormous expense—at the cost of about a billion dollars a year. So large are the accumulated surpluses that the problem of finding physical facilities in which to store them has become acute. And yet the payment of the huge subsidies to induce still more production of the overproduced commodities still goes on.

What should be done? It is obvious that the United States is losing an important opportunity to raise its standard of consumption. The amount of labor and capital now devoted to finance the production of surpluses could be devoted to increasing the supplies of goods that are scarce and that people would consume in larger quantities if the goods were produced and were available for consumption. How can this diversion of resources from producing unwanted wheat, corn, cotton, rice, and tobacco be brought about?

A simple way to accomplish the shift would be for the Government simply to stop paying subsidies and to use the money thus saved to cut taxes. Consumers would then decide how the released production power would be used because tax cuts would enable them to step up promptly the buying of a vast variety of goods.

GRADUAL ELIMINATION

The additional demand by consumers would pull workers and capital out of the wheat, cotton growing, corn, rice and tobacco industries into more productive uses. In order to mitigate the problems of transition it would probably be desirable to eliminate the subsidies by gradual steps over a period of about 4 years. In order to provide new sources of demand to pull resources out of the excessively expanded industries, the tax cuts should be timed to coincide or slightly precede the subsidy cuts.

But though tax cuts could provide alternative demand for that now supplied by subsidies, the Government would not need to use all of the savings from the termination of subsidies in this way. The country has enormous public needs. It needs more schools, low-cost housing, better roads, flood control, pollution control, more hospitals, more recreation areas with roads to them, its cities need much replanning and rebuilding.

Hence, the Government would be wise to divide the savings from terminating subsidies into two parts—one part going to individuals in the form of tax reductions, the other part going to the public in the many forms of public works that the country badly needs but cannot now afford.

SUMNER H. SLICHTER.

[From the Wall Street Journal, Aug. 17, 1959]

VIEW FROM THE FARM

"Today's burdensome surpluses with their fantastic storage costs are symptoms of a sick farm program which has infected the business of agriculture with the disease of Federal aid and control."

Now, people reading those words might conclude they came from some city slicker so ignorant of the farm he thinks prize-winning calves always come in pairs a couple of inches above some shapely ankles.

Not so. Charles B. Shuman, president of the American Farm Bureau Federation, was the speaker. The Farm Bureau Federation represents 1.6 million farm families throughout the country, but does not, of course, claim to speak for all of them. It can speak for a considerable majority of its members, however, for frequent polls the federation holds invariably show opposition to the support programs.

The farmers would be vastly better off, Mr. Shuman told an audience recently in New York, if the Government would permit them to use the free marketplace to supply consumer needs. Government subsidy programs based on parity serve neither the interests of the consumer or the farmer, he added.

Nor of anybody else, for that matter. Consumers and farmers pay taxes (somebody once figured out that there are 51 taxes hidden in one loaf of bread) and the taxes they've paid for the monstrous farm program might be enlightening to some who don't realize the figures. Since 1954, and including 11 months of fiscal 1959, the farm program has realized losses of $5.8 billion.

In addition to paying farmers for things they grew and for things they didn't grow, the Government also spent some pretty impressive sums of money the farmers didn't get a dollar of.

For example, the Commodity Credit Corporation reports for the 11 months ending last May 31 that carrying charges alone on crops amounted to $495 million, interest amounted to $145 million and general overhead—that euphemism for a bureaucracy that has moved in on the farmer faster than a corn borer through the lower 40—has cost the taxpayer $39.3 million in the same period.

Well, if a wasteful program such as this isn't even liked by farmers it's supposed to benefit, what in the world keeps it going?

Mr. Shuman had an answer for that one, too. "Though farmers often have asked that these programs be changed, the Congress has not yet taken effective action."

And that, so far as letting the public know who is really to blame for the follies of the farm program, ought to help separate the sheep from the goats.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 10, 1959

Mr. ALGER. Mr. Speaker, the following is my newsletter of August 15, 1959:

WASHINGTON REPORT BY CONGRESSMAN BRUCE ALGER, FIFTH DISTRICT, TEXAS

The labor bill passed, unbelievably the strongest of the three bills considered, and by a lopsided resounding vote, 303 to 125. A victory for Senator MCCLELLAN and his committee (through its disclosures), for the President, for the minority Republican House leadership, and for the coalition of Republicans and southern Democrats. By their own statements against the bill, it was a defeat for the House Democrat leadership, the AFL–CIO, the Teamsters, and the dedicated House liberals. But, most of all, it was a victory for the people, both in and out of unions, who by letters and wires demanded labor reform and an end to the abuses and excesses of the power of labor leaders.

The bills considered and their sponsors: (1) The Teamsters sponsored the weakest bill, the Shelley bill (defeated 245 to 132). (2) The Democrat House leadership (and AFL–CIO indirectly) sponsored the committee bill. (3) The administration, most business interests, the minority House (Republican) leadership, and southern Democrats sponsored the bipartisan Landrum-Griffin substitute bill, passed with 156 Democrats and 147 Republicans for, 122 Democrats and 3 Republicans against. Oddly enough and yet understandably, the excesses of labor and of proponents of labor's legislative demands brought on their own downfall or correction. These excesses include (1) unwillingness to concede that effective labor reform legislation was needed; (2) intemperate and inaccurate criticism of the substitute bill; (3) accusations of management's lobbying (galleries full of labor representatives and most lobbying by labor as usual); (4) sponsorship of committee bill that would actually weaken present labor law (example: exempt from boycott provisions 88 percent of truckers now covered); (5) those against the committee bill were accused by Democrat leadership of being "labor haters" and partisan.

The debate raged around the differences of the three bills (see last week's newsletter). On study I found arguments for the substitute bill outweighed the arguments for the Committee bill (after Shelley bill was eliminated). Arguments for committee bill include: (1) It's stronger than Shelley bill; (2) It goes as far as possible without hurting labor movement; (3) The substitute bill is "punitive" and goes too far. Rebuttal by proponents of the substitute bill (see last week): (1) Only the substitute bill covers the main areas of abuse: (a) Workers' bill of rights (b) union finances (c) No man's land labor disputes jurisdiction (d) Blackmail picketing (e) Secondary boycotts and hot cargo; (2) the substitute bill is not punitive and will eliminate from labor movement only the undesirable.

The debate was the most stimulating of the year—the air almost crackled with excitement, intemperate statements were hodgepodged with studious presentations, tempers flared, laughter greeted many exchanges. Debate highlights, humor or oddities include: (1) Threats by labor proponents that dire political consequences would befall those voting against organized labor's wishes, that this would be the "Congressional Retirement Act of 1959"; (2) The disclosures of brutality, violence, and coercion by John L. Lewis, Hoffa, and Reuther; (3) The intemperate charges of partisanship by House Democrat leadership, even as Republicans and Democrats smoothly joined (the "coalition") to put through the Landrum-Griffin bipartisan substitute; (4) The union-member Congressman who pleaded for labor reform to protect working people which he claimed only by the substitute bill could provide; (5) The attempt by labor's spokesmen to sabotage the substitute bill by tagging it NAM (National Association of Manufacturers) or Chamber of Commerce-sponsored; (6) The liberals' amendment to include no discrimination in union membership because of race, color, creed or sex, contrary to AFL–CIO desire to select membership by their own rules,[1]—and many others. Volumes will be writted describing this 4-day debate and its legislative outcome, a landslide of popular opinion for correction of labor's indiscretions.

My own belief is that even here we are attempting to doctor the surface sores rather than cure the basic illness. The boycotts, financial embezzlements, violence, and other abuses are the sores; the basic illness stems from the monopolistic power of unions which further result in dictatorial power of the national union leaders. The shutdown nationally of the steel industry (Hoffa's power to tie up transport nationally), prevention of piggy-back trucking, price-fixing, limiting of new businesses entering trades, limitation of new products' use such as prefabricated window, door, and building units or plastic pipe, all these and more are situations that cannot be cured short of antitrust law. Why shouldn't labor be treated as equal to business which is under antitrust law? I presented this viewpoint in suggesting my bill H.R. 8003, which would: (1) Return control of local unions to local union members and their elected officers; (2) end monopolistic practice of industry-wide bargaining by professional labor bosses at national and international level; (3) unions no longer could fix prices, restrict uses of new processes and products. Enforcement would be injunctive relief in Federal court (not criminal prosecution). I predict that, though the bill just passed was the best before us, the abuses, excesses and dangers of organized labor's power will not be curbed until and unless labor organizations are placed under antitrust law. Only then will union members, the consumer, and management-labor relations be really protected. Because I believe this, I predict that the national labor leaders will never rest until I am removed from office, no matter how greatly my bill would benefit union members. As always, it is up to the people. The victory of the labor bill resulted from aroused public opinion communicated to Congressmen.

[1] Senator MCCLELLAN's endorsement of the substitute bill.

Kindness to a Stricken Family

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 23, 1959

Mr. BUDGE. Mr. Speaker, recently a news story, originating in Idaho Falls, Idaho, told the tragic tale of a stricken family. The following editorial from the Deseret News—Salt Lake Telegram, published at Salt Lake City, Utah, on August 7, 1959, discloses a previously unpublished chapter of that story. It teaches a fine Christian lesson, for which all of us are indebted to the organizations, business firms, and individuals who participated:

KINDNESS TO A STRICKEN FAMILY

The brutality of two world wars and the coarsening effect of the aftermath have taken their toll of the gentler virtues. So have the new oppressions and tyrannies of our day. Even in our country which has suffered comparatively little from the direct effects of war and has never been trampled under the heel of tyrants, there are tensions and stridencies which tend to make people less likely to be kind than harsh.

"So shines a good deed in a naughty world," wrote the "bard of Avon" centuries ago and his sage observation might well apply to our time and our people.

It might well apply to the Idaho Falls Junior Chamber of Commerce, the radio and television station of that fine community, Kansas City, Mo., civic clubs, the Lederle Laboratories of New York City and all others who are helping the Kenneth Nelson family, of Kansas City, stricken with botulism (food poisoning) while visiting with Mrs. Nelson's parents on a farm near Idaho Falls.

"Service to humanity is the best work in life and is a part of the junior chamber of commerce creed," said Laddy Dale, head of the "Nelson family survival fund." Because "service to others is the best work of life," the campaign is catching on in numerous western communities and may even become nationwide.

With Mrs. Nelson in an iron lung, Mr. Nelson, their daughter Wanda, 15, and Mrs. Nelson's father, Aaron Cruwell, 74, all dead, and Mrs. Cruwell and three Nelson children recovering or under observation, the sympathy of many persons and communities has been aroused. It is magnificent to see how this sympathy is being transformed into action in behalf of this stricken family.

Lederle Laboratories did a most generous and kindly deed when it canceled out a $7,825 bill for the antitoxin and also paid the air freight costs as the drug was flown in from various parts of the country. The Idaho Falls JC's, the Kansas City civic clubs and others are gathering funds since the cost of treatment for botulism is very great.

There is an old proverb which says, "Kindness is a language the deaf can hear and the dumb can understand." Certainly, everybody understands when trouble hits our friends and neighbors. It is then that we see and understand how our lives flow into the lives of others, especially those who are struck by tragedy.

Dangers Involved in the Use of Coal Tar Colors

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 17, 1959

Mr. WOLF. Mr. Speaker, I am bringing to the attention of the Congress a letter which I have just received, similar to others which have come to me, one of which I placed in the CONGRESSIONAL RECORD on July 27, page A6478, discuss-

ing the dangers involved in the use of coal-tar colors, food, drug, and cosmetic yellow Nos. 3 and 4, as coloring agents for butter, cheese, and oleo. I think that from a health standpoint this proposal should receive the most thorough consideration.

It is significant, Mr. Speaker, that most of the civilized countries have outlawed the use of these coloring agents in food products. If we continue to use these agents in our foods we obviously stand to lose our overseas markets. For example, Canada has just announced that it will not buy any more butter which has been colored with food, drug, and cosmetic yellow Nos. 3 and 4.

The letter follows:

IOWA CREAMERIES ASSOCIATION,
Ames, Iowa, August 15, 1959.

Hon. LEONARD G. WOLF,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN WOLF: We understand there is a bill before Congress, H.R. 6852, which calls for extending the time for certification of food, drug, and cosmetic regulations on the use of Nos. 3 and 4 colors in butter.

If the Federal Food and Drug question the use of yellow Nos. 3 and 4 colors, it is our opinion that there should be no extension for the use of these colors in butter.

Very truly yours,
IOWA CREAMERIES ASSOCIATION,
J. S. QUIST, *Executive Secretary.*

Fishing Under Cover

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, August 17, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the RECORD an article appearing in the Washington Post and Times Herald of August 14, 1959, entitled "Fishing Under Cover":

FISHING UNDER COVER

Sometimes a congressional committee can justify a closed hearing for the protection of a witness who may be asked embarrassing questions about activities that have not yet been fully examined. In these cases the closed hearing is really a part of the information gathering process preliminary to a full-scale public investigation. But where can any excuse be found for closed hearings to protect the committee members who are doing the questioning? That appears to be the only excuse for the McClellan committee's strange star-chamber probe into the affairs of the United Auto Workers Union.

Senator MCCLELLAN tried to explain the committee's unusual procedure by saying that it was having a preliminary look at evidence which its Republican members wished to present in order to determine whether a full-scale inquiry would be advisable. But this supposed deference to witnesses called in a fishing expedition soon evaporated when it appeared that the chief witness, Richard Gosser, preferred to testify in open session, and Walter Reuther, UAW president, protested vigorously against the closed-door technique. In these circumstances it seems impossible to avoid the conclusion that the secrecy was ordered solely for the benefit of the Republican members who were pressing the charges, and that is a wholly unwarranted excuse for withholding from the public and the press what is indubitably the public business.

Robert C. Hill, Ambassador Extraordinary and Plenipotentiary

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 13, 1959

Mr. TEAGUE of Texas. Mr. Speaker, the August 9 issue of the Dallas Morning News carried an article on our mutual friend Robert C. Hill, U.S. Ambassador to Mexico.

That portion of his official title "extraordinary" is certainly befitting Mr. Hill, as the following article will testify:

AMBASSADOR POINTS UP MEXICO'S TOUR LURES

(By Joe Goulden)

Robert C. Hill, the U.S. No. 1 "tourist" in Mexico wishes his fellow countrymen would give him some help.

Since being appointed Ambassador in 1957, Hill has spent just about as much time meeting Mexico in person in farflung villages as he has in the more formal Embassy in Mexico City.

He has visited most of Mexico's 31 states and territories. He has met the sidewalk hucksters in Tijuana; he has visited the tiny Isla de Mujeres off the coast of Yucatan.

And the big surprise, in Hill's estimation, is that more Americans haven't done the same.

In Dallas recently with the blue-ribbon group of Mexican businessmen, Hill summed up his reasons in an interview.

"Look at it this way," he said. "Why spend thousands of dollars going to Europe when such a beautiful nation is right in our own backyard?

"The scenery is just as beautiful. The cultures are just as old. The history is close to that of Texas and the Southwest.

"And most of all, the Mexican people want a chance to be friends with and know more about the United States."

A second (and more serious) reason: "Right now the United States is literally fighting a cold war with Communists in some Latin American countries.

"But the more Latin Americans get to know Americans, the less chance the Reds will have. So you might say that tourism is another road to survival."

Ambassador Hill, a hulking man who used to play football at Dartmouth, isn't the type of tourist who wanders gawkeyed with guidebook in one hand and camera in the other.

In fact, judging from descriptions given by aids, at times he must approach being a tourist attraction himself.

His guiding philosophy while making trips is that meeting people and making friends are two different things. Hill would rather make friends.

At a fiesta (he's been to dozens) Hill will don a serape and hat, pick up a guitar, and lustily sing "Cielito Lindo," his favorite Mexican song.

University of Mexico City students had him as a guest at a football game once. Someone asked how Americans kicked footballs.

Hill sent several 50-yard spirals down the field while the crowd stood and cheered.

Nor is Hill a striped-pants diplomat. He believes in finding out things first hand, doesn't balk at getting his feet wet if necessary.

While ambassador to El Salvador back in 1954, Hill, his wife and two children drove the family car over the Pan-American Highway from San Salvador to Washington, D.C.

"I wanted to find out more about the highway, which I consider one of the most important cooperative effects in this hemisphere," he said.

Freedom of the Press

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 10, 1959

Mr. GEORGE P. MILLER. Mr. Speaker, Hugh Gallagher, of San Francisco, is known in maritime circles throughout the world for his interest in that segment of the economy. He serves as a special representative to the president of the Matson Navigation Co., and is chairman of the mayor's committee for shipping, shipbuilding, and ship repair.

Hugh looks the part of the stern, business executive but hidden behind this protective shield is the heart of an Irish poet. He is the poet laureate of Pacific coast shipping and here, reproduced from the San Francisco Chronicle, is one of his poems entitled "Freedom of the Press":

FREEDOM OF THE PRESS

(By Hugh Gallagher)

'Twas my custom to drop in to Eddie's place,
in those days when the Nation was dry,
As Eddie had news of the waterfront and
Eddie had mighty good rye.
Many's the story, and sometimes a scoop,
came from that famous place
Of ships and people and goings on—and
that man's unforgettable face.
It had the look of a beaten man with nothing ahead but hope,
But not the scum of the waterfront or the
leavings of drink or dope.
He generally sat where he could look on a
beautifully modeled ship—
I'd covered her comings and watched her
sail on many a busy trip.
From time to time he'd come and go—
quiet—and so alone
Like one without "the tie that binds," or
friends to call his own.
Cold and drenched by a storm one night, he
came through an alley door.
My memory stirred—the modeled ship—these
two—somewhere before.
I motioned to Eddie to pour some drinks
and moved a chair to his side
Mumbling some words about the storm—not
wishing to hurt his pride.
He didn't look up nor did he speak as his
glass was filled with rye,
Then he raised it up to the modeled ship
and looked me straight in the eye.
It wasn't a weakling's face I saw, but a
man's—once strong and fine,
With a thousand years of pain and hurt
etched into every line.
His eyes met mine with a steady look, without shame or fear or doubt,
And I knew the sweep of the seven seas, as
my brain reeled round-about.

He nodded his head toward the modeled
ship—then spoke in a tired voice.
"A storm was the end of the world for me—
but a man must take his choice.
Remember the case of the *Rio Del Mar* and
the night she ran aground,
And the hero master who gave his life—
whose body was never found?
I was the chief mate on watch that night and
I got the brunt of the blame,
The world collapsed around my being and
headlines ruined my name.
Maybe I should have told the truth and taken
my chance with the law,
But who would believe what happened that
night, or the things no others saw.
I've had my share of storms at sea—but I
never knew such a night.
I tried to see through the blinding snow but
couldn't make out the light.
The order logged was to call the Master when
Point Arno was abeam,
So I stowed the engines and asked the chief
to keep a good head of steam.
I knocked on his door, then opened it wide,
and there he lay on his bunk,
A stink you could cut—a drooling mouth—
filthy and rotten drunk.
I shook, I cuffed him and twisted his ear—
and tumbled him out on the floor,
Then bodily carried him stumbling, in
through the wheelhouse door.
I tried to get through his sodden brain that
we hadn't made out the light.
But he stood there mumbling stupidly, like
a man half crazed with fright.
Above the noise of the storm outside I could
hear the breakers roar,
And a sailor's instinct seemed to warn we
were much too close to shore.
Then he did a thing no man would do, lest
reason within had fled—
He seized the engineroom telegraph, and
rang full speed ahead.
My heart most stopped at what he'd done,
then gripped with rage and fear,
I grabbed the fool at the telegraph and tried
to pull him clear.
But he was a powerful well-built man and he
wrestled me to the deck
And I felt his angry fingers feel for a hold
about my neck.
We fought like two wild animals all over the
wheel house floor,
'Til the rolling ship took a heave to port, and
tumbled us through the door.
Cursing and clawing like maniacs—drenched
by the heavy seas,
He gripped my throat with his heavy hands
and forced me to my knees.
A cresting wave came over the rail, and I
pried his big hands free.
Then she rolled to port, and with all my
strength, I flung him into the sea.
I crawled half choked to the telegraph and
rang full speed astern.
Calling down in the speaking tube for every
last blooming turn.
For minutes the vessel quivered and shook, as
she fought to come to a stop,
And I clung to the telegraph fighting for
breath, sick and ready to drop.
She seemed to check, then she lifted up, then
down with a grinding shock,
But the engines backed and she freed her-
self from a shelving point of rock.
I kept her turning full speed astern until
sure we were in the clear.
Then—a moment of horror at what I'd done—
I shook with a chilling fear.
A moist moon broke through the tumbling
clouds and I made out a light from
afar.
I knew where we were so I set a course for my
precious *Rio Del Mar*.
She was down by the head and filling fast,
but the bulkheads held real tight,
So we eased her along, and she made her
way, steering as best she might.
We came into port with all hands safe—the
ship and the cargo intact.
Then I was alone with a secret dread, and
the ghost of my guilty act.
The headlines screamed of a captain brave,
who perished to save his ship,
And a careless mate who was all at fault was
damned by a flippant quip.
'Asleep on watch,' I recall it well, it seared
and it cut till it bled,
My years at sea were at an end—all hope
within was dead.
I was in charge of the watch, they held—
I was the man to blame.
No one could help, and the grisly truth
wouldn't serve to clear my name.
Friends passed my by—no more to sea—
my wakeful nights were hell
And dreary days when I faced the world,
with that secret I dare not tell.
So now I drift from job to job, doomed with
the living damned,
The careless mate—asleep on watch—the
ship he dreamed to command.
So thanks, my friend, for this welcome talk
and the warming glass of rye.
Somehow I'll feel that I have one friend,
when others pass me by."
Then he touched my hand as he turned to
go out in the storm and the cold,
My insides gripped and I felt all sick—sud-
denly tired and old.
I looked away for I wouldn't dare to let his
eyes meet mine.
I hadn't the guts to let him know—that I had
written that line.

Representative Oren Harris

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 13, 1959

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD I wish to include a recent editorial from the Washington Evening Star concerning the recent amendment to the stadium law for the District of Columbia.

The editorial commends our colleague and my good friend, OREN HARRIS, for his work on this measure. Having been formerly associated with Mr. HARRIS on the District of Columbia Committee, I can testify to the great effort and amount of work exerted by Mr. HARRIS in this regard. We here in the Congress as well as the people of the District of Columbia owe him a debt of gratitude for his untiring efforts and deep interest in District affairs.

The editorial is as follows:

STADIUM AMENDMENT

Thanks largely to the earnest and intelligent efforts of Representative HARRIS, of Arkansas, the House has passed an amendment to the stadium law which deserves quick passage, also, by the Senate. The amendment, by specifying the amount which may be spent for such collateral projects as parking, access, and other important stadium facilities, sets at rest reports that too much money would be allocated to such accessories.

Earlier, Interior Department officials indicated the facilities might cost as much as $5.6 million, an estimate which rightfuly brought charges that the designs were "grandiose" and "utopian." Actually, it turned out that the work involved a number of improvements in nearby federally owned areas which were not directly related to the stadium. In order to rule out any such inclusions, Mr. HARRIS' amendment limited expenditures for parking lots, approach roads, and utility facilities to $2.6 million—a realistic figure arrived at recently in conferences between Interior, congressional, and civic participants in the project.

The bill also clears up any further question about the legislative authority of Interior to construct the facilities—a matter which had been queried by the Genreal Accounting Office. It is imperative that this new legislation be approved this year so that the design and financing of the 50,000-steat stadium can proceed. We hope the Senate District committee sends it to the Senate floor promptly and that swift approval follows.

Poison in Your Water—No. 155

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, August 17, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the RECORD an article appearing in the Portland (Oreg.) Journal of May 24, 1959, entitled "Dirty River: Big Swallow Dangerous":

DIRTY RIVER: BIG SWALLOW DANGEROUS
(By Watford Reed)

Pollution is turning Portland Harbor and the lower Columbia River into something approaching an open sewer.

A big swallow of water from Portland Harbor or the Columbia downstream from Hayden Island contains enough germs to make a person deathly sick. If enough persons should drink it, an epidemic could be started overnight. So far, luck has prevented conditions from being ripe for that, but luck may run out.

The U.S. Public Health Service has found that one big swallow of water from the Columbia at the lower end of Hayden Island in late summer contains 23,300 coliform bacteria—the type that live in the intestines of humans and warm-blooded animals.

In Portland Harbor, the germ count in the summer ranges from very low in some places to 70,000 in others, with an average as high as 24,000.

So polluted is the Columbia at one point—near the lower end of Hayden Island—that the Public Health Service is concerned about repeated exposure of spray to motorboat occupants and water skiers. It could reach a point where it would be dangerous.

The Columbia and Portland Harbor are 97 times as polluted as accepted standards for swimming. Those standards call for an average of fewer than 240 coliform bacteria per 100 milliliters—the equivalent of a big swallow—in water used for swimming, 1,000 for boating and fishing, and 200 in water for domestic use after conventional treatment.

The U.S. Public Health Service declares flatly:

"The bacterial contamination of the lower Columbia River constitutes a health hazard to those who use the water for domestic water supply, for swimming and water skiing, and for activities that involve boating, such as pleasure boating, fishing, hunting, trapping, navigation, and log transportation."

The Service has found that even in months of high water on the Columbia, bacterial pollution is twice as great as standards for boating and fishing.

And 89 percent of the bacterial pollution in the lower Columbia comes from Portland.

In Portland itself, 80 outfalls still pour untreated sewage into the Willamette.

This is true in spite of a $19 million sewage-disposal project which put 90 percent of Portland sewage through a treatment plant.

Columbia water is almost completely pure before it reaches heavily populated areas. The Public Health Service reports only 51 coliform organisms per 100 milliliters downstream from Bonneville Dam.

No other big city in the United States has such a tremendous river of almost pure water only 40 miles away. But sewage discharges upstream from the Portland-Vancover area raise the coliform count to 1,200, too much for swimming, boating or fishing, by the time the water reaches the metropolitan area.

Besides menacing health, pollution has threatened to wipe out one phase of the Northwest's rich fishery which yielded commercial fishermen in Oregon alone more than $30 million a year for 1948 through 1953. The river also contributes heavily to the State's $150 million a year tourist industry.

Sewage and industrial pollution have combined to threaten the fall run of salmon in the Willamette with extinction. In 1954, only 370 fall chinooks were counted over Willamette Falls at Oregon City. In 1955 there were 75 and in 1956 only 21. In 1957, the pathetic number increased to 53. Figures are not available for 1958.

The fish commission believes that sport fishing is only a tiny factor in the destruction of fall chinooks.

Pollution makes Portland Harbor a virtual death chamber for migrating fish in low water periods.

Twice in 1957, dissolved oxygen in the Willamette River neared the vanishing point, and that summer salmon fingerlings died as far upstream as a moorage near the Sellwood Bridge.

Last year oxygen content of the Willamette was reported higher because industry—mainly paper mills—had begun abating pollution.

But the bed of the Willamette below Oregon City must be the equivalent of a desert for fish seeking food. Sewage and paper mill wastes have wiped out most underwater plant life of the kind that feeds fish. And the water is so dirty that little light could reach vegetation to keep life processes going.

Portland is not alone in its despoliation of the once beautiful Willamette. Salem, Eugene, Oswego, Newberg, and other cities pour inadequately treated sewage into the river. The Oregon Sanitary Authority has ordered them, like Portland, to abate the nuisance, and Oswego has a project under way.

A Rose by Any Other Name

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, August 14, 1959

Mr. PORTER. Mr. Speaker, I see by the August 4, 1959, issue of Aviation Daily that "members of the Association of Local Transport Airlines have adopted a resolution to refer henceforth to subsidy payments as public service revenues. It is reported that the idea was first set forth by Allegheny Airlines which used the expression in its latest annual report. Reasoning is that subsidy is actually the cost of providing a public service."

A subsidy is a subsidy no matter what you call it. The only justification for any subsidy is that a public purpose is served. Sometimes the public service aspect of the public service is rather direct and sometimes it is rather indirect. Sometimes it is nonexistent.

Subsidy payments may or may not be public service revenues. This is something that should be examined carefully and constantly in the interests of the taxpayer and the welfare of our country. I do not approve this attempt to obscure plain language by Madison Avenue sugar coating.

Cut Out the Expensive Pamphlets

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 11, 1959

Mr. BOW. Mr. Speaker, under leave to extend my remarks, I include an editorial suggestion from the Massillon, Ohio, Evening Independent, to the Department of the Army. All Government agencies will do well to take this advice to heart:

CUT OUT THE EXPENSIVE PAMPHLETS

The mailman left quite a package on our desk the other day.

It must have weighed all of a pound or more and it was carried from Washington to this city without the payment of postage—official Government business, you know.

Inside the package were six pamphlets, all of slick surfaced paper—the expensive kind—and with the covers beautifully decked out in two- and three-color designs.

All had to do with the activities of the U.S. Army.

Two carried the title of "Official Army Information Digest, U.S. Army Magazine." One was issued in April, of this year and referred the reader, if there would be one, to the Army budget. The other, issued early this month, carried this notation: "The Chief of Staff Reports."

Another bore this imposing title: "The Professional Army Missile Expert—A Soldier First." Titles on the other three were: "Army Missiles Rockets, Department of the Army Pamphlet No. 355-13, May 1959"; "This Is the Army 59; America's Most Versatile Fighting Force," and "Progress 58, U.S. Army Reports."

Now these six pamphlets probably were distributed to many publications and other news media and perhaps to other organizations and individuals throughout the United States.

It required the work of a lot of people to compile and lay out these various pamphlets. The printing and art work is of the best. It also must have cost a heap of money to have them printed and Uncle Sam's postal service derived not a penny though being assigned the chore of delivering them to their destinations.

And, of course, the taxpayers of the country, as usual, footed the bill.

Now we do not want to leave the impression that we are taking a stand against the development and training of an adequate military force to defend this country if the need ever arises. We would be the last to argue against such a thing, what with the cold war still a matter of grave concern and Russia becoming more belligerent by the day.

But in these days of $40 billion defense budgets, which are taxing the American people's ability to pay, we wonder if some of the activities of the Armed Forces, such as flooding the mails with a lot of pamphlets very few people will read, could not be dispensed with in the interest of greater economy in defense spending and greater efficiency in our military preparations.

With newspapers, magazines, television, and radio ready to give the fullest coverage, as they always have been, to all activities of our Armed Forces, which have not been labeled as "top secret" so Russian spies can steal them, we believe our Federal Defense Department could save millions of dollars by eliminating some of its nonessential spending, such as the pamphlets we are writing about.

We believe any vital information about our Defense Department and the progress it is making in shaping a strong defense for this Nation can be adequately relayed to the American public through this country's newspapers and other news media.

And this not only applies to the Defense Department. All other departments in our Federal Government, now swarming with bureaucrats eager to spend every dollar they can squeeze out of the taxpayer, also could save millions by eliminating a lot of their nonessential activities, such as flooding the country with pamphlets no one takes the time to read.

Yes, the American taxpayer could be saved a lot of money and all branches of our Federal Government strengthened if more attention was paid to the things that are essential and eliminate the many that are nonessential.

And by the way, anyone interested in reading the Army's pamphlets can have them by calling at this office in the next few days before we consign them to the round file.

Mr. K

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Monday, August 17, 1959

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therein an editorial written by Mr. Parker M. Merrow, publisher and editor of the Carroll County Independent, Center Ossipee, N.H., on Friday, August 14, 1959, entitled "Mr. K."

This is a most interesting and able statement on the coming visit of Premier Khrushchev to the United States:

MR. K

With all the fanfare in the press about the impending visit of Mr. Ksrushchev, we feel that one point has been badly missed, namely, that the visit will give ample opportunity to show the gentleman just what is the United States.

There is good reason for certain segments of our population to hate him bitterly and there is no reason why any of our people should feel it necessary to roll out the red carpet or hit the fatted calf between the eyes with a small sledge hammer.

But it has been repeatedly reported that Mr. Khrushchev has no real concept of the

strength of the United States. Comment has been made that he does not realize either the actual or the potential strength of our Nation. It is felt that if he knew the truth, he would not be rattling the saber of threatening to release forces which could wipe out civilization.

Obviously he has read all manner of reports on the United States. But reading a dry report and seeing for one's self, right on the spot, in person, are two different things entirely.

That is why our great corporations, our military and our governmental agencies, are continually sending their people out, to all parts of the world, to see things as they actually are.

You can read all the statistics you want to about the great New Jersey Turnpike, but you will never know the vital flow of people and good till you stand beside that road on a warm spring morning and hear the almost never ending hum and rumble that is the Jersey Pike, and watch the strings of vehicles, carrying everything from Florida bound vactionists to lumber for New York, roll in endless lines.

You can read all you wish to about the vitality of Chicago, but until you have ridden in 5 o'clock traffic on Lake Shore Drive, you cannot appreciate what that city is.

You can read about Pittsburg, but until you have driven through Pittsburg and then the coal towns of Pennsylvania, you just do not have the concept of that great area.

Until you have flown on a clear night over the Washington-Baltimore, Wilmington, Philadelphia, Newark, New York complex you simply cannot visualize the greatness of the area.

You can read and look at pictures for 8 hours, all about our auto industry, but until you have driven through Detroit, you just cannot understand.

All too many of us have our concepts of nations and of national character from old school geographies, stylized funny books and hackneyed movies and TV shows.

From the books of our childhood, we still visualize Russia as a land of great snow-covered plains where horses at a dead run pull sleighs filled with frightened people and a pack of wolves is just three jumps behind.

Of course we have all seen many photos and news reels since those early days, and know far better, but still lingering in the back corner of our mind, is that childish concept of Russia.

W would bet a really good hat that in the back of his mind, Mr. Khrushchev still thinks of the United States as a country where cowboys still chase Indians, where Negroes named Uncle Tom are beaten by cruel masters and where gangsters in snap brim hats, chewing cigars and wearing form fitting Chesterfield coats, step into saloons and cut down the patrons with tommyguns.

There is nothing like a dose of reality, of getting one's feet right on the ground, to know and understand a problem. That is the beginning of wisdom.

We cannot lose anything by wheeling Mr. K. around for a few days. And quite possibly the eyes of the gentleman might be opened.

The Roadbuilding Tax

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 17, 1959

Mr. LINDSAY. Mr. Speaker, an editorial that appeared in this morning's New York Times on the question of the roadbuilding tax merits the attention of my colleagues, and I therefore take the liberty of inserting it in the RECORD:

THE ROADBUILDING TAX

The House Ways and Means Committee did not find it easy to take the responsible way of financing the interstate highway building program, but it finally came around. Three days after it had voted 15 to 8 against a temporary increase of 1 cent a gallon in the gasoline tax it reversed itself and voted 16 to 9 to accept a compromise formula that includes the tax rise. So fiscal soundness wins a victory, as does President Eisenhower.

The solution chosen involves imposition of the tax increase from September 1 to June 30, 1961, when the Federal tax on gasoline would return to 3 cents a gallon. On that expiration date the highway trust fund would begin to receive the benefit of a diversion of $2,500 million (over a 3-year period) in taxes on automobiles, parts, and accessories which now go into the Treasury's general fund. Allocations to States for highway construction would be somewhat cut back in the next 2 years, a disappointment, but one that apparently must be weathered.

So the principle applied to this program from the start, that it would be kept on a pay-as-we-build basis, is maintained. The departure from principle suggested July 29 by the committee, involving a billion-dollar bond issue, and accompanied by diversion of excise taxes needed for Federal budget balancing and drastic reduction of aid allocations for roads, has been repudiated.

The Government would have been better off, and the highway-building program would have been better served, if Congress had approved several months ago immediate imposition of the 1½-cent gasoline tax rise long ago advised by the President. But if it accepts this committee compromise it will have repaired most of the damage. The situation can be reviewed in early 1961 to see whether the Federal budget's condition warrants diversion of automobile excise taxes to the roadbuilding program. If not, the gasoline tax should be raised again.

A Major Event in International Scientific History

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 17, 1959

Mr. COHELAN. Mr. Speaker, I have received a letter from Chancellor Glenn T. Seaborg, of the University of California at Berkeley, with reference to the Century 21 Exposition, a scientific and cultural exposition to be held in Seattle, Wash., from May 1961 to October 1962. We will soon consider H.R. 8374 by the gentleman from Louisiana [Mr. OVERTON BROOKS], which would appropriate $12,500,000 for construction of a hall of science at the Century 21 Exposition, for various exhibits and for other allied costs.

Chancellor Seaborg is the Nobel prize-winning professor of chemistry and associate director of the radiation laboratory at the University of California. Under permission to extend remarks, I include his letter in which he gives his full endorsement to the Century 21 Exposition:

Congressman JEFFERY COHELAN,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN COHELAN: I have learned that legislation concerning the Century 21 Exposition may be considered in the House of Representatives next week. As a scientist and as a member of the National Science Planning Board of Century 21 Exposition, I feel certain that this exposition will be a major event in international scientific history. The quality of the exhibits and the international participation in their planning and display will certainly justify, in my opinion, every effort made to provide support for the exposition.

Sincerely yours,

GLENN T. SEABORG.

Ukranian Congress Committee of America Appeals to American Conscience Against Visit of "Hangman of Ukraine"

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 17, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting news release issued by Dr. Lev E. Dobriansky, chairman of the Ukrainian Congress Committee of America, in opposition to Khrushchev's visit to the United States:

NATIONAL GROUP WILL DEMONSTRATE PEACEFULLY—APPEALS TO AMERICAN CONSCIENCE AGAINST VISIT OF "HANGMAN OF UKRAINE"

In a statement sent to President Eisenhower on the visit of Nikita Khrushchev to this country, Dr. Lev E. Dobriansky, chairman of the Ukrainian Congress Committee, and also a member of the Republican Committee on Program and Progress, deplored the invitation as "another Russian cold war victory which Moscow is already celebrating as Khrushchev's triumph." He also declared, "This planned action appears now as a cynical sequel to our first observance of Captive Nations Week." A professor in Soviet economics at Georgetown University, Dr. Dobriansky originated the Cative Nations Week resolution which precipitated Khrushchev's outbursts during the Vice President's visit in the Soviet Union. On the real effectiveness of the Captive Nations Week resolution, he pointed out that Khrushchev had to hurry down to Ukraine, while NIXON was in Russia proper, to give a self-reassuring speech.

ANOTHER COLD WAR DEFEAT FOR UNITED STATES

The statement stressed that the invitation constitutes "another cold war defeat for the United States by placing the cloak of respectability and legitimacy on a political criminal, no matter how he is painted. Moreover, Mr. President, it so obviously contradicts your own test, put so often before our people, that you would not meet with Khrushchev unless there were some encouraging progress at Geneva. There was none. What this and a forthcoming summit meeting amount to are a dangerous retreat from the policy you so admirably upheld against all short-sighted pressures when Secretary Dulles was alive."

"This step really ushers in a new phase in our foreign policy," the professor said. "We now seem to be reducing our last and most

potent weapon of clear-cut superiority, our discriminating moral world leadership. Secretary Dulles must have rolled in his grave when this invitation was announced."

TAKE A LEAF FROM THE SCANDINAVIANS

In issuing the statement, Dr. Dobriansky said that "knowing the facts about Khrushchev's crimes, every God-revering American should from here on strongly protest the visit of the Hangman of Ukraine. We Americans can still take a leaf from the Scandinavian peoples and with an equally strong moral conscience disapprove the propaganda and cold war visit of the Hangman."

Appealing to the moral conscience of America, the Ukrainian Congress Committee, with headquarters in New York, is committing its resources to bring these ghastly facts to the American people in order to permit their consciences to decide on how to receive the Hangman. The committee speaks for about 2½ million Americans of Ukrainian ancestry and has branches in New York, Boston, Pittsburgh, Newark, Philadelphia, Buffalo, Cleveland, Detroit, Chicago, Los Angeles, San Francisco, Minneapolis, and other major cities.

"Along with other Americans," the professor said, in issuing the statement, "we'll put these questions to the conscience-aroused minds of our fellow citizens:

(1) Would you invite a criminal to your home? Then why Khrushchev to our national home?

(2) Would you have favored Hitler here 20 years ago? Then why the Hangman of Ukraine whose career is based on the genocide of millions of various national patriots, Christians, Jews, and Moslems?

(4) Does a God-dedicated people pay respects to a professional atheist who denies God as the ultimate source of human and national freedom?

SOME CRIMES OF THE HANGMAN OF UKRAINE

The professor's statement to the President emphasized that "it is incredible that a genocidist and political criminal should be extended the official hospitality of this home of the free." It explained why Khrushchev is widely known in Eastern Europe as the Hangman of Ukraine by citing some of his crime:

(1) As a party functionary in the early thirties, he played a brilliant role in the Moscow manmade famine in Ukraine that resulted in the annihilation of some 5 million lives;

(2) For his excellent performances, he was elevated to high party posts in Ukraine and had a hand in the genocide of some 11,000 lives in Vinnitsa, Ukraine, before the war;

(3) Although a Russian, he paved the way to leadership in the party in Ukraine by conducting many purges;

(4) Following World War II, he was specially dispatched by Stalin to quell the patriotic resistance in Ukraine.

"Terrorism comes easy with the Hangman of Ukraine," said Dr. Dobriansky. "He showed it also in Georgia, Poland, and Hungary in 1956. Through his puppets, he showed it in Tibet. Only last month it was against the Ukrainian underground in the Carpathian mountains. Fooling many of our Americans today as Stalin did before fully entrenching himself over 30 years ago, the Hangman continues this terrorism by less conspicuous but more effective methods in the Soviet Union."

ARGUMENTS FOR VISIT INSULTING TO AMERICAN INTELLIGENCE

The Dobriansky statement also rejects the arguments given for Khrushchev's visit here. It states: "It is almost insulting to the intelligence of the American people that we are deemed by some as being naive enough to believe that Khrushchev does not already understand what the United States represents and possesses. Clearly, it didn't take the Russians long to understand where our atomic and missile secret were. Khrushchev understands our country far more than many of us understand his empire in the Soviet Union itself and his centuries-fashioned methods and techniques. Those, like our visiting Governors to the U.S.S.R., who speak in mythical concepts of the Soviet people and the Soviet nation, and with callous disregard of the Lithuanian, Latvian, Ukrainian, and other captive non-Russian nations in the U.S.S.R., may well learn from the late Secretary of State Dulles. 'The Soviet bloc,' he said on October 10, 1955, 'represents an amalgamation of about 900 million people, normally constituting more than 20 distinct national groups.'"

The statement also points out, "It is an illusion to think that this visit and the later calculated summit meeting will relieve pressures on Berlin, the Middle East, Laos, free Korean, free China and, indeed, upon our United States. This action shows how woefully unprepared we are to cope with Moscow's cold war challenge. More than anything else that Khrushchev now wants its respectability and legitimacy to consolidate his empire. He is behaving in a tradition developed long before the Russian Revolution, and we have not even begun to learn the lessons of Russian empire building. Some of us may just as well pay tribute to Ivan the Terrible who was the first to use the friendship and peace tool in his cold war conquest of the Khanate of Kazan in the 16th century."

COMMITTEE'S GROUPS TO DEMONSTRATE PEACEFULLY

"Upon the arrival of the Hangman of Ukraine to this country," said Dr. Dobriansky, upon issuing the statement, "our groups will join with other Americans, churches, veterans in peaceful demonstration of protest and righteous condemnation against the hangman. The tolling of church bells, and wearing of black bands in mourning of the millions the hangman sent to their graves will be urged. In his historic proclamation of Captive Nations Week, the President urged all Americans to study the plight of the captive nations. There is no better occasion for this than now. We call upon all to pass the word. No violence but no approval. Our motto is D.D. with B.B.—dignified disapproval with black bands."

THE STATEMENT TO THE PRESIDENT

AUGUST 7, 1959.

DEAR MR. PRESIDENT: The Ukrainian Congress Committee of America again cannot thank you enough for your historic proclamation of Captive Nations Week. By act of Congress and your splendid proclamation, the United States has officially recognized for the first time the existence of the many captive non-Russian nations within the empire known as the Soviet Union. This represents a great stride in our real understanding of the prison house of nations parading as the U.S.S.R. It was most significant that while the Vice President was in Russia proper, Khrushchev had to hurry down to Ukraine to give a self-reassuring speech.

We are, however, gravely disturbed by the invitation extended to Mr. Khrushchev to visit this country. In our judgment, this invitation cannot but be deplored as another Russian cold war victory which Moscow is already celebrating as Khrushchev's triumph. To countless Americans, this planned action appears now as a cynical sequel to our first observance of Captive Nations Week.

In the view of this committee, the invitation constitutes another cold war defeat for the United States by placing the cloak of respectability and legitimacy on a political criminal, no matter how he is painted. Moreover, Mr. President, it so obviously contradicts your own test, put so often before our people, that you would not meet with Khrushchev unless there were some encouraging progress at Geneva. There was none. What this and a forthcoming summit meeting amount to are a dangerous retreat from the policy you so admirably upheld against all shortsighted pressures when Secretary Dulles was alive.

This step really ushers in a new phase in our foreign policy. We now seem to be reducing our last and most potent weapon of clear-cut superiority, our discriminating moral world leadership. Secretary Dulles must have rolled in his grave when this invitation was announced. The pressures that sought to oust him over a year ago, have now, but momentarily, won their first round.

To us, who follow closely developments within the multinational Soviet Union, it is incredible that a genocidist and political criminal should be extended the official hospitality of this home of the free. His record in part shows: (1) as a party functionary in the early 30's, he played a brilliant role in the Moscow manmade famine in Ukraine that resulted in the annihilation of some 5 million lives; (2) for his excellent performances, he was elevated to high party posts in Ukraine and had a hand in the genocide of some 11,000 lives in Vinnitsa, Ukraine, before the war; (3) although a Russian, he paved his way to leadership in the party in Ukraine by conducting many purges; (4) following World War II, he was especially dispatched by Stalin to quell the patriotic national resistance in Ukraine. This partial record explains why he is widely regarded in Eastern Europe as "the Hangman of Ukraine."

Terrorism comes easy with the hangman of Ukraine. He showed it also in Georgia, Poland, and Hungary in 1956. Through his puppets, he showed it in Tibet. Only last month it was against the Ukrainian underground in the Carpathian Mountains. Fooling many of our Americans today as Stalin did before fully entrenching himself over 30 years ago, the hangman continues this terrorism by less conspicuous but more effective methods in the Soviet Union. To assert, as some do, that peaceful methods have featured his regime since the 20th party congress belies the facts.

This committee, doubtless in addition to millions of Americans, regards the arguments offered to justify Khrushchev's visit here as spurious. It is almost insulting to the intelligence of the American people that we are deemed by some as being naive enough to believe that Khrushchev does not already understand what the United States represents and possesses. Clearly, it didn't take the Russians long to understand where our atomic and missile secrets were. Khrushchev understands our country far more than many of us understand his empire in the Soviet Union itself and his centuries-fashioned methods and techniques. Those, like our visiting Governors to the U.S.S.R., who speak in mythical concept of the Soviet people and the Soviet nation, and with callous disregard of the Lithuanian, Latvian, Ukrainian and other captive non-Russian nations in the U.S.S.R., may well learn from the late Secretary of State Dulles. "The Soviet bloc," he said on October 10, 1955, "represents an amalgamation of about 900 million people, normally, constituting more than twenty distinct national groups." The untutored harm some of us do to the freedom aspirations of 110 million people making up the captive non-Russian nations in the U.S.S.R. cannot be too strongly emphasized. The blemish this places on our own traditions and the reciprocal harm it incurs for our own security interests need hardly be stressed.

It is an illusion to think that this visit and the later calculated summit meeting will relieve pressures on Berlin, the Middle

East, Laos, Free Korea, Free China and, indeed, upon our United States. This action shows how woefully unprepared we are to cope with Moscow's cold war challenge. More than anything else that Khrushchev now wants is respectability and legitimacy to consolidate his empire. He is behaving in a tradition developed long before the Russian Revolution and we have not even begun to learn the lessons of Russian empire-building. Some of us may just as well pay tribute to Ivan the Terrible who was the first to use the friendship and peace tool in his cold war conquest of the Khanate of Kazan in the 16th century.

In the light of these facts and reasoned judgments, our conscience moves us to join with other Americans in peaceful demonstration of protest and righteous condemnation against the "hangman." The Russians—and, indeed, the Vice President traveled only in the Russian part of U.S.S.R.—had no crimes to denounce. By any stretch of logic, the "hangman" is no parallel case to our Vice President. We, as indeed many other Americans who will in time voice themselves, cannot but share the moved feelings of Richard Cardinal Cushing, Senator STYLES BRIDGES, Congressman WALTER JUDD and many other outstanding leaders in our society.

In full confidence of your understanding and with God's many blessing upon you, I am,

Sincerely yours,

LEV E. DOBRIANSKY,
Chairman, the Ukrainian Congress Committee of America.

If You Believe!

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. BRAY. Mr. Speaker, the following article which appeared in the July-August issue of U.S. Lady, published for circulation among service wives, is an excellent description of the accomplishment of the Capehart housing program, started in 1954:

IF YOU BELIEVE!

(By Bonnie Fein Thompson)

Do you believe in miracles? I was somewhat of a skeptic until the first of July 1958 when we moved baggage, six children, boxer dog and ourselves into four-bedroom completely furnished, single house with the label "Navy Quarters."

The miracle began to materialize in the summer of 1957 at the Point Mugu, Calif., Naval Air Missile Text Senter.

An architect who believed in California living at its fullest took the 122 acres the Navy had allotted for a 360-unit Capehart housing development and designed ranch style, single family dwellings in 17 diversified architectural plans. He also separated the houses, giving each unit a large front and back yard.

The Capehart bill itself allotted enough money per unit to build large family-size homes and not just adequate housing.

Then, best of all, an interior decorator had the foresight to order different styles and colors of furnishings. Thus the completed units resemble their next door neighbors neither inside nor out.

We watched the houses being built from the day the workmen first poured the concrete slabs until they began nailing the roof boards. We suffered with the contractor when the torrential spring rains delayed construction and we felt almost a maternal pride as the ground was raked and grass seed was sown.

How will they assign the houses? When will we be able to move? I wonder which house will be mine? These are some of the monumental questions which faced not only the people who were to occupy the houses but the naval coordinators on a base where there had previously been 16 family quarters.

Finally "the word" was out. "Sunday and Monday the houses will be open for inspection."

My husband was called. He was luckily one of the first 20 enlisted men allowed to choose his quarters.

Yes, all the rumors of modern conveniences and good planning materialized when we opened the front door, tested the chimes and entered our miracle.

Each bathroom (every house has at least two) has glassed-in tub and shower enclosures, walls and floors of ceramic tile, and overhead radiant electric heating elements.

The kitchen, a magazine dream kitchen, glistens with built-in ovens, countertop ranges, double sinks, and easy-to-keep-clean natural birch cabinets.

I had to keep pinching myself to believe that this was Government housing and the rent would be only the forfeiture of our quarters' allowance.

Looking through the empty house our 6-year-old son stopped testing the sliding doors in the closets long enough to chastise his younger brothers and sisters.

"You better keep your dirty hands off-a those walls," he scolded. "This is a nice house."

The date of our actual occupancy was still another month off, but, like a new home-builder, we would pack the family in the station wagon each weekend to investigate how everything was progressing. It certainly was a thrill the time we saw a "Do Not Enter" sign on the front door, peeked through the window and spotted the freshly laid oak block flooring. Then the next weekend we discovered that both the electricity and the hot and cool air systems were already connected.

On July 1, the first set of quarters was occupied. From then on the sight of moving vans and lamps sticking out of car windows became as familiar as the ice cream man, who seemed to have advanced knowledge of a new sales territory.

Civilian movers were authorized under the little known Joint Travel Regulations to transport families' household effects from their civilian homes to the Capehart units. This Department of Defense Bulletin states that when any serviceman moves into Government quarters, he is entitled to have his household goods moved in for him.

What a pleasure it is to have a house with enough storage space. The hall closet is more than 4 feet wide and extends from the ceiling to the floor. I must admit I felt pretty foolish when I inquired of the Navy inspector what the table-level "breadboard" was doing in the linen closet. Still, as I think back, I'd not been in many homes which even had a linen closet, let alone a board to lay the towels and sheets on while placing them on the shelves.

The ceramic-tiled vanity-type lavatory in the family bathroom covers a large storage closet which is perfect for soaps, tissues, and bath towels. The bedroom closets are large enough to both hang clothes and place a large chest of drawers inside. The master bedroom has a double closet. For once my clothes are not squashed between winter greens and summer whites.

In the kitchen every available nook is storage space. This includes a broom closet large enough for the mops, buckets, furniture polishes, ironing board, vacuum cleaner and the broom.

Even the garage is oversized enough so that, with our large station wagon inside, my husband has room for his tool bench and for the storage of our innumerable footlockers, suitcases and the boxes and boxes of things labeled Christmas, Easter baskets, Halloween costumes, and for later reference.

For a while everything was quite hectic. I must have chased the children off the tender new grass every 5 minutes, and I'd peel the potatoes into the trash can before I'd remember that we had a garbage disposal.

Of course 2 days after we moved the twins contracted intestinal flu; I had an accident with the car, putting that out of commission; there were boxes and barrels yet to unpack, and the Navy sent my husband off to sunny Hawaii for 7 days.

This of course is the rule, not the exception.

Conversation over morning coffee in the early weeks of occupancy was filed with talk of drapes, patio furniture, and the excellent reception of the television sets under the master antenna system.

For days I couldn't get over the sensation of indoor-outdoor living. The perpetual spring-summer atmosphere of southern California is especially accented by wall-to-wall, ceiling-to-ceiling windows and sliding glass doors leading to our own private cement patio.

Most of the plans allowed for attached garages but where the garage is a separate building it is bound to the house by a roofed breezeway.

Even more important than the closet space, the built-in kitchens and the pre-softened water, is the fact that for the first time in our 8 years of service living, we finally have privacy.

Every unit sits on approximately a quarter acre and is turned in such a manner that no one actually meets his neighbor when leaving via the back or front door.

Although the lawns were seeded and sprouting, the landscaper watered the growing grass two and three times a day. With twin infants I found it almost impossible to dry diapers in between sprinklings. Then about August 1 the rumor that automatic washers would be installed came true so we "beat the sprinkler man" and put a new electric dryer right beside it.

Installation of modern laundry equipment is simplified because the utility rooms are fitted with both gas and a 220-volt electrical outlet.

The Navy ordered a half million dollars worth of furnishings—enough for 220 of the 360 quarters—almost a year ago, but like many Government contracts it wasn't all in the warehouse when the houses were finally opened.

Many families of all ranks who did not have their own furniture slept with their springs and mattresses on the floor, with no rugs and with clothes still in boxes instead of drawers.

During August and September the furniture started arriving by the freightload and the sight of Navy trucks unloading overstuffed contemporary American furniture in every possible color was a common one. Everything from foam-rubber cushioned sectional couches, walnut bedsteads, maple Mr. and Mrs. dressers and all types of room-size nonskid rugs began to be part of the new homes.

There were 17 furnishing plans to correspond with each individual house plan. Living room, dining room and bedroom furnishings were coordinated according to wood, size of rooms and colors of walls.

A sample master plan of a four-bedroom enlisted man's house reads like this:

Living room: Gray tweed sofa; light olive tweed easy chair; cinnamon tweed high back chair; cinnamon and walnut occasional chair; olive leather brass-studded lamps; two floor, two table; gray tweed rugs throughout house; desk; corner table; end table; coffee table.

Dining room: Walnut table, buffet, arm chair, five straight chairs.

Bedrooms: Two bunk beds, two twin beds, four Mr. and Mrs. dressers, double bed, chest of drawers (wood, light cherry).

Kitchen: Gray chrome dinette set.

Our house is furnished just like this master plan. Only the pictures on the walls, the doilies on the tables and the dishes, the blankets and clothing are ours.

Even the new community is beginning to form. Point Mugu is in the unique position of being located more than 10 miles from the nearest shopping center. It does not yet have any dependents' facilities except a small exchange. For a cut finger or a loaf of bread it is necessary to drive into the Port Hueneme, Calif., C.B.C. base.

Both the Point Mugu Officers' Wives and the Navy Wives Clubs are conducting fundraising activities to start organizing both a teen-age club and a child care nursery. The Boy Scouts are forming troops in all age brackets as are the Girl Scouts, and the C.P.O. Wives are in the process of making up hospitality kits for the use of incoming families.

We've heard rumors of a commissary and out-patient medical care on the base, and we hope this will soon come to pass.

A new house, new furniture, new appliances and gracious living at its fullest. What more could any woman ask for?

On what used to be wasted swampland a beautiful, active, business-like community has developed—a place I am proud my children call home.

U.S. People and Khrushchev

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 17, 1959

Mr. LANE. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting editorial by David Lawrence which appeared in the Washington Star, Washington, D.C., on August 6, 1959:

U.S. PEOPLE AND KHRUSHCHEV: CITIZENS' DISSENT AGAINST VISIT BY DICTATOR HELD CONSTITUTIONAL RIGHT

(By David Lawrence)

Do the people of the United States really want Nikita Khrushchev to visit this country? President Eisenhower assumes that they do. The governments of Sweden and other Scandinavian countries recently issued a similar invitation, but the Soviet Premier, after accepting it, decided not to go there because it was evident the people didn't want him to come.

What happened in Sweden between the time the invitation was extended and the announcement that Khrushchev had given up the idea for the present? A letter from Dr. Bela Fabian, written from Geneva a few days ago, tells the story. He is chairman of the Federation of Hungarian Former Political Prisoners and was in Sweden at the time of the planning for the visit of the Soviet Premier. Dr. Fabian writes:

"Naturally, Major General Zacharov, deputy chief of the Soviet security police, knew that the 'August committees' were preparing mass meetings and demonstrations. In Sweden ten meetings were to be held simultaneously on August 13. The one thing he did not know was whether the Swedish people would demonstrate by ostentatiously staying at home, so that the streets would be empty and there would be no one there except the police, or that there would be enormous crowds who would turn their backs on Khrushchev."

Dr. Fabian writes that the August committees contained a large number of members, among them prominent intellectuals, several Nobel Prize winners, university professors and writers. Many student organizations were represented.

Already there are varying points of view in this country as to what the reaction of the American people will be in the cities to be visited by Khrushchev. Certainly any disorderly demonstrations would only result in worldwide criticism on the theory that the Americans were not as courteous to the Soviet Premier as the people of the Soviet Union have been toward Vice President NIXON. But inside the United States—unlike the situation in the Soviet Union, where everything is controlled by the government—the people have a right under the Constitution to speak. They have a right to picket peacefully, if they like, with placards expressing their ideas.

If the Scandinavian plan were put into effect in the United States by boycotting the parades or by viewing in silence the public events where Khrushchev makes his appearance, an orderly protest could be registered.

There may be some in this country who are willing to "let bygones be bygones," but, among the hundreds of thousands of Americans who came here originally from the lands which now are held captive by the Communist dictatorship, there will be no suppression of emotions. Their point of view toward the Moscow autocracy which has ordered the murder or exile of so many innocent people in the last several years is deeply rooted. They cannot forget.

It is true that, after wars are over, friendly feelings toward former enemies often are developed. But the governments which ruled in Nazi Germany, in militaristic Japan, and Fascist Italy have been removed and free governments established. No such change has occurred in Moscow, where the same kind of regime is in power today as the one that broke the pledges given at Yalta in 1945 and at Geneva in 1955.

"Khrushchev's criminal record exceeds all," wrote Dr. L. E. Dobriansky, professor of economics at Georgetown University, in a letter to President Eisenhower dated July 31. The Georgetown professor was the originator of the resolution adopted by Congress to proclaim Captive Nations Week. Expressing the hope that Khrushchev would not be invited to America, Professor Dobriansky added:

"It is patently naive to believe that a visit by the 'hangman of the Ukraine' would add anything to what he already knows about our country. * * * Moral principle alone should dissuade us from conferring respectability and legitimacy to a dedicated enemy, the attributes he desires in order to extend his empire."

There is talk now of arranging a parade of hearses in each American city where Khrushchev appears. On each hearse would be placarded the statistics of the number of persons murdered or exiled from each of the 14 captive countries in recent years. This is one type of orderly demonstration.

Another which is being suggested is that memorial services be held throughout the Nation to carry out the spirit of the resolution in behalf of the "captive nations" adopted overwhelmingly last month by both Houses of Congress. Nationwide prayers for the liberation of the "captive" peoples, as well as memorial tributes to the many who have been enslaved or killed by the ruthless Communist dictators, would at least let the rest of the world know that, however polite the Government has to be to any visitor, the people here have the right of free speech. They can express their dissent from the position of their Government, which has invited to free America at this crucial time the man who has threatened war unless the Western forces surrender Berlin and who has never withdrawn that threat.

Industry's Stubbing Its Toe on the Hill

EXTENSION OF REMARKS
OF
HON. JOHN E. MOSS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 10, 1959

Mr. MOSS. Mr. Speaker, the following article by Mr. Laurence Laurent, which appeared in the Washington Post and Times Herald issue of August 13, 1959, is one with which I completely agree.

If ever there were a need for the equal right to discuss an important public issue, it was in connection with our very recently passed labor legislation.

It is my judgment that the networks behaved badly and did much to undermine the confidence which I had in their objectivity and their fairness. The article referred to follows:

INDUSTRY'S STUBBING ITS TOE ON THE HILL

(By Laurence Laurent)

The television industry, whose spokesmen are highly effective in congressional hearings, manages to fall on its face when dealing with political realities. This falling has been particularly noticeable this summer, with the TV-radio industry trying to persuade the Congress to change the equal political time regulations.

The industry has a good case. There is general agreement that the Federal Communications Commission goofed when it ruled that equal time applied during political campaigns to newscasts. Industry spokesmen have already persuaded the Senate that it should pass amendments to the Communications Act which execpt newscasts.

But when the same legislation came before the House of Representatives, the industry began taking pratfalls.

Members of the House are much more reluctant than Senators to give the radio-TV operator addition freedom. The Representative runs for reelection every 2 years, and, thus, is constantly concerned about the treatment he gets from news media.

First, there was the incredibly badly managed "Face the Nation" incident with Senator Hubert H. Humphrey, Democrat of Minnesota. His friends announced that he would be a candidate for the Democratic presidential nomination, an announcement that could have been a surprise only at, say, Manus in the Admiralty Islands.

CBS canceled Senator HUMPHREY's appearance, "on the advice of attorneys." The advice—to many Congressmen—was bad. Senator HUMPHREY, technically, is not a candidate and, technically, section 315 does not apply.

This incident has been interpreted by several members of the powerful House Interstate and Foreign Commerce Committee as coercive. They feel that CBS was trying

to force them to amend the equal time law by the threat of a blackout on all candidates.

One Democratic committee member cited last Sunday's two-network performance by Vice President RICHARD NIXON and said: "It may be news to CBS, but everyone else in the country knows that the Vice President hopes to get the Republican presidential nomination in 1960."

He objected to NIXON's network hour, only in the light of the HUMPHREY cancellation.

The current fight over labor reform legislation is causing more bitterness against the networks. First, time was provided for the President to express his views; and this, surely, is beneficial to the public. But when Democrats asked for equal time in the name of the Speaker of the House, the request was denied. Instead, the networks provided forum-programs. This served only to prove what policians have long felt: Some equal time is more equal than other equal time.

For the most adept hairsplitter, section 315 does not apply to political issues, only to candidates. The sad part, however, is that the TV-radio industry missed a splendid opportunity to show the Congress how well it is prepared to meet its responsibilities.

Worst of all, the mistakes are being made during the summer when the airwaves are filled with tedious repeats. It is the perfect time for lively, controversial public affairs programs. It is the time when radio and TV can best afford to be generous.

DAV Services in Nevada

EXTENSION OF REMARKS
OF

HON. WALTER S. BARING

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 17, 1959

Mr. BARING. Mr. Speaker, an exceptional record of vital rehabilitation services freely extended to thousands of Nevada citizens has recently come to my attention. These splendid humanitarian services are not sufficiently appreciated by those who have benefited thereby, directly and indirectly.

Among the several congressionally chartered veteran organizations, which have State departments and local chapters in Nevada, is the Disabled American Veterans. The DAV is the only such organization composed exclusively of those Americans who have been either wounded, gassed, injured, or disabled by reason of active service in the Armed Forces of the United States, or of some country allied with it, during time of war. Formed in 1920, under the leadership of Judge Robert S. Marx, DAV legislative activities have benefited every compensated disabled veteran. Its present national commander is another judge, David B. Williams, of Concord, Mass. Its national adjutant is John E. Feighner, of Cincinnati, Ohio. Its national legislative director is Elmer M. Freudenberger; its national director of claims, Cicero F. Hogan; and its national director of employment relations, John W. Burris—all located at its national service headquarters at 1701 18th Street NW., Washington, D.C.

Inasmuch as less than 10 percent of our country's war veterans are receiving monthly disability compensation payments for service-connected disabilities—some 2 million—the DAV can never aspire to become the largest of the several veteran organizations. Nevertheless, since shortly after its formation in 1920, the DAV national headquarters, located in Cincinnati, Ohio, has maintained the largest staff of any veteran-organization of full-time trained national service officers, 138 of them, who are located in the 63 regional and 3 district offices of the U.S. Veterans' Administration, and in its central office in Washington, D.C. They have ready access to the official claim records of those claimants who have given them their powers of attorney. All of them being war-handicapped veterans themselves, these services officers are sympathetic and alert as to the problems of other less well-informed claimants.

The DAV national service officer in Nevada is Mr. Melvin L. Jacobsen, located at the Veterans' Administration Regional Office, 1000 Locust Street, Reno. The department commander is Mr. Charles F. Hardin, 130 North Virginia Street, Reno, and the Department adjutant is Mr. Charles E. Jackson, 1853 G Street, Sparks, Nev. The DAV VAVS representative is Mr. John Haley.

The Veterans' Administration hospital located in Reno is a 166-bed general medical hospital.

During the last fiscal year, the VA paid out $6,108,000 for its veteran program in Nevada, including disability compensation to its 2,094 service disabled veterans. The amount of $1,848,614. These Federal expenditures in Nevada furnish substantial purchasing power in all communities. Only about 12 percent, 253 are members of the 5 DAV chapters in Nevada.

This 12 percent record is strange, in view of the very outstanding record of personalized service activities and accomplishments of the DAV national service officer in behalf of Nevada veterans and dependents during the last 10 fiscal years, as revealed by the following statistics:

Claimants contacted (estimated)	5,995
Claims folders reviewed	4,996
Appearances before Rating Boards	2,243
Compensation increases obtained	319
Service connections obtained	167
Nonservice pensions	125
Death benefits obtained	18
Total monetary benefits obtained	$178,984.57

These above figures do not include the accomplishments of other national service officers on duty in the Central Office of the Veterans' Administration, handling appeals and reviews, or in its three district offices, handling death and insurance cases. Over the last 10 years, they reported 83,611 claims handled in such district offices, resulting in monetary benefits of $20,850,335.32, and in the central office, they handled 58,282 reviews and appeals, resulting in monetary benefits of $5,337,389.05. Proportionate additional benefits were thereby obtained for Nevada veterans, their dependents and their survivors.

These figures fail properly to paint the picture of the extent and value of the individualized advice, counsel and assistance extended to all of the claimants who have contacted DAV service officers in person, by telephone, and by letter.

Pertinent advice was furnished to all disabled veterans—only about 10 percent of whom were DAV members—their dependents, and others, in response to their varied claims for service connection, disability compensation, medical treatment, hospitalization, prosthetic appliances, vocational training, insurance, death compensation or pension, VA guarantee loans for homes, farms and businesses, et cetera. Helpful advice was also given as to counseling and placement into suitable useful employment—to utilize their remaining abilities—civil service examinations, appointments, retentions, retirement benefits, and multifarious other problems.

Every claim presents different problems. Too few Americans fully realize that governmental benefits are not automatically awarded to disabled veterans—not given on a silver platter. Frequently, because of lack of official records, death or disappearance of former buddies and associates, lapse of memory with the passage of time, lack of information and experience, proof of the legal service connection of a disabality becomes extremely difficult—too many times impossible. A claims and rating board can obviously not grant favorable action merely based on the opinions, impression or conclusions of persons who submit notarized affidavits. Specific, detailed, pertinent facts are essential.

The VA, which acts as judge and jury, cannot properly prosecute claims against itself. As the defendant, in effect, the U.S. Veterans' Administration must award the benefits provided under the laws administered by it, only under certain conditions.

A DAV national service officer can and does advise a claimant precisely why his claim may previously have been denied and then specifies what additional evidence is essential. The claimant must necessarily bear the burden of obtaining such fact-giving affidavit evidence. The experienced national service officer will, of course, advise him as to its possible improvement, before presenting same to the adjudication agency, in the light of all of the circumstances and facts, and of the pertinent laws, precedents, regulations, and schedule of disability ratings. No DAV national service officer, I feel certain, ever uses his skill, except in behalf of worthy claimants, with justifiable claims.

The VA has denied more claims than it has allowed—because most claims are not properly prepared. It is very significant, as pointed out by the DAV acting national director of claims, Chester A. Cash, that a much higher percentage of those claims which have been prepared and presented with the aid of a DAV national service officer are eventually favorably acted upon, than is the case as to those claimants who have not given their powers of attorney to any such special advocate.

Another fact not generally known is that, under the overall review of claims inaugurated by the VA some 4 years ago, the disability compensation payments of about 37,200 veterans have been discontinued and reduced, as to

about 27,300 others at an aggregate loss to them of more than $28 million per year. About one-tenth of 1 percent of such discontinuances and reductions have probably occurred as to disabled veterans in Nevada with a consequent loss of about $28,000 per year.

Most of these unfortunate claimants were not represented by the DAV or by any other veteran organization. Judging by the past, such unfavorable adjudications will occur as to an additional equal number or more during the next 3 years, before such review is completed. I urge every disabled veteran in Nevada to give his power of attorney to the national service officer of the DAV, or of some other veteran organization, or of the American Red Cross, just as a protective measure.

The average claimant who receives helpful advice probably does not realize the background of training and experience of a competent expert national service officer.

Measured by the DAV's overall costs of about $12,197,600 during a 10-year period, one would find that it has expended about $3.50 for each claim folder reviewed, or about $8.80 for each rating board appearance, or, again, about $22.70 for each favorable award obtained, or about $123 for each service connection obtained, or about $54 for each compensation increase obtained, and has obtained about $14.10 of direct monetary benefits for claimants for each dollar expended by the DAV for its national service officer setup. Moreover, such benefits will generally continue for many years.

Evidently, most claimants are not aware of the fact that the DAV receives no government subsidy whatsoever. The DAV is enabled to maintain its nationwide staff of expert national service officers primarily because of income from membership dues collected by its local chapters and from the net income on its Idento-Tag—miniature automobile license tag—project, owned by the DAV and operated by its employees, most of whom are disabled veterans, their wives, or their widows, or other handicapped Americans—a rehabilitation project in thus furnishing them with useful employment. Incidentally, without checking as to whether they had previously sent in a donation, more than 1,400,000 owners of sets of lost keys have received them back from the DAV's Idento-Tag department, 1,354 of whom, during the last 8 years, were Nevada residents.

Every eligible veteran, by becoming a DAV member, and by explaining these factors to fellow citizens, can help the DAV to procure such much-needed public support as well as enable it to maintain its invaluable nationwide service setup on a more adequate basis. So much more could be accomplished for distressed disabled veterans, if the DAV could be enabled, financially, to maintain an expert service officer in every one of the 173 VA hospitals.

During the last 10 years, the DAV has also relied on appropriations from its separately incorporated trustee, the DAV Service Foundation, aggregating $3,300,000 exclusively for salaries to its national service officers. Its reserves having been thus nearly exhausted, the DAV Service Foundation is therefore very much in need of the generous support of all "serviced" claimants, DAV members and other social-minded Americans—by direct donations, by designations in insurance policies, by bequests in wills, by assignments of stocks and bonds and by establishing special types of trust funds.

A special type of memorial trust fund originated about 3 years ago with concerned disabled veteran members of the DAV chapter in Butte, Mont., which established the first perpetual rehabilitation fund of $1,000 with the DAV Service Foundation. Recently it added another $100 thereto. Since then, every DAV unit in that State has established such a special memorial trust fund, ranging from $100 to $1,100 equivalent to about $5 per DAV member.

Each claimant who has received any such rehabilitation service can help to make it possible for the DAV to continue such excellent rehabilitation services in Nevada by sending in donations to the DAV Service Foundation, 631 Pennsylvania Avenue NW., Washington, D.C. Every such serviced claimant who is eligible can and should also become a DAV member, preferably a life member, for which the total fee is $100—$50 to those born before January 1, 1902, or World War I veterans—payable in installments within 2 full fiscal year periods.

Every American can help to make our Government more representative by being a supporting member of at least one organization which reflects his interests and viewpoints—labor unions, trade associations, and various religious, fraternal, and civic associations. All of America's veterans ought to be members of one or more of the patriotic, service giving veteran organizations. All of America's disabled defenders who are receiving disability compensation, have greatly benefited by their own official voice—the DAV.

Unsound Dollar

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 17, 1959

Mr. DORN of South Carolina. Mr. Speaker, the following editorial appeared in the Easley Progress, Easley, S.C.:

THEY LAUGH AT THE U.S. DOLLAR

An Easley citizen, traveling over in Canada, writes: "We ate dinner in one of the small resort towns. They had a big sign on the cash register telling us that our money was not as good as their's and that we would be charged the difference. When we paid our bill he attached 5 percent extra and was very careful to give us our change in the sickly U.S. money. It gives you a strange feeling when folks tell you your money isn't any good, and laugh at you about it."

The Greatest Satellite Success

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks I wish to call attention to the following editorial which appeared in the Shreveport Times, Shreveport, La. This fine editorial should be of interest to all of us in this space age:

THE GREATEST SATELLITE SUCCESS

Successful launching of the missile and satellite, Explorer VI, probably is the most important achievement in space rocketry thus far by any nation—this because of the completeness of the electronics laboratory carried in the satellite and the efficiency with which the laboratory has been functioning as its container orbits the earth at a speed of 22,000 miles an hour and at distances ranging from 150 miles to 25,000 miles from the earth.

(And even as this was being written, another American satellite, Discoverer V, was put into orbit.)

But what may be even more important in the whole rocket-space picture from the standpoint of national security was the announcement at the same time by the Navy of the success of its Project Tepee, hitherto probably the most guarded secret possessed by the American military. Through Project Tepee, the Navy stated, it has been able to detect instantaneously more than 95 percent of all atmospheric nuclear weapons tests and rocket launchings anywhere in the world for several months. Actually, the project has been underway since 1954 and has had some success ever since that time.

Tepee still requires refinement, but it is unlikely that, even now, Russia could fire a single missile as a test or as the opening of war without Tepee recording it instantaneously.

The Navy states that it has a number of Tepee stations in operation in various places, but the locations are closely-guarded secrets.

With as much simplicity as can be put into any explanation of functioning of electronics. Tepee operates this way: Radio signals are sent from earth stations against the ionosphere, an ionized layer of upper atmosphere. The radio signals ricochet off this layer of outer space and come bouncing back to earth and then back to the ionosphere—and so on—each bouncing being at an angle so that the radio signal actually travels around the earth's surface in its skip-and-jump course.

The same result comes when the radio signal hits the gases of a rocket trail or any other interference created by rocket launchings and missile or satellite flights. While it has taken quite a few seconds to present even this inadequate explanation, the radio signals would have recorded any interference with their course instantaneously and those on the ground at the Tepee stations would know what it was the signals were recording.

Tepee has been used successfully in literally hundreds of American missile firings, satellite launchings and other space probes from experimental stations in Florida, California and far out into the Pacific since early in 1957. Its possibilities in detecting enemy space action, experimental or otherwise, are almost unlimited.

As for Explorer VI—in no way related to Tepee—unless something goes wrong it will provide at least a year's flow of invaluable

outer space information hitherto unattainable through any electronic devices. It will report particularly concerning radio activity in areas enveloping the earth, information that is essential in planning flights of man into outer space. Such information is essential not merely in that individual project, but to success of many major space objectives which the United States is seeking. It is expected, also, to send back considerable information on the ionosphere—the ionized area against which Tepee bounces its signals.

Just where Explorer VI puts the United States in the space race with Russia is impossible to say and not too important by itself. The United States and Russia are seeking certain space objectives, but by ways vastly different in some instances. What is important to this Nation is whether the objectives are being obtained as rapidly as possible and whether everything needed to further them is being done.

Russia sends dogs into the air and the United States sends monkeys and mice. Russia is concerned with the size of what it sends into outer space where the chief concern of the United States is information that comes back. The end result sought by each is exploration of outer space and thus, in all probability, control of it, particularly from the military standpoint.

If Russia has anything like either Explorer VI or Project Tepee, it has not yet done any boasting about that fact and, if American scientists are right in their assumption, Russia has a long way to go to catch up in the fineness, the delicacy, the accuracy and the capabilities of tiny electronic devices already proven successful in tests by the United States. But the Soviet still seems to have greater thrust—power of propulsion—for its rockets.

Nikita Ought To See

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 11, 1959

Mr. BOW. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Neosha (Mo.) Miner & Mechanic containing some suggestions for the Khrushchev visit:

NIKITA OUGHT TO SEE

A full-fledged convention of the AFL–CIO, where the workers of America get things off their chests;

A formal Presidential Press Conference, where the leader of the greatest Nation on earth answers the barbs and bites of questions to which no Kremlin is ever exposed;

A stormy stockholders meeting of the New York-New Haven Railroad;

A debate between Senators PAT MCNAMARA, of Michigan, and BARRY GOLDWATER, of Arizona;

A session of the Oklahoma Legislature;

A movie of Cal Coolidge in action, and of Gov. Earl Long, in person;

The Hoover Dam and Lake Mead;

A Billy Graham rally in Los Angeles Coliseum;

An American election campaign;

Display of the New York Times and Daily Worker, side by side on a newsstand;

A Sunday comic section;

A conversation between Casey Stengel and Charles Van Doren;

Elvis Presley, before and after;

A USAF firepower demonstration at Eglin Field, Fla.

If seeing is believing, Nikita ought to see all that there is to see of the Nation he says can't win in the cold war.

Mud in Your Eye

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 17, 1959

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Daily Tribune, dated August 15, 1959, entitled "Mud in Your Eye":

MUD IN YOUR EYE

Milwaukee, which has been paraded insufferable self-righteousness in opposing Federal legislation to grant Chicago a slight boost in water diverted from Lake Michigan, has closed seven of Milwaukee County's bathing beaches. The reason: Pollution from sewage processed through a municipal system which Wisconsin's two Senators only last Friday were describing as the "acme of sewage disposal in the United States."

Those were the words of Senators WILEY and PROXMIRE, but the Milwaukee City Health Commissioner, Dr. E. R. Krumbiegel, does not agree. He says that Milwaukee's sewage disposal system can only be brought up to snuff by an expenditure of half a billion dollars, and that that is economically impossible.

Dr. Krumbiegel intimated that two of the closed beaches will remain permanently shut down because of pollution from human and animal refuse. The county superintendent of parks, Russell Kurtz, stated that the closing orders were necessitated because of the uncertainty of water conditions at the beaches, which was explained more definitely by the health department as endangering the public through exposure to amoebic dysentery and typhoid. Dr. Krumbiegel said that the geographical position of Milwaukee, which returns its treated effluent to the lake, forms a natural cesspool during the summer months.

Now, we do not mention these conditions with any intention to gloat. Indeed, we sympathize with Milwaukee's difficulties in dealing with sewage disposal and maintaining health. This, we might add, is more than Milwaukee is willing to do in considering Chicago's problems, which do not involve any pollution of the lake, inasmuch as the effluent from Chicago's sewage treatment works is discharged through the Illinois Waterway because we had the foresight to reverse the flow of the Chicago River.

But the difficulties of our neighbor to the north do emphasize certain facts which deserve to be underscored. One is that Chicago is no unique culprit, handling its sewage disposal problem in disregard of the welfare of its neighbors and of other States. The movement of the lake current, on the contrary, is likely to dump some of Milwaukee's pollution on our lake front.

Another factor is that Chicago, unlike Milwaukee, has never claimed perfection in its efforts to dispose of wastes from an enormous and highly industrialized area covering 920 square miles and populated by more than 5 million persons. But it does contend that it has made prodigious efforts at great cost to deal effectively with this tremendous problem, and that it has attained a very large degree of success.

The Tribune, in its own independent survey, has not endeavored to conceal that the sanitary district has not been 100 percent effective. But it has established that the district has been 90.6 percent successful in removing impurities from the tremendous volume of waste that is treated.

That a problem remains seems to us to provide only additional justification for the city's request that Congress authorize an increase of 1,000 cubic feet of water diverted each second from the lake. We are now restricted to a modest 1,500 cubic feet, and the added allowance is initially sought only for a test period of 1 year. Yet Milwaukee and the State of Wisconsin, beset by a much more grave problem of pollution, begrudge us this minimal help.

The difficulties of Milwaukee point up the fact that there has been no small amount of hypocrisy in the opposition voiced against Chicago in Congress and before its committees. The bill authorizing increased diversion will be before the Senate Public Works Committee for decision Monday, having already been approved by the House. We trust that the responsible Senators will take due note of the imperfections of some of the bill's holier-than-thou critics.

Imports

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 17, 1959

Mr. DORN of South Carolina. Mr. Speaker, the following article by Sylvia Porter should be studied by each of us:

FOREIGN IMPORTS SWAMP U.S.-MADE PRODUCTS

(By Sylvia Porter)

The other evening I went to a stimulating but deeply disquieting dinner party. For, my partner from the start to the good night was Cyrus Ching, head of the Federal Mediation Service under President Truman, and through the hours we debated not only the threat of the steel strike but also the threat of steel imports to our economy.

"The long-range problem is the rising importation of steel," said Ching. "Competition to our steel industry and to steelworkers from lower-cost foreign producers of the metal is what we must face up to * * *. It is in this sphere that U.S. industry will get a climactic test."

With my mind pondering the implications of Ching's warnings, I came home and headed for a midnight snack. On the kitchen table I put a plate, a glass pitcher, a glass, and an ash tray—all purchased since June. Before I sat down, I moved from my chair a laundry basket in which there was a cap my husband had picked up a few days ago, my new bathing suit and a silk robe. And suddenly my eyes saw something I hadn't see before.

Every product I had touched in those few minutes in the kitchen had been an import—the plate, glass, and pitcher from England; the ash tray from Denmark, the basket and cap from Japan, the bathing suit from France, the robe from Italy.

And after I had finished racing through the house to check what we had bought in the past 6 months, I got an even greater shock.

OVER 60 PERCENT

Over 60 percent of our recent purchases had been imported from abroad. I, living in a typically American home and buying with a typical American's attention to quality and

price, had gradually become a buyer of foreign products on a scale I hadn't dreamed of.

Then Ching's warnings about steel imports came into focus.

Imports are pouring into our land. This year alone, the National Foreign Trade Council has just estimated, imports to us will total a record $15 billion, up $1.6 billion from 1958. And the imports are not just the obvious cars, cameras, radios, etc. Stores and factories from coast to coast are loaded with foreign goods which are well-designed, well-made, attractively priced compared with similar U.S. products.

We created this competition for ourselves in the most grandiose gesture of generosity any nation ever made. For, when World War II ended we began pouring billions into the rebuilding of the ruined or obsolete factories of Europe and Japan. With the aid of our dollars and know-how, many countries have now come back and are operating with modern factories, materials, and machines and at much lower wage scales.

WHAT'S THE SOLUTION?

"OK," I mumbled to myself as I sat in the kitchen and mentally continued my debate with Ching. "What do we do about it?"

Raise tariffs and slap on quotas until we force out the competition? Hardly a satisfactory answer.

Freeze wages? Also hardly an imaginative answer.

What then? In all humility, I suggest the answers must be:

1. A much sharper, faster and a sustained rise in modernization and efficiency of production. With increased efficiency, we'll be able to turn out goods competitively priced and still raise wages.

2. A powerful drive for new inventions and improved products—meaning greater emphasis on research. With new inventions and superior productive capacity, we can keep and expand our markets.

3. A realization by all of us that we are into an economic war for the markets of the world—including our own. I'm not proposing an aggressive "Buy American" program, but I readily admit there'll be no more of that 60–40 ratio in purchases I make.

We won't meet the important competition by flinching from it, ignoring it, or putting up walls against it. We will meet it when we vow to lead the world in inventing, modernizing, selling. We'll meet it when we wake up.

The Proposed Khrushchev Visit

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 17, 1959

Mr. WOLF. Mr. Speaker, there has been much discussion regarding the coming of Mr. Khrushchev to the United States. I feel that the following editorial which appeared in the Witness of August 6 would be considered good reading by many people who are concerned with this impending arrival:

THE PROPOSED KHRUSHCHEV VISIT

The announcement by Mr. Eisenhower of the forthcoming visit of Mr. Nikita Khrushchev to this country carries with it many serious complications.

We firmly believe this country could and would prosper bountifully without having the Premier of the Soviet Union visit our shores. We believe also that world peace does not hinge on a visit by one man to this country. We should not be made to dance to the tune fiddled by the Soviets.

Mr. Khrushchev is not going to change his mind about Marxism after a short social call to this country. When he returns home he will be more determined than ever to destroy the system which has given generations of millions and millions of Americans the peace and liberty denied the more than 800 million people behind the Iron and Bamboo Curtains.

The visit will, of course, be tremendous propaganda fodder for the Soviet Union. But how will we ever explain to the captive hordes our decision to entertain this international scoundrel?

And who would ever venture a guess what price the American people will have to pay for such a visit.

The present on our shores of a man whose contempt for the basic decencies of life is so well known, will prove embarrassing for the majority of our American citizens. It will be disheartening to the thousands of refugees from communism who have found formerly denied freedom on our protecting shores.

Mr. Khrushchev's disdain for religion will seriously sadden the millions of Americans who daily worship their God freely and openly.

What about the feelings of national groups in this country? The Hungarians, the Czechs, Poles, Lithuanians, and former residents of both Russia and East Germany, whose fatherland now breaks with the burden of communism.

The security problem of protecting a man such as Mr. Khrushchev will be overwhelming.

But will Mr. Khrushchev learn anything when he visits this country? He has been described as an outmoded Marxist. Yet the basic problem remains that he is a Marxist of the first dedication, outmoded or not.

Our progress, our efficiency, our mode of living is awesome to foreigners of any country. Seeing the sights of America will only provide him with information to bark more fiercely about the progress communism will continue to make.

It must be recalled that the Soviet Premier canceled his proposed trip to Scandinavia after the free press and free public opinion criticized it.

If the visit goes through as planned at this stage Khrushchev should be shown the real America. We are told he is ignorant about many basic things which exist in this country. His criticism of the American exhibition in Moscow would seem to confirm this.

It is hard to describe what is typically American. But we sincerely feel that the things denied the Russian people, and which we take so much for granted, should be emphasized very strongly. Let him see the religious fervor of our American people. The great number of churches and church-conducted schools should be displayed to him. Let him know our religious heritage of yesterday and our dedication and determination today to follow the law of God is what has made us free and strong.

Let him see the freedom of the press and freedom of speech. He should be made to taste the genuineness of our liberty and the wealth of opportunity offered our young.

Take him to the Statue of Liberty in New York Harbor where he can read this inscription: "Give me your tired, your poor, your huddled masses yearning to breathe free, the wretched refuse of your teeming shore. Send these, the homeless, tempest-tost to me. I lift my lamp beside the golden door."

(Incidentally, the reference for the correctness of the above quoted quotation was the World Almanac, the book recently banned by the Soviets at our exhibition in Moscow.)

Mr. Khrushchev won't learn much of the real America by looking at skyscrapers and gadgets. He can learn if we prove by fact and deed that we have concern for all races, creeds and color. Housing for the poor, equal rights for Negroes, and social security benefits for millions will make him realize ours is truly a thrice-blessed Nation.

If Nikita Khrushchev comes to the United States it will be difficult for the American people to see the heads of our Government entertaining a man who doesn't even deserve the title of a gentleman.

It will not be easy to have our shores darkened by the image of a man dedicated to destroying us. It will be even more trying to face a man whose crimes have shocked and stunned the entire civilized world. It would take many volumes to detail the havoc and misery this man has cast upon mankind. Josef Stalin, who deported and exterminated 6 million kulaks (farmers) described it as "socialist construction."

Nikita Khrushchev dismisses people from the face of the earth describing their crimes as "socialist illegality."

Tens of millions of people have suffered from the hands of Communist rulers. Yet in trying to justify his terribly evil system, the Soviet dictator says, "some innocent people suffered." He will never admit the crime of the system itself.

If and when the Soviet Premier visits America, Catholics especially should recall, as indeed all Christians should, that this man has spent most of his life fighting religion.

In March of 1958 he is quoted as saying, "I think that there is no God, and for a long time I have had such an idea. I am an adherent of a scientific outlook. Science and the belief in supernatural powers cannot go together, especially if you have a thoroughly logical outlook."

September will not be the usually charming month this year that it most generally is. American Christian hearts will be heavy. For all Christians the time of the visit of Mr. Khrushchev should be a period of intensified prayer, asking God to send the grace of conversion to a man determined to destroy all things men of good will love and cherish.

Charity demands we love our enemies, and those who persecute us. The dictates of charity must be in evidence during these future hectic days.

The Watumull Foundation Contribution to East-West Understanding

EXTENSION OF REMARKS
OF
HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Monday, August 17, 1959

Mr. BURNS of Hawaii. Mr. Speaker, the Johnson-Burns bill, now title VI of the Mutual Security Act of 1959—Public Law 86–108—provides for the establishment in Hawaii of a center for cultural and technical interchange between the Western and the Eastern Worlds—in other words, it provides for the establishment of an East-West university.

It was my high privilege to cosponsor this bill with the very able, knowledgeable and prescient majority leader of the Senate, the Honorable LYNDON B. JOHNSON of Texas. The able Congressman D. S. SAUND joined in sponsoring the measure in the House.

The purpose of the bill was to utilize to the maximum extent possible the outstanding abilities and to develop to the maximum the exceptional capabilities of the great Americans of Hawaii whose ancestors came from the nations of the Orient, or who themselves came from the Orient.

The geographic position of Hawaii between the shores of Asia and North America accentuates the cultural meeting of East and West in the peoples of Hawaii. Thus, the State-to-be of Hawaii was a most natural locale for the institution envisioned by the very great majority leader and myself—an institution which we sincerely believe can do more to bring peace in the world than any other means, which we believe, is the only means by which true peace in the world can ever be attained.

Ample evidence of the part that the people of Hawaii can play in bringing understanding between the peoples of the East and the West is afforded in private and public efforts already underway in Hawaii as a result of the initiative and vision of the people of Hawaii.

One of the outstanding of these endeavors is the Watumull Foundation. This foundation was founded by G. J. Watumull in 1942 and incorporated in 1956. It is presently administered by a board of trustees whose chairman is Mr. G. J. Watumull, with Mr. Milton Cades, president; Miss Doris E. Bennett, Mr. J. Russell Cades, Mr. Hugh C. Tennent, Mrs. Ellen J. Watumull and Mr. David Watumull as trustees.

On July 10, it was my privilege to attend a special award luncheon of the foundation at which Dr. Sarvepalli Radhakrishnan, Vice President of India, and Dr. Charles A. Moore, sponsor of the recent outstandingly successful East-West International Philosophical Conference, were honored by the foundation with special awards by the Watumull Foundation.

At this luncheon there was presented a history of the Watumull Foundation as well as an account of their awards activities which I included herewith as an example of how the East and West do meet in Hawaii, and the great potential Hawaii has as the bridge between the nations of the East and our own great country.

The Watumull Foundation is indeed a tribute to the initiative, resourcefulness, and charity of Mr. G. J. Watumull and his family.

It is also a tribute to the Watumull family's great love for the United States as well as for their mother land.

The part played by the Watumull Foundation to understanding between India and the United States cannot be underestimated.

HISTORY OF THE WATUMULL FOUNDATION

The Watumull Foundation was established in 1942 by G. J. Watumull of Honolulu with three purposes in view: (1) To promote better understanding between India and the United States (India's independence at that time was only a remote possibility); (2) to increase India's national efficiency (for only 5 percent of her industrial potential was developed at that time, and both agricultural production and educational development were woefully inadequate); and (3) to support cultural, charitable, and educational programs in Hawaii.

In order to promote better understanding between India and the United States, the Watumull Foundation has sent several distinguished Americans to lecture in Indian universities or to carry on special projects furthering this purpose. Dr. John Haynes Holmes, the great American friend of Mahatma Gandhi, Mr. Merle Curti, the American historian and authority on Federal constitutions, and Dr. Paul Arthur Schilpp, editor of the Library of Living Philosopher series, including "The Philosophy of Sarvepalli Radhakrishnan," are a few who have visited India sponsored by the Watumull Foundation. The most eminent Indian whom the foundation has brought to the United States is Dr. Radhakrishnan, our guest of honor today. He lectured in 14 of our great universities in 1946.

The Watumull Foundation has provided funds to about 30 American universities and colleges for the purchase of books about India for their libraries, available to undergraduate as well as graduate students. And books for similar libraries in India have been purchased in the United States, in order that students and readers in India may know our country. However, most of the books sent to India are technical, medical, and professional, and in no sense propaganda material.

The foundation has also supported special lectureships held by Indians in the United States, notably the American University and the Catholic University of America, both in Washington, D.C.; New York University and the University of Hawaii.

In furtherance of its second purpose of increasing India's national efficiency, the Watumull Foundation initiated a program of bringing fine Indian scholars, mostly university professors, to the United States, for postgraduate studies or postdoctoral research for 1 to 3 years in nation-building fields such as education, medicine, agriculture, dentistry, engineering, chemistry, physics, veterinary medicine, etc. Thirty-five men and women came under this program. Many of them now hold top posts in their fields not only in India, but in Africa, Malaya, WHO, FAO, and even in the United States. The foundation has given innumerable grants-in-aid to Indian students in American universities; has given over 200 scholarships to displaced Sindhi students in India (86 in the past year alone), has given 6 beta ray eye applicators to strategic hospitals in India, gave the first spectrophotometer, the first cornhusker, the first electric compost grinder to India. The foundation has had the cooperation of several American industries in providing industrial training for about 10 Indians, has had 18 Indian doctors, men and women, trained in contraceptive techniques at the Margaret Sanger Research Bureau. It also initiated the Third International Planned Parenthood Conference held in Bombay in 1952, which was inaugurated by Dr. Radhakrishnan.

BOOK PRIZE

The foundation program of especial interest to this gathering is the biennial book prize awarded through the American Historical Association to the best book about some phase of India's history, politics, economics or related subjects, published in the United States in the 2-year period preceding the award year. A committee of distinguished historians, all members of the association, select the prize-winning book or books. On three occasions the award has been divided between two authors. The prize was first awarded in 1948 to:

1. "Chanhu-Daro Excavations," by Ernest Mackay (awarded posthumously).

2. (a) "A Pageant of India's History," by Gertrude Emerson Sen; (b) "John Company at Work," by Holden Furber.

3. (a) "Life of Mahatma Ghandi," by Louis Fisher; (b) India in the New Era, by T. Walter Wallbank.

4. (a) "The White Umbrella," by D. Mackencie Brown; (b) "The United States, India and Pakistan," by W. Norman Brown.

5. (1958) "Sources of Indian Tradition," edited by Wm. Theodore de Bary.

In addition the Watumull Foundation has on occasion given special awards to works about India, other than historical or political books, notably one by Swami Nikhilananda dealing with the Great Scriptures—and religious and philosophical teachings of the country.

VIVEKANANDA, HIS LIFE AND TEACHINGS

Another special award was given to Miss Juliette May Fraser of Honolulu for her beautiful book "Ke Anuenue."

The foundation also purchases books for distribution to college, university, and public libraries both in the United States and India if, in its estimation, such a book will create better understanding, at least of some aspect of life, between the two countries. A few years ago a philosophical work entitled "Epitomization" by Dr. George Conger was sent to a number of libraries, especially in India. Three authors whose works have received recognition, either by awards or distribution, are with us today—Dr. D. Mackenzie Brown, Dr. George P. Conger, and Swami Nikhalananda.

We are gathered here today to present a special award to the editors of "A Source Book in Indian Philosophy," edited jointly by Dr. Sarvepalli Radhakrishnan and Dr. Charles A. Moore, and published in 1957 by Princeton University Press. In it are included "the chief riches of more than 3,000 years of Indian philosophical thought—the ancient Vedas—the Upanishads—the epics—the treatises of the heterodox and orthodox systems—the commentaries of the scholastic period—and contemporary writings."

Dr. Radhakrishnan, the Vice President of India, and certainly the greatest living Indian philosopher, belongs to the world, not only to his own country. His philosophical works are many, beginning with his first book, developed from his M.A. thesis in 1908. They number nearly 200 including almost 30 books.

His honors also are many, including a knighthood, and honorary degrees from many universities, including the University of Hawaii. His academic career is long and distinguished with professorships in several Indian universities and also at Oxford. He has been vice chancellor of two Indian universities, India's ambassador to the U.S.S.R. from 1949 to 1952, president of UNESCO in 1952, and vice president of India since 1952. In recognition of his great contribution to better understanding between East and West, the Watumull Foundation takes great pride in presenting its citation and accompanying award to Dr. Sarvepalli Radhakrishnan, scholar, philosopher, diplomat.

The Watumull Foundation on this occasion also wishes to recognize the splendid contribution made by Dr. Charles A. Moore, to the "Source Book in Indian Philosophy," for it was he who did the long, painstaking work of choosing the selections, editing them, proofreading the book and raising the funds for its publication. Dr. Moore spent a year at Benares Hindu University in India and in England at Oxford, working with Dr. Radhakrishnan. While in India he also conferred with many other distinguished philosophers, with the result that this work contains the finest selections, in a compact form, of Indian philosophical thought ever brought together in one volume. This book is a must, especially for Western students of Indian thought.

Dr. Moore's talents lie not only in the field of philosophy but also in the administrative field, and it is due to his efforts, in large measure, that three great international phil-

osophical conferences have been held in Honolulu at the University of Hawaii in 1939, 1949 and 1959.

The Watumull Foundation takes great pleasure, therefore, in presenting a citation and special award to Dr. Charles A. Moore, professor of philosophy of the University of Hawaii and director of the Third East-West Philosophers' Conference.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Khrushchev's Forthcoming Visit to the United States

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, August 18, 1959

Mr. JOHNSON of Texas. Mr. President, there has been much comment from people in public life and from the press regarding Mr. Khrushchev's forthcoming visit to this country. Some of it has been too optimistic, some too pessimistic.

I believe that a particularly sensible and intelligent editorial appeared in the Amarillo Daily News of August 14, 1959, which gave recognition to the views of my friend, the distinguished junior Senator from Oregon [Mr. NEUBERGER].

Mr. President, I ask unanimous consent that an editorial entitled "Nikita May Be Curious To See United States of America, but Many Want To See Him, Too," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NIKITA MAY BE CURIOUS TO SEE UNITED STATES BUT MANY WANT TO SEE HIM, TOO

What do we show Soviet Premer Nikita S. Khrushchev? To some extent the Soviet Communist Party boss has answered the question for us: we show him what he wants to see. It is known he has made certain definite specifications. He wants to visit Washington, naturally, and New York, Chicago, and San Francisco—always a favorite with foreign visitors.

Less specifically, he wants to go to California, Texas, Florida, and some farm State in the Middle West. And he would like to see something of smalltown life, say, President Eisenhower's boyhod home of Abilene, Kans.

Other stops on the itinerary will be worked out between the State Department and the Soviet Embassy in Washington. So many invitations have been tendered that this intrinsically unwanted guest begins to appear a social lion. Foy D. Kohler, the veteran Foreign Service officer given the job of coordinator of "Khrushchev's tour, is scarcely to be envied.

Khrushchev's desire to see an example of American agriculture could well be satisfied by an invitation to the Coon Rapids, Iowa, farm of Roswell Garst, who has twice visited Soviet Russia and says of Khrushchev, "It's his turn to come to our house." The Soviet Premier will see America's farms at their booming best despite the brakes of Government controls. He will see lush fields of high-yielding corn, cattle at a record peak in numbers, hog production at a peacetime high, bins crammed full of surplus corn, the most highly mechanized grain harvest in the world.

Khrushchev also wants to see U.S. industry, and the State Department is considering two of the Nation's heaviest industrial complexes, the Pittsburgh and Detroit areas. Here again he will see capitalism booming, with industrial production—at a new peak at midyear—65 percent greater than the average of the 3 years immediately prior to the Korean war. A settlement of the steel strike would make a welcome addition to the picture of overall prosperity.

What might, indeed, most impress Khrushchev would be a flight over one of our great industrial areas, with thousands and thousands of automobiles—worker's automobiles—packed tightly inside plant parking lots.

Invitations continue to come in from hamlets, from villages, and from counties as well as from cities, many of them from chambers of commerce inspired by local pride. At least one plea has been made—by Senator RICHARD L. NEUBERGER, the Oregon Democrat—that Khrushchev be shown "the gentler, more compassionate, and more human side of America."

NEUBERGER says he believes the Communist leader would be more moved by American schoolchildren or by an American seeking an answer to the grim riddle of cancer than by "a panorama of American weapons and factories." To those suggestions could be added many other kinds of individuals and groups who make up our diverse society—labor unions in the meeting hall, granges, PTA's, college students in the healthy frenzy of a football rally. The list is endless; only the brevity of Khrushchev's time here imposes the discipline of selectivity.

Vice Adm. G. D. Murray, USN

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 18, 1959

Mr. McCORMACK. Mr. Speaker, the U.S. Navy, throughout its great career, has had many outstanding officers, whose names are an important part of the history of our country, and an important part of the history of the U.S. Navy. One of these officers, now deceased, is Vice Adm. G. D. Murray, who gave his entire life in the service of our country, for a period of more than 50 years; from the time of his appointment to the U.S. Naval Academy in 1907 until the time of his retirement. Vice Admiral Murray was not only a great naval leader, but a warrior, and a fighter, and a great American.

Under permission to extend my remarks, I include an article about Vice Admiral Murray, which appeared in the Golden Gate Federal News of February–March 1949:

VICE ADM. G. D. MURRAY, WESTERN SEA FRONTIER CHIEF, HAS ILLUSTRIOUS CAREER

Vice Admiral Murray, born in Boston, Mass., July 6, 1889, attended Henry L. Pierce Grammar School and Mechanic Arts High School in Boston before his appointment to the U.S. Naval Academy from his native State in 1907. Graduated in June 1911, he served at sea, as then required by law, before he was commissioned ensign, March 7, 1912. He was promoted to lieutenant (junior grade), March 7, 1915, during the World War received temporary promotion to lieutenant and lieutenant commander, was commissioned in the latter rank February 11, 1922, and subsequently was promoted as follows: Commander, June 4, 1931; captain, July 1, 1939; rear admiral, May 7, 1942; and vice admiral, November 29, 1944.

After graduation in 1911, Vice Admiral Murray served consecutively in the U.S.S. *Virginia* and the U.S.S. *Ammen* until December 1914. Following instruction in aeronautics at the works of the Burgess Co., Marblehead, Mass., he reported in February 1915 to the Naval Air Station, Pensacola, Fla., for flight training. Designated naval aviator No. 22 on September 20, 1915, he has served continuously with naval aviation since that time. Detached from the Pensacola Station in January 1916, he had duty for 3 months as naval inspector of aeronautical material, works of the Burgess Co. at Marblehead, and later at Boston, Mass.

TRANSFERRED

In April 1916, Vice Admiral Murray was transferred to duty as inspector of aeronautical material, works of the Gallandet Aeroplane Co., Norwich, Conn., and was serving in that assignment when the United States entered the World War in April 1917. He had duty at the Naval Air Station, Naval Operating Base, Hampton Roads, Va., from January to July 1918, when he became Commander, Naval Air Station, Anacostia, D.C., the first commanding officer of that station. Detached from command of the Anacostia Air Station in November 1919, he served as executive officer of the Naval Air Station, San Diego, Calif., from December of that year until August 1921 when he joined the aircraft tender *Aroostook*. Assigned duty with squadrons attached to that tender, he later commanded Spotting Squadron 5.

CHIEF INSPECTOR

Detached from the *Aroostook* in September 1922, Vice Admiral Murray served as chief inspector, Naval Aircraft Factory, Philadelphia, Pa., the first line officer (naval aviator) to serve in that capacity, until November 1923 when he reported to Aircraft Squadrons, Battle Fleet, San Diego, Calif., for duty in connection with organizing Torpedo Squadron 20. On December 5, 1923, he assumed command of that squadron, the first aircraft squadron ordered to Asiatic station, attached to the U.S.S. *Huron* and later the U.S.S. *Ajax*. For his services in organizing and administering Torpedo Squadron 20, an assignment which extended to May 13, 1925, he received a letter of commendation from the commander in chief, Asiatic Fleet.

In June 1925, Vice Admiral Murray reported for duty in connection with the inauguration of the course in aeronautics at the Naval Academy, Annapolis, Md., serving as senior naval aviator for the indoctrinal flight training of midshipmen until December of that

year. He then had duty in the Plans Division, Bureau of Aeronautics, Navy Department, Washington, D.C., until September 1927, with additional duty in the Office of the Chief of Naval Operations during the latter part of that period. In October 1927 he reported for duty as aviation aide on the staff of Adm. (now retired) Louis R. de Steiguer, U.S.N., Commander in Chief, Battle Fleet, U.S.S. *California* flagship, continuing that duty when Adm. (now retired) William V. Pratt, U.S.N., succeeded to the command in June 1928. A year later he joined the U.S.S. *Wright*, flagship of Aircraft Squadrons, Scouting Force, serving as her executive officer until December 1929.

From January 1930 until May 1933, Vice Admiral Murray was assistant naval attaché at the American Embassies in London, England; Paris, France; Berlin, Germany; and the Hague, the Netherlands. During that period he was technical assistant for the Navy of the American delegation to the sixth session of the Preparatory Commission for the Disarmament Conference at Geneva, Switzerland, in November 1930. After his return to the United States in June 1933, he served for 2 years as head of the air department of the aircraft carrier *Saratoga*, flagship of Aircraft, Battle Force, and Carrier Division 1. In June 1935 he returned to the Pensacola Air Station as superintendent of aviation training when aviation cadet training was established. In June 1936 he became executive officer of the Pensacola Air Station, serving in that capacity until May 1937 when he rejoined the *Saratoga* as executive officer. A year later he assumed command of the U.S.S. *Langley*, converted in 1937 from an experimental aircraft carrier to a seaplane tender. He commanded the *Langley*, operating with Scouting Force, U.S. Fleet, until June 1939 when he again had duty in the Bureau of Aeronautics, Navy Department, serving as head of the personnel division until March 1941.

COMMANDED

Vice Admiral Murray commanded the aircraft carrier *Enterprise* from March 21, 1941, until June 30, 1942. During that period the *Enterprise* was engaged in 1941 in transporting planes and squadrons from the United States to various island bases in the Pacific. Late in November of that year, as part of a force under command of Fleet Adm. (then Vice Adm.) William F. Halsey, USN, she transported Marine fighter planes to Wake Island and was returning to Pearl Harbor at the time of the Japanese attack, December 7, 1941. Delayed by a storm, the *Enterprise* launched planes from her air group 6 that Sunday morning for a scheduled landing on airfields at Pearl Harbor. These planes ran into the midst of the surprise attack and thus became the only carrier-based aircraft to participate in that action and the subsequent unsuccessful search for the fleeting enemy.

"ENTERPRISE"

In February 1942, the *Enterprise*, under command of Vice Admiral Murray and flying the flag of Admiral Halsey, launched her planes in the successful raid on the Marshall and Gilbert Islands. In this, the first combat test ever participated in by an American aircraft carrier and the first offensive blow in the war against the Japanese, her flyers effectively proved the potency of air attack from a mobile, floating base, accounting for 35 Japanese aircraft, 13 auxiliary and patrol vessels, 1 cruiser, 1 seaplane tender and numerous storehouses, hangars, and other land targets. Later in February she participated in the successful raid on Wake Island, in enemy hands since December 22, 1941, and in March made a successful raid on Marcus Island. In April she escorted the carrier *Hornet* to within 800 miles of Tokyo for the *Hornet's* launching of 16 Army bombers for Lt. Gen. James Doolittle's famous first raid on the Japanese Capital. In the Battle of Midway, June 4–6, 1942, in which the carriers *Enterprise*, *Hornet*, and *Yorktown* took part the air group from the *Enterprise* sank the large enemy carriers *Kaka* and *Akagi*, and together with the *Yorktown* air group, sank the Japanese carrier *Soryu* and damaged an enemy battleship in an engagement which marked the first decisive defeat suffered by the Japanese Navy in 350 years, put an end to the long period of Japanese offensive action and restored the balance of naval power in the Pacific.

For his services in command of the *Enterprise*, Vice Admiral Murray was awarded the Navy Cross, and also received a facsimile of, and is entitled to wear the ribbon for, the Presidential Unit Citation awarded the *Enterprise*. The citations follow.

NAVY CROSS

"For distinguished service in the line of his profession, as commanding officer of the U.S.S. *Enterprise* when, on February 1, 1942, his ship was under a heavy bombing attack in enemy waters. By his courage and resourcefulness he saved his ship from serious damage."

PRESIDENTIAL UNIT CITATION—U.S.S. "ENTERPRISE"

"For consistently outstanding performance and distinguished achievement during repeated action against enemy Japanese forces in the Pacific war area, December 7, 1941, to November 15, 1942. Participating in nearly every major carrier engagement in the first year of the war, the *Enterprise* and her Air Group, exclusive of her farflung destruction of hostile shore installation throughout the battle area, did sink or damage, on her own, a total of 35 Japanese vessels and shoot down a total of 185 Japanese aircraft. Her aggressive spirit and superb combat efficiency are fitting tribute to the officers and men who so gallantly established her as an ahead bulwark in defense of the American Nation."

Gilbert and Marshall Islands raid, February 1942.

Wake Island raid, February 24, 1942.

Marcus Island raid, March 4, 1942.

Battle of Midway, June 4–6, 1942.

Occupation of Guadacanal, August 7–8, 1942.

Battle of Stewart Islands August 24, 1942.

Battle of Santa Cruz, October 26, 1942.

Battle of Solomon Islands, November 14–15, 1942.

On July 17, 1942, Vice Admiral Murray assumed duty as Commander, Carrier Task Force 17, with the U.S.S. *Hornet* as his flagship. He was abroad that carrier in the Battle of Santa Cruz, October 26, 1942, when his task force wrecked the Japanese invasion fleet bent on driving American forces out of Guadacanal. In that battle the *Hornet* was so severely damaged that when it became apparent she could not be saved, she was sunk by our own naval forces. For his leadership at Santa Cruz, Vice Admiral Murray was awarded the Distinguished Service Medal with the following citation:

DISTINGUISHED SERVICE MEDAL

"For exceptionally meritorious service to the Government of the United States in a position of great responsibility as commander of a task force in the Battle of Santa Cruz Islands on October 26, 1942. Displaying great tactical skill and outstanding leadership, Rear Admiral Murray directed the excellently coordinated and determined action against Japanese forces with the result that heavy losses were inflicted on enemy ships and air groups, thereby contributing immeasurably to the success of our forces in this engagement. The distinguished service rendered by Rear Admiral Murray and the devotion to duty of the units under his command reflect great credit upon the U.S. naval service."

In November 1942, Vice Admiral Murray returned to the Pensacola Air Station, where he had won his wings in 1915 to become the first commander of the Naval Air Training Center established there, and at the same time Chief, Air Intermediate Training Command. He relinquished these commands in January 1944 to organize and command the newly created Naval Air Training Command at Pensacola, created to coordinate and direct the entire training program. For his services in these assignments, which extended to August 1944, he was awarded the Legion of Merit with the following citation:

LEGION OF MERIT

"For exceptionally meritorious conduct in the performance of outstanding service to the Government of the United States as Chief of Naval Air Intermediate Training and Commandant, Naval Air Training Center, Pensacola, Fla., from November 26, 1942, to January 20, 1944, and as Chief of Naval Air Training from January 20 to August 4, 1944. Charged with the urgent task of expanding the intermediate stage of the pilot training program, Vice Admiral (then Rear Admiral) Murray handled the many complex problems of his vital assignment with skill and foresight, developing and maintaining the efficiency of his command with no sacrifice in quality of training, and subsequently, assuming the duties of Chief of Naval Air Training, directed the integration of all stages of the program. By his outstanding ability as an organizer, an administrator and a leader, Vice Admiral Murray contributed essentially to the successful training of large numbers of pilots to meet the requirements of the naval service during its most critical expansion period and to the prosecution of our sustained fleet operations against the enemy."

On August 16, 1944, Vice Admiral Murray became commander, Air Force, Pacific Fleet, charged with assuring that the Navy's aviation units in the Pacific be supplied with personnel and material. For this service in that command he was awarded a Gold Star in lieu of the second Legion of Merit, with the following citation:

GOLD STAR LIEU SECOND LEGION OF MERIT

"For exceptionally meritorious conduct in the performance of outstanding service as Commander Air Force, U.S. Pacific Fleet from August 1944 through July 1945. He efficiently handled the administrative responsibilities of this great force, and displayed exceptional ability in supervising its organization, and the planning for effective utilization of the material and personnel under his command. He frequently inspected forward operations in order that aircraft requirements might be better understood and complied with; and that advanced methods, gained from everyday experience with a relentless and devising enemy might be developed and incorporated into training programs. His experience and sound judgment were invaluable assets in providing for the improvement and maintenance of fleet aircraft and material. His energetic initiative, professional excellence, and devotion to duty contributed materially toward our defeat of the Japanese Empire, and were at all times in keeping with the highest traditions of the U. S. naval service."

In July 1945, Vice Admiral Murray became Commander, Marianas, and on September 2, 1945, acting for Fleet Adm. Chester M. Nimitz, U.S.N., Commander in Chief, U.S. Pacific Fleet and Pacific Ocean Areas, accepted the formal capitulation of Truk atoll, the wartime command headquarters for Japanese holdings in the central Pacific. Ceremonies were held aboard the light cruiser *Portland*.

In January 1946, he was ordered to duty as a member of the General Board, Navy Department, Washington, D.C. On March 22, 1946, he assumed duty as Commandant of the Ninth Naval District, Chicago, Ill., and as Commander of the Midwest Naval Area. On July 18, 1947, he was detached under orders to duty as Commander, 1st Task Fleet, to report on August 14, 1947.

Vice Admiral Murray was detached from duty as Commander 1st Task Fleet on October 9, 1948. On October 20, 1948, Admiral Murray assumed duties as Commander Western Sea Frontier and Commander Pacific Reserve Fleet with headquarters at Treasure Island, San Francisco. Admiral Murray was assigned additional duty as Commandant 12th Naval District until relieved of that additional duty on December 8, 1948.

In addition to the Navy Cross, the Distinguished Service Medal, the Legion of Merit with Gold Star, and the Presidential Unit Citation Ribbon, Vice Admiral Murray has the Mexican Service Medal (U.S.S. *Ammen*), the Victory Medal, and is entitled to the American Defense Service Medal, Fleet Clasp (U.S.S. *Enterprise*); the Asiatic-Pacific Area Campaign Medal with Stars for the Marshall-Gilbert raids, Wake Island, Tokyo raids, the Battle of Midway, the defense of Guadalcanal, and the Battle of Santa Cruz; the American Area Campaign Medal; and the World War II Victory Medal.

Retired four-star rank.

Self-Employed Individuals Retirement Act

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, August 18, 1959

Mr. KEFAUVER. Mr. President, yesterday the junior Senator from Utah [Mr. Moss], appeared before the Senate Finance Committee in support of H.R. 10. This is the bill designed to provide self-employed persons with a voluntary pension plan similar to that now accorded employees covered by employer-financed pension, and is identical to my bill, S. 944.

I am very glad to see the able Senator from Utah giving his invaluable support to this proposal. It is a field that has been too long neglected, Mr. President.

Since the Senator from Utah presented such an excellent case for the bill, I ask unanimous consent to have printed in the Appendix of the RECORD the Senator's testimony.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR FRANK E. MOSS, DEMOCRAT, OF UTAH, BEFORE SENATE FINANCE COMMITTEE, AUGUST 11, 1959

Re H.R. 10, Self-Employed Individuals Retirement Act.

Mr. Chairman, I appreciate this opportunity to testify in support of H.R. 10, the Self-Employed Individual's Retirement Act of 1959.

On June 17 of this year, Mr. David A. Lindsay, Assistant to the Secretary of the Treasury, appeared before this distinguished committee. As spokesman for the major opponent of this legislation, he said, "The Treasury recognizes that present law does not give self-employed persons tax treatment for their retirement savings comparable to that now accorded to employees covered by employer-financed pension plans."

In view of this statement, I don't believe it is necessary for me or other proponents of this legislation to waste your valuable time discussing whether or not an inequity exists. The Treasury Department admits it.

The people of Utah are greatly concerned about this situation, and many of them representing an excellent cross-section of the self-employed farm folks, small retailers, lawyers, dentists, doctors, and many others have written me on numerous occasions urging the enactment of H.R. 10.

Naturally, they have given a lot of thought to their old age, and the vast majority of them say that they have nothing other than OASI to live on once they retire. They can't understand why they are being penalized because they are self-employed and do not work for a corporation. Gentlemen, with but few exceptions, these are the average people of my State, the middle-income group often referred to as the backbone of this great country of ours.

I am concerned about this inequity and I believe that the majority of our colleagues feel it is time to remedy it.

H.R. 10 was first introduced in 1951 and has been before the Congress for 8 years. It has always had bipartisan support from Members who feel that enactment of the bill is the best way to deal with this unfair situation.

While the Treasury Department has advanced a number of objections to the bill, their major argument is the one generally offered when all others have failed—"let's wait until the budgetary situation is more favorable for tax reduction." As part of this reasoning, they emphasize a revenue loss of $365 million, which to the best of my knowledge they are unable to substantiate. Because of my constituents' interest in this legislation, I have read a good part of the hearings on this bill and am inclined to feel that the maximum impact would not exceed $100 million the first year.

Gentlemen, I am very definitely interested in keeping our economy in a healthy state, as are all the Members of this Congress. Surely the effect of the tax loss in the case of H.R. 10 is small compared with the favorable effect it will have on the 10 million self-employed of this country.

These people are not asking local, State, or Federal governments to take care of them in their retired years. They are asking simply for a postponement of tax liability so that they may be able to set something aside for their old age. They are willing to put up the money when they are able to spare it from the demands of their business. All they are asking of us, the Congress of the United States, is that we offer them the same tax consideration that 18 million corporate employees are receiving, so that they can provide for themselves.

In my opinion, it is imperative that H.R. 10 be enacted in this 86th Congress.

Thanks for your courtesy.

Browbeating House Committee

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 18, 1959

Mr. HARRISON of Virginia. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Northern Virginia Daily published at Strasburg, Va.

Wednesday's Washington Post editorial calls the House Ways and Means Committee members cowardly for their action in opposing both the increase in the gasoline tax for interstate highway financing and the issuance of bonds to further increase the debt of the Federal Government. Such browbeating tactics are distasteful to citizens who are honestly seeking an equitable solution to the problems of government.

The Washington newspapers have a peculiar opportunity to interpret the news of the National Capital, and therefore a greater influence upon the thoughts and actions of the Government than other newspapers throughout the Nation. It is unfortunate when that privilege and opportunity is abused by tactics which smack of intimidation.

Virginia has long suffered from the invasion of its rights by attempts to impose the will of the editors of Washington newspapers upon Virginians. One of the sore spots which has existed throughout the years is the fact that Virginia has furnished national leaders who believe in sound fiscal policies, and governmental honesty in its economic policies.

The Interstate Highway System is important, but so are the highway systems of each State. If there is an increase in the Federal gasoline tax of 1½ cents this will mean the States will have to match more Federal Interstate Highway money. Where will the various States obtain their increased proportion? Certainly the States cannot add another gasoline tax increase.

The argument that the Interstate System will increase highway travel in general, and therefore gasoline taxes to pay for them is fallacious. The overall effect of the system, when completed, will be to cut mileage and reduce gasoline consumption to some small extent. There should naturally be a gradual increase in use of gasoline as the population increases, if the economy remains at its present level.

There are arguments on both sides of the highway finance question, and our Washington editor friend should not assume that all who disagree with him are cowards.

The Farmer's Public Relations

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, August 18, 1959

Mr. NEUBERGER. Mr. President, some adroit people in our country have what might be called a good press. The American farmer, of late, has been suffering what might be called a bad press. This is described in a thoughtful editorial, entitled "The Farmer's Public Relations," which was published in the Pendleton East Oregonian of Pendleton, Oreg., of August 13, 1959. The editorial admits that some farmers have been amassing considerable wealth. But the editorial also emphasizes that the average farmer has not done well, and it calls attention to the per capita income of American farmers in 1958 of only $1,027, as compared with $2,040 for nonfarm residents.

I ask unanimous consent, Mr. President, that this informative editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE FARMER'S PUBLIC RELATIONS

Practically no one at all who's interested in the subject will disagree that the present farm program isn't working as well as it should. Nor are there many, farmers included, who will disagree that it deserves honest criticism. Plenty of people, legislators among them, say they have solutions to the problem.

Too many of these so-called solutions are predicated on the theory the farmer is living in clover and Cadillacs. The answer, too many of these self-styled agricultural experts say, is to chop the farmer off at the pockets by taking away the trough into which—if you believe these pronouncements—practically every farmer has his snout.

"Pull him down to the level of the average wage earner," seems to be the theme.

Hell's fire and blue mud. If the truth were realized, any leveling-off process to bring the farmer's salary into line with his city-dwelling cousin would have to raise the farmer's income.

Last year, for instance, the average per capita income of farmers was $1,027. This princely sum compared with $2,040 for nonfarm people.

To carry this situation a bit further, those who find the farmer living exclusively off Government handouts, and who allege the price of food is soaring because of the farmer, might take a look at the investment the farmer has in his job in comparison with the investment the average Joe has in his. The price of machinery and other necessary items being what it is, it doesn't take much thinking to get the point.

No, the farmer isn't starving. In fact, he's doing pretty fair in a lot of instances, despite the drawbacks. Here and there you even find one driving that Cadillac every one of them supposedly has. The farmer isn't going to fold up, in most cases, and head for the employment office.

But unless a lot of officials, including the Secretary of Agriculture, don't start telling both sides of the story, farming is going to be the most maligned business the public has heard about in a long time.

One of the most succinct understandings of the problem was voiced by a Pendleton man who said: "I think we all understand that it is exactly that way (the farmer being pictured as on one big gravy train when that's not true) but how to get the 160 million people in the United States to understand it is one that confuses most of us."

He went on to say something with which a majority of farmers probably agree: "Of course, as we all know, our good Secretary of Agriculture has done more to publicize the farm subsidy in a bad light than any other one person that I know of. He has used this publicity to further his farm program ideas. I am not too opposed to many of his ideas and promises for solving some of our farm problems. But I am opposed to his methods of publicity in which he builds up all this bad press and public relationships for the farm people."

The same thing was said in another way recently by Ed Lawrence of Waitsburg at a public relations school for county association of wheatgrowers officials at Spokane. Lawrence is a wheat farmer and chairman of the Washington Association of Wheat Growers Committee on Public Relations. Said he, in part:

"The bombardment aimed at farmers is bewildering when you consider that net farm income slipped from $17 billion in 1952 to less than $14 billion in 1957. In the meantime labor and industry are enjoying bigger and better prosperity. The prices of farm products has declined 20 percent in a few short years and yet we're all pictured as rural tycoons.

"Agriculture is still the economic basis for smalltown America. The prosperity of Main Street merchants is largely dependent on how the surrounding farmers make out.

"We want to say that farmers aren't living high on the hog these days and that the corporation-type farm is a rarity. Most of our food production comes from middle-sized farms and they are feeling the pinch of lower prices and higher costs. And the future looks ever worse.

"We should bring out that research, which leads to higher yields, is benefiting the consumer as much or more than the farmer. If we still farmed with the techniques of 1940 there would now be a food shortage in this country and the Nation's food bill, it is estimated, would be $8 billion higher than it is now.

"It is confusing why so many writers want the farmers to get off at economy junction while most everyone else keeps riding the gravy train. I hear no viewing with alarm the fact that there is now an $8 billion pile of price-supported metals. It involves almost as much Federal funds as farm surpluses. People aren't perturbed over the Armed Forces $50 billion stockpile of manufacturer goods, which we might suspect help labor and industry. Both of these accumulations have the advantage of coming under the handy heading of 'national defense.'

"By law, 500 million bushels of wheat are supposed to be reserved for national emergency, but strangely enough no one has ever set it aside. All the wheat the Government has is called just plain 'surplus.' It's all chalked up to the account of the farmer.

"It is unfortunate that the word 'subsidy' seems to be gaining such a poor reputation. Actually there have been subsidies given to certain groups since the founding of our Republic."

There it is in a nutshell. Now if the squirrels could only be made to understand.

Polish Americans Hit Khrushchev Visit

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 18, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter to the public by Rt. Rev. L. A. Sikora, national director of the Polish American Congress:

POLISH AMERICANS HIT KHRUSHCHEV VISIT

Millions of Americans do not approve of Khrushchev's visit. Strong voices objecting are heard from the average American citizenry. Religious leaders, both Catholic and non-Catholic, voiced their strong objections. Not a few of our Congressmen and Senators do not see any benefit resulting from this visit. Six million Americans of Polish ancestry know the background of Nikita. That is why we object to his visit here. It is an insult to all subjugated nations for whom America is the ideal of democracy, a beacon of hope. We have followed the rise of bolshevism and its insidious conquests and its propaganda of infiltration.

We recall how the Soviets stabbed Poland in September 1939, how the Soviets forcibly evacuated 8 million inhabitants of eastern Poland to Siberia and to labor camps. From that time Soviet hands are covered with new bloodsheds. We remember the Katyn murder of 12,000 Polish Army officers. Our own congressional investigating committee made a report on July 1952, calling it the most inhumane massacre of our times.

The defense of Warsaw and the infamous stalemating of American aviators by the Soviets is well known. The subjugating and absorbing of Estonia, Latvia, Lithuania, and other small nations has shocked the American public. It is not revenge that we seek, but the correction of injustices and the return of freedom and liberty to the nations in bondage, conquered and occupied by the Soviets.

We feel this more keenly because this invitation came so soon after Mr. NIXON'S visit to Poland, where he was received with such great enthusiasm as a representative of our great democratic Nation. America is the only ray of hope for Poland in this bewildered world. United States of America is their only beacon of freedom. At the American Embassy, Mr. NIXON told the Polish people that he was happy to visit Poland and that relations between our countries have improved and that "we" are working together in the economic area.

After placing a wreath at the Polish Unknown Soldier's tomb, Mr. NIXON wrote in the guestbook: "In tribute to the epic courage and sacrifice of Polish soldiers throughout history." Here a great crowd broke out in emotional shouts: "Long live NIXON. Long live Eisenhower. God bless America." And next day we hear of the invitation extended to Nikita Khrushchev. We fear another Yalta, when Stalin, Roosevelt, and Churchill sold Poland and other nations down the river. One could not do business with Stalin, nor with Hitler, nor can one do business with Khrushchev, who is their natural offspring.

One cannot argue, neither can one convince those international evildoers, set on the conquest of the world. To fight evil, we must be strong, we must pray as we combat moral evils by vigilance and prayer fortified by fasting.

On the vigil of the 20th anniversary of the outbreak of World War II, may we be vigilant, firm with Nikita Khrushchev, and pray that some good may result.

Rt. Rev. L. A. SIKORA,
National Director, Polish American Congress.

Tribute to Judge Clem McClelland

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, August 18, 1959

Mr. JOHNSON of Texas. Mr. President, recently the Houston Chronicle gave recognition to a distinguished jurist and civic leader of Houston, Tex. He is Judge Clem McClelland, who has been judge of the Harris County probate

court for over 9 years. Judge McClelland was appointed to the court shortly after it was created in 1949, and has been elected four times since then, without opposition.

Judge McClelland is widely known and respected for his ability and his compassion.

Mr. President, I ask unanimous consent that an article from the Houston Chronicle of August 14, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEIGHBOR OF NOTE—JUDGE GIVEN COLD WELCOME

(By Bill Porterfield)

It was a freezing New Year's Day, 1940, when Clem McClelland came to Houston to make his mark.

He had a new law degree, and the high dreams of all young men who find themselves searching the great stone faces of the cities. The thought of failure never entered his head.

The towering figure of the Georgia boy appeared at law offices throughout the city, only to be turned away.

Such jobs were scarce, he was told. There was war in Europe.

SAW MOVIE

McClelland bought a paper and read that Finnish ski troops were mopping up Russians on the Arctic front. The new year looked dreary, but only for a moment. McClelland threw the paper in a trash can and went to see Wallace Berry in a movie at the Uptown.

Four months later after filling part-time jobs, McClelland opened his first law office in the then Second National Bank Building, hired a secretary, and started looking for clients.

He married the former Doris Cook, a legal secretary, in 1941.

People in trouble found McClelland to be sympathetic, hardworking and honest. He had one other qualification. He knew law.

In 1947, County Judge Glenn Perry, bogged down in the disposition of probate matters, hired McClelland as an assistant. McClelland buried himself in a study of probate law, took the load off Judge Perry.

APPOINTED TO BENCH

In 1949 the legislature created the first probate court in Texas history.

McClelland was appointed to the bench of the new court here.

He was sworn in January 3, 1950, exactly 10 years and 2 days after setting foot in Houston.

McClelland has held that post through four elective terms without opposition.

He has been a force in overhauling antiquated State probate statutes.

Ask him how he feels about being a judge, and he may tell you, Sir Thomas Noon Talfourd once wrote:

"Fill the seats of justice with good men, not so absolute in goodness as to forget what human frailty is."

McClelland has said he learned tolerance from his father, now a professor at the University of Arkansas.

He was inspired to enter the law profession by an uncle, a successful attorney in McClelland's birthplace, Griffin, Ga.

McClelland did undergraduate work at the University of Arkansas and completed his law degree at the University of Texas.

Off the bench, Judge McClelland is a tireless civic and fraternal leader. At present, he is illustrious potentate of the Arabia Temple Shrine, a member of the city's youth commission, a member of the Masonic Lodge and the Scottish Rite bodies, and the First Presbyterian Church. He is also active in Little League baseball.

The judge lives at 4514 Ivanhoe with his wife and three children.

Lake Diversion

EXTENSION OF REMARKS
OF
HON. CHARLES A. BOYLE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. BOYLE. Mr. Speaker, the Senate Public Works Committee has voted out the O'Brien bill, H.R. 1, and in considering the merits of this piece of legislation a recent editorial appearing in the Chicago Tribune should prove both informative and instructive in evaluating the meritorious request for additional water from Lake Michigan on a 1-year trial basis.

[From the Chicago Daily Tribune, Aug. 17, 1959]

COMING TO COURT WITH CLEAN HANDS

The Senate Public Works Committee is to vote Monday on legislation authorizing Chicago to divert an additional 1,000 cubic feet of water a second from Lake Michigan for purposes of improved sanitation and navigation. This authority, already voted by the House, is on a 1-year experimental basis. The additional water would supplement the present authorized diversion of 1,500 cubic second feet.

We trust that the committee itself will not be diverted from Chicago's pressing needs into consideration of the emergency that has arisen at Milwaukee through pollution of the lake. All of that city's lake beaches have been ordered closed because effluent from the Milwaukee sewage treatment works has made the lake a "cesspool," as conditions are described by the Milwaukee health commissioner.

Not that Milwaukee's difficulties are not relevant to Chicago's petition for more diversion to help its sewage treatment program. Milwaukee and the State of Wisconsin have been the most vociferous opponents of help for Chicago. Their spokesmen have represented the Milwaukee treatment program as perfection.

In view of the conditions that have developed on the Milwaukee lake front, we believe it pertinent that the Senate committee review some of the Wisconsin statements and objections to determine whether they are truthful and were made in good faith.

Here is a statement from Oscar Muegge, Wisconsin State sanitary engineer: "Records of the Milwaukee sewerage commission show that the effluent of adequate, properly operated activated sludge plants will contain less than 5 percent of the bacteria initially present. Laboratory tests further show that pouring disinfectants 4 parts per million with 8 to 10 minutes' contact will reduce the bacteria remaining to one-half of 1 percent or less * * *. There is every reason to believe that equally effective purification could be obtained at Chicago."

But Milwaukee bathers are warned that to enter the lake from which Milwaukee obtains its drinking water may expose them to typhoid or amoebic dysentery.

Gov. Gaylord Nelson of Wisconsin charged in his statement that Chicago "held down taxes by drifting along with an outmoded sewage disposal system." Yet the Milwaukee health commissioner, Dr. E. R. Krumbiegel, conceded that it would cost $500 million to eliminate pollution at Milwaukee. He termed the remedy "economically impossible."

Mayor Frank Zeidler of Milwaukee offered facts which he asserted proved that Chicago's sanitary district "is not taking enough vigorous steps to reduce industrial pollution and * * * has not operated its works at greatest efficiency." He held up the threat that it might be necessary to federalize the Chicago sanitary system. What are the mayor's views about the desirability of federalizing Milwaukee's sanitary system, now that it presents a menace to public health?

Senator WILLIAM PROXMIRE, in his testimony, displayed a jar of liquid taken directly from the pipe the effluent goes in at Milwaukee. He said, "I understand that some people drink this. I am not going to drink this this morning, but I would like to show it to the committee because, as you can see, in the first place it is transparent, there is no color to it. In the second place, this is sealed, but I can assure you there is no odor. It is stable, and we discharge that effluent within a couple of miles of where we take in our drinking water."

The Senate committee should require Senator PROXMIRE to demonstrate his faith by drinking this Milwaukee tonic. From the character of all this Wisconsin testimony, it should be able to establish whether the attack of that State and of the city of Milwaukee on the Chicago diversion plea is honest. Then it should vote Chicago the help it needs to prevent a repetition of the Milwaukee experience.

A Parent's Responsibility

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES

Tuesday, August 18, 1959

Mr. JOHNSON of Texas. Mr. President, the Wichita Falls (Tex.) Record-News is known for its fine reporting and distinguished editorials.

Because of my interest in the problem of juvenile delinquency, I took a particular interest in an editorial entitled, "A Parent's Responsibility," which appeared in that newspaper on August 13, 1959. This editorial takes a close look at the meaning of the word "discipline" and I think it shows clearly that freedom and discipline can be properly balanced, and that this is in a child's best interest.

Mr. President, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A PARENT'S RESPONSIBILITY

It's an old story that people in this country love children. It's also getting to be said a little too commonly that Americans are ruled by their children.

No one can quarrel with the basic feelings and attitudes that prompt deep concern with the wellbeing and future of our youngsters. Yet some observers do question whether enough of us act upon that concern in the most sensible way.

They argue, to start with, that it is a mistake to "live for the children" almost entirely, as some parents seem to do.

Any human being worth his salt must have a life of his own. He does not exist merely to guide and provide for his children. He has a responsibility to himself, to develop his personal interests and talents for his own as well as others' enrichment.

Suppose he chooses to live for the kids alone, and they in turn do the same as they grow up. This means that individuals are being born and raised to bear and raise others, and so on, without end.

While this may sound wonderfully unselfish, observers will contend with good sense that it takes too much of the self out of life. If your own individuality is served only when you are young, then your maturity is nearly empty of meaning to you.

Nor, it is argued, is it necessary to the proper development of children that they be given so much room to roam in free of restraint.

A notion has grown up that the ordinary disciplines are somehow old fashioned, that the big thing is to let the child exercise his own free will, to show his creative possibilities, etc.

When discipline does in fact go out of fashion, life will have fallen into complete chaos. Children need much love and encouragement and free rein. They also need the tight rein, and many, many hard lessons. If they do not learn them when they are young, they will suffer them bitterly when they are older.

Parents who do not provide the hard as well as the loving guidance do their children no real favor. They simply pass to the children themselves, and others in society, the painful tasks of training for life's realities.

Rather than living for our children, it seems a better idea to learn to live well for ourselves.

Aid Program in Vietnam Not a Fiasco

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 18, 1959

Mr. ZABLOCKI. Mr. Speaker, on July 30, 1959, I had taken the floor to advise the Members that the Subcommittee on the Far East and the Pacific of the Foreign Affairs Committee would hold hearings to be fully briefed on the situation of our aid program in Vietnam, with particular reference to the series of articles written by Mr. Colegrove and appearing in the Scripps-Howard chain.

The hearings conducted by the subcommittee on the Colegrove articles were completed last Friday, August 14, and at that time I issued the following statement:

The Subcommittee on the Far East has been conducting a continuing review of our aid programs in the area under the subcommittee's jurisdiction. In an effort to be fully informed about progress achieved in this field, the subcommittee has conducted on-the-spot investigations, and supplemented them periodically with hearings.

The U.S. aid program in Vietnam, being within the area of the subcommittee's jurisdiction, has received close and continuing attention.

The series of articles which appeared recently in one of the local newspapers, alleging that the aid program in Vietnam is a fiasco, and that the administration of that program has been fraught with corruption, mismanagement, and other abuses, has received the subcommittee's immediate attention.

After reviewing these charges in an executive session on July 27, the subcommittee decided to examine them thoroughly. The author of the charges, Mr. Albert Colegrove, Government officials responsible for the administration of the aid program in Vietnam, and other interested persons were invited to testify before the subcommittee.

The hearings which the subcommittee has conducted have thus far failed to bear out the charge that our aid program in Vietnam is a fiasco, and that it has been administered in a scandalous manner.

These accusations, as well as specific charges of wrongdoing, have not been substantiated to date. Many of these charges have been traced to sources which I, for one, must regretfully consider to be less than reliable.

In contrast, the testimony which the subcommittee received from reliable observers who had first-hand knowledge of the aid program in Vietnam, and from executive branch witnesses, indicates strongly that the aid program in Vietnam has been constructive, successful, and responsibly administered.

Because of its desire to be as thorough as possible in examining Mr. Colegrove's charges, and to correct any weaknesses or waste in the aid program, a special study mission of members of the Foreign Affairs Committee, headed by Congressman PILCHER, Democrat, of Georgia, will conduct an on-the-spot investigation of certain items which have not been substantially explained.

The results of the subcommittee's inquiry and its findings will be referred to the Special Subcommittee for Review of the Mutual Security Programs for further examination and appropriate action by that investigating body.

The Atlantic Congress in London

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, August 18, 1959

Mr. KEFAUVER. Mr. President, one of the U.S. delegates to the recent Atlantic Congress, which met in London last June, was the Reverend Alan J. Davis, minister of the North Royalton Methodist Church, North Royalton, Ohio.

Reverend Davis has sent me five articles which he wrote for the Cleveland Press giving his impressions of the congress. Reverend Davis points out that "The NATO countries must develop into more than just a military alliance."

Mr. President, I ask unanimous consent that the articles be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

ARTICLES IN THE CLEVELAND PRESS REPORTING THE ATLANTIC CONGRESS IN LONDON

(By the Reverend Alan J. Davis)

AREA PASTOR WRITES OF HIGH HOPES AS DELEGATE TO NATO CONFERENCE JUNE 8, 1959

Members of NATO must tighten their political ties to fight communism successfully, Editor Edward J. Meeman of the Memphis Press-Scimitar told the Atlantic Conference today.

"Hitler would never have struck if the Western democracies had been unified," the Scripps-Howard editor told the 650 delegates.

Of that total, 130 are from the United States. We Americans have been divided into 5 study groups to look into the economic, educational, cultural, scientific, and political cooperation among the 15 nations making up the alliance.

The Atlantic Congress was designed to evaluate the worth of NATO from a nonmilitary point of view. In my study group—the cultural and spiritual committee—are a priest, a rabbi, a college president, and leading laymen of three faiths.

On the plane trip to London, I sat next to economist Leon Keyserling, and while we were winging over the Atlantic at 19,000 feet, I asked this well-known economist what he expected the Atlantic Congress to accomplish.

He said he did not expect it to accomplish many specific things but that there was great value in bringing together 650 citizens to exchange views and to make personal contacts.

NATO is thought generally to be merely a military alliance; it is much more, as this Congress hopes to dramatize.

Fourteen years ago to the very week, I had arrived in London on furlough from Germany. V–E Day and touched off wild celebrations among the Allies. The war had been won.

In the intervening years we have found ourselves in a cold war with a new foe.

ATLANTIC CONGRESS STRESSES SPIRITUAL VALUES
JUNE 10, 1599

The Atlantic Congress, meeting here to assess the value of the NATO alliance, has listed my study group—"The Spiritual and Cultural Values of the Atlantic Community"—as "A–1." What designation could be higher?

The value assigned to us symbolizes the effort made by congress leaders to keep values straight.

These spiritual and cultural values were discussed by Queen Elizabeth in her address to the 650 delegates meeting from 14 of the NATO countries. (Iceland refused to send delegates because of its differences with Britain over fishing rights in North Atlantic waters.)

Said the Queen:

"Two elements have long been the main principles of enlightened European thought and action: Respect for the freedom of the individual and the dignity of human nature and a simple faith in God.

"These principles show more clearly than anything else that the things which divide us are very small and unimportant compared to the things which unite us."

An A–1 speech.

Incidentally, I wondered if the Queen wrote her speech or whether she was told what to say—as is the case when she delivers messages from "Her Majesty's Government."

My new-found British friends were of the opinion that she indeed had spoken her own thoughts, but that she had consulted her husband and advisers before addressing us.

The Congress also heard the Archbishop of York, who also stressed spiritual values. He said:

"We turn to those things first which are not transient but eternal—the things of value that point beyond themselves to a source of divine power."

Again, an A–1 message.

Attending these congress sessions with me are six other delegates from Ohio: Miss Sally Sue Witten of Cleveland, who represents the Girl Scouts; Congressman Wayne Hays (Democrat, Flushing) cochairman of the meeting; Congressman Walter H. Moeller (Democrat, Lancaster); Prof. Howard White of Miami University; Prof. Earl Warren of

Ohio Wesleyan; and Mrs. Eleanor Stevenson of Oberlin.

London, we have already found, is a fascinating city. But I find one thing lacking—drinking water.

British restaurants do not offer you a glass of water unless you ask for it. Public drinking fountains are scarce, althought there are plenty of places you can quench your thirst in other ways.

So I'm always looking for a glass of water.

AREA MINISTER WANTS CONSCIENCE IN NATO
JUNE 11, 1959

Our subcommittee here at the Atlantic Congress—on the spiritual and cultural value of the NATO alliance—is concerned with the interpretation which non-NATO countries will place on the purposes of the general meeting.

We know that the congress, made up of 650 delegates, is designed to assess the nonmilitary aspects of the alliance. But what will others think of us?

We want to set forth a statement of spiritual ideals that will capture the minds and hearts of the entire world—especially those people in underdeveloped areas where freedom of the individual is still a vision in the future.

I have been reading reports of how this Atlantic Congress is being interpreted by the Communist press. In its view, the congress is an act of aggression in the cold war.

In an attempt to reach our goal and formalize our statement, I made two speeches in committee debate.

The first was a call to implement the spirit of the NATO community by establishing a permanent section in this organization to serve as the conscience of the Atlantic community.

I told of the recent Indianapolis auto race in our country. After months of preparation the starting time was approached; the gun sounded, the cars sped down the track—all except one that did not move. It was left sitting at the starting line.

NATO can be like that unfortunate car if we are not careful. The structure looks fine. The spirit is there to drive it ahead. But the power must be communicated to the rest of the mechanism if it is to move.

We must prepare to implement our statements of ideals and principles in a way that they may be brought directly to bear on the larger decisions of NATO.

In the second speech I objected to the way concern for trade unionism and assistance to underdeveloped nations were always referred to as the great issues before our committee. It seemed to me the great moral and spiritual issue we were ignoring was NATO's own dependence on atomic weapons.

I argued for a statement in our declaration that would clearly say that we were against the irresponsible use of the armaments of war and uncompromisingly concerned solely with the preservation of peace.

This brought some applause, even from those who probably were not sure just what I had said.

After the evening session I talked with Maurice Van Glabbeke, of Belgium, a member of Parliament. He said, in French, "Let me shake the hand of Reverend Davis, who is from beautiful Ohio."

He had been in Cleveland, he said, at the time of the tragic Cleveland Clinic fire. But from that disaster, laws to regulate hospital safety were enacted all over Europe. He has always given Cleveland credit for this.

MANY FEEL GLOOMY ON NATO, JUNE 12, 1959

As the Atlantic Congress nears its final meeting, I and others among the 650 delegates sense a growing pessimism.

We doubt if NATO as a military structure is strong enough to defend the free world if suddenly attacked.

We also doubt the depth of the friendship we have been counting on from our NATO colleagues.

There is a growing nationalism in Europe reflected here. Even the smaller countries like Denmark and Belgium feel no great dependence upon America, even though we have so greatly assisted them in rebuilding their countries.

I spoke today of this problem with former British Prime Minister Clement Attlee. He senses the same shift in European opinion. "Let America help us," people are saying, "but don't think she can buy our friendship."

The delegates, who last night saw the hit play "My Fair Lady," today have whistled "I Could Have Danced All Night"—one of the songs from the show—but it's just whistling in the dark if we think all's right with NATO.

THREE GOALS DIRECTED TO NATO, JUNE 17, 1959

Circling the domed ceiling of the assembly hall where the Atlantic Congress met were these words etched in gold leaf: "Holy is the true light and passing wonderful, lending radiance to them that endured in the heat of the conflict."

How much true light came from the Congress?

In his closing remarks J. J. Fens of The Netherlands, the presiding officer, rightly said that only history can judge. But we have outlined a program for NATO to follow in the next decade. It is now up to the Parliamentarian's Conference to implement these plans.

As I view it, three concerns have emerged:

The NATO countries must develop more than just a military alliance. There must be much greater integration of our political, economic, and cultural interests if we are to build an Atlantic community.

There must be intensified efforts to help the underdeveloped areas of the world help themselves.

Excessive nationalism on the part of NATO countries must not be allowed to confuse our common goals.

So the Congress has ended. The 650 delegates are scattering to their homes.

The most amazing fact of the conference to me was this: the total cost to the international committee of the Atlantic Congress equaled the price of one helicopter or two-thirds the price of one military tank.

Lush Living in Vietnam

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 18, 1959

Mr. ZABLOCKI. Mr. Speaker, the Foreign Affairs Committee has received a letter from Mrs. James W. Bayne of Nha Trang, Vietnam, addressed to the U.S. House of Representatives.

Since it is the reply of an American citizen living in Vietnam to the charges of lush living in Vietnam, under leave to extend my remarks I include the letter and commend it to the attention of the Members of the House.

BOITE POSTALE 70,
NHA TRANG, VIETNAM,
August 10, 1959.

U.S. HOUSE OF REPRESENTATIVES,
Washington, D.C.

DEAR SIRS: As I read "The Times of Vietnam" I get angrier by the minute. This Colegrove fellow and his articles are truly to be deplored. I am an American housewife, and have been here in Vietnam since June 16 and though I don't pretend to know all the answers, as evidently Mr. Colegrove does, there are a few things I do know firsthand for a fact, and they are:

Any American child of schoolage here pays $100 for 3 months of school. We have three children. It is a known fact here that there are three prices for anything bought, a regular price for the Vietnamese, a bit higher for the French, and the prices are doubled or tripled for the (rich) American. My husband makes $650 base pay a month, and we, as his dependents are allowed over here, paying our own way to the tune of over $1,500 (after first depositing $2,000 for guarantee fare home). We pay $170 a month rent plus utilities, we have cement floors in our bedrooms and kitchen, have to carry water from the sink to the washing machine (when the well is dry we carry it from the neighbors), and the city electric is so minute that the refrigerator drips all the time. Our food we buy at the American Commissary in Saigon and have it flown up to us. The only one time we have had lettuce we had to buy 6 heads it was so rotten. (We can't eat local lettuce as we'd get the bug—which is a serious case of dysentary.) I was able to make one small bowl of salad. I haven't received the bill as yet for that rotten lettuce but just you figure it out, how much would you say it's going to be? I'm not griping about all this with the exception of the school. Since we left Saigon before the school term began we got our money back, but those Americans in Saigon are still paying—having to pay through the nose for schooling. Now we have sent for the Calverts course ($125 per child), and I'll have to teach the children myself. We pay taxes on three pieces of property in California, but now I ask you if this wouldn't make you angry? I'm not against lend-lease, but how about some of our money we are sending you in the line of taxes going for some schooling for our own children here? I pick up the paper and read Mr. Colegrove's preposterous allegations—can't something be done in regards to newspapermen?

To be an attorney, one must pass the bar exams and abide by rules. To be a doctor, one must first pass a test. Even to operate an automobile, one must pass a test and abide by rules which are made to protect others. These things are so for the good of all—then why not a few rules for the press? To me I think this especially essential since the privilege of reporting actual facts in these crucial times should not be let to just anyone. If ever in the past it were true that "these are the times that try mens' souls," it, as never before, is true now. And of a certainty the American press, what they say and their opinions are repeated the world over. These people believe in us and look to us as their savior, and it is a very sad day for us, as Americans, when we take lightly our responsibility toward them. I have lived all my life in the United States and had never realized before how some other people live. Not only in poverty but in fear. To these people death, sickness and want are common, yet their tears are as real as yours or mine. Truly we owe them more than half-hazard reporting. My husband works for Johnson Drake & Piper of Vietnam, Inc., building a road here, and if there is lush living I haven't seen it. He leaves the house at 4:45 a.m., and comes home at 5:15 p.m. He works 6 days a week. And there are few recreational activities here. One single feature movie on Saturday and one on Sunday night, both of which are shown at a friend's house. There are four eating places here. At one place the flies are so thick they blacken their displayed wares. (They tell you if you go

at night you don't notice them so much as you eat by candlelight.) One other is owned by a man who was convicted of serving cat and dog in his cafe in Choln, and the other two are fairly clean. But we live lush, do we? Mr. Colegrove must have had a 5-day visa. Please, a few rules for better reporting.

Sincerely,

Mrs. JAMES W. BAYNE.

Some Reflections on a Trip to Russia

EXTENSION OF REMARKS

OF

HON. NORRIS COTTON

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Tuesday, August 18, 1959

Mr. COTTON. Mr. President, Donald E. Cummings, the son of Mr. and Mrs. Eustace H. Cummings, of Lebanon, N.H., is a young man who grew up in my hometown, graduated from Harvard and Tuck School at Dartmouth, and is a successful businessman in New York. He has recently written a report on his travels in Europe entitled, "Some Reflections on a Trip to Russia." Included in this report is a very striking and clearly phrased reference to the effect of 30 years of socialism on the Scandinavian nations. I commend this brief, well-written article to the attention of my colleagues in the Congress and ask that it be printed in the Appendix of the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

SOME REFLECTIONS ON A TRIP TO RUSSIA

(By Donald E. Cummings)

A visit behind the Iron Curtain is quite an experience—stimulating, enlightening, disheartening, frightening. It was my privilege to be invited to accompany a group of business leaders from Michigan (including my brother) on a visit to Moscow, Leningrad, and Prague, in addition to several Western European cities, for a tour emphasizing a look at industry abroad. With the assistance of American Embassy representatives and local civic and industrial leaders in each of the cities, we were treated to factory visits, lectures and informal talks by qualified officials, as well as a personal look-see at economic and social conditions in free enterprise, socialistic and communistic nations. Recognizing the fact that a quick visit cannot make one an expert on the affairs of Europe, I nevertheless feel that some of my observations, culled from discussions with these individuals, could be of interest or value to others.

The European Common Market Community, comprised of Belgium, Holland, Luxembourg, West Germany, France, and Italy, presents a very encouraging prospect for the future of these nations in solving some of their individual economic problems by pooling their resources and coordinating their endeavors. To have stifled their long-founded and understandable emotional differences sufficiently to permit this joint effort to develop is a great credit to the nations involved. It is not inconceivable that other Western European nations may finally join the Common Market, and the strengthening of their economic position thereby should constitute good news to our country, which has long sponsored reconstruction programs abroad. The obvious hope is that political joint ventures might grow from this cooperation, but the age-old resentments, the pride of language and customs of sovereignty, the evident urge to protect their unique identities—these comprise strong forces which will probably never permit a situation where, for example, a German might enjoy lawful jurisdiction over a Dutchman. To observe the consequences of the wars and the hatred that developed from the personal and public atrocities wreaked by one people upon another, is to learn understanding and patience for the very real problems these nations face as they strive to deal cooperatively with one another without sacrificing national pride, searching out for themselves a worthy place in a small world of great powers.

The Scandinavian nations after more than 30 years of socialism do not present an enviable picture, despite the pleasantness of these especially appealing people and the admirable program of modest security for the aged which our group surveyed. A national lethargy has developed with the passing of real incentives to work, and the oppressive tax program, now necessarily being levied in full force on the average earners, makes for general discontent, embodying at present a serious problem for these countries. Our own legislators might well be better informed on the dangers of the welfare state and better equipped to vote on related programs if they paid a thoughtful visit to these countries.

The Soviet citizens we encountered informally are as nice as any group of human beings, yet there is no question but that they are fully oriented to respond automatically, as one, to any edict from the hierarchy. Not being satisfied merely to follow the program laid out for us by the Soviet Government travel bureau, Intourist, I wanted to see how the middle class people lived and what they were thinking. Finding the means to slip away from our official watchdog guide, I succeeded in spending 1 full day in the company of Russian students from the University of Leningrad. Education, particularly scientific education, is greatly emphasized in urban Russia, and correspondingly neglected in satellite nations such as Chezchoslovakia. I learned that a man's suit of clothes costs about 2 months' average wages; I ate poor food with these students in a public restaurant where a meal for four cost the equivalent of 10 percent of the average Russian's monthly pay. Against official instructions, they took me to their parents' apartments where I found several families sharing apartments built many years ago to accommodate a single family. A professional photographer for a national magazine, his wife and 20-year-old son live in one room, sharing kitchen and toilet facilities (without bathtub) with 2 or 3 other families. Their homes can easily be likened to a slum apartment on Manhattan's lower East Side. It is small wonder that as they engage in one of their few means of recreation—walking along the sidewalk—these people present such a drab, unpressed, unwashed, slovenly appearance.

Virtually all women in the Soviet Union work laying brick, digging ditches, spreading concrete, driving steam rollers, while their younger children are trained in pioneer groups—described to us by our Intourist guide as "away at camp." Uninformed, innocent and naive, Soviet citizens believe they are free, for they cannot recognize that conditions they have so long dealt with constitute for them an absence of personal freedom. They are conditioned to privation, confident that their only hope for protection against the imperialistic intent of capitalistic exploitation lies in their faithful obedience to the directives of their champion leaders. They want peace and friendship, but this is only a dream, and they must be militarily strong to defend themselves against attack from the atomic bases with which the Americans have surrounded them. They strive resolutely toward 1965 when, they are told, the 7-year plan will bring consumer goods into their lives. Dissenters are few and dare not talk; to think they could revolt is folly.

These ordinary folk will never travel far from home—the Leningrader is unlikely to be afford an opportunity to see how Moscow has been dressed up as the Soviet showplace while impoverished Leningrad has been neglected. But the young zealots and party faithful will be treated to a Moscow trip as a prize and, simultaneously, for further subtle indoctrination. In the cultural exchange program, the visitor to the United States will be the carefully selected, dedicated, 100 percent indoctrinated Communist, whose faith in the Soviet command is his only religion. This visitor can view and still not see, so conditioned is his mind. No basic discontent can be expected to grow from his exposure to the comparative wealth and freedom of the U.S. average man, for he is equipped and trained to believe only what he is told by given authorities. The high-ranking Soviet official, however, is to my mind no dedicated idealist. He is strictly a power-hungry individual, taking full advantage of his position to add to his own ugly record. This is the man who should, I suggest, be invited to make a free style visit to our United States, where with his discerning eye he may reappraise his careless opinion as to the strength and determination of a truly free society, in order that he may return sufficiently better informed from personal observation to make him more wary of undertaking irretrievable steps.

The Soviets' campaign to promote trade with the West was vividly emphasized in the course of our meeting with a ranking authority of the Ministry of Foreign Trade in Moscow. It is significant that this is the area of officialdom to which they chose to expose us, and the message they pressed was the supposedly simple question of, "Why won't you trade with us—we are anxious to trade with you." They are very pleased to note that Great Britain has already signed an agreement for limited trade with Russia. On visiting the Volman Machine Tool plant near Prague in Czechoslovakia, our group was particularly forceful in plying questions which brought to the front such facts as—

(1) Management of industry is appointed by and reports to a central Communist party body;

(2) The workers of a plant are organized into a so-called trade union specifically to keep them under control by management-appointed officers; it is these officers who answer to management on questions of productivity within the plant and who dispense discipline on the everyday level to the workers;

(3) No one is free to leave his work without permission, and obtaining reassignment is an involved and lengthy process which may or may not come to fruition.

It appears likely that the near-slave labor output sphere will eventually be widely competing abroad with U.S. production. The European Common Market Community, with its developed steel program, is also an economic force that will need to be considered. Our powerful figures in organized labor, who are certainly more socialistic than democratic, may insidiously lead our inflated economy to a point where our strong competitive position will deteriorate and economic defeat will pave the way for the comparatively peaceful spread of communism in the world. Our average citizen, supporting the wage-price spiral and ultimately undermining our international competitive strength, could turn out to be the unwitting

handyman of men like Nikita Khrushchev. This is the terrifying picture that sticks in my mind—the proposition which I believe deserves serious cogitation by all of us, particularly at this time of rising stock market activity and of seemingly unlimited economic growth in our country.

Mr. G. J. Watumull, East-West Symbol

EXTENSION OF REMARKS
OF
HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Monday, August 17, 1959

Mr. BURNS of Hawaii. Mr. Speaker, on Monday, the 17th, I inserted in the RECORD a brief history of the Watumull Foundation, including a capsule account of some of their activities. Later on the same day I received information that the founder of the Watumull Foundation, Mr. G. J. Watumull had passed away.

From Hawaii's largest evening newspaper comes an editorial which I include herewith for printing in the RECORD. The editorial is a fitting tribute to the story so often written in the pages of America's history of the land of opportunity that is the United States, and the remarkable and splendid people who have contributed so much because they had benefited so greatly.

Mr. G. J. Watumull is indeed an inspiration to those of character and integrity who possess ability and determination. His life is in the best traditions of America and a convincing proof that America is still the land of opportunity for those who are willing to set their sights on a star. Mr. Watumull's philanthropies light the way for others.

The editorial follows:

HE FOUND SUCCESS AND FRIENDSHIP IN HAWAII

Hawaii mourns today the death of G. J. Watumull, 68, businessman, philanthropist, and civic leader.

His early life in his native Hyderabad, India, was one of struggle and hardship following an accident which incapacitated his father.

He managed to complete a 2-year engineering course and was working on an irrigation project in India when and older brother, Jhamandas, called him to Hawaii in 1917 to take over management of a small oriental goods store he had established in Honolulu.

The East India Store prospered and, later known as the Watumull Stores, expanded. The Watumull family acquired other business interests. As Mr. Watumull took an increasingly lively interest in civic affairs, he saw many educational and cultural opportunities to share his good fortune.

And so, in 1942, the Watumull Foundation was created. It has given help to such institutions as the Honolulu Academy of Arts and the Honolulu Symphony. It has helped to educate Indian students. It has helped to provide American-Indian lecture tours. It has encouraged birth control in India.

Mr. Watumull lived to see the achievement of two of his most cherished goals—Indian independence, and a new naturalization law giving Indians the privilege of becoming naturalized American citizens.

Mr. Watumull had taken out his first citizenship papers in 1922, but the Oriental Exclusion Act blocked his naturalization at that time. When the naturalization laws were amended in 1946, he was the first Indian to achieve American citizenship.

Much of his civic work was in the field of international understanding. He was a valued member of the World Brotherhood organization and a life member of Lions International. He participated actively in the recent East-West Philosophers' conference at the University of Hawaii.

His high moral principles, his unassuming, cultured, friendly demeanor won him the admiration and respect of all who knew him.

Here was a man of exemplary character who, from humble beginnings, achieved material success and generously shared the fruits of his efforts in projects for the cultural enrichment of his neighbors and the educational advancement of talented scholars.

Hawaii owes much to G. J. Watumull, not only for his philanthropies, but for the example he has set in personal achievement and in East-West friendship.

Retirement of Dr. Alfred Hall as Director of Forest Products Laboratory

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, August 18, 1959

Mr. NEUBERGER. Mr. President, on August 31, 1959, Dr. J. Alfred Hall will retire as director of the Forest Porducts Laboratory in Madison, Wis.

Al Hall has had a distinguished and a varied career, so there is little I can say on this floor of the Senate which will add to the luster of his accomplishments.

As a native Oregonian, I am proud that Al Hall has adopted our State. He served long and well as the Forest Service research director in the Pacific Northwest. His selection of Oregon for his permanent home speaks well of the attractiveness of Oregon and for the judgment of Dr. Hall.

I am doubly pleased today because I can announce that a native Oregonian, Dr. Edward G. Locke, will become the able new director of the laboratory.

The Forest Products Laboratory is one of our most important forestry research centers. It has and will continue to make outstanding national contributions to better wood use.

My warm compliments go to Dr. Hall for a pleasant and rewarding future. To Dr. Locke go my congratulations on his new position, and my best wishes for the success I know he will have.

Mr. President, I ask unanimous consent that an informative article from American Forests for August 1959, be printed in the Appendix of the RECORD. The article is entitled "Locke Succeeds Hall at Madison Lab."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LOCKE SUCCEEDS HALL AT MADISON LAB

The U.S. Forest Service will lose one of its most colorful directors on August 31 when Dr. J. Alfred Hall retires from his post as head of the world-renowned Forest Products Laboratory in Madison, Wis. Dr. Edward G. Locke, chief of the institution's division of wood chemistry for the past 8 years, will be the new director.

The retiring director plans to settle in Portland, Oreg., so that he may specialize in "duck hunting on the Pacific flyway." Informed sources hint, however, that he may soon become a consultant for one of the Nation's largest industrial forestry firms.

Dr. R. E. McArdle, Chief of the Forest Service, expressed much regret over Dr. Hall's sudden decision to retire, saying, "During Al's tenure as director, the laboratory made significant progress, especially in the development of the cold soda pulping process. We are looking forward to continued achievement under Ed Locke, an eminent scientist in his own right."

The cold soda process is one of the most important pulping developments in recent years because it permits much greater use of low-grade hardwoods for the production of newsprint. The process is already in commercial use at the Bowaters plant in Tennessee and the Coosa River mill in Alabama. For this achievement the Pulp and Paper Division of the Forest Products Laboratory received a distinguished award, the first such award ever given to a governmental unit.

In addition to paper research, the laboratory also covers all aspects of timber utilization, from harvesting and milling to construction, engineering, preservation, packaging, seasoning, gluing, and laminating, chemical processing, and related fields.

Dr. Hall retires as the fifth director in the nearly half a century that the laboratory has been in existence. He began his Forest Service career in 1930 as a biochemist specializing in resin production of southern pines. At that time he predicted the conversion of the naval stores industry's 1,000 or more individual fire stills to the present-day centralized steam distillation plant with its superior product.

After tours of varying duration in the California and Central States Forest Experiment Stations, Dr. Hall served as a research specialist in the Washington office of the Forest Service during the World War II days, and then became director of the Pacific Northwest Forest and Range Experiment Station.

Dr. Hall is a native of Paoli, Ind. He attended Earlham College, Indiana University, and the University of Wisconsin, receiving the B.A., M.S., and Ph. D. degrees in biochemistry from the latter institution.

Dr. Locke is a native of Portland, Oreg. He majored in chemical engineering at Oregon State College, and received a Ph. D. in organic chemistry from Ohio State University in 1932. After several years as a chemist for the Ohio State Highway Commission, he became assistant professor of chemical engineering at Oregon State College, serving also as technical advisor for the Oregon Forest Products Laboratory. From 1942 to 1944 he was a chemical engineer in the Bonneville Power Administration.

Dr. Locke joined the Forest Service in 1944, working first upon a wood hydrolysis process for production of ethyl alcohol. In 1945, he spent 5 months in Europe investigating the chemical utilization of wood in Germany. Following World War II he became chief of the Forest Utilization Service in the Pacific Northwest Forest Experiment Station.

Since coming to the laboratory 8 years ago, Dr. Locke has supervised a broadly ex-

panded program of research in production of industrial chemicals from low-grade wood, including residues from harvesting and milling. The scientists under his direction have concentrated on breaking wood into its component parts in order to transform it chemically into useful products. One of the most promising achievements has been the isolation of furfural, an oily substance, as a raw material for nylon manufacture.

Dr. Locke is a past national president of the Forest Products Research Society, and a member of the American Institute of Chemical Engineers, the American Chemical Society, and the Cosmos Club.

Congress Blocks Seat for Red China in U.N.

SPEECH
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 17, 1959

Mr. LANE. Mr. Speaker, this resolution—House Concurrent Resolution 369—expressing the sense of Congress against seating Red China as a member of the United Nations, is good commonsense, straight and to the point.

It is clear, forthright, and faithful to American concepts of peace with justice.

The way that our national self-respect has been melting in recent weeks. I was dreading the day when the administration would invite the leaders of Red China to be the honored guests of the United States, and to enjoy our deferential hospitality.

The facts on Red China cannot be hidden. They cannot be changed by any wishful thinking.

Red China has trampled on every human right.

It has violated with cynical contempt, every principle of international law and morality.

The United Nations, after deliberate consideration, found it guilty of aggression against Korea. Every intelligent person knows that Red Russia instigated that attack, encouraged and supported it. But the U.N., frustrated by Soviet vetoes, and intimidated by Soviet threats, did not follow through and indict Red Russia as well as Red China.

The Peiping regime sent troops pouring into Korea to fight against the United Nations. It has failed to obey the mandate of the U.N. and clear itself of aggression by withdrawing its material support of the North Korean Reds.

It wants to gate-crash the U.N., and then blackmail that organization once it gets inside.

This outlaw nation, which is responsible for the deaths of tens of thousands of young Americans, and still keeps American civilians in illegal confinement, scorns all standards of civilized behavior.

Mainland China must never be accepted into the family of nations until the Chinese people purge their country of the brutal Communist oppressors who torture them, and who seek to extend their power by conspiring against the governments of neighboring nations. This fanatical desire to enslave people is a form of mental derangement. It is a menace to the world.

With no respect whatever for the sanctity of human life, the new class called communism, with its tightly organized power elite in Red China is more repressive and cruel than any emperor or war lord of the old days, because it perverts all the modern knowledge and facilities at its command, to serve evil.

Its power is based upon lies, betrayals, and merciless regimentation of all the human resources under its whip. It is not the chosen government of the Chinese people. It does not represent their true and honorable interests.

I have only one reservation regarding Resolution 369.

It does not go all the way.

Instead of merely expressing opposition to the admission of Red China to the United Nations, it should seize the initiative and denounce Red China for its crimes against humanity.

However, it still has the courage to close the door to an aggressor.

That is a rare and valuable quality in this strange summer of appeasement.

This resolution, by the Congress, will tell the world that the American people are not backtracking.

We know that this world will never be safe for ourseles and other free peoples, and for those who aspire to freedom, until communism mends its ways—if ever—and gives conclusive evidence that it has abandoned permanently, the use of force and subversion as instruments of national policy.

No words will suffice.

We must have guarantees subject to the supervision and effective control of a grownup United Nations.

Until that day, Red China must be quarantined, to protect the uncertain peace.

I consider it a privilege to vote for this resolution that sternly rejects any proposal that Red China should even be considered for admission to the U.N.

Let us make it unanimous.

Migratory Workers

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Tuesday, August 18, 1959

Mr. WILLIAMS of New Jersey. Mr. President, a special Senate subcommittee was established this month to study the migratory worker problem in this Nation, and to recommend legislation which may end some of the difficulties which now face these men, women, and children who work for a few weeks or months in one county or State before moving on to farms in other areas. Scheduling of hearings is not yet completed, but it is hoped that the committee will gather facts from many parts of the Nation.

Some help for the committee's members was given in a very effective way this week by the New York Herald Tribune.

In these articles from the New York Herald Tribune, Mr. Braestrup points out the difficulties and complexities faced by county agencies and church groups in efforts to cope directly with some of the problems. And yet, despite these problems, these articles show that some progress can be made at a local level.

Until we have more awareness that there is a problem, however, and that many steps must be taken to end it, we shall not progress very far in any plan, on a local or a Federal level.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, the articles from the New York Herald Tribune.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune]

THE MIGRANT WORKER—FARM HANDS FIND SUFFOLK COUNTY CONDITIONS BAD, BUT NOT THE WORST

(By Peter Braestrup)

RIVERHEAD, LONG ISLAND, August 15.—"I could get me a steady job down in Virginia," says Robert Lee Hill, "I'd never go on the season. But a man's got to live."

From Huntington to Greenport to the Hamptons, the annual influx of some 5,000 southern Negro and 1,000 Puerto Rican migrant workers to harvest eastern Long Island's crops is hitting full stride.

Suffolk County, famed as a resort area, is also the Nation's No. 3 potato-producing county, and New York State's biggest employer-recruiter of seasonal, low-income farm labor.

As part of the migrant influx, Robert Lee Hill, 37, last month brought north a group of 15 persons, including his wife and three daughters, aged 4 to 9, to a migrant "camp" outside Riverhead.

They came from Suffolk, Va., by way of the May-June strawberry crop in Salisbury, Md., where they earned up to $40 a week. The strawberries picked, Robert Lee loaded his group aboard his secondhand 1949 Dodge truck, with their pots, pans and bedding, and, avoiding costly toll roads, headed north for his second summer on Long Island, his 15th "on the season."

Lean, serious, soft-spoken, Robert Lee Hill was first recruited for potato picking in Long Island by a Suffolk County farmer last year down in Delaware. This season, that farmer had no work for Robert Lee, and he wound up parking his truck at Charles McKay's camp, on the fringes of a permanent Negro slum a few miles outside Riverhead and only a dozen miles from the beach resorts of Peconic Bay and the Hamptons.

"I got no complaints about the facilities," said Robert Lee's wife, May, "but the rent do seem high."

The drab barrack into which Robert Lee, 10 other adults, and 5 usually barefoot children are crowded is above average for Suffolk County migrant housing: five small bedrooms and a kitchen boast electricity, a refrigerator, hot-and-cold shower (required by law), a gas stove. Not required by the migrant camp law is a bathroom; the group must use a privy.

For this, the cut is $50 a week plus utilities or over $200 a month, roughly four times what comparable, rent-controlled housing

(with indoor plumbing) costs in mid-Harlem. At $3 a person a week, the rent is average for migrant housing in eastern Suffolk County.

The high rent, coupled with little work due to the rains, discouraged Robert Lee and his group. Mr. McKay had no work for them at all. Two of Robert Lee's men left to seek jobs elsewhere. Then Mr. McKay, although he refused to advance Robert Lee any grocery money, agreed to let him pick and grade potatoes for other farmers, at roughly $1 an hour.

"We make enough to get by on." Robert Lee says. "I hope the potatoes get good soon." Otherwise he will move on.

If all goes well, and the picking's good, Robert Lee hopes to clear $350 or so for his family by October's end, when he returns to work for the winter at a peanut-processing plant at $1.10 an hour, in Suffolk, Va. For most migrants, such a steady, if seasonal job down South is unusual; moreover, Robert Lee is both close enough and concerned enough to send his children back home to school while he stays out the harvest.

What about working year-round in Long Island? "Maybe a good inside job," says Robert Lee skeptically. "But it gets cold here, man, and I can't stand the cold."

Chances are that except for Sunday churchgoing ("we sometimes go three times a day") and a rare movie ("costs too much") in Riverhead, Robert Lee and his family will depart Suffold County as much strangers and outsiders as when they first entered. Robert Lee is resigned to this and to his own life as a migrant. "Everything," he says cautiously, "is all right up to so far."

Of Robert Lee and his fellow migrants, Ray Jefferson, head of the Suffolk County Farm Bureau, representing most of the county's 1,400 farmers, has this to say: "We have to have 'em. There just isn't enough local labor available that wants to do the job."

Suffolk County's seasonal workers—like most of the Nation's estimated 500,000 domestic migrants now "on the season"—still suffer the lowest living standards, welfare benefits and wages (average 1957 income: $892), of any Americans. Only Mexico's wetbacks and workers imported from the British West Indies do worse. The domestic migrant continues to be what Secretary of Labor James P. Mitchell calls living testimonials to the neglect that is possible in a wealthy and aggressive economy.

In New York State, with 35,000 migrants due this season (versus 19,000 in 1949), press exposure of poor conditions in upstate migrant camps has led, since 1956, to some tightening of sanitation and health codes, despite Farm Bureau opposition. But minimum legal living space allowances (as little as 30 square feet a person over age 2) still permits severe overcrowding; and privies and shacks still remain the rule rather than the exception.

NOTES GAPS IN LAW

"The new laws are an improvement," says Eulalie Torres, farm placement director for the Commonwealth of Puerto Rico in New York City. "But serious gaps still remain in local enforcement."

Suffolk County, according to Mr. Torres and interested private groups such as the National Council of Churches, rates better than most areas. Says Herbert Hill, labor secretary of the National Association for the Advancement of Colored People: "Suffolk's not good, but whatever's bad there is 200 percent worse in many areas upstate."

A Herald Tribune survey of migrant conditions in Suffolk County showed that while considerable improvement has been made since 1957, especially in areas policed by local health officials, wage and living conditions remain in marked contrast to those enjoyed by this prosperous county's year-round population.

CAN EARN $50 A WEEK

Hourly wages, as reported by both farmers and workers, range between 75 cents and $1 for fieldwork, up to $1.15 for grading potatoes in processing plants. Piece rates vary. Working 10 to 12 hours daily 6 days a week, the relatively well paid Puerto Rican workers at the Steve J. Doroski farm and processing plant outside Greenport can earn up to $50 in a busy week. On slower weeks, earnings drop as much as 50 percent.

Unlike local church and welfare groups, Paul Erwin, State farm placement officer in Riverhead, takes a sanguine view of migrant wages: "Hell, a man on the farm earning $45 a week is as well off as a city man making $85."

Putting migrant workers under a $1 minimum wage law, as urged by Secretary of Labor Mitchell, would severely jolt Suffolk farmers, says Mr. Jefferson. Farmers are already smarting from last year's potato market, worst in Suffolk history, he adds, with uncertain prospects for 1959.

As Robert Lee's case shows, however, low wages, coupled with the workdays lost to rainy weather, make the Suffolk County migrant's lot even more chancy than the farmer's. The migrant is still unprotected by the benefits that most city workers now take for granted: The above-mentioned minimum wage, unemployment payments, workman's compensation, union fringe benefits, local housing codes, access to public health and education facilities.

Interviewed while resting after a day's potato picking, Robert Lee's lanky nephew, George, 15, made plain his determination to get out of the migrant stream: "I'm going to stay in school, and learn a trade, maybe go on to college. Being on the season gets you no place. On the season, you are nobody."

THE MIGRANT WORKER—SUFFOLK HEALTH DEPARTMENT TRIES HARD TO ENFORCE LAW AT FARM CAMPS

(By Peter Braestrup)

RIVERHEAD, L. I., August 16.—"We have the migrant workers here, we need them here for the potato harvest, and we have to be concerned with them," said John L. Barry, Suffolk County Public Welfare Commissioner and chairman of the county's migrant labor committee.

"Housing and better community relations remain major problems," said Mr. Barry, although, he added, "there has been great improvement."

Policing migrant housing in Suffolk County is the job of the county health department, whose camp inspectors are led by Sidney Beckwith. Roughly 40 percent of the county's estimated migrant population (5,000 southern Negroes, 1,000 Puerto Ricans) benefits from Mr. Beckwith's jurisdiction: Those in the county's 140 camps housing 5 or more persons. These camps, under newly tightened State codes must have a health department permit, hot and cold water, bathing facilities, good drainage, safe heating and cooking facilities. Privies and shacks, however, are still permitted and still prevail.

BEATING THE LAW

To escape State regulations and Mr. Beckwith's jurisdiction, many farmers resort to what Inspector Edwin Werner calls "the magic number game;" placing migrant workers in scattered camps housing fewer than five persons apiece. Other operators open bigger camps without permits—often without water, heat, or even privies. Three such operators have been caught in Suffolk already this season, and persuaded to mend their ways.

"There are still those farmers," said Mr. Beckwith, "who think of the migrants not as fellow Americans but as just an economic commodity. These farmers try to get by with the minimum."

Local and State farm bureau organizations have steadily opposed both local zoning and building laws—designed to upgrade all housing—and tighter State migrant camp codes. "We look at this from a practical point of view," says Ray J. Jefferson, executive secretary of the county farm bureau. "Every new regulation means a cash outlay for the farmer. You can't turn a migrant camp into a Waldorf-Astoria."

SOME ARE GOOD

A New York Herald Tribune survey of some two dozen representative migrant camps showed that the Waldorf has little competition in this area. However, some camps—and camp operators—demonstrate what can be done.

Among the migrant camps visited by this reporter, one of the best was David F. Wicks' camp off Route 25A in St. James. It housed a crew of a dozen Negro workers from Georgia, and far outshone most other camps elsewhere in Suffolk County.

Resembling a good motel, the white, stuccoed Wicks building, on the edge of the potato fields, provides a fully equipped kitchen, curtained casement windows, hot air heating, indoor toilets and showers for each sex, three high-ceilinged, spacious furnished bedrooms for married couples, a big bunkroom for the single men. All for free: Mr. Wicks reward: the experienced crew returns every year, causes no trouble or turnover, works hard, keeps the place clean. Off season the bunkroom is used to store machinery.

GOOD TREATMENT PAYS

"This is the ideal," said Mr. Werner, "and there is no reason every camp couldn't be like this. The expense is minor compared to other farm costs. Wicks treats his people like human beings and it pays off."

Something of a contrast is Suffolk County's largest migrant camp—the Eastern Suffolk Cooperative, Inc., isolated village at East Cutchogue, northeast of Riverhead. With a capacity of 267 persons, its drab wooden barracks and cabins house families and single men from Mississippi, the Carolinas, and Florida who have been recruited by the co-op, contacted through the State employment service, or arrived as "walk-ins" on their own. Many of the buildings, says Mr. Beckwith, should "be bulldozed under," even though occupancy ratios 30 square feet per person) and other criteria match State minimums.

The East Cutchogue camp has its own store—selling beer and plenty of chicken, Vienna sausage, rice, and beans—and its own messhall-style restaurant, the Dixie Belle Inn. Central latrine and shower facilities complete the layout.

UNIQUE SCHOOL

The camp showplace is the spotless school and day care center for migrant children, financed by both public and co-op funds. Migrants leave their children here while the adults work from 6 a.m. to 6 p.m. in the fields. The children play games, rest, and get snacks and cod liver oil to offset what is usually a chronically unbalanced diet. The elementary school enrolls children of migrants who stay on into the fall grading season; it is the only such school in the State.

For workers averaging under $1 per hour, with work interrupted by rain, the cost of living runs high at East Cutchogue. Weekly rent is $3.50 per person; if meals are eaten

at the Dixie Belle Inn, another $12 is added. Workers are paid off and these costs deducted in the camp office, says John Murphy, camp supervisor, "otherwise I'd never get any money." Most family groups do their own cooking in their crowded quarters.

Despite the dearth of adult recreation facilities and the camp's isolation, the recurring migrant problems—Saturday night drunkenness, occasional violence, and gambling—are no longer serious, according to Mr. Murphy.

Many farmers, like Charles McKay of Riverhead, charge similar rent, averaging $3 per person per week for camps with privies but sometimes waive this rent when they cannot provide tenants with work.

Among the other camps visited by the Herald Tribune, many were in worse condition. One young Mattituck farmer, admitted that he expected to house two or three Negro migrants (one was already there) in an 8-by-8-foot shack that not only lacked even a privy, but also stood some 400 yards from the nearest watertap. When a health department inspector said such conditions violated local sanitary laws, even if the migrant camp code did not apply, the farmer expressed surprise: "They got all kinds of new rules."

"There aren't any local building codes or housing inspectors out here," said Mr. Beckwith. "We're about the only protection the migrant and the public has. Within the legal limits, we do pretty well."

THE MIGRANT WORKER—SUFFOLK CLERGY AIDING SHACK FAMILIES

(By Peter Braestrup)

RIVERHEAD, L.I., August 17.—Here in Suffolk County, where 5,000 southern Negroes and 1,000 Puerto Ricans have come north to harvest potatoes and cauliflower, young local churchmen are seeking greater community effort to relieve the migrant family's abnormal living conditions, lack of recreation, and general isolation.

Says the Reverend Harry T. Cupp, chairman of the Suffolk County Council of Churches: "The situation has greatly improved, but it has a long way to go."

"One of our major problems here is apathy," said another leading member of the church council. "The established residents—Negro and white—would just as soon ignore the migrant. It's not hard to do. The camps are mostly out of sight, and many migrants are reluctant to venture out of them."

Nevertheless, the Council of Churches is hard at work. Among the projects in which it is involved:

1. Operating a 1-month summer school for some 30 migrant children, ages 6 to 12, at the Riverhead Congregational Church, with two full-time teachers, free transportation and hot lunches. Along with regular classes and games, Rev. Kenneth Nelson, in charge, is stressing simple hygiene education (washing regularly, brushing teeth). "This," he says, "is something which is also needed."

2. Recruiting children for a similar summer session, financed by the New York State Department of Education in the East Cutchogue public school, under the direction of Alfred E. Dart, school principal.

3. Teaching reading and writing English to adult migrants in night classes at the Congregational Church at Acquebogue.

Supplementing these church-state activities is a flourishing community-financed child daycare center for smaller children in Bridgehampton.

Backing up these local efforts is the Reverend Clyde Williams, a chaplain sent out by the Migrant Ministry of the National Council of Churches of Christ in the U.S.A. Driving a green Migrant Ministry "Harvester" station wagon, Mr. Williams visits his parish, which is the camps themselves. His parish is large; some 130 camps were issued permits last year, and this season the total is expected to go even higher.

For the majority of his parishioners, Mr. Williams and his volunteer aids, provide the only outside human contact—aside from Health Department and State Police inspectors.

Mr. Williams shows movies on social security benefits, offers information on migrants' rights and duties, helps out on family problems and organizes singing groups and games of volleyball, baseball (a Puerto Rican favorite) and horseshoes. To draw a crowd to religious services at a camp, reports Mr. Williams, "we sometimes start off with a good western movie, then start the service."

SLUMS SPRING UP

Not only have churchmen led efforts to ameliorate the migrants' present condition, but they have also led an uphill fight against a major byproduct of the annual migrant influx: clusters of slums and shacks outside Riverhead, Bridgehampton and Greenport which provide the only housing available to the estimated 2,500 Negro migrants, who, over the years, have decided to stay on.

Biggest of the slums is a 200-family development on Riverside Drive outside Riverhead. Bordering the Peconic River marshes it is owned by Hollis V. Warner, once reportedly the world's biggest duck farmer.

Here many tenants are crowded into converted duck brooders next to sheds where thousands of ducks are still being raised by a local cooperative. Rentals run up to $70 for four small rooms, with cold water and a distant privy. One 50-family section, "Tin City," is totally inaccessible to fire equipment.

OWNER COMMENTS

Interviewed on the premises, Mr. Warner confided: "With integration and all that, that's why they (the Negroes) are all up here. I don't blame those southern Senators for getting upset about it (desegregation). If 90 percent of them (the Negroes) came up here, you'd see how these northern Senators would act."

As a matter of fact, Mr. Warner indicated, he was doing his tenants a favor: "No one else is going to give them a place to live."

He refused further comment.

His son John, interviewed later, admitted that "the conditions here might shock someone like you or me. But they (the tenants) are a different class of people. They're all happy with what they have here."

TENANTS DISAGREE

Tenants interviewed vehemently disagree; Riverhead's advisory committee on slum clearance, headed by the Reverend Herbert E. Perry, has condemned Mr. Warner's housing as a fire hazard.

In Bridgehampton, however, sparked by a lawyer, Bryan Hamlin, prospects are brighter. With Kenneth Gibson, president of the Bridgehampton Council, and other community leaders, Mrs. Hamlin has secured public support for a day camp for children in the town's 100-family Narrow Lane slum, helped organize a self-help civic improvement association, got State help on plans for building codes and, possibly, a local housing authority.

"Our task," said Mr. Perry in Riverhead of himself and his fellow ministers, "is to awaken the individual consciences of the community to what needs to be done. We keep trying."

A National Park To Honor the Minutemen of Concord and Lexington

---

SPEECH

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 17, 1959

Mr. LANE. Mr. Speaker, this bill is timely.

We need to be reminded of our heritage, and to be inspired by it.

H.R. 5892, has been introduced by Mrs. ROGERS, who represents the district where the war for American independence began.

It will provide for the establishment of Minute Man National Historical Park to honor and perpetuate the scene of these stirring events.

At Concord and Lexington, a few men with faith and determination dared the impossible and won.

They did not take the easy way.

And they did not invite the oppressor of those days to visit the Colonies in the hope that they could persuade him to make a deal that would relax the tension.

They showed that they would not make peace at any price.

Guided by their heroic example that would not compromise with despotism, our Nation has become great and strong, not in material things alone, but in the devotion to liberty for which we are known and respected throughout the civilized world.

The scene of the events that gave birth to the American spirit, is in danger of being overrun by ranchhouses, suburban shopping centers, and express highways.

The bulldozer is practical.

It is unmoved by anything except petroleum products, and the man in the driver's seat, who takes orders from the construction superintendent, who follows specifications.

Is the liberty road useful?

Is it profitable?

Who cares for anything else?

The bulldozer is advancing upon the shrine of American independence.

People who understand the imperative need of strengthening the human spirit against the challenge of materialism are supporting this bill to establish a Minute Man National Historical Park in Massachusetts.

Where we can see unspoiled by modern overlay the scene, and the events associated with it, that the people of Massachusetts honor each year by the celebration of Patriot's Day.

Where the villagers and the farmers, on the 18th and 19th of April, 1775, fired the shots heard 'round the world for the cause of human freedom.

We must rekindle this spirit today, to save our Nation from the complacency and the compromises that threaten our national will and purpose.

We do not have much time.

The bulldozer, symbol and instrument of impersonal materialism, is leveling everything before it.

Need more be said?

Every American who cherishes the memory of those courageous and self-reliant minutemen of 1775 will support this bill to establish a national historical park in Massachusetts.

The Smokejumper Brigade

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 18, 1959

Mr. MANSFIELD. Mr. President, on August 14 there was published in the Christian Science Monitor an article entitled "Smokejumper Brigade." I wish to point out that the genesis of smokejumping occurred in my hometown of Missoula, Mont. Because of the many improvements which have been made in smokejumping since then, greater effectiveness has been developed in fighting forest fires, which have been so difficult to control in many sections of the country. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SMOKEJUMPER BRIGADE

(From a roadside marker, U.S. Route 10, Montana: In 1910 this was a remote neck of the woods and hard to reach. Forest fire protection was relatively new. That dry summer many small fires started. Public apathy together with manpower shortage, lack of organization and good equipment, and inaccessibility permitted them to spread and join.

(Pandemonium broke loose in August. Whipped by 50-mile gales, the combined blaze covered 3,000 square miles in 3 days. Animals were trapped, 87 human lives were lost, settlements and railroad trestles were destroyed, 6 billion board feet of timber burned like kindling. The pungent smoke pall stretched to eastern Montana.

(Some good came from this costly debacle due to inadequate organization, funds, and public understanding. Legislation was enacted, appropriations were increased, cooperative effort was developed, and public became forest-fire conscious.

(Now U.S. Forest Service lookouts and aerial patrols discover fires while small, then smokechasers by trails and smokejumpers by parachutes reach and control most of the fires in record time.

(This devastated area has been restocked with trees that will again produce commercial timber, and provide homes for wildlife and recreation for people.

(Fire-protection methods, equipment, and organization capable of handling future threats of dry summers will pay off in healthy watersheds and abundant forest products. An uncontrolled forest fire is a terrifying, destructive thing. Please be careful with your matches and campfires, won't you?)

(By Harlan Trott)

MISSOULA, MONT.—Where there's fire there's a smoke-jumping crew ready to hit it in less than 20 minutes. That's as long as it takes Earl Cooley's elite corps of parachute firefighters to grab their packs and be off the runway of the U.S. Forest Service's aerial fire depot on the wide-open outskirts of this mountain-rimmed city in northwest Montana.

Missoula's highly trained airborne firemen stand summer-long guard over some 8 million roadless acres of Federal forest lands in Montana and Idaho. And the depot's northern forest fire laboratory is working on a year-round basis developing new equipment and new techniques to combat the menace of forest fires.

When the new forest-fire laboratory is finished next summer, Missoula will become the testing ground for surmounting critical forest and range fires. In fact, it will be a research center for nationwide forest-fire problems as well as special fire problems on 335 million acres of forest and watershed lands encompassing the whole intermountain West and Alaska.

SUNDAY DINNER AT MESS HALL

In a long two-story concrete dormitory, some 150 members of Missoula's airborne forest-fire brigade were sitting down to Sunday dinner in what was for all the world like a military mess hall and barracks.

Ranging from 18 to 28 years old, these seasoned young parachutists are recruited mostly from the colleges. Here they undergo the intensive training, and if need be the hard experience of airborne counterattacks on the forest-fire lines.

Nearby in the riggers' loft young Hal Samsel, of Missoula, a Marine Corps veteran, was overseeing the meticulous work of folding some used parachutes.

He hardly seemed old enough to be assistant loft foreman of this strategic aerial fire depot. But pinned to his GI fatigue cap was the Forest Service's mark of distinction: a little gold emblem of encircling wings with a gold parachute superimposed on a sky-blue enamel background, and the little gold numerals 50.

This signifies that Hal Samsel is a veteran of 50 drops in the skilled and arduous calling of a forest smokejumper.

Some dozen or so in the present force of 150 have earned this badge. They are a tough, seasoned nucleus—the first team, so to speak—in Earl E. Cooley's taut command. The project superintendent is himself a veteran smokejumper. He had 44 jumps to his credit before his promotion to head man.

RECRUITS HANDPICKED

Now he heads a force which averages six jumps a season per man. They are handpicked recruits from 33 States, Hawaii, Cuba, and the Philippines. Although the smokejumpers have to carry a 47-pound pack when they jump, they are about average in size.

When the reporter remarked that they looked lean and wiry rather than beefy, Mr. Cooley grinned, explaining that a zest for hard work and know-how is what pays off in the hard and hazardous work on the forest-fire lines. "It may surprise you," he added, "but we have very few college athletes here. There's no substitute for enthusiasm."

Actually, the best crews, Mr. Cooley recalls, were the World War crews of 1943, 1944, and 1945. They were Middle West men slightly more mature than the normal crop of summer recruits. All were members of the Civilian Public Service, the wartime group that gave constructive noncombat occupation to conscientious objectors.

"They were mostly Mennonite farmers, Brethren or Friends," said Mr. Cooley. "One was a professor of engineering from Purdue. All had at least 2 years of college. I never saw their equal before or since. They learned quickly and worked hard. They never knew when to quit."

NO PREMIUM PAY

Out of 600 applicants this year, 50 were selected. Another hundred are holdovers from last year's campaigns. Recruits are given a year's trial elsewhere in the Forest Service, then if they still wish to volunteer for smokejumpers, they are considered on the basis of their seniors' personal recommendations.

They get paid $2 an hour for an 8-hour day. They draw no premium pay for being parachutists. And their hourly pay for work on the firelines in excess of 8 hours is the same straight $2 wage.

Asked if this has been a good year so far for smokejumpers, meaning have there been fewer than average fires, Mr. Cooley nodded, then added wryly, "but the boys don't think so."

Trained smokejumpers, they react like firehorses when the loudspeakers call them to combat. They don't seem to mind that straight overtime pay, either. Most of them are earning money to keep them in college.

It was just 19 years ago this month that the Forest Service's chief smokejumper jumped onto his first fireline in the Nez Perce Forest of western Idaho.

Everything here is in spectacular and heartening contrast to those times. In the historic 1910 summer, Missoula sent 50 volunteer firefighters afoot to the Selway Forest's fire. It was 10 days before anybody heard from them in the roadless wilderness. Smoke alerts in the Selway today mean that one of Mr. Cooley's teams of two, four, six, or eight smokejumpers can hit the fireline in half an hour.

RECORD OF COUNTERATTACKS

In the big forest blaze north of the Salmon River in Idaho last summer, Missoula's aerial fire depot dropped 50 men. Last year, this station, headquarters of region 1, made about 100 drops altogether. The Forest Service record for smokejumpers is 360 drops in a season.

Region 3, at Deming, N. Mex., has hit 13 fires so far this year. Theirs is a longer dry season. Here at Missoula, June 15 to September 15 is the normal fire season—just right for the college recruits' vacation time availability.

Besides having its own airstrip adjoining Missoula's county airport, region 1 maintains a warehouse big enough to feed and supply airborne supplies for an army of 5,000 forest fighters.

That's how many bedrolls are stacked up in readiness for a major battle. And shovels, messkits, and a whole long checkoff list of tools and miscellaneous items to equip and keep 5,000 men on a major fireline.

Its immaculate shops are constantly working to refurbish the gear. There's even a "grinding room" where the smokejumpers' two-edged pulaskis are sharpened. A pulaski is like a double-bitted ax except it is forged with one blade turned at right angles like a hoe.

SPECIAL EQUIPMENT

Every smokejumper carries a pulaski and a long-handled shovel. The warehouse here is stacked rafter high with special equipment that is parachuted into a sustained battle area. Portable pumps and radio transmitters, bales of canvas flies for shelters, oil stoves, kitchen boilers—you name it.

Bed rolls are free dropped. Practically everything else goes in by parachute. If a chute is snagged in a tree with a man in it, a 100-foot let down rope lands the smokejumper. To retrieve his chute or a stranded bundle of supplies, leg spurs, such as telephone linemen use to limb poles, are dropped at the site. Spurs are dropped in long slender cartons with the four sides of the lid secure horizontally so the package will spiral down. There's fiberboard, latticed

edgewise, in the bottom to cushion the landing.

Research, research. All the time, Mr. Cooley's laboratory force is testing new wrinkles in applied smokejumping.

When hungry grasshoppers started feasting on silk parachutes, Missoula came up with a low-porosity nylon fabric. Frank Derry, one-time chief rigger here, designed a chute with slots on one side the better to steer the smokejumper over the target area by accelerating the parachute's forward speed. A Derry even lets a smokejumper turn a full circle aloft.

SAFETY STRESSED

And safety above all is important for the daring young man who wants to finish his college education. In literally thousands of man drops, the U.S. Forest Service has never lost one. Some parachute innovations perfected at Missoula are now standard safety doctrine in military airborne methods.

That's why the Northern Forest Fire Laboratory is so important. Already the concrete foundations are laid. When the building opens in 1960, its fire-combustion wing will inject a new dimension into man's knowledge of forestry's worst enemy.

Forest-fire meteorology research equipment will be an important new adjunct to the aerial fire station President Eisenhower dedicated here in 1954.

Lightning, a major cause of fire in the West's forests, will be studied with the aid of new atmospheric measuring equipment. A radar room will tie in with a new U.S. Weather Bureau radar unit to be installed on the summit of an 8,000-foot peak a few miles north of this spacious meadow.

Mr. Cooley fought the 1949 fires. He remembers how his crew hit a wisp of smoke, started trenching the blaze, then saw the tree crowns "explode" and engulf 6,000 acres in 2 hours. The new laboratory has special meaning to these veteran smokejumpers. They discuss the expansion program with some pride and satisfaction.

Why Helping Hand for Khrushchev?

EXTENSION OF REMARKS
OF
HON. JOSEPH E. KARTH
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 18, 1959

Mr. KARTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the August 7, 1959, edition of the Catholic Bulletin of St. Paul, Minn., written by Archbishop William O. Brady:

WHY HELPING HAND FOR KHRUSHCHEV?

MY BELOVED PRIESTS AND PEOPLE OF THE ARCHDIOCESE OF ST. PAUL: The people are rarely told what it is that our diplomats are really after. Sometimes we wonder if they know themselves. Our national line is so knotted up with misinformation that we face the coming weeks with dismay.

Our national stomach ought to be all butterflies at the impending visit of Mr. Khrushchev. The feeling is the same that any one of us knows when fear, uncertainty and frustration are mixed. Add now the realization that our diplomats seem blind to the realities of the latest Soviet maneuvers.

That the plans of Mr. K. have matured exactly as he hoped for, who can doubt? If the United States has been blind, the people of Europe have not.

The responsible people with whom the archbishop talked last May pinpointed what our Government still does not grasp. Mr. K. has been leading from weakness, and he has bluffed us again. Most of all, he has wanted a cloak of respectability and we are going to wrap him in it, at our own suggestion.

How stupid can we get, especially when, almost without understanding why, we had Mr. K. on the defensive? We had a knife in him in a most sensitive spot. It hurt.

But no one has had the sense to follow up the thrust, to twist the knife around, to take advantage of the opportunity and to push the blade in further until it touched a vital spot.

Instead we have pulled back our hand and kissed the scratch.

Never in many years has the Soviet squealed as they have recently done over the action of our Government on the Captive Nations Week. That hurt. The Commies showed they were hurt. Mr. K. was more than annoyed. He was angry.

He let his rage fly openly. Why shouldn't he? We had touched a spot he could not defend. The ring of captive countries is restless and was hopeful. If there has been any laughter in them of late, it was to watch Mr. K. squirm on the TV, froth at the mouth on the radio, and try to turn into a joke what the whole world knows as Communist colonialism and Communist tyranny.

But what did we do about it? Our legislature passed resolutions and they were better than the legislature realized. A Captive Nations Week was organized. The churches were solicited to join prayers to proclamations. The plight of the captive nations was mooned over and moaned over, but just for a day.

Meanwhile, our statesmen did not let the people know the truth. They themselves did not know the sharpness of the steel they had forged.

Our top men began to make toasts, to pour in oil and wine and to cancel their advantage by inviting Mr. K. to a visit which blasts the hopes of captive people everywhere and strengthens the hand had holds them down.

Oh, the shame of it all. As the captive nations notion caught fire, the archbishop began to reproach himself that he had not publicized it more and given an added push to the evident advantage which our beloved but befuddled country sorely needs to have.

But now the archbishop is glad that he did not. The Captive Nations Week proposal has been a fraud. The diplomats did not mean it.

Meanwhile Mr. NIXON smiled and apologized without vigor and explained almost nothing. He knew what was happening. We did not.

He could have followed up the captive nations thrust with some pointed questions, such as why Russia has violated more than 50 of her agreements with us, why there has been no explanation of the shooting down of our planes, why the Soviet forces are in Hungary, in Germany, all through the Baltic and lately come to Albania.

But no. He was extending invitations. He was expressing pious but impractical hopes.

We are now committed to smiles and handshakes, to welcome ceremonies and amiable diplomatic chitchat, all of which will soothe Mr. K.'s wounds and tighten the chains on the captives he has as well as those he plans to secure. It is enough to make one sick at heart.

There is evidently no refuge in statesmanship. Let us continue to take refuge in prayer.

Devotedly in Christ,

WILLIAM O. BRADY,
Archbishop of St. Paul.

H. A. Dunn, of the University of Texas, Distributed Books to the World

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, August 18, 1959

Mr. YARBOROUGH. Mr. President, the example of the life of H. A. Dunn has inspired many people—particularly young students both at the University of Texas and in other countries.

For 30 years Mr. Dunn has been superintendent of various buildings at the University of Texas, including the law building. He is now retiring from his official position, but many former law students will always carry with them memories of his part in the life of the university.

He is a warm friend of many students in many other countries as well because of an unusual service which Mr. Dunn has been rendering our world. He has helped fill a hunger for books by collecting in America and forwarding to the rest of the world nearly 700,000 volumes.

Mr. Dunn was affectionately called Dean by the students at the University of Texas.

Dunn's warmly human action in initiating the distributing of books to the world was showing his real feeling of the people of the world and of the concern which Americans feel for people in other countries. This is person-to-person diplomacy.

In addition, Mr. Dunn also collects and distributes toys and clothing to needy youngsters at Christmas.

H. A. Dunn is a man with ideas of helping others and the ability and willingness to work to bring his dreams to fulfillment. He is a man of action as well as a man of dreams. He has actively aided me in contests for good government in Texas. He is a worker for idealism in action, and for integrity in government.

Mr. President, I request unanimous consent to have printed in the Appendix of the RECORD an article from the Austin (Tex.) American for Wednesday, August 12, 1959, entitled "Dean Dunn—Lifter Is Lifted at Fete."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Austin (Tex.) American, Aug. 12, 1959]

DEAN DUNN—"LIFTER" IS LIFTED AT FETE

(By Anita Brewer)

It will take more than 69 years and a day chock full of parties to retire H. A. Dunn.

The slight, kindly, and always cheerful man of many talents was honored at a special law school assembly and reception at the University of Texas' Townes Hall Tuesday as he retired after 30 years as superintendent of various buildings at the university.

He still has 2 days to go at his job as superintendent of the law school building, but

he already has future plans enough to fill up another three score and nine years.

"I may write a book," he says. "If I do I'll name it 'The Uppish Boy.'"

To those who know him that sounds a bit autobiographical, and he admits it. "Folks always said I was a fa'ward young 'un," he says.

And forward he's always been. It takes a special talent, a special forwardness to accomplish all he has. Perhaps he is widest known as the collector and distributor of three-quarters of a million books to reading-hungry peoples all over the world.

Each Christmas he collects and distributes clothing and toys for less fortunate children in East Austin, and he intends to continue his mission work in that area. He has high hopes and dreams of improving the lot of scores of unfortunate children.

Thomas J. Gibson, assistant dean of the law school, was master of ceremonies at a noon assembly Tuesday honoring Mr. and Mrs. Dunn. In tribute he said:

"Because of Dean (they always call him Dean at the law school) Dunn, the United States has many friends behind the Iron Curtain we would not have had if it had not been for him." It is to those countries he sent thousands of books.

Bob Larkin on behalf of the Law School students presented Dunn with a bronze plaque of appreciation.

Law School Dean W. Page Keeton paid the faculty tribute to Dunn. Paraphrasing Oliver Wendell Holmes, Dean Keeton said, "Mr. Dunn has brought to his task a mighty heart and a genuine interest in his work." He presented Dunn with an engraved desk set from the law school faculty and called him the law school's "best public relations."

In acknowledging the honors of his associates, Dunn said:

"I like young people, middle-aged people, old people. In fact, I like people."

He quoted the message he carries on a card in his pocket all the time: "We make our living from the things we get. We make our lives from the things we give."

Although Dunn's life has been and will continue to be one of service, he has been honored at other times—by the great and by just folks. He has letters of praise from U.S. Senators, from heads of state throughout the world and from Drew Pearson.

Ten years ago Pearson said of him: "Dunn's project (the book project) was all his own; no sponsors, no organized drive, no money to help him—which makes him, in this column's eyes, a real servant to brotherhood."

But Dunn says all his work has been successful because of the help of others. Kind and generous people furnished the money—lots of money—to ship the books to embarkation points from where U.S. ships carried them to their destinations.

Although he values the letters and praise from the mighty, the letters that have brought tears to Dunn's eyes have come from students and the hungry—those who needed more than bread.

One such letter came from the Philippines:

"You really lighten my misery."

Another from a student in Brazil:

"I can't just believe that in our days, when everywhere people are speaking of war and other terrible things, there is a man like you, who thinks only of how to help poor foreigner students."

A poet once said there are two kinds of people—the ones who lift and the ones who lean. Dunn is one of those who lift, and that is why hundreds of his friends honored him Tuesday at a noon assembly and at a 2-hour reception in the afternoon.

Statement by Bishop Griffiths on Population and Future U.S. Policy

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 12, 1959

Mr. ANFUSO. Mr. Speaker, a thought-provoking statement by a high Catholic Church leader has just come to my attention which, I believe, should be of considerable interest to my colleagues. It is a statement on "Population and Future U.S. Policy" by Bishop James H. Griffiths of New York.

Bishop Griffiths' statement is an analysis of an issue raised in the Draper Committee Report on Foreign Aid pertaining to proposals that the Federal Government sponsor birth control programs as part of assistance provided to foreign governments. Under leave to extend my remarks in the RECORD, I wish to insert Bishop Griffiths' statement:

POPULATION AND FUTURE U.S. POLICY

I.

The problem

For some 10 years a Neo-Malthusian doctrine—of obvious Anglo-Saxon-Scandinavian inspiration—has been gathering steam in United Nations circles and in organizations interested in United Nations affairs with the apparent purpose:

1. Of influencing national and personal opinion in favor of family planning programs in populous countries;

2. Of utilizing United Nations agencies, i.e., World Health Organization, Food and Agriculture Organization, Technical Assistance Program, UNICEF to assist such countries and their citizens in effecting such programs;

3. Of obtaining world recognition for the morality of such a doctrine and the right to hold and propagate it. Public opinion in the United States is crucial for this purpose. Churches, women, wealthy businessmen, and scientific scholars are being effectively mobilized to produce and guide it.

The underlying fact

The introduction into underdeveloped and mainly agrarian countries by the United Nations and other aid agencies of mass health measures (against malaria, tuberculosis, yaws, infant mortality) and feeding and relief programs has reduced mortality rates significantly without affecting the high fertility rates.

This is especially true of Asia, which is presently most heavily populated, and also of Latin America; official prognostications are for geometrical and frightening increase in two generations. The economic gap between developed countries where scientific progress leaps forward, and the underdeveloped countries, does not lessen but widens.

Arguments advanced by proponents of family planning

Economic: The argument goes that there is not sufficient opportunity for these countries to amass capital, train people, industrialize, and thus raise the general level of living because all available resources go into providing mere subsistence for the ever-increasing number of dependent mouths to be fed. Even bare necessities such as food must be imported. There are no opportunities to export in relation to the imports necessary. Hard-won advances in economic development are thus wiped out.

Political: This condition of treadmill poverty, it is contended, leaves the way open to Communist agitation, penetration, and eventual domination. People will barter liberty for bread. The example of China, which through its oppressive slavery can produce more food for its vast population than democratic India does by gentler methods for its vast population, is feared. Help to India to slow up its population growth becomes a must.

Racial fear: Rarely admitted, but expressed in his inaugural address by Prof. Robert Matthey, zoologist and new rector of the University of Lausanne, last November, is perhaps an unconscious motive of most Western Neo-Malthusians.

"Overpopulation is a general phenomenon whose rhythm in Asia, Africa, and South America is a rumbling threat to Europe. In the next century * * * there will be four Asians to one European. Surely it is a duty for us Europeans to preserve our human community and save ourselves from being diluted by the tide of peoples whom the ancient Greeks would have called barbarians: Is it really our role to offer ourselves like resigned victims and prepare our succession? Genocide is hideous. Autogenocide, or collective suicide, would it not also be hideous and stupid? So, 2,000 years after the Christian revelation, 100 years after the message of Darwin, the thinker must choose between the scientific law of struggle and the moral law, which for us Europeans means our progressive eviction from the world scene."

Professor Matthey, obsessed, like other scientists and economists, by this danger of overpopulation which he links to the yellow menace, went so far as to deplore the success of the scientific methods of preserving the prolonging life initiated by Pasteur, and to incriminate medicine, hygiene, and social legislation. Losing all sense of human values, Professor Matthey even laments the fact that a growing number of the population is taken off the productive circuit to care for the sick and the old who refuse to die. Finally, he condemns in the name of science, the influence of the soft religions which inculcate a love of one's neighbor and a code of ethics whereby victory is given not to the strong but to the peaceloving. Professor Matthey maintains that he is a Christian.

Economic assistance: In this interdependent world, where aid by the richer to poor countries is necessary for political freedom and world prosperity and trade, apparently many comfortable and wealthy businessmen in the United States regard the undisciplined fecundity of the poorer nations much as their forebearers regarded the large families of slum areas—an unproductive and thoughtless drain on their generosity—"money down a rat hole."

Personal freedom: However mixed the motives of some proponents may be, credit for sincerity must be given to sentimentalists (this includes the great majority of American non-Catholic clubwomen) who see women in Asia and elsewhere with a pitiably low status as to personal freedom (arranged early marriage, polygamy, etc.) and as to educational and economic opportunities chained to an apparently endless routine of slavelike childbearing and economic and social misery.

Undoubtedly there are some planned parenthooders in this group, although their favorite arguments are population pressure

and fear of communism. Since fear of communism is now the style, they are linking it for popular appeal, to their cause. This group is gaining respectability and influence. It sends people all over the world to promote its programs, in many cases receives government subsidies, e.g., British West Indies and Singapore.

Parental responsibility: Many Protestant churchmen maintain that parents do not exercise their responsibilities if by having too many children they cannot afford their education and training. This responsibility they maintain extends to the community (by not imposing an unnecessary burden on it), to the future world (by ensuring standing room), and to world peace (by preventing armed quests for lebensraum a la Germany and Japan). The Protestants are elaborating the notion of responsibility into a theological doctrine which envisages birth control within the married state as the will of God. Chief agitator in the United States for an ecumenical movement among the churches in this regard is Richard Fagley of the National Council of Churches of Christ. The Lambeth Conference for the Angelicans on a world scale, the new Anglican bishop of Southwark who is a crusader for the cause and various national or local groups of Lutherans, and other denominations have gone already on record in favor of birth control. Mr. Fagley includes in his ecumenical concept "millions of Catholic laymen who disagree with their church on this matter and who thus provide an effective counterpoise to the erroneous official Roman Catholic position."

The methods used and contemplated to achieve the goal

Local and State Action

Planned Parenthood announced a number of years ago that it would work to get incorporated into every local and State health and welfare board. It has tried also to get accepted on community chests. The measure of its growing strength is not merely acceptance on such boards, but the legal or administrative victories its proponents have won in New York hospitals and the Pittsburgh Board of Public Assistance.

At its recent meeting in New Delhi the International Planned Parenthood announced it would concentrate on getting the repeal of hostile national or State legislation or the enactment of actual new enabling legislation, which would permit sterilization, etc. The North Carolina case is an example of progress. The single-minded (and well-financed) efforts of this organization leave no room for doubt that there will be increasing cases on the local and State level for legal and administrative action to introduce birth control, sterilization, etc., into public institutions as accepted social practice. This will be done apparently not only for the good of these local communities but also to build up national sentiment and precedents so that birth control could be constructed to be a respectable national policy. The work of the churches (both Protestant and Jewish groups) already invests this aim with the mantle of morality. The appeal of responsibility and sound family life, with overt or veiled references to the Catholic Church's benighted lack of interest in the terrifying facts of population increase and their implications among its adherents, contrives to make the church appear an enemy of the people.

National Action

The United States is undoubtedly the key to the hopes of those who would like to give official birth control aid to the populous yellow, brown, and black, or even the Catholic light tan, countries. Therefore, the ultimate target is Congress, which holds the purse strings. Because there is already some sentiment (United States, United Kingdom, or Scandinavian induced) in favor of birth control aid in the U.N.—Japan, India, Ceylon, Pakistan—it may be hoped to secure action in the U.N. with U.S. backing.

Early efforts to introduce birth control policy in the World Health Organization and the Population Commission were defeated largely, in the first case by the International Committee of Catholic Nurses in Geneva, and in the second, by the World Union of Catholic Women's Organizations in New York. The official policy of the U.N. Secretariat is not to make any formal recommendations in this field. However, Secretariat studies on social progress, health, economic development, and population abound in references which can only be interpreted as allusions to the need for population control by family planning. In regional meetings and seminars, proposals by Government participants have been made, e.g., Economic Commission for Asia and the Far East, the Bangkok Seminar on the Participation of Women in Civic Life, but no formal action taken.

Activity Within U.N.

Actually there have been two U.N. projects related in an exploratory way to family planning. At the request of India, the World Health Organization sent Dr. Abraham Stone (recently deceased), a pioneer "birth controller," to that country to study the effectiveness of the rhythm method in limiting families. (He reported it was a dismal failure, so now India has artificial birth control and sterilization as a national policy.) The U.N. Technical Assistance Administration sent a mission to study the effectiveness in family planning services in Barbados. (Conclusion: "highly efficient from the economic point of view as compared with other measures to relieve overpopulation" but will affect the birth rate little "unless and until it reaches younger women with smaller families.") This is a personal conclusion of the expert.

The 12th General Assembly passed a resolution in 1957 asking for studies on the relationship between demographic and development (economic and social) problems of underdeveloped countries. This was introduced by a Peruvian. It can safely be predicted that pressure of facts and studies backed by a growing public sentiment will increase the danger of U.N. involvement.

Official U.S. policy thus far is "hands off."

Activity in U.S. Circles

Many U.S. delegates to the U.N. unofficially but more or less publicly, hold that birth control is necessary. Thus, (1) U.S. delegate to the Population Commission, Kingsley Davis of the University of California, laments in the New York Times magazine, Foreign Affairs, and undoubtedly elsewhere, that the United States is prevented from giving help to dampen the population explosion by a medieval obscurantist minority (i.e. the Catholic Church). (2) Years ago (1952) the chief U.S. economic adviser frankly stated in an off-the-record briefing in Paris that overpopulation in Italy was an invitation to the Communists and regretted that only an under-the-counter method to control population could be used. (3) The present U.S. delegate to the Human Rights Commission, Mrs. Mary Pillsbury Lord, comes of a wealthy business family which heavily subsidizes the International Planned Parenthood Federation and makes no secret of her own sympathies to control the terrible population explosion. She travels unofficially extensively in Asia and Africa; her targets for human rights matters are mostly women. The State Department naturally opened all doors possible.

(4) The most recent example of this ill-advised but calculated campaign may be found in the interpretations given by leading U.S. press agencies to recommendations of the Presidentially appointed Draper Committee on Foreign Aid (see UP story as appearing in Washington Post, July 24, 1959; also New York Times story, same date) to assist economically underdeveloped countries which are experiencing rapid population growth.

The committee chairman, William H. Draper, Jr., is quoted in the UP story, July 24, as saying, when asked if this country is supplying (birth control) information * * * "I presume so—informally, not formally."

(5) Mr. Fagley, executive secretary of the commission of the churches on international affairs of the World Council of Churches and International Missionary Council (who is the world council's representative at the U.N. for technical assistance and economic development matters) states his belief in a constant stream of writings and speeches that birth control should be a part of the U.N. technical assistance program. He does not blame the Congress or the U.N. for not adopting birth control, as long as the churches did not make their will known. He is now in the process of directing that will, with the results noted above.

(6) The Planned Parenthooders of Washington, D.C., recently went on record (meeting in an Episcopal church to hear among others a representative of the New York Council of Churches) as seeking World Health Organization programs in birth control for underdeveloped countries—and our own.

(7) The U.S. committee for the World Health Organization (heavily loaded) met in May to consider among other things the population problem.

(8) The Foreign Policy Association, a private, nonpartisan, educational organization, each year puts out an analysis of foreign policy issues to help American citizens realize more fully the responsibilities they must exercise if this Nation is to act in world affairs with * * * wisdom and * * * realism * * *. It disclaims a position on any questions raised. These issues are debated in numerous groups throughout the country in which many Catholics participate. In its 40th anniversary statement (November 1958) it raises the "population explosion" question. Among possible solutions relating to emigration, resettlement, food, water, housing, etc., under the title "Was Malthus Right?" the questions are asked: "Should the United States give financial and scientific support to the intensive search now being made to discover inexpensive contraceptives? To what extent does our experience with Puerto Rico—and with immigrants from that island—serve as an example of what might be accomplished elsewhere?" Newspaper chains and publications throughout the country continue in this vein and exploit the psychology of terror.

II

Some observations on these arguments

From all that has been written above, it will be seen that there is abundant evidence of a systematic, concerted effort to convince U.S. opinion, legislators and policy makers that official U.S. national agencies as well as international bodies, particularly the U.N. should provide, with public funds and support, assistance in promoting artificial birth control for underdeveloped countries. The purpose, as often remarked, is allegedly to prevent a "population explosion" engendered by advance in health techniques and services which has cut down the mortality rate. Although it is recognized that industrial, social and cultural advancement is usually accompanied by a decrease in fertility, the proponents of artificial birth control maintain that the "population explosion" presently endangers economic development and therefore, political freedom and world peace. Their mathematical projections of birth increase take little account

of other factors, including economic, social (e.g., position of women, high rate of illegitimacy, and polygamy) and cultural factors and changes. Moreover, if they claim the right to project population increases, they must concede the right to project production increases of foods as well.

U.S. Catholics and the moral issue

The position of U.S. Catholics in relation to the growing and needy population of the world is grounded in the natural law and respect for the human person, his origin, freedom, responsibility and destiny. They believe the goods of the earth were created for the use of all men and that men should not be arbitrarily tailored to fit a niggling and static image of what they are entitled to by those who are more fortunate, greedy or lazy. The hidden reservoirs of science and of the earth will be uncovered and offered to humanity by the optimists with faith in mankind, and not by those seeking short cuts to comfort.

U.S. Catholics believe the promotion of artificial birth control would be a morally, humanly and politically disastrous approach (ineffective even for its own aims) to a problem, the real solution of which requires sustained effort in a sense of human solidarity. They are prepared to dedicate themselves to this effort, already happily begun in official national and international circles, as well as by nongovernmental groups.

U.S. Catholics will not support any U.S. public assistance to other countries to promote artificial birth control, abortion, sterilization, for whatever purposes, whether through direct aid or by means of international organizations. Nor will they support international technical assistance, health or economic aid agencies or organizations which include such projects in their programs.

The basic reason for this position is conscientious objection to promoting a moral evil.

U.S. Catholic attitudes toward other aspects

However, quite apart from the moral issue there are practical reasons why Catholics would not wish to see any official U.S. favor given such specious methods of assistance.

Social: Man himself is the most valuable productive agent. Therefore, economic development and progress are best promoted by creating conditions favorable to his highest development. Such progress implies discipline, self-control and the disposition to postpone present satisfactions for future gains. The widespread use of contraceptives would hinder rather than promote the acquisition of these qualities necessary for the needed social and economic changes in the economically underdeveloped countries.

Immigration: Immigration and emigration have their role to play as a factor in solving the population problem. Both must be made more free between nations. Likewise, the migration of people from place to place within the same country must be facilitated. Many places lack manpower for economic development. Others have it in excess. Often migration of the surplus is impeded by lack of railroads and road systems. Hence, improvement of communication is an objective also to be studied. It has been said that migration to other countries is no ultimate solution because of difficulties of absorbing populations into other economies. But migration has de facto helped as a solution in the past. Sixty million people migrated successfully from Europe to the Americas in the last 150 years. When the nomadic Indians roamed the uncultivated plains of North America before the coming of these immigrants, the entire country with its estimated Indian population of only 500,000 and shortage of food, according to the norms of present day planned parenthooders, would have been regarded as overpopulated. Yet, the same plains today are being retired into a land bank because they are overproductive in a land of 175 millions.

Economic: It is a recognized duty for the richer countries to help needy nations so that their people and their nations may live and develop and themselves aid and enrich the worldwide community of peoples. The possibilities of this aid in the form of financial and technical assistance, trade agreements, commodity prices, marketing possibilities, migration opportunities have only begun to be explored by the United States or the United Nations. Technical and scientific advances in our country and other developed States offer ever new possibilities to men of good will and a modicum of imagination and effort. What, for instance, has happened to the food-for-peace plan, and how much is the United States paying to store its surplus grain? Could these rental costs be used instead for transportation costs of the grain to needy areas?

Bad economics too: Despite the promises of birth-controllers, contraceptives in terms of the yearly incomes of the citizens in underdeveloped nations are not cheap. In the United States, as far back as 1942, the contraceptive industry totalled $2 billion. India has recently allocated $10 million dollars for the promotion of contraception and is attempting to arrange for the construction of two separate factories for the distribution of contraceptives. It has 700 clinics distributing birth control information. It is certainly uneconomic to invest heavily in such nonproductive industry when capital is so badly needed for agricultural and industrial development. The educational drive needed to propagandize for the use of contraceptives could be far more effectively used to change ineffective ancient agricultural practices and to promote technical training.

Political and psychological: Soviet Russia in its wooing of underdeveloped countries does not press artificial birth control propaganda on them as a remedy for their ills. It offers education, loans, technical assistance and trade, and boasts that its economic system is able to use human beings in constructive work and to meet all their needs. The Russian delegate to the recent meeting of the United Nations Economic Commission for Asia and the Far East said, "The key to progress does not lie in a limitation of population thrugh artificial reduction of the birth rate, but in the speedy defeat of the economic backwardness of these countries." It has been speciously alleged by planned parenthooders that contraception will thwart communism. A little reflection will explode the fallacy of the prophets of "population explosion." Granted that the Soviets have proven in the past to be callous and unscrupulous in liquidating millions of their own population, the great masses in the underdeveloped countries do not know or do not remember this. Hence, their reactions must be as simple as this: If communism tells these presently highly sensitized groups: "The imperialists want to cut down your growth because they are afraid of your increasing numbers and because of the inadequacy of their economic system. We shall feed you no matter what your numbers," while on the other hand, the free world says, "You are overpopulated and cannot be fed. To eat, to live, to progress you must cut down your families and we'll give you the know-how"—shall we be able to blame the gullible and undiscerning if in the future they cast their lot with the Communist bloc?

The question is asked: Why do Americans spend so much time, effort and money seeking a short-cut inherently contemptuous of the human person, when they are continually airing their surplus food problem and their luxurious standard of living while their neighbors are crying for material, moral, and spiritual solidarity and assistance? If this solidarity and assistance are forthcoming, the dangers of their adopting communism and war as solutions are minimal.

Racial: The West in its passion to control the population is suspected of harboring the same fear and motives expressed recently by Prof. Robert Matthey, rector of the University of Lausanne to whom reference has already been made. This narrow vision of humanity and human relations, and the suspicion that this racist, selfish attitude dominates that part of Western opinion intent on limiting Asian, African, and Latin American fecundity, hurts Western and more specifically U.S. prestige and impedes friendship perhaps even more than stories of racial discrimination in the United States.

Asian women visiting the United States on Government exchanges have been programed to birth control organizations. Suspicion of motive follows on such a directed tour of what may be sold merely as the American way of life.

Concern for the human community and the sound development of international organization

The United States is an important member of the United Nations, which thus becomes a part of U.S. policy. Great numbers of U.S. Catholics, from motives of patriotism and from a sense of the universal solidarity of the human race, wish to see the United Nations improved and perfected and increase its effectiveness as an instrument of international justice: Of defense of the human person and his dignity, and of world peace. These persons do not wish to ignore or minimize the problem of population pressure. But these U.S. Catholics do deplore and object to the efforts of all those and especially Americans, who, however sincerely mistaken, would prostitute the United Nations and its agencies to unworthy and uncertain programs by using every fantastic argument, every hysterical fear and terrorism, bland misrepresentations of data, naive misunderstandings of real issues to bolster the fixations of birth-controllers.

These latter, for example, do not place in proper focus the idea of increasing the acreage and the acreage yield to meet the food demands of an increasing population, by stating that this requires extensive education, a lengthy period of time, new distribution methods, and the elimination of apathy, greed and superstition. This is pure begging of the question. It never seems to dawn on them (or does it?) that in a chronic condition where we have more people than food, the logical answer would be, not to decrease the number of people but to increase the food supply (or as G. K. Chesterton put it: We cannot solve the problem of uncovered heads by cutting off the heads but only by producing more hats). Is this too much work—or—do people simply not count? * * * especially if they are peoples of pigmentation?

If the problem of population is simply the one of feeding people, the potential is almost unlimited. Estimates of land areas which could be brought under cultivation vary from 4 to 11 billion acres. With scientific methods acreage yields can be increased to fabulous proportions. Rarely if ever are mentioned the equally expert opinions of renowned scientists. By way of example, Prof. Colin Clark of Oxford University concludes that the earth could now provide a standard of living comparable to that of Holland for a population of 10 times the present population of the world. This type of agricultural development is already at hand despite the fact that a relatively small amount of money has been invested in agricultural research. Total agricultural research in the United States has a budget of about $100

million, roughly the cost of one atomic submarine.

CONCLUSION

In these observations we have attempted to face realistically the problems connected with a growing world population within a morally acceptable framework. We have made no allusion to the marvelous discoveries which are just around the corner. For example, we shall soon be able to convert sea water for industry and irrigation at a price competitive with present water supplies. We have not even touched on the tremendous potential of atomic energy. We have not spoken of farming the seas as they can now be farmed for plankton. The problem would seem to be primarily economic, and not genetic unless the goal is genocidal. We must not permit the United States to be stampeded or terrorized into an international policy inimical to human dignity, based on the unilateral "guesstimates" of special pleaders who could win for us from underdeveloped peoples, the accusation of suavely and hypocritically plotting for them a form of urbane, furtive but nonetheless effective genocide.

The Need for Refugee Legislation

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, August 18, 1959

Mr. KENNEDY. Mr. President, the August issue of the American Federationist contains an excellent article by Hyman H. Bookbinder clearly presenting the need for refugee legislation. It points out how desperate is the situation of the 2 million refugees and how urgent it is that we participate in World Refugee Year by a modest program such as is contained in the Walter bill in the House and the Kennedy bill in the Senate.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the American Federationist]

LET'S HUMANIZE OUR IMMIGRATION LAWS

(By H. H. Bookbinder, AFL–CIO legislative representative)

Since July 1, 52 nations around the globe—including the United States—have been observing World Refugee Year. The result of a resolution adopted by the United Nations General Assembly, World Refugee Year is a "human year"—in contrast to the scientific aspects of the recently concluded International Geophysical Year.

"What a refugee wants most is to cease being a refugee."

This is the way the tragic problem of the world's millions of refugees was summed up by Claude de Kemoularia, special representative of the U.N. Secretary General for the World Refugee Year.

"We have a home, sir. What we need is a house to put it in."

This the way it was summed up to visitors to a refugee camp by a 10-year-old who with her family had lived all her life in the camp.

And another girl, one who probably has already become the world's best known and most honored refugee in modern times, has summed up both the despair and the prayers of the world's refugees. Anne Frank, the 13-year-old escapee from Hitler Germany, wrote in her diary, 8 months before her death in a concentration camp:

"It's really a wonder that I haven't dropped all my ideals, because they seem so absurd and impossible to carry out. Yet I keep them, because in spite of everything I still believe that people are really good at heart. I simply can't build up my hopes on a foundation consisting of confusion, misery, and death.

"I see the world gradually being turned into a wilderness. I hear the ever-approaching thunder, which will destroy us, too. I can feel the sufferings of millions. And yet, if I look up into the heavens, I think that it will all come right, that this cruelty too will end, and that peace and tranquility will return again.

"In the meantime, I must uphold my ideals, for perhaps the time will come when I shall be able to carry them out."

Anne Frank's words of hope should inspire us all to redouble our efforts during World Refugee Year.

The Very Reverend Francis B. Sayre, Jr., dean of the Washington Cathedral, is chairman of the U.S. Committee for Refugees, the group which has the major responsibility for American participation in World Refugee Year. AFL–CIO President George Meany serves as vice president of the committee and Joseph Beirne, chairman of the AFL–CIO Community Services Committee, is a member of its board of directors.

On the last Sunday before July 1, Dean Sayre devoted his sermon at the Cathedral to World Refugee Year. In a special litany for refugees, Dr. Sayre reminded us of the many areas in the world which cry out for help:

"For those who await salvation in the camps of Europe;

"For Chinese who have abandoned familiar paths to seek freedom among strangers;

"For children of Arabs whose lives are enclosed in barricades of bitterness;

"For pilgrims of Tibet who brave the mountain passes to keep their souls in liberty;

"For Algerians and Koreans fleeing from the ravages of war:

"For Jews and Gentiles who struggle against tyranny and oppression;

"For the destitute migrants of India and Pakistan;

"Lord, hear our prayer."

The U.S. Committee for Refugees has formulated a modest governmental program for American participation in World Refugee Year. AFL–CIO President Meany has endorsed this program as "the very least that the administration and the Congress should approve."

Needless to say, it cannot be expected that the world's millions of miserable, homeless refugees will find complete solutions to their problems during the next 12 months. But it can be hoped that during this period there can be an acceleration of our efforts so that a sizable number of refugees can begin to live in dignity, in comfort and, most of all, in hope.

During this World Refugee Year, moreover, it is to be hoped that a greater understanding of the refugee problem can be achieved among all the peoples of the world, including the United States, and that the proper basis may be laid for helping us meet our continuing responsibility in this crucial area for years to come.

In a recent statement before the Senate Judiciary Committee, the AFL–CIO testified that the most meaningful, most lasting and most appropriate thing Congress could do during World Refugee Year is to liberalize and humanize our basic immigration policies.

Immigration reform is only one facet of the total refugee problem. Relatively few of the world's homeless will ever have the opportunity, or the desire, to come to the United States. Their hopes lie rather in finding a secure haven either in the land where they now are, in some other land culturally and otherwise bound to the country of their birth, or in returning to their native land.

But just as immigration is only part of the broad refugee problem, so refugee relief is only a part of the broad immigration problem. Even if there were no homeless groups of human beings driven from or escaping from all types of tyrannies, or the tragic consequences of wars, the United States would still be faced with the challenge of modifying its immigration laws.

Our basic immigration law, the Walter-McCarran Act of 1952, has not reflected either the humanitarian, compassionate, democratic convictions of most Americans or the actual practices of the United States Government.

During the period since the adoption of the Walter-McCarran Act, over a Presidential vetc, there have been many harsh words spoken about that act—words spoken by both its defenders and its critics. As is so often true in political debate, neither side has been the model of objectivity.

If it is true that the act reflects discredited notions of racial superiority, as I believe it does, it does not follow that its authors or its supporters are "bigots" or "racists."

And, on the other hand, if it is true that the act's critics desire to change the law in order to allow more people, with less difficulty, to get to the United States, as I do desire, it is not true that we advocate unlimited numbers of immigrants or that we don't care whether subversives or criminal elements come in.

Although there are significant differences between these defenders and these critics of our basic immigration law, I do not believe that the differences are so irreconcilable that we cannot make substantial progress in bringing our law into harmony with American humanitarianism and actual American practice.

The AFL–CIO, from its very formation in 1955, has called upon Congress to "revise and liberalize the Walter-McCarran Act to reflect the democratic and humanitarian traditions of our country and to provide an immigration policy attuned to the present requirements of our Nation and of the entire free world."

The AFL–CIO believes that the number of quota immigrants admitted annually can be increased from the present quota of 155,000 to 250,000 without undermining employment opportunities for American workers.

The AFL–CIO is fully conscious of its responsibilities to its membership when it makes this recommendation. We do not overlook the fact that there are still more than 3 million American workers totally unemployed. It does come to our attention every now and then that a recent immigrant is working at a given job while an "American" is without work. But we are just as conscious of the fact that other "Americans" are at jobs created by some creative, imaginative "immigrant."

We do not forget that thousands of "Americans" are able to retain their jobs because thousands of "immigrants" are buying shoes and milk and television sets and are going to the movies and eating in restaurants and sending their laundry out.

What are we talking about when we talk about 250,000 immigrants? We are talking about one-seventh of 1 percent of the present American population. We are talking about 1 new American added to 700 other Americans.

We are talking about one-sixteenth as many new Americans from outside our bor-

ders as will be born inside our borders. Yes, we are talking about 250,000 persons born all over the world to join with 4 million born each year to American parents here at home.

It is difficult for me to understand why our rapidly expanding native population is listed by economists and other observers of the social scene as an unmitigated blessing, but an increase in our population one-sixteenth as great looms in some people's minds as a national calamity.

In this connection, it must not be forgotten that only a portion of all immigrants—sometimes no more than a fourth or a third—are jobseekers. But every immigrant is a potential customer for the products of American workers.

And, of course, every employed immigrant is a producer who contributes to our total wealth, and with his earnings he becomes the customer for himself and his family.

To put it another way—what makes America the prosperous Nation that it is? It is the combination of its labor force and the material resources of the Nation brought together by creative management. The more there is of each of these factors, the greater is the wealth potential of the country. This is not just theory. The great waves of immigration to this country were always followed by great gains in our national prosperity.

The key to continuing prosperity in the United States does not lie in protectionism—neither the protectionism of tariffs nor of immigration restrictions. It lies rather in keeping our economic system properly balanced between production and consumption, so that the full production potential of the factors of production are properly matched by the consumption demands of our people.

We do recognize, however, that a sudden, major increase in our labor force could cause dislocations. We no longer have uncrossed frontiers. Automation has eliminated many jobs. There are dozens of economically distressed communities. For these reasons, the AFL–CIO does not advocate unrestricted immigration. We cannot be indifferent to short-run distress of our people. But we can afford to be much more generous than we are now.

The heart of our present immigration policy is the "national origins" quota system. It is significant that this approach was enacted following the First World War and was reenacted following the Second World War. During both of these periods this country was experiencing reaction to international entanglements, suspicion of foreigners and general intolerance of new ideas.

The essence of the national origins quota system is that quotas are assigned to the nations of the world in proportion to the numbers of Americans in 1920 who came from or are descended from those who came from those countries. As a result, countries like England and Germany and Ireland have large quotas which never get filled, while countries like Poland and Italy and Greece have never been able to meet more than a small part of their requests for visas.

The national origins quota system, regardless of the conscious motivation of some of its backers, is based upon two false notions which the AFL–CIO thoroughly rejects: (1) that the population "mix" of 1920 is exactly right and anything else is "un-American," and (2) that there are some nations in the world which will provide better Americans than others.

As to the first, that America as it was in 1920 has some very special virtue, this is arrogance and unrealism of the worst sort. The population of America before 1920 was different from what it was in 1920, and the population after 1920 has changed every year since then. And it will—as it should—continue to change.

One of the unfortunate things in our history is that almost every generation of Americans has viewed succeeding ones with suspicion. The English immigrants distrusted the Irish; together they suspected the Germans; then all of them joined together in vilifying the Italians, and then the Slavs, and then the Chinese, and the Jews, and the Greeks.

Despite this history of initial distrust of new peoples, the record of adjustment, of integration, of accommodation is a glorious story. What we once used to refer to as the melting pot of America is now more appropriately and accurately described as the mosaic of American culture.

Assimilation and integration do not mean uniformity. It means that generation after generation America has shown its ingenuity in working out harmonious relationships between different cultural strains. Together, these strains have given us a composite known as American.

If there is anything like a purebred Anglo-Saxon American, he is probably like Martin Arrowsmith, whom Sinclair Lewis described as a union of German, French, Scotch-Irish, perhaps a little Spanish, conceivably a little of the strains lumped together as Jewish, and a great deal of English, which is itself a combination of primitive Briton, Celt, Phoenician, Roman, German, Dane, and Swede.

For more than 400 years, starting with Christopher Columbus and his fellow voyagers, each wave of immigrants has brought something to add to the American story. There have been many great periods in American history. But only 1 year in its long and proud history is numbered 1920. What is so particularly attractive about that year?

Perhaps even more appropriate than the mosaic, the true image of America is the kaleidoscope. It is a mosaic of human beings that is always changing but encased in a basic framework of freedom, of brotherhood, of tolerance, of creativity.

The fact is that we couldn't retain the 1920 "mix" even if we were all determined to do so. The large quotas assigned to some countries just do not get filled, while those of other nations are always exhausted. Special acts by Congress have permitted large numbers of refugees and relatives of American citizens to come in, without regard to national origins quotas. And even if we closed our borders completely and let no immigrants come in, we could do little about assuring a continuation of the existing "mix."

Hitler's plans for preserving the racial pattern in Nazi Germany were crude and inhuman. But his nonsense about the so-called Aryan race is based upon the same myths which explain the initial formulation of the national origins quota system.

Every serious study of this question has concluded that there is no such thing as racial superiority. Each race and each people produces a wide range of ability and intelligence. Behavioral patterns reflect the tensions and the opportunities of the respective societies.

There is nothing in the individual's genes which explains criminality or intolerance or subversiveness. For every criminal or subversive with a foreign-sounding name, the records are replete with hundreds of scientists, musicians, industrialists and every other type of positive contributor to the American way of life.

The national origins quota system has no place on the American statute books. It reflects an un-American policy of racial superiority; it fails to reflect the needs of a democratic America in a changing world.

In the absence of unrestricted immigration, there must be some criteria for selection of those who can be admitted in the place of the national origins quota system. We would support any standards which flow from this basic consideration:

Which people does America need most, and which people need America most?

Earlier this year Congress itself most eloquently rejected the philosophy of the national origins system when it voted to admit Hawaii as a State. Our newest State has an Oriental majority. Of the 600,000 Hawaiians, 38 percent are Japanese and only 20 percent are white. Among these whites are not only Americans but Norwegians, Germans, Russians, Poles and Portuguese. And there are Filipinos, Chinese, Puerto Ricans and Koreans.

All of these Hawaiians have lived in peace and in harmony for many years. Now they will continue to do so, but as full-fledged American citizens.

Because of the belief—a belief which we hope is unjustified—that Congress is not ready to make basic changes in the immigration law at this time, most of the bills in the 86th Congress deal with only limited aspects of the problem. Only two bills (the Celler bill in the House and the Kennedy bill in the Senate) strike directly at the national origins quota system, although almost all proposals would strike at it indirectly by giving special consideration to certain groups of applicants.

Almost every one of these "halfway" bills contains worthwhile improvements in our present law. Some would increase the number of immigrants; some would permit the "pooling" of unused quotas and thus yield extra numbers to some countries; some would provide special arrangements for refugee-escapees; some would facilitate family reunification.

The AFL–CIO hopes that this Congress will defy the predictions of the pessimists and vote a basic immigration reform. If it does not do so, we do want to see progress toward that goal. When the suffering of human beings is involved, when families are waiting to be united, when refugees who have never seen a private home continue to yearn, we would not advise Congress to wait until a completely satisfactory bill can be passed. But we do earnestly hope that Congress will give its serious consideration to basic changes in the law and then go just as far as possible in the development of an immigration law consistent with democracy and humanitarianism.

Oneonta (N.Y.) Star Describes Work of Hébert Investigating Subcommittee as Well Worth Pursuing

EXTENSION OF REMARKS

OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 18, 1959

Mr. STRATTON. Mr. Speaker, the work which the Special Investigations Subcommittee of the House Armed Services Committee under the chairmanship of the able gentleman from Louisiana [Mr. HÉBERT] has been doing in looking into defense contract practices has gained the attention of the whole country.

Under leave to extend my remarks, I include in the RECORD a thoughtful analysis of the work of this committee which appeared editorially in the Oneonta Star of August 17, 1959:

[From the Oneonta (N.Y.) Star, Aug. 17, 1959]

HÉBERT COMMITTEE PROBE IS WELL WORTH PURSUING

The billions spent on military equipment and supplies are acknowledged to be an essential part of the price we pay for defense in an uncertain world. Because of this, few Americans object to these tremendous expenditures. The very magnitude of defense contracting heightens the chances of abuse, however.

Instances of overcharging of the Government have come to light in recent months. Now it appears that other kinds of unethical behavior in connection with defense contracts may also be widespread.

A House Armed Services Subcommittee of which Representative F. EDWARD HÉBERT, of Louisiana, is chairman, has started to probe the activities of former military officers and Defense Department employees now working for defense contractors. The committee wants to know what kind of work such persons do, and whether there is a connection between their employment and the defense contracts their firms get.

The mere fact that an investigation has begun does not mean that there has necessarily been wrongdoing. The number and variety of complaints about possible defense contract maneuvering suggest, however, that something is wrong. The Hébert committee probe is will worth pursuing.

University of Wisconsin Researchers Plan More Antarctic Trips

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, August 18, 1959

Mr. WILEY. Mr. President, we recognize that in view of the worldwide efforts of communism to gain footholds wherever it can, it is important that we keep a watchful eye on its progress all around the globe.

Too, it is important that we protect U.S. rights, as well as promote efforts to assure that new lands and resources be utilized, insofar as possible, for peaceful purposes to serve mankind.

Today, I refer specifically to the Continent of Antarctica. My colleagues will recall that earlier this session I introduced a bill, S. 764, to establish a commission for coordinating our antarctic program—until now, unfortunately, scattered among 14 different agencies of the Government. The purpose of the proposal was to provide the foundation for as effective a policy as possible in relation to Antarctica.

Currently, a recommendation is under consideration to put our antarctic program under the National Science Foundation. The transfer would provide the Foundation with authority similar to that provided in my bill S. 764.

If the transfer occurs, I sincerely hope it would succeed in adoption of as effective a policy as possible for protecting U.S. rights on the Great White Continent.

I am, however, adopting a wait and see attitude.

In view of the fact that the Soviet Union is extremely active in Antarctica, I believe it imperative that we be alert to protect U.S. interests.

As a matter of fact, I am frank to say that, in the past, I have had some misgivings about the lack of a clearer definition of our antarctic policy.

Despite this hazy situation, it is gratifying to note that U.S. exploration of the area is going forward. Recently, the New York Times carried an article entitled "U.S. Explorers To Map Unknown Antarctica." The article reveals a number of the explorative projects underway, including greater emphasis on exploration relating to geology, cartography, and biology of the antarctic region.

Particularly, I am proud to point out that the University of Wisconsin has played a significant role in research of the continent at the bottom of the world. Recently, the Milwaukee Journal, also, carried a fine article by Laurence C. Eklund entitled "University of Wisconsin Researchers Plan More Antarctic Trips."

As fine illustrations of the research and exploratory programs, I ask unanimous consent to have the articles printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Times, Aug. 17, 1959]

U.S. EXPLORERS TO MAP UNKNOWN ANTARCTIC—SCIENTISTS TO STUDY NEW FIELDS ON TRIP—START IN OCTOBER

(By John W. Finney)

WASHINGTON, August 16.—The United States in the coming year will explore unknown areas of Antarctica, attempt to determine if the frozen continent is divided, and study the birds and fishes of the polar region.

These plans for the exploration in 1959–60 were announced today by the National Science Foundation, which has been given responsibility for directing the U.S. antarctic research program.

The program for scientific exploration, beginning in October, calls for greater emphasis to be placed than in the past on geology, cartography, and biology of the antarctic region.

In explaining the shift in sicentific emphasis, Dr. Alan T. Waterman, Director of the Foundation, pointed out that during the International Geophysical Year, the investigations had been primarily in the field of geophysics.

"Many very basic questions about the Antarctica remain unanswered, as for example the locations of mountain ranges and the types of marine life around the continent," he said. "Work during the forthcoming year will attempt to fill in many of these gaps in our knowledge."

The Foundation announced the award of $3,170,069 in grants to support the program of scientific research and exploration. The funds will go for 29 projects ranging from extensive oversnow traverses of the continent to a study of the nasal discharges of the penguin.

Logistic support for the scientific program will be provided once again by the Navy, which is preparing to send another fleet of supply ships and icebreakers to Antarctica as part of Deepfreeze 60. The naval support force will be under the command of Rear Adm. David M. Tyree.

Two Navy icebreakers will attempt to penetrate the previously unexplored waters of the Bellingshausen Sea. Aboard the ships will be a team of scientists to gather information in biology, geology, cartography, oceanography, and glaciology.

The U.S. research program will be carried out at seven installations in Antarctica, some of which are operated jointly with the Governments of New Zealand, Argentina, and Australia. Thirty-five U.S. scientists will remain through the 1960 antarctic winter. Twice that number will be doing research in the coming summer.

The research program will get underway in October—the start of the antarctic summer. Two oversnow traverses by snow tractors are planned for the summer.

One traverse party, consisting of seven or eight scientists, will climb the Skelton Glacier from McMurdo Sound for a 3-month survey of Victoria Land. This is a desolate, ice-capped expanse, 7,000 to 8,000 feet high. Seismic sounding and gravity, magnetic and glaciological studies will be made along the route in addition to geological investigation in the Skelton and Hallet areas.

A second party will leave Byrd Station in October for a 1,200-mile traverse of Marie Byrd Land to the coast near the Amundsen Sea. Geological and geodetic studies will be conducted in the executive committee and Hal Flood Ranges.

In addition, there will be an airborne traverse. On this, scientists of the University of Wisconsin will land by plane at 8 to 12 points along the 88th West Meridian between Horlick and Sentinel Mountain.

They will carry out seismic, gravity, and magnetic investigations, these may establish whether the continent is divided by a trough running between the Weddell Sea and the Ross Sea.

The Foundation also announced that preparations are underway for two traverses in the 1960–61 season. One of these would go from the Byrd Station to the coast of the Bellingshausen Sea and the other penetrate the high polar plateau in the area between McMurdo, the Soviet station Vostok, and the South Pole station.

As part of the biological research program, studies will be made on the ecology of the Ross Sea area, the fish in McMurdo Sound, the sexual behavior and orientation of the Adélie penguin. Also to be studied is the theory that salt taken in by the penguin is eliminated through nasal discharges.

The programs of U.S. scientists during the 1960 winter season, starting in March, will be as follows:

Byrd Station: Eleven scientists will winter at Byrd Station pursuing studies in atmospheric noise, aurora, geomagnetism, glaciology, ionospheric physics, meteorology, and seismology.

Amundsen-Scott Station: Nine scientists will carry out investigations in aurora, geomagnetism, glaciology, ionospheric physics, and seismology as well as special studies in solar radiation, ozone measurements, carbon dioxide, and nuclear radiation.

Naval Air facility, McMurdo: Four scientists will investigate cosmic rays, conduct glaciological measurements, perform seismic soundings, and operate the biological laboratory there.

Hallett Station: In cooperation with three New Zealand scientists who will carry out auroral, geomagnetic, ionospheric, and seismic observations, two U.S. civilian meteorologists and three naval aerographers will make daily upper air and surface weather observations and conduct research in solar radiation.

Ellsworth Station: With Argentine scientists, who will operate the station, four U.S. scientists will do research on the aurora, cosmic radiation, geomagnetism, ionospheric physics, and meteorology.

Wilkes Station: Australian and U.S. scientists will carry out projects in auroral investigation, biology, geomagnetism, ionospheric physics, meteorology, and seismology at this Australian-operated station.

Scott Station: At this New Zealand post, two U.S. oceanographers will investigate the waters and the ocean bottom of McMurdo Sound. A U.S. physicist will work with a New Zealand scientist on problems of auroral physics.

[From the Milwaukee Journal, Aug. 16, 1959]

UW RESEARCHERS PLAN MORE ANTARCTIC TRIPS—SCHOOL HAS BECOME ONE OF THE NATION'S IMPORTANT CENTERS IN SUCH STUDIES

(By Laurence C. Eklund)

WASHINGTON, D.C.—The University of Wisconsin has become one of the most important antarctic research centers in the country as the result of the allocation of more than $700,000 in Federal funds to the university.

The National Science Foundation, which allocated a total of $3,170,069 for scientific research in Antarctica, beginning October 1, granted the University of Wisconsin $566,985 to prepare for geophysical traverse programs in 1960 and 1961. The money will be spent for field work as well as research at Madison.

One traverse will leave the Byrd Station in the antarctic in November 1960, for the Bellingshausen seacoast, through a region never before explored.

Another traverse will seek to penetrate the high polar plateau between the U.S. Navy air facility at McMurdo Sound and the Russian station Vostok.

NOW AT WILKES STATION

Plans for those field studies are being worked out at the University of Wisconsin under the direction of Drs. G. P. Woollard, Charles R. Bentley and Edward C. Thiel, a native of Wausau, Wis.

Under a second grant of $135,930 to the university, the same three investigators will continue to reduce the seismic gravity and magnetic data collected on the traverses.

A third grant of $20,023 to the University of Wisconsin will finance a study of the climatology of the antarctic by Dr. Glenn P. Trewartha.

Richard L. Penny, who is working on a Ph. D. degree at the University of Wisconsin, is now at the Wilkes Station in the antarctic investigating orientation in the Adélie penguin and the parental and sexual behavior of the Adélie.

Penney's work will be carried on during the new exploration year beginning October 1 at the U.S. Hallett Station. The Wilkes Station was established by the United States but the American scientific program there is now being carried on cooperatively with the Australian Government.

HOPE FOR PROFILE

Probably the most dramatic undertaking of the new expedition will be an air borne traverse for seismic, gravity and magnetic investigations to be put into the field by the University of Wisconsin.

This project could determine whether the antarctic continent is divided into East and West Antarctica by a deep, ice filled trough between the Weddell and Ross Seas.

Dr. Thiel, who will direct the project, will be flown with two assistants along the 88th west meridian between the Horlick Mountains, named for the Racine (Wis.) malted milk family, and the Sentinel Mountains.

Their plane will be equipped with instruments, recently developed and refined, which, it is hoped, will enable them to take a profile of the land mass below. Thiel and his assistants will be landed at from 8 to 12 points along their route.

Thiel, now 31, got his doctorate at the University of Wisconsin in 1955. Before that he studied glaciers in Alaska. In 1956 he took a leave of absence from a teaching job at the University of Utah to do scientific work at the Weddell Station.

On that expedition Thiel, while on a traverse, used seismic soundings to detect a deep trough extending inland toward the Ross Sea from the Filchner ice shelf.

The bottom of the trough was found to average almost 4,000 feet below sea level, and Thiel's traverse party reported that the trough continued beyond the southerly limits of the traverse, swinging toward the southwest.

This may represent the Weddell Sea side of the hypothetical transantarctic trough.

DEPTH OF 4,400 FEET

More recently Bently led a traverse from the Byrd Station to the Horlick Mountains in a further effort to solve the problem of the trough's existence and exact location.

The newest evidence that the continent is separated by a trough was the discovery recently of the greatest bottom depth yet found beneath the Ross ice shelf.

A traverse party led by Albert P. Crary, chief scientist of the U.S. antarctic program, measured a record depth of 4,400 feet below sea level by a seismic sounding.

The existence of the trough was first suggested by Griffith Taylor, geologist with the 1901–04 British national antarctic expedition, led by Robert F. Scott.

Taylor's theory was based on studies of antarctic geography and the geology and geography of the nearby continents of South America and Australia.

The trough's existence is also suggested by the deep penetration into the interior of Antarctica of the Ross Sea on the Pacific side and the Weddell Sea on the Atlantic side.

THREE THOUSAND MEN INVOLVED

The Navy said Saturday that Operation Deep Freeze '60, the new name for its antarctic operation in support of our scientific program, will get underway this month.

Eight ships, three dozen aircraft and 3,000 men will be involved. There will be four icebreakers, two cargo ships, a tanker, and a destroyer escort.

Most of the scientists, including those from Wisconsin, are expected to fly to Christchurch, New Zealand, whence they will be flown to McMurdo Sound about October 1.

TASS REPORTS EXPEDITION

Ships of the task force will begin their unloading and loading operations December 10. They will all stage through New Zealand ports.

The icebreakers *Glacier* and *Burton Island*, said the Navy, will attempt to penetrate the Bellinghousen-Amundsen seacoasts in February to obtain oceanographic, cartographic and geological data of that unknown area.

Tass, the Russian news agency, said last week that the All-Union Arctic and Antarctic Research Institute in Leningrad had begun preparation for the Soviet Union's fifth expedition to the Antarctic, where the Russians maintain five stations.

Rear Adm. David M. Tyree: New Commander, U.S. Naval Support Force, Antarctic

---

EXTENSION OF REMARKS

OF

HON. CLARK W. THOMPSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 18, 1959

Mr. THOMPSON of Texas. Mr. Speaker, in a statement to the House of Representatives on July 28, 1959, I included a biographical sketch by Harry W. Frantz, distinguished foreign correspondent of the United Press International, of Rear Adm. George J. Dufek, the retiring commander of the U.S. Naval Support Force, Antarctica.

A sequel to that news story is another informative biographical sketch also by Mr. Frantz of United Press International of Rear Adm. David M. Tyree, who, on April 14, 1959, succeeded Rear Admiral Dufek as commander of this important task force for antarctic exploration.

Under leave to extend, I quote the indicated news story, which is most informative:

REAR ADM. DAVID M. TYREE: NEW COMMANDER, U.S. NAVAL SUPPORT FORCE, ANTARCTICA

(By Harry W. Frantz)

WASHINGTON.—Rear Adm. David M. Tyree foresees an era of development on the Antarctic Continent, leading toward permanent human habitation and utility to world science, communications, and economy.

Tyree became commander of the U.S. Naval Support Force, Antarctica, at New York on April 14, 1959, relieving Read Adm. George Dufek, who commanded Operations Deep Freeze I, II, III, and IV. He also serves as U.S. antarctic projects officer, by Presidential appointment.

He is now making the plans for Deep Freeze 1960. The Roman numeral system has been abandoned in favor of identification by fiscal years: thus 1960 is the 12 months ending June 30, 1960.

Tyree will leave Washington September 10 for New Zealand, and on October 1 will fly to the U.S. McMurdo Sound Base. In the approaching antarctic season, 8 ships, 35 airplanes, several helicopters, and about 3,000 men will be engaged in the support operations for the scientific program sponsored by the National Science Foundation.

The year is considered extremely important in the evolution of Antarctica's future. Twelve countries which engaged in antarctic projects during the International Geophysical Year, 1957–58 intend to continue their antarctic researches.

They presently cooperate through an international special committee for antarctic research. On October 15, representatives of 12 nations including the Soviet Union will meet at Washington to attempt negotiation of an international treaty, proposed by President Eisenhower, for cooperation in scientific and other peaceful purposes. Territorial claims in antarctica would be kept in the status quo.

Like his naval predecessors in the antarctic support operations, Admiral Tyree is not directly involved in antarctic diplomacy which is handled by the State Department, except as technical advice is required.

Tyree already has brought unusual technical viewpoints and a novel philosophy to bear upon the United States outlook toward Antarctica.

"We are approaching a new era in Antarctica, and looking to the future," he said to the United Press International. "If the new international treaty is concluded, there will be a long period of international scientific cooperation.

"We would hope that in the years to come we could organize our efforts on an economic basis, and obtain the scientific knowledge that the world needs. Who knows what Antarctica may mean in the coming 'space age'?

"There will be a rising interest in the future need for air routes across Antarctica, such as have already been established in northern polar regions."

Tyree believes that nuclear reactors, to be used for heating buildings and to melt

ice for clean water supplies, could greatly increase the possibilities of permanent human habitations at the Antarctic stations. There is a possibility that a nuclear reactor may be installed at the McMurdo Sound Base early in 1961.

The admiral said that for a century world interest in Antarctica was chiefly directed to the geographical exploration of the unknown continent. Later there developed a combined interest in exploration and the advancement of scientific knowledge, which culminated in the International Geophysical Year program of 1957–58.

"Now," he concluded, "we are on the threshold of what may be called an era of development, with prospects for completion of the exploration and many opportunities for advances in scientific and other peaceful enterprises."

Apart from his distinguished service as a line officer in Pacific theaters during World War II and the Korean conflict, Admiral Tyree is especially known in the Navy for his technical contributions in the field of explosives and propulsion materials. A graduate at Annapolis in 1925, he later received the degree of Master of Science at the University of Michigan in 1934, and he also had advanced courses in the National War College.

His official duties have involved long contact with scientific institutions and with technical establishments of the Navy. His reputation for successful collaboration with scientists was an important consideration in his appointment as commander of naval support operations in Antarctica.

The continent is sometimes called a great scientific laboratory. Good will and effective collaboration between the scientists and the Navy is indispensable to maximum success of the U.S. program.

International cooperation in Antarctica puts a premium on diplomacy. Admiral Tyree is a quiet-mannered man who thinks before he talks. While under his command, the U.S.S. *Renville* in the Java Sea was used for the successful cease-fire operations between the Netherlands and Indonesia under auspices of the United Nations.

The Government of the Netherlands awarded him the Order of the Orange of Nassau, rank of commander.

Admiral Tyree was born in Washington, D.C., January 23, 1904.

In 1943 he was awarded the Legion of Merit for participation in all phases of the Solomon Islands campaign and fulfillment of extremely hazardous assignments at the occupation of the Russell Islands and the assault on New Georgia.

In 1944 he was commended for his staff services in training, planning and conducting operations of the Third Amphibious Force against the Japanese at islands in the Bougainville area.

In June 1944 he was assigned to the Bureau of Ordnance, Navy Department, and in the same year he was Navy member of the Army's Chemical Warfare Committee. He was commended by both services.

For operations of the U.S.S. *New Jersey* during the Korean conflict he was cited for brilliant leadership, sound judgment and inspiring devotion to duty.

Improving Housing Programs

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, August 18, 1959

Mr. WILEY. Mr. President, as we give further consideration to the housing legislation, I would like to call attention to provisions relating to the loan authority for the FHA program.

Over the years, the FHA has performed a splendid service to the people of the country. During its lifetime, the FHA—through its mortgage insurance programs—has helped to provide homes for millions of American families, and housing for hundreds of thousands of other families in rental and cooperative projects.

In Wisconsin, over 3,000 home mortgages, amounting to over $37 million, were processed in 1958 alone. During the period 1935–58, the FHA insured 39,671 mortgages in our Badger State.

Overall, this program has helped to make it possible for three out of every five American families to own their own homes. Although a federally sponsored program, it is significant to the American taxpayer that the FHA is self-supporting.

Important, to, is the fact that there have been relatively few loan delinquencies. As a matter of fact, a nationwide survey recently indicated that currently, the delinquency rate for FHA—as well as the GI home loan program—has been at an alltime low during the 3-month period preceding June 30, 1959.

Although I frankly feel that the FHA authorization should be put on a permanent basis—as recommended by the administration—the amendment adopted yesterday to provide an additional $8 billion loan authorization and extend the program until October 1, 1960, will at least carry the program forward.

At this time, I am pleased to point out that my home State of Wisconsin—not continually looking to Uncle Sam to meet the problems of its citizens—has sponsored a fine housing program that, too, is helping folks in our Badger State to own their own homes.

Recently, this program—permitting second mortgage loans to veterans, at liberal repayment terms—celebrated its 10th anniversary. During its 10-year lifetime, it has helped more than 20,000 Wisconsin veterans of World War II and the Korean conflict to get additional money for home purchases.

Recent editions of the Milwaukee Journal carried two articles:

First. Showing the low rates of delinquencies under the FHA and VA programs; and

Second. Outlining this fine State-sponsored program for assisting veterans and their families to own homes.

I ask unanimous consent to have these articles printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal, Aug. 16, 1959]

FHA, VA LOAN DELINQUENCIES LOW

Home buyers in the United States with GI mortgages and Federal Housing Administration (FHA) insured loans set new records for keeping their loan payments current in the 3-month period ending last June 30.

In a nationwide survey of 2,664,688 loans the Mortgage Bankers Association of America (MBA) said that the overall delinquency ratio for FHA and GI loans was at an all-time low for the 3-month period.

Only FHA loans that were 3 months overdue were more delinquent this year than last, the survey showed. The MBA said the delinquency rate for 1,128,792 GI loans studied was the lowest since the survey was started 6 years ago.

The MBA said that only 1.83 percent of all GI loans were 1 month overdue, 0.37 percent for 2 months and only 0.28 percent for 3 months. At the same time last year, GI delinquencies were 2.06 percent for 30 days, 0.42 percent for 60 days, and 0.34 percent for 90 days.

Only 1.30 percent of the FHA insured mortgages surveyed were 1 month overdue, 0.24 percent for 2 months and 0.17 percent for 3 months, up slightly from last year. Last year's figures were 1.43 percent, 0.27 percent, and 0.13 percent, respectively.

Comparable figures for the State were not available from the Milwaukee offices of the FHA and Veterans' Administration (VA). As of July 31, there were 138 FHA-type home loans in the State reported in arrears, compared to 128 last year. There were 995 GI loans delinquent so far this year, compared to 857 at the same time last year, the VA said.

While spokesmen for both agencies here estimated that the Wisconsin delinquency ratio probably was near or lower than the national average, they said they had no figures on their total number of loans still outstanding to develop percentages.

On conventional loans, the MBA's survey showed a 1-month delinquency rate of 1.01 percent; for 2 months, 0.26 percent, and for 3 months, 0.16 percent.

The national delinquency rate on all types of loans was 1.98 percent as against 2.19 percent a year ago, the association said.

STATE AIDED 20,000 GI's TO GET HOMES

(By Chris Lecos)

The 10th anniversary of a State program that has helped more than 20,000 Wisconsin veterans of World War II and the Korean war get additional money to buy houses slipped by last week with little fanfare.

It was on August 5, 1949, that former Gov. Oscar A. Rennebohm signed into law the bill that permitted the State to make second mortgage loans to veterans at liberal interest and repayment terms.

Between then and June 30, 1959, the State made 20,251 loans to Wisconsin veterans for a total of $54,193,353—an average of slightly less than $2,700 per loan.

Slightly more than one-fourth of the number—5,189—were loans made to Milwaukee County veterans for a total of $14,525,326.

Approximately 35 percent of all loans being made at the present time are going to Milwaukee County applicants, according to Gordon A. Huseby, Madison, director of the State Department of Veterans' Affairs, which administers the program.

Several major changes have been made in the law in the last 10 years. At the start, a veteran could borrow only up to $2,000. He now can get up to $3,500. The original interest rate—2 percent a year on the unpaid balance—and the maximum term—20 years—has been unchanged.

When the law was passed it limited State second mortgage loans to the "purchase, improvement or construction" of a house that did not exceed $10,000 in price, including the cost of the land.

In 1951, the limit was raised to $15,000. A legislative attempt to boost that to $17,500 last year failed to get out of committee.

Basically unchanged over the years have been these provisions:

The veteran must have at least one dependent—wife, parent, etc.

He must have been honorably discharged after at least 90 days of service from August

27, 1940, to July 25, 1947, or from June 27, 1950, to January 31, 1955. A veteran discharged because of a service connected disability but with less than 90 days service is eligible also.

The veteran must have been a resident of the State when he entered service, or he must have lived in Wisconsin 10 years since his discharge and must not have received a veteran's bonus from another State.

RECORD SET IN 1951

Statistics provided by Huseby showed that more veterans received loans in the first few years of the program than in more recent years.

For example, from October 1949 to June 1951 (while the price ceiling was $10,000), the State made 2,715 loans. The year the State boosted the ceiling to $15,000—1951—the largest volume was recorded—6,752 loans for a total of $20,367,000.

Since then, the number of loans made each year has dropped. Between 1953 and 1959, the number of loans ranged between a high of 2,663 and a low of 1,201. In the fiscal year ending last June 30, the total was 1,614 loans.

Huseby said the drop in volume was not entirely due to lack of veteran interest. The inability of some counties to continue making loans contributed to the dip, he said.

LAW HAS BEEN CHANGED

During the peak 1951 period, 12 of the State's 71 counties exhausted allocated funds and had to stop making loans. By 1957, the figure had risen to 32 counties. Last year, 11 more counties ran out of funds.

The legislature took steps this year to provide a "more reasonable distribution" of funds.

It amended the law to provide that all the counties must turn in leftover funds to the State for redistribution to the 71 counties each March. Redistribution still will be on the basis of the veteran population in each county. Milwaukee County now gets the largest single share—26.59 percent.

The first allocation under the new law was made April 1, when Milwaukee County received $1,261,000, slightly more than it had actually turned in, said Jack Luban, Milwaukee County veterans service officer.

SIX HUNDRED AND SIXTY-TWO THOUSAND DOLLARS ON HAND

Only once in the 10-year history of the program has Milwaukee County run out of funds, Luban noted. That was between August 1952 and December 1953, he said. At present, the county has an estimated $662,000 for loans to veterans.

Luban cited several factors that could tend to deter or prevent some veterans from obtaining loans from the State.

One is a rise in home prices, particularly in the Milwaukee area. Since the $15,000 ceiling covers the house and lot, plus well and septic tank costs, if these are required, the veteran has a smaller field of housing to choose from, it was indicated.

Luban said the great majority of the loans were used for purchase of an existing house.

Also, the need for State secondary financing aid may not be as great, he observed. Some veterans undoubtedly have been able to find satisfactory financing through the low down payment loans backed by the Federal Housing Administration (FHA) or the Veterans' Administration (VA), Luban said.

INCOME REQUIREMENT

Other potential borrowers could be blocked by a requirement that total monthly payments for both the first mortgage and the State loan cannot exceed 25 percent of the veteran's gross monthly income, he added.

Overtime pay, part-time earnings and even a wife's income cannot be considered. Luban added that "excessive" indebtedness also could affect a veteran's eligibility.

But, despite the various factors that affect volume, officials said, the program has helped veterans, particularly those who wanted low priced houses and who had the required minimum 5 percent of the total cost available as a down payment.

The program has "probably been one of the prime and best factors of rehabilitation that the State has developed in getting a veteran into his own home," Huseby said. "We believe that home ownership is a very potent factor in getting a veteran stabilized as a self-supporting citizen in his community, because that is where his rehabilitation must take place."

Wisconsin veterans have proved to be reliable risks. Last October, Huseby told the legislative council's judiciary committee that only 47 out of 19,332 second mortgage loans made by the State had been written off as losses.

How Scandinavia Solved the Khrushchev Embarrassment

EXTENSION OF REMARKS
OF
HON. WALTER H. MOELLER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 18, 1959

Mr. MOELLER. Mr. Speaker, it is apparent that more and more of the people of America are beginning to share the concern I expressed in my remarks of August 10 with respect to the impending visit of Nikita Khrushchev, and the impact such a visit will have here and abroad. That was also the attitude of the people of the Scandinavian countries when he was scheduled to visit them in July. However, in the case of Scandinavia before things went too far respected persons in religious, court, and parliamentary circles exerted their efforts and their influence to alert public opinion and forestall the visit. The results gained world wide publicity.

At this time I would like to insert a part of a statement from the MRA Information Service bulletin of August 1, 1959, which relates the sequence of events which led to the cancellation of the Khrushchev visit to Scandinavia.

Facts which led to the cancellation of Soviet Premier Khrushchev's trip to Scandinavia were given July 21 by Bror Johnson of Sweden at the Summit Strategy Conference for Moral Rearmament, Mackinac Island, Michigan. He is the son of Bishop Bengt Jonzon, one of the men whose ideological stand made the Soviet Premier change his plans.

In an official Soviet report the Moscow Government said it believed now is not the opportune moment for the visit of the Soviet Premier in view of the position taken by the press and certain personalities in the northern countries. The Government hopes that the atmosphere will be more favorable in some years' time.

Among the personalities referred to are James Dickson, a Member of the Swedish Parliament and a Chamberlain to the King of Sweden; Bishop Jonzon, for 19 years bishop of the largest Swedish diocese including the strategic iron ore mines of northern Sweden; and Ole Bjorn Kraft, Vice President of the Danish Parliament, former Foreign Minister and Chairman of NATO during 1952–53.

Dickson issued a statement at the summit Strategy Conference at Mackinac, widely quoted in the Swedish and world press, that he had made a serious mistake in Parliament last year when he said he would not oppose Khrushchev's visit to Sweden this summer.

"Khrushchev should not come to Scandinavia and the invitation should be withdrawn," said Dickson. "His visit is not meant to be merely a social visit. It is part of the ideological war he himself has proclaimed. This time it is against Scandinavia. Next time it might be against the United States. So America should be prepared.

"I had not considered how such a visit would affect the nations of Africa and Asia. Our official invitation would set a precedent of acceptance to other areas of the world to entertain communism and its leaders."

Ideological trap. Dickson went from Mackinac to the parallel meeting of the summit strategy conference at Caux, Switzerland, where he met with Bishop Jonzon and other Nordic leaders. They planned how to alert public opinion to the ideological trap concealed in Khrushchev's visit.

Bishop Jonzon then issued an open letter to the leadership of Scandinavia simultaneously from Caux and Mackinac 2 weeks ago. He said, "Inviting Khrushchev to our country is the same as letting the enemy through the frontline in a shooting war. It is wrong, unwise and stupid. The only alternative to communism is to choose moral rearmament and live it as individuals and nations."

Bishop Jonzon said in his statement, "People say peaceful coexistence is possible, but the third world war—ideological war—is being waged now, and the Communists believe they will carry it to victory even by military means if necessary.

"Every word and action of Khrushchev serves a definite purpose; to split the free world, to confuse our judgment, to break down the will to resist, to encourage defeatism, through trade to bind our economy to the Communist bloc and finance our final incorporation in the Soviet system.

"It was shaking to see with what supreme skill Mikoyan played on every string during his visit to America—idealism, love of peace, sentimentality, naivete, sensation, vanity, business sense, Mammon.

"There are two world centers where people are planning and working night and day to make God's will effective in the life of every nation in order to break the materialism in West and East, and create an ideologically sound world for free people. These places are the MRA Assembly centers at Mackinac Island, Mich., and Caux, Switzerland.

"If we don't choose to live moral rearmament both as individuals and as nations, we choose communism as Khrushchev wants and intends by his visit. For as William Penn said, 'Men must choose to be governed by God or they condemn themselves to be ruled by tyrants.'"

Mr. Speaker, it is apparent that an informed and aroused public opinion can have its effect, even upon so insensitive a person as Nikita Khrushchev. Let us hope that a similar outcry from the people of the United States will let him know that he is not welcome here. Perhaps it would induce him to become conveniently indisposed and force him to call off his plans to impose his undesirable presence upon us.

Forests Take Vision

EXTENSION OF REMARKS
OF

HON. ROBERT C. BYRD
OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 18, 1959

Mr. BYRD of West Virginia. Mr. President, in the August edition of American Forests magazine, there is an article by a West Virginian which gives a good illustration of the myriad of benefits which can accrue from home-style, do-it-yourself forestry.

The article recounts how the author, Robert E. Bowers, and his partner purchased 123 acres of timber in Roane County, W. Va., and have nurtured it into manifold productivity. It also tells of the great personal satisfaction which the two have received from working in cooperation with the Mother Earth.

Mr. President, I am a strong supporter of nationwide forestry efforts; I am a cosponsor of the wilderness bill and the Youth Conservation Corps bill, and I have worked for broadening of our national forest system. Yet, I feel that it is also important that the American people, as individuals and as owners of woodland property, should actively partake in the preservation and management of the green heritage which we have been given in our forests. Such personal endeavor and responsible ownership can greatly assist our Federal efforts to meet the mushrooming forest demands of the years ahead.

Therefore, Mr. President, I ask unanimous consent that the article, entitled "Forests Take Vision," may be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FORESTS TAKE VISION

(By Robert R. Bowers)

For as long as memory can recall, autumn has been my favorite season. The painted forests have drawn me into the hinterlands on every occasion possible, for truly there is no time of greater natural beauty. Last year, however, the trees in Roane County, W. Va., seemed a bit brighter; the beauty somewhat more glowing; the air slightly sweeter. Sugar trees were a deeper gold; hickories slightly browner. Across the valley and up the mountain, the richness of the season was more pronounced and the woods were more enticing. In seasons before, I had walked upon these lands, but the soil and the trees had belonged to somebody else. Last fall, the land upon which I ambled and the trees which I admired were all my own.

It is difficult to express the feeling of such ownership to a man who has never owned anything but a city lot. But the responsibility I felt for my land and the pride it gave me were something which I had never before known.

Sentiment, you ask? Hardly. This land with all its fascinations is now a business. The beauty of it is something extra which cannot be evaluated on any business ledger, but which is certainly a part of the venture. And it is not taxable.

Sentiment? Sure, forest land has sentiment with it, and if it doesn't it resolves itself into just another impersonal business investment. Too often forest land is nothing more than "a business" which must produce the most revenue as quickly as possible with the least effort in the long run. To me, however, my forest is my son and daughter's future education, and their children's education as well, and that's about as personal as a man can get.

If somehow people more than 50 years old could impart their hindsight to youngsters, the future of our children and our natural resources would be secure. That is a conclusion reached by my partner, Walter Mitchell, and me after little more than a year of managing 123 acres of forest land. We bought the land with no hope of realizing any monetary return for more than 10 years, and with the possibility that it would take 15 years. Our children are now about to reach school age. Our plan was to improve our timber through thinnings and plantings, figuring that our first timber sale would coincide with the entrance of our youngsters into college.

Walter and I have tried to enlist the aid and advice of every man or agency who has dealt with forest problems. We have had problems, but professional guidance should keep us from any catastrophic occurrences.

We bought our 123 acres of timber from an oldtimer who was indeed a rare individual. He, despite his age, could see merit in waiting for his forest land investment to pay off. "If I were 20 years younger," he told us, "I'd never have let that land go." Unfortunately, most landowners in this same county don't look at their forests that way. They own them now, and many always have owned them. But to the average man, his timber is either "worthless brush" or "ready to cut." There is no in between. Most of these people cannot see beyond the immediate sale of timber.

The land we purchased had been cut some 7 years before. The timber cutters had high-graded it, and slaughtered the young stuff in the process. When they left, it must have been a desolate sight to behold. However, the land was coming back. Young yellow poplars had shoved through the slash and debris, reaching for the sun from the moist valley floor. The field where the sawmill had been contained several dozen husky 7-year-old black walnut trees, which stood nearly 10 feet tall. Another 3 years and they would bear their first harvestable crop of nuts.

Along the drier ridges and on the thin soils of the southern exposure, white oak and hickory predominated. The oaks formed a heavy coppice on every stump, while a few 8-inch trees had the markings of future timber. Intermingled with the poplars were young beech, walnuts, and locusts. Down in one hollow, an abundance of azaleas flowered in profusion, adding a touch of color. We earmarked them for future house plants. Everybody loves flowering plants, and healthy wild ones of this variety have special enticement. Ten acres of 16- to 18-inch beech appeared sound and offered some immediate potential for timber.

A county road crosses our land, separating 3 acres of goldenrod and bramble from the woods. It borders on 1,500 feet of the Little Poca River, a fine smallmouth bass and muskie stream.

Each time we walked over our land we learned something new about it. Soon each rock and stump and tree took on a meaning within itself. The land soon became more personal, and its potential and problems more apparent. We are proud of our choice of areas. It was not the best in the country; neither was it the worst. One might have called it typical of most cutover land in the eight-county area surrounding us. If we could make a go of our project, make it pay, and cite it as an example, there was a good chance of making forestry prominent in our section. We were, and still are, completely confident that we can. In fact, nearly a dozen individuals just like us have begun investigating land for future purchase, simply because they have been convinced that we know what we are talking about. That, in itself, is a sign of progress.

In 1 year's time, our enterprise has proven the wisdom of our judgment. During that time, however, many frustrations lay in our path.

First of all, we were attempting to operate a business while living 75 miles from our homes. Such a distance kills working hours one could put to good use by taking them up in travel. We had considered this before we invested, but since land is somewhat less expensive at that distance from Charleston, limited funds forced us to buy it there. We got the same quality property for about one-half the price of similar land within 50 miles of our homes.

Secondly, we encountered a minor difficulty the first time we visited the area. We were caught in a heavy rainstorm and became lost for nearly 3 hours. That just about washed out our enthusiasm. Later on, during the winter freezing and thawing, our cars became mired axle deep in mud four times. Each time, however, some kind soul pulled us out.

Our land is typical of the 5 million acres of West Virginia. It is neither good land nor bad land. Nor does its potential differ greatly from any area in the surrounding counties. Yet, we wouldn't sell our 123 acres for $50 an acre now, while much of the land surrounding us could be purchased for $30 or less per acre.

Most of the land around us is owned by farmers who have spent their lives there. Some have been there for generations, yet we can draw a more detailed picture of our woodland than most of them. Their woodlands have been nothing more than fence-posts or firewood to them these many years. When someone offered a price for the big trees they sold for what they could get. Thereafter, the brush that seeded in was forgotten or cleared away to make room for grass. Fortunately, these people are not inclined to burn every spring and fall.

We bought our forest; these people got theirs by inheritance. Ours was intentional; theirs was accidental. Theirs was taken for granted; ours was to assure our children a college education 15 years from now. They see little future in their woods; our 123 acres will pay off the mortgage in 10 years. From then on our harvest will be profit. Most of these forest owners sit and hope for a buyer for their big trees; we go looking for markets for every product from our land, and there is certainly much more than timber.

When we bought our land in 1958, the mines were down. This killed one major market for 4- to 10-inch oak and hickory saplings. Most timber owners closed their shops to await return of the good times again. We studied every product we had, from timber to nuts to flowering shrubs. Then we inquired about markets in all directions.

The first nontimber use we recognized was our black walnut crop. There are about 100 large walnut trees on the area. They are gnarled, and are bypassed by the cutters. Yet, they have produced from 1 to 20 bushels of nuts per year, averaging about 5 bushels per tree. Walnuts sell in West Virginia for $3 per hundred pounds. That meant that our annual crop had a potential value of approximately $400. Time involved in harvesting, distance from market, and transportation costs would eat into this gross

value heavily, but the future would work these problems out.

A survey indicated that we could cut 10 cords of firewood or mine props per acre without hurting the growing stock. This amount could be removed in our initial improvement cuttings, which were aimed at increasing the growth increment of the trees left for future timber. There is an excellent firewood market in my home town, but 75 miles is a long way to haul timber. Nevertheless, more than 1,000 cords at $16 to $18 per cord cannot be overlooked. One drawback has faced us constantly. We can get enough orders for firewood, but we don't own a truck. We don't dare hire a truck and then look for orders, and we can't take orders in advance as we may not get enough to pay the transportation charges. The solution: we are going to get a truck, but not for awhile.

The need for the improvement cutting was exemplified by a 14-inch chestnut oak which had been released to some degree back in 1951. A core drilling showed that during the 10 years preceding the 1951 cut, the oak had grown one-quarter inch on a side. After release, it had grown three-quarters inch in 7 years. Such findings expedited the initial improvement cutting. We contacted the Agricultural Conservation Program office in Spencer. We hoped to sign up under the cost-sharing plan, for 25 acres the first year. The ACP pays up to $10 per acre for labor costs involved in timber stand improvement. At that time, we were the only ones to sign up for timber-improvement during 1958, which pointed up the lack of understanding among the people for their forest potential. The ACP man decided he would allow us 15 acres, instead of 25. We were disappointed, but left the office eager to get started. When the approval came through it was for only 10 acres. At that rate it would take us 12 years to improve our entire 123 acres. We accepted the acreage figure as approved, and planned to sign up for 25 acres in 1959.

It was probably just as well we only got 10 acres approved, because the work had to be done by December 31, 1958. Our approval arrived on December 12. Vacation time, weekends, and free time of our neighbors were imposed upon, but we finished our work with axes under the deadline. Blisters and calluses covered our hands and feet, and scars from flying chips pock-marked our arms, but we did it!

Within 30 days a check arrived for $114 as repayment for the labor involved in the stand improvement. This was our first return from the property, even though more than that had been spent for labor, travel and equipment. When we bought the area we didn't have one tool. We now have three double-bitted axes, two shovels, one brush hook, and a rake. We hope to purchase a powersaw before starting the next cutting. An office man just can't stand to sit all week then cut trees with an axe all day on weekends.

As quickly as the check arrived, we signed up under the ACP program for tree planting. We had some erosion problems and about seven acres of bramble land that needed planting. This spring we planted 7,300 conifer seedlings, for which we are to receive $20 per acre, or $140, from the ACP. By the time the trees were in the ground, more than $238 had been invested: $139 for a three-man crew to plant them, $86 for the trees, and $12 for a man to plow furrows in the bottomland for planting.

This planting was done for three reasons: beautification, Christmas trees, and pulpwood. Beauty would take a year, Christmas trees 6 years, and pulpwood at least 15 years. Because we try not to be too optimistic, we count on only two-thirds of the trees surviving to maturity or at least to useful size. Christmas trees at 6 years of age should bring an average of $1 per tree, if properly pruned and shaped. Our hope is to harvest about 500 Christmas trees in 6 years, 500 in 7 years, and 1,500 in 8 years. From these we hope to obtain $2,500 in gross income. The remaining pines, white, Scotch, red, and Virginia, will be left to grow into pulpwood, which should produce about 20 cords per acre in 15–20 years. The 750 Norway spruce will be lifted at about 5 years of age and sold alive for house base plants and lawn decoration. We hope to harvest 500 for this purpose at an average of $3 per tree. Good ones will bring $5, but the average will be $3. Our spruce should bring us a total of $1,500 in 5 or 6 years. This market is almost assured, as there is heavy demand for such decorations in our area.

The pessimists have told us that the Christmas tree market will be flooded by the time our trees mature. I don't believe it. We'll have competition. Here's hoping we'll have plenty of it by then. In fact, if we had our way, every eroded hillside in Roane County would be competing with us in the next 6 years. We hope our example will sell farmers on planting those barren, nonproductive slopes to trees of some kind. We hope they will see the wisdom in it by our example. So far as competition is concerned, however, we don't worry about it. West Virginia is now growing several million Christmas trees, but still two-thirds of our annual purchases come from other States.

Our first appraisal was quite like anybody else's. But after a closer look we began to consider our acreage as a group of units, each having its own personality and characteristics which had to be considered for maximum yield and income.

For instance, we could slaughter the beech and sell it cheaply, because at present there is not a great market for it. We think that there will be someday, and we can wait. If not, we'll have a beautiful squirrel woods, and that is worth something. So we'll thin the beech and let it grow. It is fair-sized now; it will grow faster in the future.

When we started a critical analysis of our property, we envisioned it as a multiple use area in which every possible outlet must be considered. Improvement of the stand was our first consideration, with the thinnings as firewood and possibly pulp. Of course, we hoped for some sideline hunting during the interim. That was one facet we really underestimated. One month after buying the area, we jumped a covey of 18 quail and 2 grouse one morning not 50 feet from the road. On opening day of the squirrel season, six of us killed 13 squirrels and spotted nearly 50 on a 10-acre plot of beech hickory. By afternoon we had killed nearly 20. More than this, that October day the four visitors, whom we didn't know until then, caught a nice string of smallmouth bass and panfish from our river. If nothing more, we had purchased a really fine hunting and fishing area which in itself is rewarding in these days of hunting and fishing pressures and posted land.

One of the frustrations of our venture came from our hunter friends. Four of them stayed all night in our shack and we had to sleep in our car. That wasn't bad, but they also had our stands by the time we got into the woods. We forgave them. Next day, they had a notion about running us off our own property, until they found out we owned it. When we requested that they clean up the garbage around the shack before they returned to hunting, they all agreed nicely. We returned to the woods to hunt. Upon our return, our friends were gone but the garbage remained. In fact, bottles were broken, the shack floor had been used as a bathroom, and the place was an unsightly mess.

Walter and I decided that the vandals were not typical, so the land remains open to anyone who cares to hunt or fish. After all, one doesn't write about brotherly love among landowners and sportsmen for 8 years, and then lose his religion at the first infringement upon his property rights. My faith in humanity was dimmed for awhile, but I recovered.

Watching the squirrels work on hickory nuts opened up another aspect of forest ownership which we will investigate to the fullest. We have about 300 hickory trees, and at least 50 of them produce a heavy crop of nuts. These are relatively thin shelled shagbark nuts which taste almost like pecans. Market possibilities are in doubt at present. If, however, there is no demand, we will create one. The nuts are just too good to waste.

Walter and I each spent 20 hours removing grapevines and suppressing growth from 3 dozen healthy young walnut trees last fall. The trees had seeded in naturally after the logging operation 8 years ago. They should be producing nuts in 2 or 3 years, which we can add to our growing list of possible sales. We are cultivating them for the future. They are close to the road and accessible, which adds incentive to our project of releasing special trees.

Speaking of nuts, last November we planted several hundred Chinese chestnut seeds. This spring they came through the ground in fine fashion, and we should have several hundred seedlings for sale this fall or next spring. We hope to use the money to buy fertilizer to put on the chestnut trees we keep for our orchard. On June 1, 1959, our seedlings stood almost a foot high. They should be from 2 to 3 feet high this fall. The squirrels dug up a few, but that's part of the price you pay for having a multiple-use area. We already have a half-dozen orders for our young chestnut seedlings this fall.

It is not my claim that I was born with any special wisdom about land and trees and such. Nor it is my claim that I have any great ability to predict the future. In fact despite hard work and planning, this whole venture may fall flat on its face, but I doubt it. My one claim is that I know something about land and something about trees, and my faith in both is as deeply implanted as the roots of a 300-year-old white oak which marks a corner of our land. And I believe in my State and in my Nation. There is no sounder investment than land and forests.

Personal Guilt of Communist Dictator Khrushchev

EXTENSION OF REMARKS

OF

HON. THOMAS J. DODD

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Tuesday, August 18, 1959

Mr. DODD. Mr. President, in a Senate speech last week I tried to point out the personal guilt of Communist dictator Khrushchev for a series of atrocities against the people of Hungary and their leaders in the revolt of 1956.

Today's Washington Post and Times Herald carries a report of eight additional murders to be charged against Khrushchev.

Eight additional murders do not constitute a large entry in the record of one who is involved either directly or indirectly in the murder of millions. But I call it to the attention of the Senate

as one more reminder of the kind of man we are welcoming to our shores as an honored guest.

Mr. President, I ask unanimous consent that the article from the August 18 edition of the Washington Post and Times Herald be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HUNGARY EXECUTES EIGHT LINKED TO 1956 REBELLION

BUDAPEST, August 17.—Communist Hungary has executed eight men recently convicted of political crimes, according to an unconfirmed report circulating today among Western diplomats.

The report of the executions is the final chapter of a secret trial story that has been heard in Western circles since last spring. It has been impossible to verify the reports through official sources.

A Foreign Ministry spokesman would neither confirm nor deny the reports of the executions.

The trial rumors never clearly spelled out the charges on which the men were supposedly brought to court. They allegedly stemmed from the Hungarian revolt of 1956.

According to the most persistent reports, the men involved were mostly workers from Ujpest, an industrial suburb of Budapest.

Ten were reported sentenced to death in the original trial but two of these sentences were reduced to life imprisonment in an appeal hearing last month. About 15 other persons reportedly received prison sentences.

Sources for the execution reports were unable to give any names.

Poison in Your Water—No. 156

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 18, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Oregon Journal of Portland, Oreg., of May 26, 1959, entitled "Dirty River Cleanup Job Partly Done."

DIRTY RIVER CLEANUP JOB PARTLY DONE
(By Watford Reed)

Portland residents sighed with pride early in 1955 when the city neared completion of its $19,000 sewage disposal project. They thought the job was done.

It was as though a football team reached its opponents' 10-yard line, the rooting section sang the school song and the team trotted off the field while the opposing team kept on playing.

The job was only partly done.

With the Columbia River and Portland Harbor polluted 97 times above accepted standards for swimming, Portland is exposing its residents and neighbors who water ski or use the streams for other purposes to the threat of serious illness.

A small part of Portland's woes have been inherited. The annexation of Garthwick in 1950 added 300 residents whose sewage still is dumped straight into the Willamette. The annexation of the Vermont Hills area added a few hundred, although most of the district's sewage is treated by a plant built before the area joined Portland.

The city's sewage disposal plant provides only primary treatment for the sewage that is poured into the Columbia. Primary treatment means screening and sedimentation, which takes 30 to 35 percent of the total organic matter and about 65 percent of the suspended matter out of sewage.

State officials say that henceforth secondary treatment will be required of all sewage where the effluent is dumped into the Willamette. This kind of treatment, which depends mainly on the work of bacteria, can remove from 85 to 95 percent of the organic matter in sewage, depending on the degree of treatment—and almost 100 percent of the germs.

Milwaukee, Wis., makes commercial fertilizer from its sewage to avoid contaminating Lake Michigan. The sale of the fertilizer reduces the cost of treatment to the city, although it does not yield an overall profit.

In the case of Portland, sanitary officials would be satisfied at present if the city would chlorinate effluent dumped into the Columbia.

Nor is Portland the only city on which Federal and State authorities are "lowering the boom." The public health service has taken steps involving St. Joseph, Mo.; Washington, D.C.; Omaha, Nebr., and Council Bluffs, Iowa; Kansas City, St. Louis, Sioux City, Iowa, and others. Most of the cities have cooperated.

In Portland, city officials estimate the cost of covering those last 10 yards to the goal line at $5 million. They profess to believe that the city's voters would rebel at proposals to spend that much more.

Yet $5 million is slightly more than the cost of 1 mile of city freeway, and scores of miles of freeway are projected for Portland.

City officials may be right, however, for Portland voters have shown a preference for frills that look nice over necessities that are not conspicuous. In 1956, for instance, they voted down a $5 million proposal to rebuild overloaded sewers that already had burst and flooded basements. And at the same election they joined the rest of the county in voting money for a new western approach to the Hawthorne bridge.

City officials believe that the voters were against spending money for sewage disposal when they killed a $39,500,000 "package" plan last November. State officials are convinced that the voters would have approved the $5 million items for sewage disposal if it had been on the ballot alone.

All over the country increasing numbers of people are becoming convinced that if mankind is going to use nature's gifts, such as streams it has a duty to keep them in condition almost as good in that in which human beings first found them.

And whether the State wins or loses its legal action to force Portland to abate pollution, the issue cannot be delayed much longer.

Harry Golden Pays Tribute to the Late Harold Duane Jacobs

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES

Tuesday, August 18, 1959

Mr. NEUBERGER. Mr. President, in the Carolina Israelite for August 1959, the noted editor and author, Harry Golden, has paid tribute to a newspaperman of integrity and ability, the late Harold Duane Jacobs of the Baltimore Post. All who knew Harold Jacobs—as I was privileged to do—respected his devotion to the cause of the fourth estate. He practiced journalism as a great profession, and to it he brought genuine distinction and credit.

I ask unanimous consent, Mr. President, that the editorial entitled "Harold Duane Jacobs of Grey Rock," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HAROLD DUANE JACOBS OF GREY ROCK

In 1946, about 4 years after I had founded the Carolina Israelite, I received a letter from a subscriber who introduced himself as Harold Duane Jacobs. He lived in Pikesville, Md., 20 miles outside of Baltimore. Mr. Jacobs said he had been a managing editor and closed with, "Boy, what I could have done with you if I were still a managing ed." In this business it is not the money. You can always borrow a few hundred from someone, or exchange postdated checks with a friend. What is important is to receive letters from a man like Harold Duane Jacobs who tells you you are on the right track. It is hard to explain but a letter of this kind is like acquiring a partner whose investment solves all your financial problems. I am not exaggerating. An oldtime professional newsman tells you you are making a contribution to American journalism. That is what is important, and you go on.

Harold Duane Jacobs came to Baltimore in the 1920's. He edited the Baltimore Post. He started from scratch. Before he left, the Post had a daily circulation of 90,000.

Just a few years before the publication of my first book, "Only in America," I met my subscriber, Mr. Jacobs for the first time. He invited me for a weekend to his home. Mr. Jacobs and his wife, the former Ethel Epstein, gave me a stimulating and gracious weekend. The winner was held in my honor in the main dining hall of their famous colonial estate, Grey Rock. The Governor of Maryland came, Federal Judge Sobeloff, the mayor of Baltimore, the chief of police, and many of the editors and civic leaders of that great city. At the head of the table sat the grand old master of the American essay, Gerald Johnson, who introduced me. This was my connection with Harold Duane Jacobs, who died a few days ago.

I mourn his loss.

Veto of Oil Leasing Bill for Alaska Unwarranted

EXTENSION OF REMARKS
OF
HON. RALPH J. RIVERS
OF ALASKA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. RIVERS of Alaska. Mr. Speaker, I firmly believe that President Eisenhower's veto of H.R. 6940, a bill which would have increased the maximum allowable acreage for oil and gas leasing in Alaska from 300,000 acres to 600,000 acres was ill-advised and uncalled for. Alaska's size, equaling five western States, plus the need for incentives to bring about exploration of remote areas subject to the high costs which prevail

in Alaska, requires an increase from 300,000 to 600,000 acres.

The fast that the Department of the Interior expresses preference for a package bill to increase lease rentals and abolish the existing waiver of rentals for the second and third year has nothing whatsoever to do with my bill which has been vetoed. Interior's package plan could, in the wisdom of Congress, be put into effect regardless of the provisions of H.R. 6940. The maximum allowable acreage in Alaska has nothing to do with rental rates and waivers or nonwaivers of rentals. It is admitted that this veto will deprive the State of needed income by curbing increased leasing at this time, but is piously justified on the theory that it will be better for the State and the Nation in the long run.

The Interior Department made only a meager showing regarding the bill during the House and Senate committee hearings, expressing no firm position regarding monopolies, and could not justify its proposal that a separate leasing area be established for that part of Alaska north of the Brooks Range. That this is true is evidenced by the favorable reports made by both the Senate and House committees which conducted the hearings. The House Interior and Insular Affairs Committee, of which I am a member, was unanimous in finding that the increased acreage would not be monopolistic and that the legislation would be conducive to orderly, yet accelerated development of the oil resources of Alaska. The evidence also showed that there was no unanimity of opinion within the Department of the Interior itself, and that the opinion expressed by the witness for the Department, at the hearings, that there should be a separate leasing area north of the Brooks Range, was only a makeshift.

The President's action is a reflection of departmental arrogance directed at the House and Senate Interior Committees—and the Congress of the United States—for having the temerity to legislate with a slight variance from the conclusion submitted by the Interior Department. I consider this veto to be an unwarranted overriding of congressional discretion and judgment.

Ninety-Cents-on-the-Buck Come-On

EXTENSION OF REMARKS

OF

HON. GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 13, 1959

Mr. HUDDLESTON. Mr. Speaker, under leave heretofore granted, I am privileged to insert in the CONGRESSIONAL RECORD an editorial from the Birmingham (Ala.) News of Sunday, August 9, 1959, entitled, "90-Cents-on-the-Buck Come-On." This editorial, as its title implies, deals with the proposal of President Eisenhower to increase the Federal gasoline tax an additional 1½ cents per gallon. I recommend this editorial to the careful study of every Member of the House:

NINETY-CENTS-ON-THE-BUCK COME-ON

The great attraction of the Federal highway program, now underway, is that Uncle Samuel puts up 90 cents of every dollar spent on this nationwide project.

Right now the Federal Government finds itself without necessary funds to insure continuation of the program. In State after State the howls are going up because the pinch is being felt or is about to be felt. Such highway funds generally are committed some time in advance, since highway development is a long-time piece of business.

To provide the needed money to keep up this gargantuan program, Mr. Eisenhower has asked for a 1½-cent gasoline tax hike, which would put the Federal levy at 4½ cents. The House Ways and Means Committee has refused to go along with this. Instead it recommends a billion-dollar bond issue and cutting the annual expenditure rate to $600 million next year with a graduated increase. This would see the sum of $2,200 million allocated not until 1969. But the Public Works Committee, responsible for deciding how far, how fast, is stiffly turning down this plan. The Public Works Committee wants construction maintained at $2,200 million a year steadily.

The Ways and Means Committee proposal also would stretch out the construction beyond the 1972 terminal date of the program.

We have no idea how best to find the money, though we see little to recommend the Ike-asked gas tax increase. The bond issue Ways and Means proposes would be paid for by transferring one-fifth of the present 10-percent manufacturers' new auto excise tax from the general fund to bond retirement. One-fifth of that tax would come to about $250 million a year. Obviously we would be paying for the new highways for some time; that is not necessarily bad for they would be used for a long time.

The entire situation is muddled by the fact that the program got going hastily when unemployment was up, there were recession evidences all about, and the highway program seemed a good pump primer. As it is, though, we now find ourselves short of money and face the question whether we want to go in debt more. Our own tendency would be to cut the program back. If it seems we would be turning our backs on a 90-percent Federal handout, let us ask ourselves whether we ever will stop Federal spending in gigantic figures unless we make do with something less than the maximum. You can't keep dishing it out at a high rate and ever expect to control Federal spending.

A Man and His Wealth

EXTENSION OF REMARKS

OF

HON. ARCH A. MOORE, JR.

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 18, 1959

Mr. MOORE. Mr. Speaker, several weeks ago, a great American passed away. The individual of whom I speak is the late Michael L. Benedum, who during his lifetime perhaps was responsible for the discovery of more oil than any other man living or dead. He was a great humanitarian and philanthropist. His love for his native State of West Virginia, while evident during his lifetime, has become all the more evident upon the spreading of his last will and testament upon the record.

That last will and testament is a monument to America and all that we seek to safeguard here in these great Halls of Congress.

Thomas O'Brien Flynn, the editor of the editorial page of the outstanding West Virginia paper, the Wheeling Intelligencer, has set out in a brief article, "A Man and His Wealth," several paragraphs of this great man's last words which I want to include in my remarks and respectfully urge my colleagues in the House to take a few minutes to read. This editorial should confirm to all of us here that while our jobs are most difficult and trying at times, that as long as America has men such as Michael L. Benedum, ours is an easy undertaking:

A MAN AND HIS WEALTH

Those who share the divide-the-wealth views of some of our modern social planners who would limit the personal acquisition of riches either through direct limitation of income as proposed by the late President Roosevelt or by the imposition of punitive taxes or other Government restrictions, would do well to read the last will and testament of the late Michael L. Benedum.

In disposing of a fortune estimated at $100 million, Mr. Benedum made some observations on the subject of property and its use which the prophets of a new social order might consider with profit.

"If I could have looked upon my material goods as personal property," wrote Mr. Benedum, "belonging to me alone, my task would have been immeasurably lighter. But I have never regarded my possessions in that light. Providence gives no fee simple title to such possessions. As I have seen it, all of the elements of the earth belong to the Creator of all things, and He has, as part of the divine purpose, distributed them unevenly among His children, holding each relatively responsible for their wise use and disposition. I have always felt that I have been only a trustee for such material wealth as providence has placed in my hands."

Can anybody seriously believe that laws or a political system which would have made impossible the career of a Mike Benedum or a Henry Ford or an Andrew Mellon or a John D. Rockefeller or an Andrew Carnegie would be in the public interest? Because these were wise men who took their responsibilities seriously, their management and disposition brought benefit to untold millions. The wealth of others who were not so wise or who were succeeded in its management by lesser men, has been dissipated. In either case, the millionaire's personal use of the wealth he had amassed was relatively trivial, the benefit to others, directly or indirectly, immense. The point is that under a political system denying these men the freedom of action they enjoyed much of the wealth which their genius created and managed, and which in the last analysis went to the benefit of others, never would have come into existence.

Letter to the French Ambassador

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 12, 1959

Mr. ANFUSO. Mr. Speaker, on August 6, 1959, a story was published in the press that 16 Members of the House of Representatives urged the French

Government to enter into negotiations to end the Algerian war and my name was listed as one of the 16 House Members. I have no knowledge of having signed such statement and do not subscribe to the views as expressed in that statement.

I have informed the French Ambassador that I am not in accord with the contents of the statement. Under leave to extend my remarks in the RECORD, I wish to insert the text of my letter to the French Ambassador as follows:

AUGUST 13, 1959.

His Excellency Mr. HERVE ALPHAND,
Ambassador of France,
French Embassy, Washington, D.C.

DEAR MR. AMBASSADOR: Since writing to you on August 4, my attention has been called by my good friend Congressman EMANUEL CELLER, and also by Mr. Joseph M. Levy, that on August 6, 2 days after writing to you such letter lauding President de Gaulle, I allegedly joined 15 other Congressmen in a statement concerning Algeria.

I have no knowledge of signing such letter and am unable to check whether my secretary signed such statement without my knowledge, since she is presently away on vacation.

However, since the contents of such statement has now been made known to me, I wish to state emphatically that I am not in accord with its contents since it demonstrates interference with the internal and domestic policies of our great ally, the French Republic.

I repeat that, regardless of what my feelings toward France may have been prior to President De Gaulle, I am now convinced and have been since President de Gaulle came into power, that we are dealing with a new France, with a united country under the splendid leadership of a great friend of the United States and a stanch foe of communism.

With warm regards, I remain,
Sincerely yours,

VICTOR L. ANFUSO,
Member of Congress.

County of Los Angeles Board of Supervisors Urge Congressional Committee To Expedite Approval of Federal Aid to Highway Bill, Making Funds Now Available for Critically Needed Highway Improvements, Dated Tuesday, August 11, 1959

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 5, 1959

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I present the text of a communication received by me dated August 11, 1959, from the Board of Supervisors, Los Angeles County, Calif. The great 23d district which I represent, in this my 13th year of membership in this great legislative body, is all located geographically within the great county of Los Angeles. Hence, my receipt from the board of supervisors of this communication dealing with the very present and urgent need of Federal aid to highways.

The text of the resolution speaks loudly and clearly of the urgency of the subject matter regarding the continued immediate financing of the federally aided highway program. It is to be noted that the motion for this resolution was proposed by Supervisor Hahn, whose supervisorial district geographically is located partially within my congressional district.

RESOLUTION URGING WAYS AND MEANS COMMITTEE OF THE U.S. HOUSE OF REPRESENTATIVES, AND OTHER COMMITTEES, TO EXPEDITE APPROVAL OF FEDERAL AID TO HIGHWAYS BILL MAKING FUNDS AVAILABLE FOR CRITICALLY NEEDED HIGHWAY IMPROVEMENTS

On motion of Supervisor Hahn for Supervisor Bonelli, unanimously carried, it is ordered that the following resolution be and the same is hereby adopted:

"Whereas a stalemate has occurred between Congress and the administration regarding financing of the Federal highway aid program; and

"Whereas this stalemate has resulted in a halt of all new State highway construction in California until the details of financing the Federal program are resolved; and

"Whereas approximately $200 million of highway construction in California are affected by this stalemate, including $90 million in Los Angeles County alone; and

"Whereas these amounts include in excess of $15 million for the Golden State Freeway, excess of $5 million for the San Bernardino Freeway, excess of $15 million for the San Diego Freeway, excess of $14 million for the Glendale Freeway, excess of $34 million for the Santa Monica Freeway, $250,000 to improve U.S. 101 Alternate, and $350,000 for Palmdale Boulevard: Now, therefore, be it

"Resolved by the Board of Supervisors of the County of Los Angeles, That the Ways and Means Committee of the U.S. House of Representatives and other appropriate congressional committees be urged to expedite approval of the Federal aid to highways bill making funds available for the critically needed highway improvements in Los Angeles County; and be it further

"Resolved, That copies of this resolution be forwarded to Vice President RICHARD NIXON and members of the Los Angeles County congressional delegation urging their support of an expeditious settlement and passage of the Federal Aid to Highways Act."

I hereby certify that the foregoing is a full, true, and correct copy of a resolution which was adopted by the Board of Supervisors of the County of Los Angeles, State of California, on August 11, 1959, and entered in the minutes of said board.

HAROLD J. OSTLY,
County Clerk of the County of Los Angeles, State of California, and ex officio Clerk of the Board of Supervisors of Said County.
By GORDON T. NESVIG,
Deputy Clerk.

Walter Lee, Legislative Assistant to the House Committee on the Judiciary, To Retire

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 18, 1959

Mr. PHILBIN. Mr. Speaker, I was sorry to learn that Mr. Walter Lee, legislative assistant to the House Committee on the Judiciary, will soon retire from this position which he has held for more than 21 years.

The name of Walter Lee is synonymous with warm friendship, wholehearted cooperation, and diligent, effective work for the committee to which he is assigned and for the membership of the House as a whole.

During my public service, I have never know a finer more sincere, more devoted, more dedicated public servant than Walter Lee, and I am profoundly grateful to him for his outstanding service and for the many instances in which he has personally assisted me with my work. He has indeed made noteworthy contributions to vital work of the Congress.

I heartily congratulate him and his family upon the completion of his magnificent service and wish for them every success and happiness in the future. Godspeed and good fortune to our dear, able, and esteemed friend, Walter Lee.

Birmingham, Ala.: A Name and a Prophecy

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 13, 1959

Mr. HUDDLESTON. Mr. Speaker, under leave heretofore granted, I am pleased to insert in the CONGRESSIONAL RECORD an article which appeared in the Southern Railway System magazine, Ties, for August 1959. The article deals with the founding of the city of Birmingham, the hub of my district and also the industrial center of the Southeastern States:

BIRMINGHAM, ALA.: A NAME AND A PROPHECY

Better known as the Magic City and the City of Destiny, Birmingham, Ala., could with equal justice be called the City That Grew From a Railroad Crossover.

The steel capital of the South was incorporated as a city on December 9, 1871. But almost 4 years before that, while it was nothing more than an expanse of fields and swamps, a president of one of Southern's predecessor lines prophetically referred to the mineral-rich area in which the city was later built as destined to be the Birmingham of America.

The railroad pioneer who made the remark was Sam Tate, fourth president of the Memphis & Charleston Railroad (now Southern's Memphis division). He foretold not only the name but also the city's future growth in an annual report to the M. & C. stockholders for the year ended July 1, 1867.

While his railway was not directly involved with the coal and iron fields of north central Alabama, Tate envisioned increased traffic for his road through a connection at Decatur with the South and North Alabama Railroad (now part of the Louisville & Nashville) which was to be built from Decatur southward through what is now Birmingham to the State capital of Montgomery.

The location of Birmingham was actually determined by the crossing of the South and North Alabama and the Alabama and Chattanooga Railroad (now Southern's Alabama Great Southern) then being completed between Chattanooga and Meridian.

After the intersecting point of the two roads was definitely set about 2 miles east of the town of Elyton, a group of businessmen and financiers—including Sam Tate—formed the Elyton Land Co. and bought a large section of land around the proposed crossing. They reasoned correctly that transportation was the key to the vast underground mineral wealth which, though long known, had been hardly scratched.

Particularly fitting for a city built on, by and with the ingredients of steel, Birmingham began with a steel backbone. The act of incorporation defined the city limits as "All the territory within 3,000 feet of the Alabama and Chattanooga Railroad on each side of the same extending from 26th Street in said city to the eastern boundary of the city of Elyton." (Elyton, which later became a part of Birmingham, is sometimes mistakenly referred to as Birmingham's predecessor.)

Today the city named for the seat of iron and steel manufacture in England is served by nine major railroads (including two divisions of the Southern). Among its hundreds of railroad crossovers it would be difficult to find the original one from which the city grew. But Birmingham, the second largest city in the South, has well carried out Sam Tate's prediction in his annual message to the Memphis & Charleston stockholders in 1867 when he said, in part: "* * * this vast field of mineral wealth * * * will open up new sources of wealth and employment, that will draw to it millions of capital, and an immense population of industrious and enterprising citizens for its development."

Not Our Friend, Just Our Guest

EXTENSION OF REMARKS
OF
HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 4, 1959

Mrs. DWYER. Mr. Speaker, one of the country's outstanding Polish language newspapers is Obywatel Amerykanski, the American Citizen. On August 13, 1959, the American Citizen published a front-page editorial entitled "Not Our Friend, Just Our Guest," which discusses the forthcoming visit of Soviet Premier Khrushchev to the United States.

In view of the multitude of reasons which the Polish people have for their distrust and hatred of Soviet communism, reasons which are shared by other Eastern European peoples who have also suffered from Soviet domination and tyranny, I commend this editorial to our colleagues as a most significant example of sound commonsense, great restraint, and an impressive ability to understand the real issues involved in the visit.

At the time President Eisenhower invited the Soviet Premier, I commented in response to a newspaperman's question that "we do not propose to honor Khrushchev, we propose to inform him." This same distinction, I believe, is admirably set forth in American Citizen's editorial.

Since the American Citizen editorial contains such a wealth of wisdom and good judgment, it should be allowed to speak for itself.

The editorial follows:

NOT OUR FRIEND, JUST OUR GUEST

The Presidential invitation to Nikita Khrushchev to visit America presents many problems with as many overtones. Crushing Poland's freedom, the brutal extermination of Hungary's brave fight for freedom, the violent eruption in Korea, the repeated Communist threats to the whole world, the lies and double talk of Soviet diplomacy—are only a few of the problems that immediately arise in dealing with any Communist.

The whole hydra-headed history of communism comes to the surface with every Communist meeting.

However, President Eisenhower's invitation to Premier Khrushchev is the act of the head of the free world to try to maintain peace and to save the world from total annihilation by war.

Most of us will have to exercise great restraint when Khrushchev visits America. But this we owe to the President, to man's eternal hope for peace, and to the constant search we must maintain for a solution of the wide differences between free peoples and the Communists.

Every avenue must be explored for the search for a stable peace. The President must be encouraged in this search.

Americans have learned the hard way that the Communist only understands one thing—strength. For that reason, we will always have to be armed to the teeth so long as communism exists, whether in Russia, China, or any place else, for that matter. The President may pacify Khrushchev, showing him the road to peace, but the virus of communism has already been implanted in another potential giant—Communist China. So, even if the world could miraculously expect peace from Communist Russia, it still has to face the virulent virus that has been implanted in China.

The free world, if it is to remain free, must remain strong. We can never let our guard down, even in our search for peace.

The face-to-face meeting between President Eisenhower and Khrushchev may ease many tensions. For that reason alone it should be encouraged. For some, it may be a complete waste of time, accomplishing nothing. For others, it may be the beginning of negotiations; for others still it may mean the real hope for a lasting peace.

The grim reality of history tells us that not one of these will be accomplished by the visit.

One thing will happen, however, the Russian dictator will be able to talk about the kind of peace the Americans expect. This he will not only hear from the President, but he will hear it from the American people, too.

We do not want a peace that will make Russia strong and us weak; that will allow Russia to gobble up Europe and Asia, isolating us in the narrow rim of our own freedom. We do not want a peace that would place communism at our back door in South America.

We want a peace that the free world can live in, move in, breath in without fear and with self-respect.

Mr. Khrushchev will learn that we want to keep the door open to peace, even have it ajarred more. But we do not want appeasement for peace, capitulation of our ideals and love for freedom for peace, that we have solemn obligations to ourselves and the free world that we will not trade for peace.

Mr. Khrushchev will learn that we have many weaknesses as free individuals, but that as a Nation we are strong and determined to stay that way.

The Communist game has been played out. We have learned too much from the brutal lessons of our recent history to be fooled again, again, and again. It's time for Mr. Khrushchev to learn this, too.

For the moment, therefore, we should subdue our feelings of the past and be ready to treat him as the head of a state who has been invited to visit us by the head of our Nation. He may not be our friend, but he is our guest and our conduct should be governed accordingly. He has yet to prove that he is our friend—only deeds can prove that.

Schenectady (N.Y.) Little League Baseball Team Once Again New York State Champions

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 18, 1959

Mr. STRATTON. Mr. Speaker, it is becoming almost a habit, and I may say a very pleasant habit, for me to rise to point out to my colleagues in the House the fact that another baseball team from my district has been accorded outstanding honors. Only the other day I pointed out to the Members of the House that the Babe Ruth All-Star team from Johnstown, N.Y., had been declared the winners of the New York State Babe Ruth League championship tournament. Today it is my pleasant duty to advise the Members of this House that the Schenectady Little League All-Stars from my home city of Schenectady have clinched the New York State Little League championship and move on, on Thursday, to the regional games scheduled to be played at the Hy Turkin Memorial Field, Staten Island, at 3:30 p.m.

Perhaps one of the reasons why we develop such excellent baseball teams in the 32d Congressional District is that our district, as I have frequently mentioned, includes the home of our great national game, Cooperstown, N.Y., where the national baseball Hall of Fame and Memorial are located.

The Schenectady Little League team carries on this year, Mr. Speaker, in a great tradition. The Schenectady team in 1954 won the Little League World Series, and I am confident that this year's team will make an equally excellent showing.

Under leave to extend my remarks I include a news article from the Schenectady (N.Y.) Union-Star of Monday, August 17, describing the game in which the Schenectady team won the State championship:

STATE CHAMPS, SCHENECTADY LITTLE LEAGUERS, HEAD FOR REGIONALS

(By Larry Serrell)

POUGHKEEPSIE, August 17.—The Schnectady Little League All-Stars, New York State champions via a 4–1 victory over Elmont, Long Island, Saturday, make their regional bow Thursday afternoon at 3:30 on Hy Turkin Memorial Field, Staten Island, against the Barry, Vt., versus Brockton, Mass., winners, the latter contest being played tonight at Franklin, Mass.

In the regional opener at 1:30, Suburban Chester, Pa., goes against the East Rutherford, N.J.-Bridgeport, Conn., victor. Regional competition is one step away from

the Little League World Series at Williamsport, Pa. There, representatives from the Pacific, Europe, Canada, Latin America and the north, east, south and western portions of the United States will open the new Little League Stadium. Should Schnectady take the regionals they will meet Canada or Latin America, minus Mexico City, which recently was disqualified after being national champions for 2 consecutive years.

Billy Neidel was the mound winner in Schenectady's victory over Elmont. The righthander worked five and one-third innings, allowed three hits, walked one and fanned six. He pitched one-hit ball over the first five frames.

First Baseman Mike McGarry turned pitcher in the sixth inning with the tying run at the plate and one out. He struck out Jimmy Smith then got Tom Reilly on a soft fly to Stan Stringham at second base to end the game. McGarry has yet to give up a hit, run, or walk in all-star play.

Schenectady faced its toughest mound opponent since it beat Bellevue's Dick Pidgeon, 1–0, in the first game of the section 12 playoffs in the person of Elmont's Smith. The lanky right-handed curve baller set a personal record for walks, five in the contest, and couldn't get needed support in the Schenectady second. He already had thrown two all-star no-hitters this year.

Elmont drew first blood in the top of the second when Reilly was safe on Stringham's error at second. Jack Brink cracked a single to center that DiNola let go through his legs, Reilly scoring. Neidel settled down and ended the inning by striking out Neil Silver, Ed Schunk, and Tom Fagan.

The winners came back with three in their half of the frame. Doug Wilkins got on through an infield single, went to second on Russ Moskal's sacrifice and third on Bill Jahnel's grounder to the shortstop. Tom Piotrowski bounced a ground-rule double over the right field fence to bring Wilkins across. Neidel sent what could be considered the winning run home on a single, then went to second on the throw and third on a wild pitch.

An error, a safe bunt, and a hit batsman loaded the bases in the fourth inning for Schnectady. Tom Wood brought the last run home on an infield grounder.

Elmont's threat in the sixth developed after one out. Tommy Pugh walked and Paul McGarry singled him to second. That's where McGarry came in and Schnectady left for Staten Island.

Labor Begins To See

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 18, 1959

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I desire to call the attention of my colleagues to an editorial in the New York Mirror, under date of August 18, under the caption "Labor Begins To See."

The editorial is a flat endorsement of the idea that we need more protection for American industries and American jobs.

The editorial follows:

LABOR BEGINS TO SEE

Organized labor has, in a large measure, in recent years, been responsible for supporting the Rooseveltian policy of reciprocal trade agreements which have worked out so disadvantageously to the United States.

Already one effect of these treaties is that last year as many automobiles were imported as exported and the United States is importing such a product as steel.

The real sufferer from these treaties, agreements, quotas, exchange arrangements, etc., is the American worker.

For many years, conservatives have been cautioning labor that they have embarked on a dangerous course when they supported political measures disadvantageous to them. But having adopted labor internationalism, they would not retreat.

However, some unions are beginning to realize their peril. What they call imports from sweatshop countries have always been coming in from the same sweatshop countries. The only difference was that during the war and the early postwar years, businessmen were afraid to go to those countries, invest American capital in them, and then ship the goods back here to compete with the American worker, who generally lost out.

It is interesting to note that the great free trade unions, the International Ladies Garment Workers Union; the Amalgamated Clothing Workers; the United Hatters, Cap & Millinery Workers International, and the Textile Workers are leading in this reconsideration of a policy that has always been disadvantageous to the American worker.

A few points need to be made concerning this:

1. Most mass production work can be done as efficiently by low-wage workers as by high-wage workers. Therefore, unless the high-wage worker is in some manner protected, he will outprice himself;

2. In the semiskilled industries, the ability and efficiency of the workers play a small part in the total product; the bigger part is contributed by the machine which can be operated as well by less efficient workers, thus making the product cheaper to sell in the American market;

3. Since the Roosevelt regime everything has been done to make the phrase "Buy American" unpopular, with the result that Americans buy what is made in Hong Kong or Japan or Czechoslovakia as readily as they buy American goods.

It is nonsense for American unions to believe that they can solve this problem by stimulating campaigns in other countries to increase wages there. They will be told to mind their own business. Not all standards of living are the same and not all people approve of the American standard of living which includes many inflationary factors.

The soundest protection against the dumping of cheap goods into the world's greatest market is a protective tariff—and it would be startling, but it is foreseeable, that American labor will come to that.

A Symbol of Peace?

EXTENSION OF REMARKS
OF
HON. HERMAN TOLL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 13, 1959

Mr. TOLL. Mr. Speaker, the publisher of the Philadelphia Jewish Times, Mrs. Esther Klein, raised a very interesting question in her weekly editorial of August 14, 1959, concerning the effect which the proposed visit of the Soviet leader may have on our people. She asks whether the invitation will aid or deter the world peace which we are seeking. Is the invitation to the leader of Soviet Russia a boost to his position in the world, as well as to the Communist philosophy?

Mrs. Klein's questions are searching, her position on the subject is good food for thought, and I hope her editorial, which appears below, will be read and seriously considered:

THE PUBLISHER SPEAKS

(By Esther Klein)

Nikita Khrushchev has accomplished his aim. He has been invited to the United States. He is being hailed as a symbol of peace.

This belligerent bully, whose entire career has been indicative of cruel and barbarous treatment, in a few short hours, has become the saviour of world peace. In a startling new diplomacy he has achieved an open door to our choicest American citadels.

In a carefully planned dramatic vehicle, Khrushchev emerged the hero rather than the villain he has enacted before the world for years. Nixon's tour of Russia with a barrage of brilliant American newspaper men and women, radio commentators, and television experts, obtained a million-dollar publicity campaign for Khrushchev.

All the horrors of the Hungarian debacle, the Tibet betrayal, and the vicious Soviet colonization as well as desperate state of the vast Russian population, were lost in the benign hospitality extended with fanfare to our American delegation. Each day of the tour was fraught with incidents to arouse publicity for the hosts.

It wasn't surprising that the Soviet leader, whose personal travels have been concentrated on Soviet territory or in countries behind or within the Iron Curtain, should seek an invitation to the United States. He obtained the invitation simultaneously with the conclusion of our allies meeting in Geneva. He was ready with his acceptance and also specified the cities he wished to visit. He had contrived to get firsthand inspection of certain American metropolitan centers.

Our gullible State Department thought a coup had been accomplished by getting Khrushchev here but it was a carefully contrived Soviet plan. It is beyond my comprehension that our American leaders are rejoicing that this new exchange of visits will bring about world peace. Is this plan of "you entertain us and we'll have you back" the straw of hope to prevent the world from drowning in another flood, this time induced by nuclear weapons?

When Khrushchev announced the cities for his tour, there was no mention of Philadelphia, the cradle of American liberty. He had no desire to touch the Liberty Bell, the symbol of freedom that brought our country into the world as a democracy. He has no reverence for the Declaration of Independence that inspired the freedom-loving colonists to rebel against a cruel and vicious monarch.

What effect has the proposed Soviet leader's visit had so far on our people? They are being lulled into complacency. Now that the American and Soviet rulers are becoming buddy buddy there will be no war, certainly the cold war is of the past. Look at the effect on our stock market. Defense stocks which had been zooming are down. The stock market is the criterion to indicate the relaxed status of our people.

Forgotten are Khrushchev edicts opposing religion, the threatened destruction of the Jewish and Catholic faiths in the vast Soviet territory. Forgotten also was the opportunity for the American delegation to attend services during the tour. There was no mention of the officials or the attending press stepping within the holy confines of the

cathedral or the synagogue. This was the golden occasion to emphasize a great American privilege, freedom of religion.

Khrushchev's often repeated prediction that our grandchildren in the United States will live under communism, was frequently reiterated during his talks with NIXON. Having this shocking statement made 5,000 miles away in the confines of Soviet Russia strikes terror to our hearts. Giving this conniving world leader the opportunity to come here and repeat it constantly to our American citizenry is a deplorable situation.

When Khrushchev and company arrive, he will achieve his international objective of spreading communism at the invitation of the greatest democracy in the world. Could such an aggressive act aid or deter the world peace that we are seeking?

The Khrushchev-Eisenhower Visits

EXTENSION OF REMARKS
OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 18, 1959

Mr. YOUNGER. Mr. Speaker, on August 7, 1959, Mr. Frank H. Bartholomew, president of the United Press International, spoke to the Commonwealth Club of California in San Francisco; and I am sure excerpts from his very able presentation will be of interest to everyone:

"WE SEEM SUSCEPTIBLE TO ANY OLIVE BRANCH," SAYS BARTHOLOMEW, BUT SEES HOPE IN KHRUSHCHEV-IKE VISITS

(Address by Frank H. Bartholomew, president, United Press International)

At Geneva, I could not but be impressed by the attitude of the Swiss nation. They have escaped two world wars; have had, I think, no war in 500 years.

This is not because of any deals, but because they apparently are ready at all times to defend themselves.

They have one of the largest standing armies in Europe; my impression is the largest.

Friends of all, they have no intention of dropping their guard.

Contrast this with the emotional attitude of our own people. We are wont to think of the Latins as being emotional, but we ourselves are subject to gigantic swings of popular feeling.

We seem to be susceptible to anyone who extends an olive branch.

This was illustrated in Korea after World War II, when, in a seeming calm, we withdrew General Hodges and his three divisions. The vacuum was almost immediately filled by Communist invaders from the north.

Russia wanted a Geneva conference, insisted on it, got it, and then set about preventing one single facet of accomplishment.

We Americans usually credit the Russians with deviousness; with following a policy line so deep we cannot understand it. I'm beginning to wonder if they don't baffle themselves as much as the rest of the world!

I talked with Secretary Herter at the end of the third day. He said he expected no accomplishments, had not been optimistic beforehand, and therefore was not disappointed.

I was in Berlin the day the Russian ultimatum expired. Khrushchev had launched the crisis by giving us 6 months to pull out of Berlin.

INTERVIEWED ULBRICHT

On the day the ultimatum expired, I had asked for an interview with the chief of the Communist Party of East Germany, Walter Ulbricht.

On the way we passed Hitler's bunker, under an upended slab of concrete which was sort of a memorial to Hitler and all he stood for. In East Berlin we went through block after block of ruins.

The gloom and darkness of the headquarters building seemed to express the drabness of communism. We were escorted down a long corridor, crisscrossed every 10 feet by neon lights, but only 1 of 12 was lighted.

Ulbricht may loom large in world events to come. He is an odd little man and could be extremely dangerous.

Ulbricht was a colonel in the Russian army of occupation. A German, he lived in Russia so long he speaks German with a Russian accent.

COULD BE DANGEROUS

There is no question that Khrushchev thought he had hit upon the perfect device for blackmailing the West out of Berlin by turning it over to East Germany.

This does not mean any real government, but an organization that remains in power only because of the nearness of the Red army. It could not stand an election or a plebiscite.

TOOK IT SERIOUSLY

While Khrushchev may have looked upon his ultimatum as a means of blackmailing the West, Ulbricht took it seriously.

I have no doubt that he pressures Khrushchev at every opportunity to bring about the removal of the West. Unquestionably he opposes the suggestion of a 2-year extension because he cannot survive 2 years.

West Berlin was formerly a suburb which has been converted into a metropolis. East Berlin was the main city. The contrast is embarrassing to the Communists of East Germany.

MILES OF NEW APARTMENTS

Anyone can go from East to West Berlin and see what capitalism has done for West Berlin. The control is not on casual visits but on the families who remain.

First impression of Moscow was of the large airport and cavernous concrete buildings. We traveled a bumpy concrete road into the city.

On every side were mile after mile of new apartment buildings just completed or under construction. There is nothing like it in the world.

I was told the engineering and architecture was good, but the construction workers were not up to the design. Plaster was off the walls, floors buckled. But the apartments are occupied, with up to four in a single room.

Moscow has jumped from 1.5 million to 5 million inhabitants in a brief time. Therefore traffic into the city has been cut off. No housing permits are issued, and the migration is stopped.

I expected to see a drab city, but not so. They are doing a lot to beautify it. Buildings have been taken out and shade trees planted.

The people are too well fed. With the lifting of food rations, they eat too much and are too fat.

But they are badly clothed. None of the women are chic, and they don't seem to care too much. Yet when a beauty parlor was proposed at the U.S. exhibit, exhibitors were advised it would create a riot beyond the ability of the police to cope.

SHORTENED COURSES

The minister of education told me they had to shorten courses to accommodate the thousands and thousands of youngsters desiring an education.

Until recently, apparently, any Russian could have the equivalent of a college education and become a doctor or scientist, but now they have had to divert two-thirds of the students into the factories at the equivalent of a high-school education.

There is nothing in Moscow to evidence that the Russian people have been conditioned for a war. In all Moscow there is not an air-raid shelter or a siren. They have never had an air-raid drill.

The papers are filled with the achievements of the 7-year plan—people are urged to help fulfill the 7-year plan, and the Government will undertake to see that the Western warmongers do not attack.

Khrushchev seems to have bet on his ability to guarantee peace.

This must mean a dual policy: one of peace at home and one of threats and bluff for export—bluff, except for the fact that they do have atomic weapons.

I am personally convinced the Russian people would be the most surprised in the world if they found themselves in a war today.

NO DAMAGE, SOME GOOD?

My own conclusion is that no damage and some positive good may come from the exchange of visits between Khrushchev and Eisenhower. Bill Knowland, and Adm. Charles M. Cooke,[1] whom I profoundly respect, disagree.

* * * * *

If we don't drop our guard, I think the effect of Eisenhower's personality on the Russian people—his warmth and sincerity will far outweigh any Russian gain.

The fall of 1959 holds improved hope for peace. These are precarious times, times of great tensions, but let us, in the shadow of Theodore Roosevelt, walk softly but carry a big stick.

ANSWERS TO WRITTEN QUESTIONS FROM FLOOR

Question (L. B. Worthington): "Will NIXON visit result in any lasting improvement?"

Answer: "Yes. Most valuable result was to force Soviet papers and radio to carry large portions of what he said. This is the first time Russians ever heard anything like that."

Question: "Did NIXON get through to Russian people?"

Answer: "Large sections were in Pravda and Isvestia, which have tremendous circulations. Chances are a good deal got through."

Question: "How were newsmen who accompanied NIXON selected?"

Answer: "For the wire services, generally on their knowledge of NIXON and ability to get the news out (very important for a foreign correspondent). Normally in Russia a correspondent must write in quadruplicate; he gets back the fourth carbon showing how his dispatch was censored. Some say, deletions are made to change the context; others that additional deletions are made. Some stories never get through."

Question (Hilary H. Crawford): If Russians cut our corridor to West Berlin, why not get allies to close Dardanelles and back them to limit?"

Answer: "Put my name on that and send it to Pentagon. If we'd do more to take the initiative rather than counter or defend, there'd be better balance."

Question (Mike Ranney): "Manpower shortage?"

Answer: "Stortage of technicians very evident. People were busy."

Question: "Herter?"

Answer: "I had felt his nomination was half-hearted. Now I think he has great moral strength and willpower; won't be pushed around. He may go down in history as a great American statesman."

[1] Former commander, 7th Fleet, who addressed club last Sept. 26.

U.S. Passport Legislation

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 22, 1959

Mr. FULTON. Mr. Speaker, the distinguished Representative JOHN V. LINDSAY, of New York, appeared today before the House Committee on Foreign Affairs and presented an excellent statement on proposed U.S. passport legislation. Many bills have been filed to limit the travel of certain U.S. citizens abroad, whose travel and activities might be detrimental to the security and basic foreign policies of the United States.

Congressman LINDSAY is well qualified to appear as an expert witness on passport legislation because of his top-level legal background and experience. He has served from 1955 to 1957 as executive assistant to the Attorney General of the United States. Mr. LINDSAY is a graduate of the Yale Law School and as an outstanding attorney, is admitted to the New York bar, the bar of U.S. Supreme Court, and the District of Columbia bar.

Mr. LINDSAY is a member of the Association of the Bar of the City of New York, the New York State Bar Association, and the American Bar Association. Mr. LINDSAY is making a fine record as a Member of the 86th Congress.

I am submitting this material for my colleagues in the Congress as well as the people of the United States so that these views can be carefully considered in working out the constitutional basis, and the correct legal method in obtaining good legislation in this important field of passport authorization and issuance.

The above mentioned follows:

U.S. PASSPORT LEGISLATION

(Statement of U.S. Representative JOHN V. LINDSAY of New York before the House Foreign Affairs Committee, Tuesday, August 18, 1959)

Mr. Chairman, I am grateful for the opportunity to appearing before this distinguished committee. I share your concern, and that of the Department of State whose representatives have already testified, over the absence of legislation, consistent with the decisions of the Supreme Court in the Kent, Briehl, and Dayton cases, to authorize the Secretary of State to exercise some measure of discretion in the issuance of passports. I am aware as we all are, that the matter of passports and their issuance, is necessarily an aspect of the conduct of foreign affairs, and in that sense, bears upon national and international security.

But in approaching the problem of devising legislation, I start with the premise that we are dealing here with a constitutional right. I am in firm agreement with the opinion of the Supreme Court in the Kent, Briehl, and Dayton cases. While not deciding those cases on constitutional grounds, the Court nevertheless stated that "the right to travel is part of the liberty of which a citizen cannot be deprived without the due process of law of the fifth amendment." I agree wholeheartedly with that statement. I believe also that the right to travel is conjoint with and part of the first amendment—freedom of speech and assembly. I believe it to be the duty of this committee to study the substance of the right to travel with great care, realizing that any measures restricting this right are certain to be tested in the courts sooner or later—probably sooner. And I am particularly disturbed by what I feel are constitutional inadequacies in the legislation endorsed to you by the Department of State.

What is the right to travel? In my book it is one of the most fundamental liberties that we have. The Supreme Court tells us that it is "part of the liberty protected by the due process clause of the fifth amendment." The Solicitor General of the United States conceded as much in his argument before the Court in Kent and Dayton. But, as I stated at the outset, I would suggest also that it is a part of the first amendment. Of all the freedoms that we have, the one I should most hate to lose is freedom of speech. Speech is communication, and communication in this modern day is impossible without locomotion. Speech is meaningless unless thought of in the context of the physical and social aspects of human existence.

Constitutional sources strongly suggest that early Americans recognized a freedom to move beyond national frontiers. However uncertain its basis may have been, however unclear its limitations, the English recognized that freedom long before they crossed the Atlantic. The people of the Colonies, moreover, evidently took the freedom for granted; witness the constant movement between Colonies and to the West. That may explain why the freedom was not more clearly recognized in writing. The Declaration of Independence goes no further than to list as a grievance the restrictions which George the Third placed upon emigration. The Articles of Confederation merely guaranteed free movement between different colonies, though the Colonies, not yet joined in a more perfect union, were more like foreign countries to each other than the United States are today. Perhaps the most direct documentary evidence is to be found in the Pennsylvania Constitution of 1790 which declared "that emigration from the State shall not be prohibited."

These sources, taken together, and viewed in the light of the ninth amendment, warrant the assumption that omission of the words "right to travel," was not intended to eliminate the right. Nor is the omission inconsistent with a specific intention to include the right in free speech. The Constitution was designed to guide the United States for an indefinite period of time. It would have been impossible to enumerate the variety of ways in which free speech might be abridged—and the framers recognized this in the generality of the first amendment's language.

The specific problem your committee must wrestle with, Mr. Chairman, is that of finding a constitutional way of preventing hard-core, dedicated Communists from abusing the travel right by actively striving against our most supreme national interests.

Now let me make it absolutely clear that we are not here talking about anyone who is under indictment for the commission of any crime, or is under restraining order of any kind by any court, or has been stripped of any right or liberty by due process of law. As to these, we all agree that the right to travel ought to be, and can constitutionally be, curtailed. The nonindicted, non-court-restrained Communist present a more difficult case. There may well be risks inherent in allowing a member of the Communist Party, or one identified as such by our intelligence units, free exit from our shores to travel abroad. But it is necessary to point out that this is true when Communists travel from Chicago to New York or from New York to the Bahamas, or from Dallas to Mexico, or from San Francisco to Buenos Aires or to any other South American country, none of which places requires a passport for exit or entry. It should be pointed out also that under the McCarran-Walter Act we are required to deport alien members of the Communist Party and we go to elaborate efforts to secure their removal after they have been traveling freely in this country for years. Well and good enough. Yet under our passport procedures, until the Supreme Court decided otherwise, we have insisted that it is essential to the national security to keep citizen members of the party confined to our shores. The point is that there could possibly be something wrong with our reasoning; and when we are dealing with limitations on constitutional rights it is important that our reasoning be compelling and logical. You must consider whether the bills before you will in fact accomplish their purpose of confining trained subversives to these shores. You must remember, also, that the President has in the past stressed the importance of taking every reasonable step that will facilitate international travel and exchange, e.g., the abolition of the requirement of finger printing for transients through, and temporary visitors to, this country.

I do not differ to widely in substance from the position taken by the administration, as presented by the State Department through its spokesman, Mr. Hanes in his testimony here. I shall come to the differences shortly, and although seemingly small, they are important ones. I do differ widely in emphasis. I would emphasize the obligation of the Department of State—for that matter, of every executive department—to scrupulously avoid to the greatest extent possible any intrusion on the precious rights of American citizens. The right to travel, although it has been around a long while, is just beginning to be articulated. We must be careful not to let a cavalier approach lead us to legislative decisions which the courts may undo, and quite properly so.

I agree with the State Department that it is indeed fundamental that the liberty guaranteed by the Constitution is not absolute. "Civil liberties," says the Supreme Court "imply the existence of an organized society maintaining public order without which liberty itself would be lost in the excesses of unrestrained abuses." Freedom to travel, like other liberties, is subject to reasonable regulation and control in the interests of the public welfare. I am not sure that it is possible to draw up absolutely fixed rules which will in advance strike a proper balance which will meet the exigencies of every case, protect the public interest, and yet stay within constitutional limitations. Circumstances and the times vary and "due process of law has never been a term of fixed and invariable content." But let's make sure we don't "throw out the baby with the bath." I should like therefore to restate what I believe to be the guideposts which should guide the Congress in its consideration of this subject:

First, the right to travel—to communicate—is a constitutionally protected right which may not be abrogated by the State except under the general war power, which normally may be invoked only in time of extreme emergency, usually involving armed conflict between nations. The right is a concomitant of, and conjoint with, the first amendment of the Constitution. A denial of a passport therefore, may result in violations of both the fifth and first amendments.

Second, neither the right of the citizen to have issued, nor the right of the Secretary of State to deny issuance of, a passport is an absolute right.

Third, a general standard under which the Secretary of State is authorized to deny the issuance of a passport whenever he finds that its issuance would be contrary to the

national welfare, safety or security, or otherwise be prejudicial to the interests of the United States is too indefinite a standard when applied to a right as firmly grounded among our basic liberties as is freedom of speech and assembly. In the past we have too often seen examples of executive arbitrariness under the umbrella of the national security and the conduct of foreign relations.

Fourth, a refusal to issue a passport may not rest upon confidential undisclosed information, under a blanket, unlimited authority to use the same. Such a refusal would, in all probability, be a denial of due process of law under the fifth amendment. The authority to use confidential information in the administrative process, under imprecise standards, coupled with the power to delegate authority to subordinates, and without full judicial review, can result in a breeding ground of arbitrariness in the course of which innocent people may, and undoubtedly will, suffer.

You will note that I have spoken here of blanket, unlimited authority to use confidential information. There may be room for an exception to cover the hard core Communist case, under which the Secretary of State or the Under Secretary, personally, will certify, first, that disclosure will expose a "double" or "buried" agent of tested and known reliability; second, that such exposure will be prejudicial to the national interests, and third, that the case may not be decided without resort to such evidence. But even then, full access to the evidence in question should be given upon judicial review to the court, under seal, for examination by the court in camera.

Thus the two important points of difference between the Department of State's views and mine are (1) I would permit confidential information to be used only upon certification at the highest level of its special necessity, and (2) I would require that the whole of the confidential information be laid under seal before the reviewing judge in chambers. In my judgment, anything less might violate the due process requirement of the fifth amendment.

Turning then to the bills before this committee, to the extent that time has permitted me to review them, I believe that H.R. 7006, which the State Department has endorsed, is lacking in the necessary procedural safeguards of a constitutional right. Since H.R. 2468 contains no review provision at all, it seems deficient in this respect, as well as in the others enumerated by the Department. Nor does H.R. 5455 provide such safeguards in my judgment.

I find that H.R. 55, in its present form, contains the words "on the record" at line 11, page 3, which are ambiguous. I understand from Mr. Hanes' statement that there is legislative history behind these words, and if they can fairly be deemed to mean "on the record, open and closed," that bill contains, at least in part, the standards I should like to see applied.

The best approach to the procedural problem of the bills presently before you, in my opinion, is contained in title III of H.R. 8329. In its requirement in section 306(b) that the Secretary of State himself make the final administrative determination upholding a refusal to issue, or a revocation of, a passport, it goes far toward providing for due caution in the evaluation of confidential information. And its section 307 provides what no other House bill I have examined does: the kind of judicial review necessary, in my judgment, to meet the constitutional test of due process.

I have not in this discussion tried to spell out an entire code to govern the issuance of passports, or to draft legislation. My purpose here has been only to state my views on some of the fundamentals, and I would hope that consideration of this matter in the Congress would be guided by those fundamentals. Neither have I touched upon the whole subject of area restrictions, except indirectly. Here I would recommend the report of the special committee to study passport procedures of the Association of the Bar of the City of New York, an excellent report, prepared by a distinguished committee of lawyers. Its conclusion on the subject of area restraints is as follows:

"Travel abroad by all U.S. citizens may be prohibited in areas where the Secretary of State determines that such prohibitions should be imposed in the national interest, but only in situations of exceptional gravity. The imposition of area restrictions should be accompanied by a statement by the Secretary of State setting forth the reasons therefor. Exceptions to general area prohibitions, permitting travel by particular individuals or groups, may be made by the Secretary of State in his discretion."

In closing, I should like to make reference to a document of great importance which is too seldom invoked. It is the Universal Declaration of Human Rights, which this year celebrated its 10th anniversary. Article 13 of the declaration reads as follows:

"ART. 13. (1) Everyone has the right to freedom of movement and residence within the borders of each state. (2) Everyone has the right to leave any country, including his own, and to return to his country."

The United States along with the other member nations, has pledged itself to achieve, in cooperation with the United Nations, the promotion of universal respect and observance of the human rights and fundamental freedoms set forth in the declaration. Let us in the United States be faithful to our pledge.

MATS Mission—ATA Mission

EXTENSION OF REMARKS

OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HQUSE OF REPRESENTATIVES

Monday, August 17, 1959

Mr. RIVERS of South Carolina. Mr. Speaker, on Monday, August 17, 1959, under leave to extend my remarks in the Appendix of the RECORD, I entitled my extension "MATS Mission, Support Our Fighting Forces—ATA Mission, Destroy MATS." Included in the above-mentioned extension, Mr. Speaker, was a statement emanating from the office of the Air Transport Association entitled "H.R. 7978." This circular was designed to deprive MATS of money vitally necessary to modernize its present MATS fleet. This circular was given to selected members of the Appropriations Committee. It was written so as to persuade Members of Congress that the private airlines can do the job for which MATS is designed. Mr. Speaker, this is an insidious, hypocritical, and unpatriotic effort on the part of those responsible in ATA to put the dollar before the security of the Nation.

For some unknown reason this circular did not appear in my remarks. It disappeared between the Capitol and the time the CONGRESSIONAL RECORD was published the following day. Under leave to extend my remarks, Mr. Speaker, I include this circular entitled "H.R. 7978." I want the Congress and the Nation to know that the mission of the MATS is to support SAC, the fighting men and women of this country, and the Armed Forces of the free world. The mission of the ATA is to destroy MATS in its capacity to fulfill its wartime mission. I leave it to the Nation to decide whether the MATS is set up to serve the Nation or whether the ATA places the dollar before the security of the Nation.

Mr. Speaker, I include herewith the MATS mission as referred to in the above article so that both the circular of the ATA and the mission of the MATS can appear as originally intended so that the reader can understand exactly what faces the Military Air Transport Command in its fight for survival. Mr. Speaker, there is not any way under the sun that the private airlines can undertake and fulfill the mission which the MATS does. There is not any way on earth for a private airline to be ordered into a combat zone. There is not any way on earth for a private airline to fulfill rescue missions which MATS undertakes. There is not any way on earth for the private airlines to do the weather service which MATS does. Mr. Speaker, MATS is a combat force designed to serve America. The hauling of passengers and freight is just incidental to MATS' global and astronomic mission. ATA wants to get the passenger and freight business of MATS and leave the other responsibilities to a nonexistent skeleton.

H.R. 7978

Senate amendment No. 34, to the supplemental appropriation bill, is an item of $30 million for modernization of the Military Air Transport Service fleet. This item should be eliminated.

It had already been turned down by both Houses in the regular defense appropriation bill. However, while the regular defense appropriation bill was pending in conference, the Air Force requested, and Senator CANNON made a personal plea to the Senate Appropriations Committee for, inclusion of $50 million for the procurement of jet aircraft for MATS. The committee included $30 million.

Testimony indicates that the Air Force plan calls for two or three squadrons of jet aircraft of essentially the same types as have already been bought by the airlines. Aircraft of this type cost between $5 and $6 million each and the amount initially required here would be only the beginning of a large expenditure. Testimony further indicates that the aircraft would be used mainly for the regular MATS mission which the Air Force views as an airline type of scheduled operation all over the world. This expenditure, if allowed, will be only an initial downpayment on a bill which may be expected to reach as much as a billion dollars.

The regular scheduled transportation of Defense personnel and cargo can be met without capital investment by the Government. At a cost of over $2 billion of private capital, the scheduled airlines are already acquiring a huge fleet of jet aircraft for the transportation of passengers. In addition, many of the airlines have already ordered modern turbine-powered cargo aircraft. They will acquire additional airplanes with private funds if they are given the opportunity to carry Defense Department traffic. If the Air Force would use the airlines to perform the scheduled transport needs of

the Defense Department instead of running the MATS airline in competition with the civil airlines, MATS would be better prepared for emergencies. Under its present system of operating, it is not well prepared.

MATS AND THE MISSION

(By Bill Borklund)

(Although the importance of its mission is the key to its entire operation, the Military Air Transport Service has been caught this year in a never before equaled barrage of diversionary charges—most, if not all, of them secondary and misleading. Until the underbrush is cleared away, MATS, and the Air Force, are going to have a hard time reaching, with much desired commercial airline help, a much needed program for use of all U.S. support air power in the time of war.)

Bombed, badgered, and besieged as were few military outfits this year, the Military Air Transport Service enters the final round, this month, of a summer-long congressional hassle over how much money it should be spending on commercial airlift, how much of its military job it should do itself.

At the same time, undaunted by the battering it has taken, MATS is reentering the Washington, D.C., arena with two far-reaching proposals of its own. One: A $53 million supplemental appropriation request for 10 jet-powered aircraft (which Capitol Hill whacked out of the original Defense money request) to start the long-overdue MATS modernization program. Two: a proposal that Defense start airlifting all personnel overseas (present levels—37 percent of Army, 50 percent of Navy, 94 percent of Air Force), double the amount of oversea shipping by air of high value hardware.

Either idea will be enough to start the whole argument again, an argument that centers around what MATS does and why. Strangely enough, all the mountains of obfuscating manuscript produced this year have done little to clarify the MATS mission, key to the whole argument. The result: means are discussed as ends, the result is called the cause and headline-hunting critics have led a big chunk of Congress (and most of the American public) down a bramble-strewn path of misinformation.

Among the baubles: MATS is the world's largest airline. It isn't even close. Soviet Russia's Aeroflot is No. 1 among the real leaders. In addition, only about 30,000 of MATS' 120,000 Navy, Air Force, and civilian personnel and half its 1,198 assigned aircraft handle the strategic air transport mission. The rest take care of MATS' less-publicized services—Air Weather, Air Photographic and Charting, Air Rescue, Airways and Air Communications, and Aeromedical Evacuation.

MATS runs a plushy airline. The three VC–137A jet passenger planes which prompted this blast are indeed plushy, were built for the Air Force to fly the President, Congress, and high level U.S. dignitaries around the world, are actually off-the-shelf Boeing 707's with standard executive interiors. Assigned to MATS for administrative purposes only, the aircraft are actually under control of the Joint Chiefs of Staff organization. Nearly all other MATS passengers travel the austere equivalent of commercial tourist class.

MATS is competing with commercial airlines for passengers. Total passengers carried by MATS last year amounted to less than 1 percent of the 49 million annual passenger load carried by U.S. airlines alone.

MATS, like any other military organization, has a wartime mission, assigned by the Joint Chiefs of Staff. The mission: be ready to move troops, missiles, and other heavy weapons and supplies in any war emergency to support other Air Force components, the Army, Navy, and Marine Corps. JCS estimates wartime airlift requirements specifies those that are critical, i.e., must be handled by military aircraft and crews, pegs the rest essential, i.e., can be done by either MATS or civil carriers.

Given a half-day to reach predesignated spots around the globe to cover the critical tasks (primarily resupplying Strategic Air Command bombers returning from their first bombing run), MATS keeps an alert force in on-the-flight-line readiness, runs the rest of its airfleet through practical training exercises. It is, in essence, a SAC-like supply operation with one exception. SAC must take pictures rather than drop its bombs. MATS can haul and process in peacetime training the same supplies it will actually carry if the big war should start.

To handle the bulk of the essential role, it has organized a Civil Reserve Air Fleet. Primary CRAF duty, at the moment: hauling passengers. CRAF list of planes varies depending on predicted requirements, is currently (fiscal year 1960) made up of 242 aircraft under assignment from 27 different civil carriers—primarily DC–4's for cargo, DC–7's for passengers. There is a slight hooker: For MATS to use any of the CRAF planes, under current agreements with the airlines, it must take them all. Result: MATS must take care of most limited war situations pretty much on its own.

To MATS its realistic training program is an absolute necessity if it is to have any chance at all of meeting its wartime obligation. Said one colonel, "Letting pilots fly the aircraft is the very tiniest part of this whole training effort. We've got to train the traffic people, the maintenance men, cargo handlers, the whole crew.

"We have to know what we can move where and how efficiently. (Biggest problem right now is the terminal operation.) You can't mothball an operation like this, any more than you can SAC, then push a button and have it spring into operation in the wink of an eye—which is how fast we'd have to get going on D-day."

Requesting 6 hours originally, MATS is allowed a 5-hour per day per aircraft utilization rate for training, has reasons for believing this isn't enough. Studies by Rand Corp., and such men as Dr. Paul Cherington of Harvard Business School indicate MATS could not boost this training rate to that required if a hot war started, far less than the 10 hours demanded by JCS, and MATS could maintain this rate for at best 30 days. Their own Korean war experience tends to corroborate this finding. Asked for a 10-hour per aircraft per day operating rate MATS, in the initial and crucial stages of the war, was able to boost its 2.8-hour prewar level to only slightly over 4 hours.

Thus, they are being asked to do what some of the best brains in the country say can't be done. In spite of this, MATS maintains it has the capability the JCS says it should, but, added one officer (in reference to oft-quoted ex-Army Chief of Staff Maxwell Taylor's demand for more troop airlift), "We don't have the capability to move everything everyone wants us to move."

MATS supply backlog, one mark of efficiency, in any given airport is running less than 3-day maximum currently acceptable to MATS headquarters. They're thinking of revising that goal to 1 day. And, in response to the Capitol Hill charges that MATS is running scheduled flights overseas along the same routes as commercial carriers, one officer snorted, "A schedule is nothing more than a program any good manager uses to see if he can do what he says he wants to do. As for the routes, although we don't use the same bases, there's usually one one efficient economical way to cross an ocean. We use the same route as the airlines for the same reason."

Beyond its realistic readiness training and the supplemental CRAF program, MATS, in its role as single manager for military air transport, buys a large chunk of commercial airlift. Among the reasons: military air transport demands are higher than the by-product—airlift—of MATS training program can handle; MATS wants only to be able to do its assigned war mission, wants a strong civil air fleet ready to back it up after the first few days or weeks of an all-out war.

Of the $200 million paid by Defense to civil carriers for contract, charter and common carriage airlift in fiscal year 1959, MATS signed signed the tab for over half ($105 million). Of that quantity, $70.8 million was Congress-appropriated money spent backing up MATS own peacetime operation. The rest it spent as procurement officer for Logair, Quicktrans and the Air Force Ballistic Missile Division.

Even if the requirement for airlift does not increase (and it's likely to), MATS will soon be spending more of Defense's airlift dollar as it phases in Northeastern North America intertheater airlift overseas, eventually will be responsible for the whole $200 million. All procurements are advertised, all carriers are eligible to bid. Commented one procurement officer. "We don't care, initially, what capability they have."

When the contract is let, however, MATS keeps two things in mind:

1. Placing as much business as possible on a fixed, long-term basis (to get better pricing, make contract administration easier for both the carrier and MATS).

2. The report of MATS Capability Survey Committee which visits carriers' facilities, verifies that they can produce as they say they will. We want to make awards only to responsible and capable carriers. To a good many commanders buying airlift, performance is a lot more important than cost.

But, if MATS has as good a case as any other military organization for existing, that $70.8 million, and growing, prize has been too much for the commercial airlines to view with clear-cut business acumen. Strangest twist, to MATS officers, in the whole Capitol Hill cacaphony is that the very people in Washington who should be helping MATS sell increased use of airlift are, instead, pounding MATS with every brickbat they own.

Like a recalcitrant bulldog, the commercial airlines, through their powerful association lobbyists, are leaning hard on Congress to get them a bigger share of the large MATS business—in spite of MATS boss Lt. Gen. William H. Tunner's statement that "there just is no more business—unless MATS flies its aircraft empty."

And if MATS flies empty? Ignoring for the moment its crippling effect on MATS prepardness, the cost of defense airlift to the U.S. taxpayer would skyrocket to nearly $1 billion—something the Pentagon thinks he would take a rather dim view of. Even though MATS used 60 percent of its passenger, 74.8 percent of its cargo capacity during the last fiscal year, commercial airlines still hauled 40 percent of MATS's passengers, 10 percent of its cargo.

This is a far cry from MATS commercial augmentation in 1955 when it spent only $4.5 million on civil airlines to haul 1.5 percent of its passengers, 6.6 percent of its cargo and mail. In the past 5 years, MATS has reduced its airfleet by 107 planes, cut its personnel strength some 2,400 persons. Yet, charges of MATS' persistent expansion, to the detriment of commercial airlines, persist.

False charges are not MATS' only headache. Attracted by the mushrooming market, MATS' bidders list has jumped from 41 carriers in 1957 to 86 this year, is expected to reach 122 in 1960. Most of the additions are briefcase operators with one or two ob-

solescent aircraft, at most, purchased solely to get MATS business.

Operating under a part 45 certification (called one of the great rackets in the aviation industry by Oklahoma's Senator MIKE MONRONEY) and not subject to Civil Aeronautics Board control, these "tissue paper" firms come under the benevolent protection of a Small Business Administration umbrella—and most of the unreliable outfits spotted by the contract survey committee are in this category.

Said one procurement officer, "These small business set-asides are encouraging the use of old aircraft, discouraging the forward looking companies—and, on top of all that, we figure we pay about a 10-percent premium to give them business."

These quick-hit-and-die operators have prompted an intramural fight among the carriers. But, as reflected in a Congress trying to keep everybody happy, the fight has become something far more ominous. Said South Carolina's Senator THURMOND, "Excessive (governmental) concern with commercial aviation has caused us to progressively nibble away at the Military Air Transport Service."

MATS' request for 10 C-jets (estimated cost: $53 million) hit a blank wall first time around—for precisely the same reason MATS has been in trouble all summer; national defense mission keeps being obscured by politics and considerations of false economy.

To MATS the argument for C-jets seems pretty clear cut. Says Tunner, "We need both a racehore and a workhorse." They are getting the workhorse, the C-133. For the other: "It doesn't make much sense to us to try to support a 600-knot-an-hour bomber with a 190-knot transport. We're trying to support a rocket (SAC) with a kiddie car."

Adds Tunner, "The transport plane now in the inventory, being piston-driven would be many hours distant from the friendly base with needed materiel and personnel at the time the SAC bomber arrived. It is precisely the difference in speed between a jet-propelled plane and a piston-driven plane. The SAC plane would therefore be threatened with immobilization after one strike at a target."

And there's the advantage of economy. Ten C-jets will do the same job as 42 of the C-124's which comprise the bulk of today's strategic transport fleet, are nearly obsolete and costly to maintain.

MATS has already heard, in the wings, the yells of the civil airlines. "What they tell us basically," said one MATS officer, "is they want us to do a good job—but not too good." Tunner insists that MATS is not fighting the commercial airlines: "We need them. We are counting on a strong airline industry to backstop us in time of war." But if MATS is not in a fight, it is showing a lot of unexplainable bruises.

What rankles MATS men most, and some of the most knowledgeable men in the airlift business today are in Tunner's organization is that the MATS record is about 180 degrees opposite from the picture painted of it by commercial interests; is, in fact, far better than the so-far performance in war situations of private carriers demanding they be given more of the job to do.

Among the quotable:

On claims industry could do the job cheaper: "Assuming the same operational training level, if we split the cargo-passenger business equally with the civil carriers, Defense airlift bill would jump another $300 million. If we flew empty, the taxpayers would shell out $750 million more."

Could do it better?: "Ten times during July, August, and September last year MATS went looking for commercial airlift augmentation, couldn't find it. During the Lebanon and Far East crisis, all bids in some offerings were so high they all had to be rejected. We had to haul the supplies and people ourselves working overtime. It was the tourist season, if you'll recall. During 1 week last November when they were on strike, all but four TWA scheduled flights were handled by MATS. We do not consider this the proper way to maintain military readiness."

MATS' "competitive" setup is preventing civil carriers from developing a cargo capability: "They want us to give them the money to build the aircraft, then guarantee them a profit on the business. The airlines built an incomparably efficient passenger service under a free enterprise system. Passenger business in this country is a drop in the bucket, compared to the commercial cargo they could haul. Why don't they go out and develop it instead of going to Washington looking for a Defense Department dole?"

What about Congress?: "If they buy this civil carrier idea to pare down MATS even more, they'll be behind the biggest eight ball they've ever seen. We already have letters indicating every transport outfit in the country, steamship lines, railroads, buses, will jump on the bandwagon—and you couldn't blame them."

Against Seating Communist China in U.N.

SPEECH
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, August 17, 1959

Mr. ASHLEY. Mr. Speaker, the best that can be said about the resolution before us, in my opinion, is that it shows questionable judgment and reflects an astonishing lack of self-confidence.

We are told that the single purpose of this resolution is "to reaffirm the attitude of the Congress that it is opposed to the seating of Communist China in the United Nations." The same proponent goes on to point out that since 1948, the House on 15 occasions has approved language opposing the admission of the Communist regime in China to the U.N.

This is an average of 1.3 times per year for the past 11 years, Mr. Speaker, and I am constrained to wonder if this almost routine expression of opposition is really necessary or desirable.

Does the legislative branch of our Government so distrust the executive, which is charged with the conduct of our foreign policy, that it finds it necessary to continuously reestablish and emphasize such guidelines as contained in the resolution before us?

I have not noticed any tendency on the part of the administration to be soft on communism or to favor the admission of Red China to the United Nations, either in the past or at the present time. For this reason, the resolution before us appears to me to be totally unnecessary.

But maybe I am wrong about this, Mr. Speaker. Maybe the drafters of this resolution detect a slight quavering on the part of the administration in its conduct of the cold war. If so, then there might be a very real question as to whether 1.3 times per year is actually often enough for us to express congressional opposition to Red China's admission to the U.N. If the distinguished Committee on Foreign Affairs detects such a quavering, perhaps we should incorporate an expression of congressional opposition as part of our daily routine. Just after the morning prayer or perhaps prior to adjournment each day.

Mr. Speaker, I can see where some Members may feel that a difficult question is raised by the House record of 15 protestations on this subject in the last 11 years. After all, if we do not continue to maintain a batting average of 1.3 protests per year our constitutents may find cause to question our resolve and determination in freedom's fight against totalitarianism.

I am happy to say, Mr. Speaker, that I don't think the people whom I have the privilege of representing in Ohio would be terribly upset even if our batting average falls to less than one resolution on this subject per year. Nor do I think that our neighbors in the U.N. would construe such inaction as an affirmative indication that the United States wants China in the United Nations. Our position is perfectly clear on this score and there is no reason whatever to suppose it in doubt.

The resolution, as I see it, is undesirable as well as unnecessary. It is undesirable because it interjects Congress into the conduct of our foreign affairs in a manner which serves no constructive purpose whatever. If we persist in this kind of nonsense, Mr. Speaker, every vestige of flexibility in the conduct of our foreign policy stands to be destroyed. It is time we recognize that such infringements by Congress upon Presidential authority can lead to confusion, if not disintegration, in the implementation of an affirmative foreign policy.

Mr. Speaker, many of us here are vehemently opposed to the admission of Red China as a member of the U.N. at this time. But it does not follow that we must therefore cast an affirmative vote for the resolution before us. I am sure that if the membership of the House is careful to distinguish between the question of whether Red China should at this time be a member of the U.N. and whether or not the legislation before us can serve any proper or useful purpose, an intelligent decision on the resolution will be reached.

Roads to Nowhere

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 18, 1959

Mr. LEVERING. Mr. Speaker, the Mansfield News-Journal, of Mansfield, Ohio, is a fine independent newspaper, which truly strives to come to grips with

many of our problems. Most of all, it deals with major national issues in simple, everyday terms that make it possible for our citizens to think clearly about complex subjects.

On Sunday, August 9, 1959, the Mansfield News-Journal carried an editorial entitled, "Roads to Nowhere," which I believe is well worthy of the consideration of my colleagues, who shortly will be considering legislation to finance the needed highway program. Under leave to extend my remarks in the CONGRESSIONAL RECORD, I am inserting this editorial, written by my friend Ken Woodman.

The material follows:

[From the Mansfield News-Journal, Aug. 9, 1959]

ROADS TO NOWHERE

Is the United States going to be full of stretches of fine double highway that start nowhere and wind up at the edge of a cornfield?

It will be if the Democrats in Congress don't quit squabbling about the Federal highway program.

Ohio has already called off bidding on all contracts where Federal funds are involved. A serious crimp has been put in the State's public road program.

California stopped advertising for bids in May and put $187 million worth of projects on the shelf.

South Dakota is stymied on plans for $36 million in highways.

Thus it goes across the Nation.

Big highways half-built; needed highways stopped cold on the planning table. And why? Largely because the Democrats in Congress who are perfectly willing to give away $3 billion in U.S. money to foreign lands, will not come up with an adequate program for financing this essential improvement at home.

Last January, President Eisenhower saw that the road program was going into the red, mainly because the Democrats had jumped it from $2.2 billion to $2.5 billion last year to "prime the national pump"—without providing any additional taxes to foot the bill.

Mr. Eisenhower suggested a 1½-cent hike in the gasoline tax to keep the road program rolling. With a Presidential election coming up next year the Democrats wanted no part of a tax increase. Issue bonds, they said. But with Federal spending outstripping Federal income and the debt soaring, nobody is rushing to buy Government bonds.

On July 1, the Federal Government was supposed to begin passing out this fiscal year's $2.5 billion to the States, but it had only $500 million.

If Congress lacks the courage to levy necessary taxes (preferably on road users through a gasoline tax), then it should shut up shop on roadbuilding and let the States take over.

Ohio, for instance, could readily finance an adequate major highway program. The wealth to do so is here. It cannot be done, however, in the face of uncertainty as to what the Federal Government will do.

And since the Federal program is started, there may be valid reasons to continue it—if it is soundly financed.

Is this a vague, uninteresting problem to you?

Just drive out and take a look at beautiful Ohio Route 1. Completed, it would take you to the Ohio and New York turnpikes so that you could drive from here to New England or Wisconsin without ever encountering a traffic light. Now it goes nowhere. It fizzles out north of Medina and somewhere south toward Columbus.

It's an expensive road to go nowhere. It would be a highly valuable road to us all if it were open and completed.

This story is being repeated all over the country. And just in case our Congressmen don't know it, the folks back home are going to be pretty sore when they see what legislative dalliance has done.

Family Life With the Strategic Air Command

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 18, 1959

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks I wish to include an article entitled "Family Life With the Strategic Air Command," by Mary Lee O'Neal, appearing in the Christian Science Monitor of August 17. Outlined in the article are some of the everyday events that are faced by the wives and families of the crew members of SAC. To a great number of Americans who themselves must shoulder the burdens of everyday life the sacrifices of that one particular group, who constantly are on the alert to protect American shores, are distant, impersonal. Yet, Americans will always be grateful to those whose devotion to duty make it possible for us to go about our assignments with a feeling of added security—and our appreciation is extended to those loved ones who day in and day out anxiously await the return of these heroes:

The article follows:

FAMILY LIFE WITH THE STRATEGIC AIR COMMAND

(By Mary Lee O'Neal)

"Next week we are going on alert." "Our crew is going to Europe next month." "Don't save dinner for me." And so it goes. Familiar words to an Air Force wife married to a pilot in the Strategic Air Command.

Familiar words, repetitious words, tiresome words, depressing words. But they are words we have to live with. They comprise the highs and lows of our daily existence.

Recent newspapers have carried items about the possibility of SAC's going on a partial alert wherein a certain portion of its force would be in the air 24 hours a day. I have often wondered if the average citizen reading such items realizes how SAC families are affected by the alerts and missions already in effect.

In the past 2 years, in addition to his regular flying missions, my husband has been gone from home on several reflex trips abroad, and has been confined to the air base with his B–47 crew on frequent home alerts.

He has been gone from home on Father's Day twice, on a birthday, our anniversary, Memorial Day, Labor Day, and the 4th of July. We have eaten months of dinners without him, and he has missed many of the little triumphs and tears mothers like to share with fathers concerning their children.

One week he left home as the baby was tentatively stepping out alone. When he returned 3 weeks later he found a sure-footed little girl. All the fun in between he never saw.

There are parties I have not attended, shows I have missed, and meetings I have been forced to forgo. I couldn't go minus a husband, or I couldn't find a baby sitter.

Recently we moved into a new home all our own. My husband lived in it for 2 days. Then he went on home alert for a week. Two days later he was off to an oversea station. Three weeks later he was home for 3 days; then he was off to Oklahoma and was delayed there 6 days. Upon his return he flew a night mission, and 3 hours later he went on home alert. And so the year goes.

Last month I waited for him to find time to help me plant morning glories for a trellis on my back stoop. It became evident to me he might be here to help me build a snowman, but if I wanted morning glories I would have to dig out the rocks, sift the dirt, and prepare the flowerbed myself. I did.

I have painted furniture, hung pictures, burned garbage in the snow, trudged across town with two tired children to complete Christmas shopping, waited in numerous barbershop chairs for my son's haircuts, serviced the car, coped with it when it wouldn't start, stacked belongings above floodwaters in our basement, and made all sorts of decisions. Perhaps many wives do these things anyway, but when he is home my husband does them, and I miss his help.

Our little girl, just learning to talk, doesn't say "Dada," but adds "Dada br-r-r-r," which is her way of saying Daddy has gone bye-bye in an airplane. She has accepted his being gone as normal; his coming home as something special.

On the other hand, my son misses his father acutely, and it is a continuous challenge to me to compensate for his father's absences. There are times when a boy needs a male influence, and mothers are poor substitutes.

Last Christmas Eve when families were gathering together to share this night of nights, I was sitting in a squadron dayroom waiting for a plane that would be my husband's—waiting for my Christmas to begin. Finally the truck brought up my husband's crew from the snowswept ramp where they had landed their big jet bomber, and I knew our little family would have Christmas after all. It didn't matter that my husband reached home too late to see the children hang their stockings, or that he was too tired from having flown the Atlantic to know it was Christmas. He was with us.

Many times I ask myself why we have to live like this and how much longer it will go on. There is little security in living day by day knowing our plans will go awry at any moment; that vacations may be canceled; that holidays will never be shared. It helps me little to realize that since civilization began wives with husbands in the service of their country have existed like this. Somehow the bonds of the centuries bring little comfort.

There are times I wish I were married to a businessman who caught the 5:15 every night of the week, walked in the door precisely at 6:04, and sat down to dinner with us at 6:30.

And yet there are other times when I wonder if I would want my life to be any different.

It is on the special occasions when we wives are allowed to wait out on the ramp and watch our husbands land their aircraft upon their return from overseas. Here are no ordinary businessmen returning from a cushioned job. Here are no workers returning from the regular grind. As that huge swept-wing plan descends, we know it is carrying men who have gone beyond the normal routine. They have been pursuing the cause of peace in a way only they themselves can know.

They are warriors who haven't fought any battles. They are heros who haven't done anything heroic.

And when my husband waves to me from the canopy of his jet bomber, that's when I am really sure. I wouldn't want my life to be any different.

Abundance Results From Impartial Development

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mr. ULLMAN. Mr. Speaker, I urge my colleagues to read the following article by Byron Brinton, editor, Record-Courier, Baker, Oreg., and member of the Oregon Water Resources Board. The article, "Abundance Results From Impartial Development," appeared in the August 1959 issue of the Powder River Sportsmen. Mr. Brinton's article clearly demonstrates his keen and thorough understanding of the multiple-use principle of resource management. Need I add that I am in complete agreement with this article? It is imperative that selfish and inadequate development of all our natural resources cease and that a national policy of comprehensive planning and impartial multiple-purpose development be adopted.

The article follows:

ABUNDANCE RESULTS FROM IMPARTIAL DEVELOPMENT, SAYS WATER BOARD MEMBER

(By Byron C. Brinton)

In the past the pursuit of abundant conditions for fish and game has not been a pursuit at all but a retreat. It has been a thrill to go up beyond the road and cast a fly into virgin water, unspoiled by an advanced civilization.

But we have had to go farther and farther back to escape the advance; and the next few years—sooner than Oregonians realize—even in our great Northwest we will become an area where we too must enhance our lives by developing water supplies and not by despoiling what we futilely have or grasping for the return of natural conditions.

The value of water is not peculiar to the sportsman alone, in fact he is probably the last to put a practical value upon it because until recently he has been unique among all people in not specificially appropriating land or water for his use. He has watched others appropriate it by placing such values upon the resources as to warrant investing in dams for diversions upon the stream or improvements upon the land, essentially for other purposes than recreation. He has not been able to compete for appropriation, but has won marked recognition for the principle of multiple-use in recent years. And oddly enough, particularly in developed storage, he has discovered that a share in a conserved and plentiful resource is of far greater benefit to him than bitter controversy over scarcity resulting from resource competition and inadequate and selfish development.

Once you accept the logic of the development approach to resource conservation you become one who realizes there is work to be done, you cease to be one who fights progress, you no longer want to turn clocks back, you want to hasten your objectives and not merely dream of your utopia.

The development approach is not a charted route. In the fields of big game it is almost sure to incur the immediate ire of the rancher, or in the field of intensified range management, it is almost sure to arouse the ire of the sportsmen. Yet the common objective of maximum use of the dwindling per capita land, soil, and water resources calls for the most understanding tolerance of divergent interests. In the field of fish, the development approach upon our waterways has amounted upon some streams to open warfare. Yet the crying need for water conservation through implementation is so critical that if the fish resource keeps pace with the development approach upon the streams of Oregon it must undertake the most intensified research effort in history. The search for compatible conditions must not be clouded by divergent competition but it must be stimulated by the common purpose of the achievement of maximum results from our water—maximum storage control, maximum irrigation, maximum power, maximum temperature and quality conditions, maximum consumptive supplies, and maximum fish life production and recreational advantages.

I am not one to say that some game range must not be acquired but it must be accompanied by a recognition of commensurate intensification in domestic stock capacity on other areas. I am not one to oppose the increase by fivefold through improvement the carrying capacity of the stock ranges, but I always point out that this potential only emphasizes that if the sportsman is to maintain equal values on his behalf he must demonstrate a know-how and an ability to apply equivalent improvement to enhance the capacity of all multiple-use acres or reserved lands assigned to game. I am not one to oppose high storage dams in our rivers, but never have I advocated less than the maximum attention to tolerance for fish while I have favored these great conservation projects. You cannot under any circumstances pull out of the mud with the power only on one wheel.

The development approach must be kept in balance. Fish and wildlife agencies are fully aware that their tasks of rationing and regulating are so tremendous that little, if any, effort has been permitted them in the fields of basic research. Without this specific factual data equivalent to the justification by other claimants through appropriation for the State's water values, the protection of the recreation values in water can only be generalities and we can only cry for moratoriums and temporary expedients. Without facts, a full water program for Oregon cannot be developed including adequate provision for fish life. Without facts desirable conditions with respect to spawning beds and flows and impoundments and passages cannot be advocated. And, without participation, recreation cannot claim its full share an multiple-use equality under development projects.

Impartial development is the only route to the abundance of resources for fish and game. As intense competition sets in for soil and water we must be impartial, we must be tolerant. Opposition to multiple-purpose water resource projects is all too unnecessary.

Decisions of the Supreme Court That Have Attempted To Alter and Revise the Constitution of the United States

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 18, 1959

Mr. HIESTAND. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I wish to include therein a series of three Washington reports made by my colleague, the Honorable JAMES B. UTT, of California. These reports treat with the dangers of this Republic by reason of a long line of judicial decisions handed down by the Supreme Court over the last several years which tend to decrease the sovereign powers of the several States by denying the States the right to legislate in areas not under the exclusive jurisdiction of the Federal Government.

Mr. UTT also attacks the Court for attempting to write new words and phrases into the Constitution which are not there, and which if accepted as law would greatly weaken the Constitution which is the very foundation of the political life of this Republic.

The above-mentioned Washington reports follow:

WASHINGTON REPORT

(By Congressman JAMES B. UTT)

AUGUST 6, 1959.

For some time I have been torn between two admonitions of significant virtue; one by my father when he said, "Son, if you can't speak well of someone, don't speak at all," the second one by Abraham Lincoln when he said, "To keep silent when one has the duty to speak out is a sin." Believing that tolerance can be a sin as well as a virtue, I have resolved this dilemma by accepting the Lincoln doctrine as a responsibility of the highest magnitude. There is aways a straw which breaks the camel's back and a catalyst which sets off a mental or physical explosion.

The catalyst in this case was the undignified performance of Chief Justice Earl Warren at a Sunday evening cocktail party in which he called Earl Mazo "a damned liar" when Mazo denied that in his new biography of Vice President NIXON he was spotlighting NIXON at the expense of the Chief Justice. Mazo asked the Chief Justice if he had read the book. The Chief Justice replied "No," and Mazo's rejoinder was, "I hope to God for the sake of the country that your decisions are based on much more full and accurate evidence than judgments on a book you haven't even read."

This last rejoinder must have struck a tender spot, as it must be recalled that in the desegregation opinion which overthrew the 58-year-old Supreme Court doctrine, the Chief Justice, after citing certain authorities, added, "And see, generally, Myrdal, 'Our American Dilemma.'"

While I am opposed to segregation, I am unalterably opposed to having the Supreme Court rely upon sociology instead of legal authorities. The Swedish sociologist, Gunnar Myrdal, in his book cited by Warren's opinion as an authority, also stated that the Constitution of the United States is "impractical and unsuited to modern conditions, and that its adoption was nearly a plot against the common people." What hogwash. What poppycock. And what a slander against our Founding Fathers. Any student of our Constitution should know that it was founded upon Judaic-Christian religion, with a profound reverence for the Greek philosophers, B.C., the Roman law, and above all, the Magna Carta of 1215, and the Common Law of England, and was beamed to protect and increase the freedom and dignity of the individual under a God-ordained universe.

At this point I wish to make it abundantly clear that I am not attacking the Supreme Court as an institution, but rather my remarks are leveled at the members of the present Court and their sociological philosophies upon which they have based so many of their opinions, in some of the most amaz-

ing decisions ever handed down by that august body. Contrary to popular opinion, the Supreme Court rulings are in no sense the supreme law of the land. The supreme law of the land is referred to in an article of the Constitution which does not even mention the Supreme Court at all.

Article III provides: "The judicial power of the United States shall be vested in one Supreme Court, and in such inferior courts as Congress may from time to time ordain and establish." The judicial power is not indivisible. Article III, section 2, says that "The Supreme Court shall have appellate jurisdiction, both as to law and to fact, with such exceptions and under such regulations as the Congress shall make." Congress, therefore, is given the sole right to divide this judicial power between the Supreme Court and the lower courts. The Constitution and some of the amendments are full of limitations upon the Supreme Court.

Article VI defines the supreme law of the land by saying, "This Constitution and the laws of the United States which shall be made in pursuance thereof, and all treaties made or which shall be made under the authority of the United States, shall be the supreme law of the land." You will note that the Supreme Court is not even mentioned in this definition. No Federal court is given any authority under the Constitution to change it by a single word nor to evade it by subterfuge, and any attempt to do so is as unlawful as rape, and just as despicable, even though perpetrated by prima donnas.

Speaking of prima donnas, in 1957 when the American Bar met in London to pay tribute to the signing of the Magna Carta by King John, the Chief Justice was an invited guest. After accepting the invitation, he heard that Vice President NIXON was also an invited guest, and the Chief Justice notified his London host that if NIXON was going to be there, he, the Chief Justice, would decline to attend. The reason? Under protocol, the Vice President outranks the Chief Justice. How horrible. The Chief Justice was not the least concerned over the embarrassment this caused his hosts in making it necessary for them to recall their invitation to the Vice President of the United States. However, if it were not for this trait, Mr. Warren would not be Chief Justice, because when he was promised the first vacancy on the Supreme Court, and that vacancy was created by the death of Chief Justice Vinson, he demanded this appointment as Chief Justice, and would not accept an appointment as an Associate Justice.

The Supreme Court has no authority to question the wisdom of any law. It can only determine its constitutionality. It is an equal and coordinate branch of our Government, and therefore has no authority to invade the jurisdiction of the executive branch, nor the legislative branch, and yet an examination of a score or two of the decisions of the present members of the Supreme Court establishes a record of invasion upon the rights, duties, privileges, and immunities of the other two branches. More than that, examination will prove that the Court has entered upon an attempt to repeal and rewrite many articles and amendments to the Constitution.

This duplicity is so outstanding that it comes within the purview of Lincoln's admonition that "to keep silent when one has a duty to speak out is a sin." A partial list of these decisions and their effect upon our Constitution will be included in next week's report. These decisions strike at the very heart of our Government, and tend to destroy the right of the individual to have a voice in his government at the State and community level.

WASHINGTON REPORT

(By Congressman JAMES B. UTT)

AUGUST 13, 1959.

In my report last week I indicated that I would cite several recent decisions of the Supreme Court which strike at the very foundation upon which our republic is built, and which create a sociological philosophy that the Constitution was created to defend the Court rather than that the Court was created to defend the Constitution. The Constitution must be supreme over the Court, and not the Court over the Constitution.

The Constitution is a document of strict limitations, and prohibits the Federal Government from doing anything not permitted by the Constitution. The 10th amendment states: "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

Now comes the Supreme Court with the opinion that none of the States can enact and enforce laws dealing with Communist subversion and antisedition laws, because Congress had legislated in that field, and therefore preempted it. This decision involved the case of Steve Nelson who was convicted under Pennsylvania antisedition laws. He was an admitted Communist leader, but the Court held that because Congress had passed the Smith Act (an antisedition law) any State law dealing with this subject was henceforth null and void. Under that decision the previous convictions of the 10 top Communists in California, which were under appeal, were automatically reversed, and these Communists were set free. The Smith Act in no sentence or pargraph indicated that Congress intended to preempt this field, nor are such laws prohibited to the States by the Constitution. How then could the Supreme Court reach such a conclusion?

Under this "doctrine of preemption" no State could enact and enforce a little Lindbergh kidnaping law, because Congress has legislated in this field, and the enactment and enforcement of our State narcotics control laws are likewise in jeopardy under this doctrine.

The great political strength of this country lies in the fact that it has 50 separate States, each with its constitution, its own legislature, its own constabulary, and its own legal department, so that just in case the Federal Government should be subverted there would yet remain 50 distinct entities with exactly the same character. No "coup" could take place in this country such as have taken place in many countries, and for the very reason just stated.

In *Sweezy* v. *New Hampshire* the Supreme Court held that the attorney general of that State had no right to question a college professor about subversive activities, and held further, in *Raley et al* v. *Ohio* that the State could not punish a witness for contempt for his refusal to answer questions by its legislature regarding his subversive activities. This line of decisions has given aid and comfort to the Communists, and follows the social philosophy of some members of the Supreme Court rather than the rule of law.

I said last week that the Supreme Court had no authority to add one word nor to delete a word from the Constitution, yet in the Watkins case it attempted to do just that. Congress had voted a contempt action against John T. Watkins for refusing to answer questions of the Un-American Activities Committee. In the opinion written by Chief Justice Warren, he said, "* * * nor can the first amendment freedoms of speech, press, religion, or political belief or association be abridged." Now the first amendment does guarantee freedom of speech, press, religion, and assembly, but where, oh where in the first amendment are listed freedoms of "political belief" and "association"? These words simply do not appear in the Constitution, and yet the Supreme Court is attempting to solidify this into accepted law.

I could cite a dozen other cases which I feel constitute a frontal attack against our Constitution, and it is shocking to know that none of the Justices of the Supreme Court has ever taken an oath to support and defend the Constitution, as members of the other branches of government do, and as required by the Constitution itself. They simply sign a watered-down version to administer justice according to the best of their ability and understandi ig, agreeably to the Constitution and laws of the United States.

I have introduced legislation to require all Federal judges and justices to take the oath of office prescribed by the Constitution, and which I have taken as a Member of Congress.

WASHINGTON REPORT

(By Congressman JAMES B. UTT)

AUGUST 20, 1959.

This report concludes a series of three, relative to decisions of the Supreme Court that have attempted to alter and revise the Constitution of the United States. Additional opinions to those heretofore cited are set forth in this final report. I do not believe that the general public is aware of the serious effect which has resulted to law enforcement agencies and others by striking down the right of the States to legislate and enforce laws which rightly fall within the jurisdiction of the State. Until the effect strikes you individually, you will continue to be complacent.

The Mallory case is one in point. After Mallory was convicted of rape, and there was no question of his guilt, as he had confessed, nevertheless the Supreme Court ordered him freed because the arresting officers had detained him for questioning before indictment. It was impossible to have a new trial because the same defense would obtain, and there was nothing to do but wait for Mr. Mallory to strike again, which he did within a few months after his release. If it had been your daughter who was the victim of this assault, you would not feel kindly toward the judges who released him, knowing that he was guilty in the first instance.

In the case of Clinton E. Jencks, who had been convicted of Communist activities, he was released by the Supreme Court because the trial judge refused to make the Federal Bureau of Investigation open its files on the matter. In this case there could have been a new trial had the FBI been willing to open its complete files. The Justice Department felt that it would reveal its sources of evidence on other investigations, and would destroy the effectiveness of the FBI. So, rather than comply with the admonition of the Court, they did not bring Jencks to trial again. Mr. Jencks is now attending the University of California under a foundation grant for the purpose of obtaining teacher's credentials qualifying him to teach your children and mine, and under the rulings of the Court he cannot be denied a teacher's certificate on the grounds of Communist association.

This is one area where the present Supreme Court has reversed an interpretation of the free speech amendment which has long been an accepted doctrine. In *Gitlow* v. *New York*, U.S. Reports, page 667, the opinion by Justice Sanford reads in part: "And, for yet more imperative reasons, a State may punish utterances endangering the foundations of organized government and threatening its overthrow by unlawful means. These imperil its own existence as a constitutional State. Freedom of speech and press * * * does not protect disturbances to the public peace or the attempt to subvert the Government. It does not protect publications or

teachings which tend to subvert or imperil the Government or to impede or hinder it in the performance of its governmental duties." In other words, it has always been the rule that the right of free speech guaranteed by the first amendment did not give sanctuary to those people whose purpose is to overthrow the Government by force and violence, thereby destroying the Government which gave them the right of free speech. However, under the recent rulings which include cases of subversion and cases involving the right to teach an idea, even though that idea could be adultery, as in the "Lady Chatterley's Lover" case, sabotage, or effective methods of overthrowing the Government by force and violence, the limit of free speech is not breached until an overt act has been committed, implementing the teaching of the idea. In other words, you can teach the overthrow of the Government by force and violence, but you are not a criminal until you light the fuse.

One final case of incompetency of the Court was revealed in one of the shortest opinions on record. In the matter of the Evetts Haley, Jr. case, reversing Federal Judge T. Winfield Davidson's decision, the opinion in full is herewith stated: "The judgment is reversed. *Wickard* v. *Filburn*, 317 U.S. 111." It is my candid opinion that any freshman in law school who would cite *Wickard* v. *Filburn* as an authority for reversing the Haley case would be washed out of school as an incompetent. I do not say that the Court might not have reached the same conclusion under the broad powers granted under the "commerce" clause of the Constitution, but surely the reversal of Judge Davidson's decision merited more than four words.

The Haley case involved the planting of wheat and its consumption on the farm without an allotment from the Department of Agriculture. The Government had imposed a fine of $506.11 against Haley because he grew 43 acres of wheat on his 1660-acre cattle ranch. Mr. Haley had never received any subsidies for anything on his farm, and in the case which the Supreme Court cited as authority for reversal, the defendant, Filburn, had received subsidies by way of parity payments, and fed his wheat, grown on the surplus acreage, to his livestock. In that case, the Court used 23 pages of opinion to arrive at its conclusion, and on page 131 of that decision stated, "It is hardly lack of due process for the Government to regulate that which it subsidizes." On page 133 of that decision the Court concluded "that appellee is the worse off for the aggregate of this legislation does not appear; it only appears that, if he could get all that the Government gives and do nothing that the Government asks, he would be better off than this law allows."

There you have it. The Filburn case was based on the Government's right to control that which it subsidizes, and in the Haley case, no subsidy whatsoever was involved, and for the Court to cite the Filburn case as an authority for reversal is simply juvenile.

James A. Farley

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 18, 1959

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the August 1 issue of the New York World-Telegram and Sun, following the return of Hon. James A. Farley, chairman of the board, the Coca-Cola Export Corp., from an extended business trip to Europe:

HARDLY PAUSES TO REFRESH: JIM FARLEY, ON THE GO AS ALWAYS, SELLS COKE AND GOOD WILL ABROAD

James A. Farley returned to New York this week from a 6-week trip to Europe. This dispatch by a British writer presents a fresh view of the veteran business executive-political figure.

(By Patricia Lewis, London Express staff writer, special to World-Telegram and Sun)

LONDON, August 1.—"Have a Coke?" beamed the receptionist, bustling to a giant cooler, selecting a bottle, opening it and spiking it with straws in one well-practiced movement.

I sipped and explained I wished to track down James A. Farley, chairman of the Coca-Cola Export Corp., for a chat about the part his product is playing in making friends all over the world.

"Well, now, Mr. Farley's itinerary is very tightly packed," said the girl consulting a sheaf of papers. "He is in Oxford today, Stratford tonight, Norwich the next day, but maybe he can fit you in breakfast time day after tomorrow."

When I met Mr. Farley—a tall, well-set-up tycoon in a light navy suit—we had neither breakfast nor cokes. Instead this quick-actioned, swift-thinking, 71-year-old reeled off a list of the 19 places, 22 cities he'd visited on his trip to see the Pope. He also met various ex-kings and current dictators.

PICTURE WITH POPE

Chuckling at the memory, Jim Farley said of Pope John: "We had our picture taken together and * * * as you can see * * * I'm quite a big fellow. Well, when the photographer started to get busy he just moved over and stood on a dais. That made him a bit taller than me—it also made a pretty good picture."

Spain is another important call on Mr. Farley's list, and this usually includes a talk with Franco * * * "through an interpreter, of course, but somehow it's all so easy it doesn't seem as if the interpreter's there."

Dinner with ex-King Umberto of Italy * * * you'd think it's amazing what a man can do with a soft drink in one hand and the say-so for opening new plants in the other. But with Jim Farley it's more than that. For Farley is a politician, too.

He mused a moment.

"I hope I'll live to see next year's Democratic Convention in Los Angeles because if I do I'll have been to every one this past 40 years. Hmm—40 years."

SEEMS TIRELESS

There's no doubt in my mind that Mr. Farley will be in there pitching come next July. He seems tireless. ("I've never had a holiday in my life—and if you think traveling is a vacation just follow me around.") He doesn't smoke * * * he doesn't drink ("just Coca-Cola and lots of coffee and milk") * * * he's a widower with nine grandchildren * * * and he wears a straw-boater with just as much aplomb—if not more—than Maurice Chevalier.

From his connections with American politics you might think Mr Farley a golf addict. But walking and studying advertisements are, he considers, more worth while.

"Golf's a terrible timekiller," he told me. "The men I know take it so seriously they get no relaxation—most seem to get more tense about their scores than about their work.

"Walking is the best thing—Harry Truman always used to walk miles each morning and I don't think he was any the worse for not playing golf."

But if golf fails to fascinate Mr. Farley—one of our British ads certainly does.

"I think the one with the man holding up a whale on his finger is very good," he said. "It does what the product does—it gets that feeling of strength over. Our aim, you know, is to sell Coke as a cool, refreshing drink—not that you use enough refrigeration over here."

Suddenly I realized Mr. Farley had been looking at his watch for quite some time. "Got some people to see * * * then a lunch * * * then a lot of reading to catch up on before I fly back to New York," he said. "And once I'm there I'll be straight in the office to get through 6 weeeks' accumulated mail—enough to keep five secretaries busy."

Effective Legislation in the Field of Labor

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. BOSCH. Mr. Speaker, as one who has supported the Landrum-Griffin bill in the House, I am very much interested in the enactment of effective legislation in the field of labor before the adjournment of this session of the 86th Congress. The battle is not over and I hope that the people of this Nation who demanded, and received from the House, effective labor-reform legislation will not celebrate a premature victory. The fate of this measure is now in the hands of the House-Senate conference committee, and I trust that an effective measure will soon be reported back to both Houses of the Congress.

Under leave to extend my remarks, I include an excellent article by Roscoe Drummond which appeared in the Washington Post and Times Herald of August 17, 1959:

LABOR REFORM—LEGISLATION ISN'T CERTAIN YET

(By Roscoe Drummond)

It is still too soon to say that the public has won its victory for a labor-reform law despite the fact that both Senate and House have acted favorably.

Because there are now two versions of the same legislation with appreciable differences between them, these two bills must go before a House-Senate conference to be reconciled, merged, or diluted.

Most correspondents expect that an acceptable compromise will be reached. But this is not certain and it is only realistic to report that anything can happen—or nothing.

These are the possibilities:

Either the Senate, which passed almost unanimously the less ambitious Kennedy-Ervin bill, will accept a substantial part of the stronger provisions of the House's Landrum-Griffin bill;

Or, the conference and the House and Senate will let themselves get into an irreconcilable wrangle resulting in no compromise, no legislation, nothing.

In the wake of the mounting disclosures of the McClellan committee on how racketeering and corruption have bludgeoned their way into many unions and in face of an alerted public opinion which, if much longer

frustrated, may well demand sterner measures, it would seem to me egregiously unwise and harmful to the country, to labor, and to both parties to let labor reform law go down the drain of an election-minded political stalemate.

The argument which the Democratic congressional leaders used against the House Republicans only a week ago is now equally applicable to the new and unexpected position in which they find themselves.

You may remember that the Democratic contention was that the Republicans, under the whiplash leadership of House Minority Leader CHARLES HALLECK, was implacably and partisanly intent upon an all-or-nothing strategy. The Democrats said they could see plainly that HALLECK was aiming at the goal of either getting exactly as tough a bill as he wanted or preventing any bill at all from being enacted.

Well, the administration bill is now the majority will of the House, passed by the decisive vote of 305 to 125, and it is certainly pertinent to ask of the Democratic leaders, who did not want the Landrum-Griffin version, whether they are going to take the position which they recently accused HALLECK of taking or whether they are going to take their own advice.

In other words, are Speaker SAM RAYBURN and Senator LYNDON JOHNSON, now denied the kind of labor bill they most wanted in the House, going to yield to the strategy they condemned and say to their followers: Since we can't have our way, let's block the way to any bill? Or will they act to thwart their own extremists and help bring about a constructive compromise?

For RAYBURN and JOHNSON to pursue an all-or-nothing policy and try to block a reasonable compromise would seem to me wholly out of character.

It would be my judgment that the labor reform bill which passed the House reflects not only the majority will of Congress but the majority will of the country. I doubt if many, but the irrevocably committed, will be impressed by the epithets—like punitive and antilabor—thrown at the Landrum-Griffin bill by some union leaders.

Labor isn't weak; it is powerful. Big labor has shown that it needs some regulation just as big business showed it needed some regulation a quarter century ago. Now is the time to do it.

From Poland's Heart

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 18, 1959

Mr. PHILBIN. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and include therein a recent editorial from the New York Times entitled "From Poland's Heart" which recounts Vice President NIXON's reception in that great nation.

All lovers of freedom can take great encouragement from the spontaneous reception which Poland accorded to our able and distinguished Vice President.

This warm and wholehearted welcome was something more, of course, than a personal tribute.

It was a demonstration of affection for our own Nation as the leader of the free world, an outburst of enthusiastic support for the freedom we represent and a fervent plea for our continued sponsorship of liberation and freedom for the captive nations. It was a great showing of confidence and admiration we must never betray.

The Polish people trust the United States. They know we seek no selfish territorial gains, that we stand for freedom and humane treatment for all nations, great and small.

In this great demonstration of loyalty to our cause, trust, and affection for our Nation and its people, Poland again stretches out its hands in friendship and devotion appealing for our sympathy and help. From their hearts and on their knees, the Polish people plead and pray for our help.

If we as proud Americans, sons and daughters of freedom, a people favored by the Almighty, above all others are to be true to our blessed heritage, if we are to be responsive to the promptings of our own souls, we must not fail them and the other captive peoples who remember our commitments for self-determination, universal freedom and a free, peaceful world.

[From the New York Times]

FROM POLAND'S HEART

Americans must be deeply moved by the incredible reception the people of Warsaw gave Vice President NIXON yesterday. In the heart of Communist-ruled Eastern Europe, in a nation with Soviet troops on its soil and with Soviet troops on its eastern and western borders, about 100,000 people turned out spontaneously to cheer and throw flowers to the Vice President of the United States.

This happened in a city which but a few weeks ago gave only a tepid welcome to Premier Nikita S. Khrushchev, for whose reception the Polish Government had mobilized all its resources. Once again truth has shown itself to be stranger than fiction.

No one planned it that way, but yesterday's outpouring of friendship from Poland's heart toward our country symbolized by Mr. NIXON was the most effective answer possible to Premier Khrushchev's gibes at our celebration of Captive Nations Week.

The Polish Government is a member of Moscow's Warsaw pact. Wladyslaw Gomulka and his fellow leaders have time and again associated themselves with Khrushchev's denunciation of American "imperialism" and his threats against the West's position in Berlin. For nearly a decade and a half the Polish people have been indoctrinated with Communist propaganda from almost every possible organ of education and communication. But yesterday the people of Warsaw gave Mr. NIXON what may well have been the warmest welcome an American leader has received in a foreign nation for a decade or longer. The political implications are unmistakable and will be understood by peoples and leaders wherever the facts are known.

At the end of World War II we did not use our power to compel Stalin to live up to his promises of a democratic Poland, but instead permitted him to enslave its people and destroy all public opposition. And almost 3 years ago, in October 1956, we contributed nothing but verbal encouragement to the Polish people as they defied Khrushchev's threats and set a new course, of which Gomulka was then the symbol. Nor have we done anything of crucial importance these past 3 years, in which the concessions of the Polish October have been steadily whittled away or abolished. Yet, as Warsaw proved yesterday, the Polish people still see in us the beacon of their hopes for a better tomorrow.

The cynical may argue that nothing really important was changed yesterday. Poland's unenviable geographic position between occupied East Germany and the Soviet Union was not altered by an inch. The harsh realities of the nuclear age which make any talk of liberation by force of arms unthinkable are as terrible this morning as they were yesterday before Mr. NIXON arrived in Warsaw.

But the cynics are wrong; something of great importance was changed yesterday. By their welcome the people of Warsaw destroyed the propaganda campaign which has sought so hard to prove that Communist totalitarianism has won over the people of Eastern Europe so there can be no more talk of captive nations. In 1 hour of truth, as the NIXON caravan rode from the airport to the city, the friends of freedom and democracy gained new courage and new heart, which cannot but affect profoundly the world political scene.

Secretary of State Herter at Santiago Ministers' Conference

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 22, 1959

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Secretary of State Christian A. Herter at the fifth meeting of the Foreign Ministers of the American States, at Santiago, Chile, on August 12, 1959, in response to the address of welcome by President Jorge Allessandri Rodriguez of Chile and in behalf of the Foreign Ministers:

Your Excellency, in behalf of the Ministers of Foreign Affairs meeting here in this hospitable capital I am honored to be entrusted with our collective expression of gratitude for the welcome extended by you and your Government. Your cordial words of greeting warm our hearts. No place could be more appropriate for sessions consecrated to preserving the peace and freedom of America. The devotion of the Chilean people to Pan American ideals of peace and cooperation, their dedicated efforts and achievements in economic and social progress, and their firm adherence to democratic principles, are widely recognized throughout our American community of nations. As long ago as 1541, when this noble and beautiful city of Santiago was founded by Pedro de Valdivia, that far-sighted hero struck a prophetic and truly American note when he declared in a letter to the King that Santiago would grow and flourish provided only that nobody should be sent out from Spain or from other areas of the New World to interfere with its affairs.

Against the heroic background of Chilean history looms Chile's cultural achievements. It is no accident that in her universities were trained many political and intellectual leaders from other American countries. The agricultural and technical development here has been accompanied, indeed has been stimulated, by the imaginative energy of a creative people. It is an augury of success that our sessions are being held in such an environment.

I appreciate Your Excellency's expression of Chile's sympathetic interest in the efforts of the great powers to seek a stable world peace through discussion of their differences. As you know, I have just returned from a meeting of this kind in Geneva. In contrast

to that gathering, however, I think the issues to be decided at the meeting of Foreign Ministers in this city appear more capable of early solution. Your Excellency brilliantly summarized the issues before us by stating that we should seek a formula that harmonizes our heartfelt desire never to see human rights violated with our absolute respect for the principle of nonintervention, thus guaranteeing an international liberty indispensable for living together harmoniously and sanely in this hemisphere. As Your Excellency states, this international democratic policy can be fortified by the fullest utilization of our economic capabilities.

At their informal meeting in Washington last year the Foreign Ministers of the American Republics reaffirmed their recognition that inter-American solidarity is an essential factor in the stability not only of our hemisphere but of the world. They likewise affirmed the present need for a renewed dedication by our peoples and our governments to the inter-American ideals of independence, political liberty, and economic and cultural progress and for a renewed faith in our capacity to achieve them. On December 24, 1958, the Eighth International Conference of American States approved "the Declaration of Lima." That declaration begins with the forthright statement "that the peoples of America have achieved spiritual unity through the similarity of their republican institutions, their unshakeable will for peace, their profound sentiment of humanity and tolerance and, through their absolute adherence to the principles of international law, of the equal sovereignty of states and of individual liberty without religious or racial prejudice." It closes with a provision for meetings of con ultation of the Ministers of Foreign Affairs of the American Republics when deemed desirable and at the initiative of any one of them.

We may say that the Declaration of Lima comes of age this current year, the 21st since its adoption. During these 21 years, our 21 Republics have convoked 5 meetings of consultation of their Foreign Ministers for the purpose of maintaining the peace and independence of the hemisphere and preserving our freedom and progress toward a better life.

That has always been the American ideal. Peace is our chosen environment, freedom and progress our chosen way of life. The American peoples have never believed that one could be valid without the other. Our Republics are founded on the concept of independence with law, freedom with order. Our revolutions were fought—all of them—to attain a freedom both for states and for individuals dedicated to the development of the progress which can be achieved only through peace.

It is in response to that undeviating concept—peace with freedom and progress—that we are met in this historical capital of a free progressive and peace-loving country. The convocation of a meeting of consultation of the Foreign Ministers is in itself evidence that a crisis exists. It is at the same time proof of our united belief, supported by our experience, that the crisis can be met and its problems solved if dealt with cooperatively in a spirit of reason and good will.

Let us remember that there have been in all the course of our common history very few armed conflicts across national boundaries in this hemisphere. No comparable area of the world so large in extent, so great in population, with so many basic mutual interests, affording nevertheless such varied surface points of difference, has ever developed into an international neighborhood like that of the Americas. The unguarded frontier is a commonplace of national life with most of our peoples. The Christ of the Andes represents not only a lofty international ideal but a customary international relationship, the same ideal and relationship which farther to the North—Mexico, Canada and my own country attest to with bridges across the boundary rivers.

Just as there is no comparable area of the world living so harmoniously with its neighbors as the American Republics, there is none other that has so long a record of freedom. Our 21 nations, neighbors by the accident of geography, free and independent by instinct and by choice, have been closely and freely associated friendly peoples. From their republican beginnings, independence has been fortified and augmented by cooperation through increased contacts between our peoples in all fields of life. We have developed wider areas of mutual understanding. Cooperation in economic and social fields has been intensified, moving forward with both national and international efforts toward the achievement of greater productivity and higher living standards for our peoples. The progress made this past year in this field of inter-American economic cooperation, particularly under the inspiration of Operation Pan America, has been highly significant and holds out the promise of further gains in the future.

Nor has any other comparable area achieved an international organization like ours—an organization voluntary, continuous, and potent as a matter of historic fact. We all know that the development of the United Nations and other international organizations owed much to the experience of the Organization of the American States, precisely because of the proved effectiveness of our own inter-American experience. The 21 American Republics became charter members of the United Nations. In that body's councils, year after year we have stood together in defense of the free world and in the maintenance of peace and security.

Our inter-American system has worked well. At various times in its history it has faced crises and surmounted them with renewed vitality and increased capacity for constructive achievement. The balance of peace with freedom and progress that has characterized our system has constituted an inspiring demonstration to the entire world of how nations large and small may live and work together toward the common goals of humanity.

Our present meeting here in Santiago comes at a time when our inter-American system again faces a critical moment in history. We are called upon as we have been called upon in the past to renew and revitalize in the light of present conditions and forces the principles that have made our great achievements possible.

Four of these principles which are expressed in the charter of the Organization of American States are particularly pertinent to the situation facing the Organization today. There is first the principle of nonintervention, which has served as a foundation stone for the relations between our countries. Second is the principle of collective security. Together these two principles form the basis for peace and independence on this continent. Third is the principle of the effective exercise of representative democracy and respect for human rights. Fourth is cooperation for economic and social progress. This is of particular pertinence to our time. Together these latter two underlie the achievement of freedom and progress. Our problem today is to restore the traditional balance between peace on the one hand and freedom and progress on the other by giving a proper emphasis to each of these four outstanding principles. We have recognized these four principles as valid in themselves and have learned that our separate, no less than our mutual well-being depends in large measure upon them. When any of these principles is threatened, the individual independence and the collective peace of the American peoples is threatened as is their capacity to progress toward better human life. Against such threats the American nations must at all times marshal their collective effort to insure their continued progress.

We are gathered together here to examine and analyze in a spirit of objectivity and with a common purpose. We will not let ourselves be deluded into mistaking a temporary disorder for a cancer in the heart of peace or for a permanent paralysis of the sinews of freedom. Neither will we permit ourselves to be deceived into dismissing negligently symptoms of a disorder that might adversely affect us all. The American hemisphere is a community of freedom under law and so it must remain for our own generation and for our children's children.

This year in my country we are celebrating the 150th anniversary of the birth of Abraham Lincoln, whose faith in freedom and devotion to peace have caused other American countries to commemorate his anniversary. At the outset of our proceedings at this meeting we may well recall his exhortation: "Our reliance is in the love of liberty which God has planted in us; our defense is in the spirit which prized liberty as the heritage of all men in all lands everywhere."

Hunger Amidst Plenty: Caribbean Paradox

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 18, 1959

Mr. FASCELL. Mr. Speaker, today is expected to mark the close of the American Foreign Ministers meeting in Santiago, attended by our Secretary of State. From reports, there will emerge from these discussions the reactivation of a peace commission originally established in 1940, to investigate reports of trouble in any country in the Caribbean threatened by revolution or aggression and to examine the relationship between economic underdevelopment and political instability.

Timely and pertinent to these reports is an editorial from the Miami News which I proudly call to the attention of my colleagues. Bill Baggs, editor of the Miami News, is one of our better known and highly respected international writers. He is outspoken and blunt in his criticism of "revolution for the sake of revolution" where it is not accompanied by some tangible improvement in the living conditions of the people. In presenting this frank statement on the paradoxical situation of people living in one of the most fertile and naturally endowed areas of the world being in desperate need of medical care for their sick, better schools for their children, more food and more opportunities for all the people, Bill Baggs ably expresses the frustrations of many of us who want to and try to help but feel that new, more effective ways must be found.

It may be that the peace commission is the answer to the tragedy of the Caribbean paradox thoughtfully presented in the editorial which follows:

HUNGER AMIDST PLENTY: CARIBBEAN PARADOX

(By Bill Baggs)

Everyday living across the street in the Caribbean neighborhood is not bad. It is ridiculous.

Millions of the people are hungry and yet they live on some of the most fertile lands of the earth.

Several of the countries in the Caribbean are very nearly bankrupt and yet their hills and mountains are treasuries of minerals needed by the industrial societies of the world.

A most kind climate presides over the Caribbean. There is fresh water. Magnificent harbors.

POOR, HARASSED

Looking down on the lovely green countries under the sun in the Caribbean, a visitor to earth might think that the people who live there are certainly fortunate people. Well, they should be. But they are not. They are poor, harassed human beings. The Indians who resided there five centuries ago enjoyed a much finer life.

It is tragic. But most of all, it is ridiculous.

At the moment, revolution or the threat of revolution can be heard in Cuba, the Dominican Republic, Honduras, Nicaragua, Panama, Guatemala, and Haiti.

Mostly, the people who plot to overthrow the governments of these countries are no better than the present proprietors. Worse, they manage a turmoil which has become the customary atmosphere in the Caribbean.

POINTLESS REVOLTS

If one measures by history, it was inevitable that revolt was coming to the Caribbean. The people have lived in somewhat of an economic and political jailhouse since the Europeans came to settle the countries four and a half centuries ago. But the shame of what we are seeing today is that these revolutions so often appear pointless. Or almost pointless.

For instance, what benefit for the people of the Dominican Republic if they sacked Trujillo in a revolution and got a leftwing dictatorship to succeed the present rightwing dictatorship? Would these mean better schools, medical care, more food, more opportunities for the people?

A Somoza succeeded a Somoza in Nicaragua. Violence in Haiti and then a new president. In Guatemala, the old liberals were heaved out and new conservatives came in, people died and others suffered hunger and privation, but is there more food, more schools, better jobs?

Revolts simmer in Honduras, but very little changes. Also in Panama.

Then, the largest example, which is Cuba. Who would argue that Batista promoted a better life for more Cubans? I certainly would not. The list of crimes against democratic ideals when he presided is long and dreary. Under Castro, at least the wanton torture has stopped, but once again, do the people have more food, what about better schools for the children, medical care for the sick?

Revolution for the sake of revolution, or revolution which does not change affairs for the better, is a horrible event.

LESSON FOR CASTRO

In Mexico, there was a revolution which carried on a social change and Mexico slowly emerges as a strong, stable society in our hemisphere. The same in Costa Rica. And now in Venezuela. Ah, there is a lesson in Venezuela for Fidel Castro and all the other revolutionists.

A few days ago, Betancourt announced a land reform program for Venezuela. There was not the burly, nasty, and vicious reaction which greeted Dr. Castro's land reform program. Why? Simply because Betancourt did not attempt to reform land ownership over the weekend throughout Venezuela. He is taking it slow, and making his steps certain.

IS IT NECESSARY?

Someday, the millions of abused people out there across the street in the Caribbean neighborhood are going to back off from these revolutions and ask themselves a question:

Is this one necessary?

If so, where does this revolution lead? What is the point of this revolution? How will it make the lives of the people better?

Only then can we end this great paradox of people impoverished living in wealthy countries, because only then will revolutions become instruments to develop the lands for agriculture, the mountains for mines, the harbors for ships.

The Invisible Retreat

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 18, 1959

Mr. LANE. Mr. Speaker, the first scene is the White House, Washington, D.C., United States of America.

It is an evening late in June 1959.

The quiet hum of motor cars in the distance has the beat of time, rising and falling, as the cars come and go.

The President is alone at his desk.

It is a warm, humid twilight. Even the sightseers have been forced to seek air-conditioned relief from the accumulated heat of the day.

One motorist turns on his lights prematurely, eager for the help of night.

The President is tired. He has worked a long, hard day, and the news has not been good.

He picks up a dispatch from his desk.

"Soviet delegate won't yield an inch. Geneva Conference adjourns in stalemate. No progress expected when talks resume."

The President reaches for a sheet of White House stationery. The time has come to do something different. Perhaps a face-to-face meeting with Khrushchev will soothe his pride and make him more cooperative. If I invite him to the United States and arrange for him to view our industrial might and our military power, and let him see all the comforts and luxuries that our people enjoy, he will realize that our people are happy in their personal progress, and have no thought for anything else. That should impress him as to our peaceful intentions. The friendship approach will accomplish more than months of stiff, formal, and fruitless debate.

He starts to write, then looks up quickly, listening.

It sounded like a cry out there—a man's cry—suddenly choked off.

But as far as he can see in the deepening dusk, there is only the chain of passing headlights, broken by the bushes and the trees that are more substantial than the night.

He waits but the voice does not cry out again.

Where did it come from?

He listens but there is no human sound above the hum of the motor traffic, rising and falling, like mechanical breathing.

"Strange. That cry in the night. I'd swear that someone was trying to warn me, but I must be mistaken. Just nerves," he said to himself.

The President frowned, then relaxed.

And went on writing the invitation to Khrushchev.

Scene 2, the Kremlin, Moscow, U.S.S.R.

It is after 9 p.m. in Washington, but 4 a.m. of the following day in an office within the fortress walls of the Soviet capitol.

Red Square is empty.

Except for the security police and the guards who are blended with the night, there is no sign of life. But the people of Moscow, after replenishing their energies through sleep, will soon rise and breakfast and hurry to work. They will continue their heroic efforts to strengthen Mother Russia and protect her against the aggressive plots of the capitalist warmongers. Or so they will be told, over and over again, by their Communist bosses. But they will work hard. They are used to it. They have no other choice.

The bald-headed man who got up early to digest the evening-before news from Washington, pushes his chair away from the desk, and folds his hands across his paunch which is round and firm, like half a globe. His voice is vigorous and jubilant.

"Comrade Secretary, you are the first to know of the great Soviet victory."

The Secretary, who was sifting papers on the desk, dropped them in his surprise and confusion. Was the leader of Communist imperialism in earnest, or was he joking? One could never be sure. And it was dangerous to guess wrong.

"But, if you will excuse me, Comrade Khrushchev, there has been no special report from Deputy Premier Kozlov in Washington."

Khrushchev smiled at his aid's ignorance and bewilderment. When people are uncertain and afraid, like this honest bureaucrat, they can be manipulated so easily.

Khrushchev wagged his finger. "One must be ahead of developments, with the nose to smell them before they can be seen. The President of the United States is going to invite me to visit Washington because I planned it that way."

The Secretary stared, not knowing what to say.

"I can see, Comrade, that you do not understand the efficiency of our methods." Khrushchev said. "With these Americans, who are thin on patience, it is only a matter of time before we wear them down. Gromyko has done well at Geneva. He has been our Gibraltar, a face of stone, deaf to the arguments of the Western diplomats, causing them frustration and loss of confidence. And when the Americans cannot find a solution, they think that friendship will 'melt' us. How childish. They have so

much to learn, but they are so impatient. They think that I will be impressed, like some peasant, when I see their luxuries. But I will be using them, and I will be exploiting their weaknesses every minute, for the greatest propaganda triumph in the history of Communist Russia."

"Would you say then," the Secretary began, but stopped, dazzled by the prospects.

"Go on, Comrade."

"Would you say that this marks the strategic breakthrough for your psychological war against the West?"

Khrushchev grinned.

"We have induced the United States to tranquilize itself. The President and his advisers do not know that we have fooled them into making the invisible retreat."

Shoreline Recreation Areas for Public Use

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 18, 1959

Mr. DINGELL. Mr. Speaker, on July 30, 1959, I introduced H.R. 8445, which provides for Federal acquisition of 10 shoreline recreation areas located on the Atlantic, the Pacific, the gulf, and the Great Lakes. Among the areas to be acquired and the maximum authorized acreage are Cape Cod, Mass., 30,000 acres; Padre Island, Tex., 60,000 acres; Oregon Dunes, Oreg., 35,000 acres; Lake Michigan Dunes, Ind., 5,000 acres; Point Reyes, Calif., 35,000 acres; Cumberland Island, Ga., 25,000 acres; Huron Mountains, Mich., 90,000 acres; Channel Island, Calif., 76,000 acres; Pictured Rocks-Grand Sable Dunes, Mich., 100,000 acres; and Sleeping Bear Dunes, Mich., 25,000 acres. The bill also authorizes the Park Service to make studies of the possibility of including in the Government acquisition the following areas: Fire Island, N.Y., 3,450 acres; Cape Flattery, Wash., 16,000 acres; Leadbetter Point, Wash., 4,250 acres; Mosquito Lagoon, Fla., 9,700 acres; Pigeon Point, Minn., 6,400 acres; Debidue Island, S.C., 8,400 acres; Kiawah Island, S.C., 7,300 acres; Popham-St. John, Maine, 1,100 acres; Parramoure Island, Va., 6,250 acres; and Smith Island, N.C., 11,900 acres.

Enactment of this bill or substantially identical legislation into law is made imperative by the fact that shorelines available for public use are being developed and subdivided at an astronomical rate. An interesting point is that public shore on the east coast amounts to one-half inch for each person within 50 miles of the beaches. Over the entire Nation there is only one-third of an inch of undeveloped shore per person, or a mile for about every 220,000 people.

In 1935 some 70 miles of beach on the Delaware-Maryland shore could have been acquired for $2 a front foot. Most of this beach is now beyond reach having been long since subdivided and developed.

The bill authorizes appropriations not to exceed $10 million as required from year to year for assistance to the States in acquiring shore areas for public use and authorizes appropriation of a sum not to exceed $50 million to acquire the above-mentioned areas. The total cost of all areas concerned will be some $85 million if the bill is enacted and the purchases made promptly. It is hoped that the Park Service can secure the $35 million between the authorized sum and the needed sum through gifts and public donations.

Similar legislation has been introduced in the Senate sponsored by the Honorable JAMES E. MURRAY, chairman of the Committee on Interior and Insular Affairs, and 16 cosponsors.

I ask permission to insert a letter received from the Izaak Walton League of America in support of this measure:

THE IZAAK WALTON LEAGUE OF AMERICA,
Washington, D.C., August 13, 1959.
The Honorable JOHN D. DINGELL,
House Office Building,
Washington, D.C.

DEAR JOHN: The Izaak Walton League of America wishes to congratulate you on the introduction of H.R. 8445, a bill to save our shorelines.

Studies made in recent years by the National Park Service and comparable State agencies reveal the appalling fact that the public is fast losing the opportunity to use beneficially our great shorelines of the Atlantic, gulf, and Pacific coasts, the Great Lakes and major inland waterways. More and more shoreline areas heretofore available to the public for recreation have been lost to private development for industry, commerce, and community expansion. At the same time the population burgeons, leisure, and real wages increase with a more than corresponding increase in public demand and need for shoreline recreation.

It is clear that a comprehensive and coordinated Federal-State program will be required, if we hope to preserve even some of these opportunities for present and future generations. Moreover, it is clear that except as we do implement very quickly such a program as H.R. 8445 proposes, the chance to do so may be lost entirely or rendered infeasible due to constantly rising costs of shoreline real estate. To put it crudely, such lands, however costly, can never again be acquired as cheaply as today. Senator MURRAY has cited the instance of an area the Park Service could have acquired 20 years ago at $9,000 a mile which would now cost $110,000 per mile, illustrating what has already occurred. In this connection, I noted recently an advertisement offering a Florida property, stated to be the last 5-mile stretch of undeveloped shoreline between Miami and Daytona Beach, for "$1 million down, terms for the balance."

The bill approaches the problem on three important fronts: (1) It lists several areas which have already been studied and proposes their consideration for authorization; (2) proposes a cooperative program by which the States can be assisted in expediting their State park and shoreline programs; and (3) lists additional areas for study to determine whether they are suitable for national or State shoreline designation. We are pleased that the bill recognizes that regulations established for national shoreline areas should permit continuation of present recreational uses such as hunting, fishing, water-fowling, and the like where appropriate. In effect, then, the legislation would establish in the park system under congressional policy a new category of public area, so successfully pioneered by the Cape Hatteras National Seashore Recreation Area.

We are pleased that the legislation sets fairly broad acreage limitations on the areas to be considered for authorization within which, if authorized, the Secretary of Interior may acquire lands. This is a sound method as has been demonstrated at Big Bend, Cape Hatteras, Everglades, Virgin Islands, Fort Clatsop, Shenandoah, and other national parks and monuments established under similar or identical procedures. During the course of hearings, of course, the committee will be able to study specific boundaries in more detail and may, if it appears desirable, describe them with more preciseness. We note also that the Secretary, before designating any authorized area, would be required to consult with the Governor of the State concerned, and to hold local hearings. Beyond this, and before the Secretary could spend any Federal funds for land acquisition, he would be required to come before Congress, in the usual appropriation process, for funds. This provides Congress with still another opportunity to assure itself that the program is being carried out soundly and within the congressional intent. These appear to be adequate safeguards against any possibility of abuse of administrative authority. At the same time it provides means at the administrative level whereby the most sensible areas can be worked out in terms of national, State, and local interests.

It is an unfortunate fact that the Nation's national park system protects and preserves in the broad public interest little of our shoreline. This great gap has been filled to only a slight degree by State park programs, splendid as they are. The save-our-shorelines bill is designed to expedite Federal and State programs cooperatively before it is too late. It is a most worthwhile objective in which all thinking Americans should and will, I am sure, join forces to support.

Sincerely,

J. W. PENFOLD,
Conservation Director, IWLA.

Smathers-Keogh-Simpson Legislation: Retirement Savings for the Self-Employed

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 18, 1959

Mr. LANE. Mr. Speaker, I wish to include a most interesting and very illuminating article on a subject matter that has been under consideration by the Congress for several years which concerns a tax inequity discrimination against self-employed individuals. This well-stated review was written by Attorney F. Joseph Donohue, a member of the District of Columbia bar for 34 years who was formerly from Lynn, Mass. He served as Chairman of the Board of Commissioners for the District of Columbia, and has taught economics and law at Catholic University and economics and banking at the American Institute for Banking. He has also served as chairman of the American Bar Association Special Committee on Retirement Benefits and also chairman of the executive committee of the American Thrift Association.

This dissertation that appeared in the American Bar Association Journal of

August 1959 will be of interest to all members of the bar but will also be most helpful to the Members of the Congress:

SMATHERS-KEOGH-SIMPSON LEGISLATION: RETIREMENT SAVINGS FOR THE SELF-EMPLOYED

(By F. Joseph Donohue of the District of Columbia Bar)

(Mr. Donohue traces the 9-year legislative effort to correct an admitted tax inequity which discriminates against self-employed individuals. Legislation to remove this inequity has passed the House of Representatives and is pending before the Senate Finance Committee. He highlights the arguments advanced at recent hearings before the Senate Finance Committee and gives reasons why this legislation, which is supported by the American Bar Association and over 60 other national associations, should be enacted by the 86th Congress without further delay.)

As a practicing lawyer, you are among the millions of self-employed persons who by law cannot do that which may be done by every other working individual. Economic pressure is being applied against you because of your status as a self-employed individual. There is at present before the U.S. Senate legislation (H.R. 10) to correct an admitted inequity in the tax laws which discriminates against self-employed individuals.

An example of the present tax treatment of retirement savings clearly illustrates this inequity.

Assume that a practicing lawyer, or other self-employed person, age 35, married, has a taxable income of $10,000 after deductions. If he were to earn an additional $1,000, his tax on this would be $260, leaving $740 in actual income. Assume that he invests this $740 each year for 30 years at a 4-percent compound interest rate. He would accumulate, by age 65, a total of $36,900.

But if he were employed by a company, and his employer deposited $1,000 for him in a qualified pension or profit-sharing plan, and had the same 4 percent interest, the fund would be $58,300 at age 65.

Under H.R. 10, this lawyer could have $58,300 rather than $36,900 at age 65. The retirement income, of course, would be subject to tax as paid out. By the enactment of H.R. 10, the attorney, farmer, merchant, or other self-employed individual would no longer be forced to give up his status as a self-employed person in order to have an opportunity to build up retirement savings comparable to that which he could enjoy as an employee covered by a pension plan approved by the Treasury Department.

In 1942 the Congress, cognizant of the desirability of encouraging the establishment of private retirement funds to supplement social security benefits, revised the provisions for private pension plans by amending the Internal Revenue Code of 1939 to allow substantial tax benefits to corporations and their employees in the establishment of pension plans. Actually there have been provisions for pension plans since the 1924 Revenue Act. The 1942 revision was reenacted with some modifications in the 1954 code. Specific rules set forth in detail the circumstances under which a pension plan may be set up and qualified. The tax effects of such plans when qualified by the Treasury Department are: (1) The contributions by the employer, although in the nature of additional compensation, are not taxable to the employee until the retirement benefits are actually received; (2) at the time the contributions are made they are tax deductible to the employer, and (3) the earnings from the funds are tax exempt until distributed. This is an obvious advantage to the employee since he would normally be in a lower tax bracket when the benefits are received. The full employer payment, without being reduced by taxes, is available to earn income to the fund. A tremendous growth in pension plans has resulted since the 1942 act. Over 45,000 plans, covering more than 18 million employees, are now in existence, and coverage is increasing at the rate of approximately 1 million employees yearly. In 1957, contributions to such plans totaled $4.6 billion, 85 percent of which was contributed by employers. This was 15 times greater than the contributions in 1940. Total reserves amounted to $34.8 billion.

It was not long until the self-employed persons realized that they were apparently forgotten under this new law, since they were the only group precluded by law from the privilege of deferring taxes on contributions to retirement plans.

By 1950, an American Bar Association committee undertook a study and legislation was drafted to correct the tax discrimination against the millions of self-employed. In 1951, Congressman EUGENE KEOGH, Democrat, New York, and the late Daniel Reed, Republican, New York, introduced legislation to allow tax deferment for a limited amount of income set aside by a self-employed person into a restricted retirement fund. Since its original introduction this legislation has had strong bipartisan support.

When Representative Reed became chairman of the Ways and Means Committee, Thomas Jenkins, of Ohio, a ranking Republican member of the committee, joined with Congressman KEOGH in the introduction of identical bills which became popularly known as the Jenkins-Keogh legislation. This legislation was overwhelmingly passed by the House of Representatives on July 29, 1958, but was not acted on by the Senate Finance Committee during the closing days of the 85th Congress.

In the 86th Congress, RICHARD SIMPSON, of Pennsylvania, ranking Republican member of the Ways and Means Committee, cosponsored the legislation with Mr. KEOGH. The committee gave early approval to H.R. 10 and the House of Representatives overwhelmingly passed the measure on March 16, 1959.

Senators KEFAUVER, Democrat, Tennessee, MORTON, Republican, Kentucky, and SMATHERS, Democrat, Florida, introduced Senate bills similar to H.R. 10. Senator SMATHERS, a member of the Senate Finance Committee, introduced S. 1979, identical to H.R. 10 as passed by the House except that it would be effective for the taxable year 1961. In explaining his proposal, Senator SMATHERS said:

"Many in the Congress, while favoring the principle embodied in the legislation have a reluctance, in view of the Treasury Department's opposition, plus the high cost of Government today, to support the measure in their desire to bring about a balanced budget. Theirs is an attitude of postponement until such time as the budget becomes balanced.

"To meet this objection, which appears to be the major obstacle in the path of its adoption, I have modified the proposed bill so that it will be effective for the taxable year 1961. This would remove from the consideration of those thinking along this line, any feeling that they would have a further unbalanced budget this year, and yet make it possible for them to adopt a principle of fairness and tax equality for all of our citizens. Discrimination in our tax laws cannot morally be perpetuated indefinitely when a just and economically defensible revision is warranted."

The Senate Finance Committee conducted hearings on H.R. 10 on June 17 and 18, 1959. This was the first opportunity for proponents to present their views to the Senate committee on this legislation since its original introduction in 1951. Approximately 50 organizations representing self-employed persons requested an opportunity to testify before the committee. Some 20 witnesses were heard in the 2-day hearings, and the committee determined that further hearings would be necessary to obtain the views of all interested parties.

The Treasury Department has consistently opposed this legislation, its principal objection being revenue loss. Yet Treasury officials concede that there is an inequity in the tax treatment of retirement savings which discriminates against self-employed persons.

On June 17, David A. Lindsay, assistant to the Secretary of the Treasury, appearing before the Senate Finance Committee, stated:

"The Treasury recognizes that present law does not give self-employed persons tax treatment for their retirement savings comparable to that now accorded to employees covered by employer-financed pension plans. Employee pension plans, if arranged on a nondiscriminatory basis, receive favorable tax treatment.

"At present, employers are permitted to take current deductions in computing their taxable incomes for contributions which they make to nondiscriminating pension funds for the benefit of their employees. No tax is imposed on the employee until the pensions are received after retirement. The opportunity to postpone the receipt and the taxation of income currently set aside in pension funds makes it possible for employees who are covered by such plans to secure larger net retirement incomes after tax from any given payment by an employer.

"Qualified pension trusts have a further tax advantage. The investment income earned on the funds held by the pension trusts is tax exempt until received by employees as part of their pensions. There is, in effect, a tax-free build up on nontaxed earnings. Though there is no final tax exemption of the income paid by employers, or of the income earned on accumulated funds, the advantages of postponement of tax on both are important, and combine to increase materially the net retirement income of employees."

In spite of this recognition of preferential tax treatment under qualified pension plans, the Treasury has made no proposal to correct this inequity.

The Treasury has estimated the revenue loss under H.R. 10 to be $365 million on a full year's basis. About $100 million of this would be accounted for by the extra deductions granted to those already 50 years of age or over on the effective date of the bill.

In discussing the impact of H.R. 10 on revenue before the Senate Finance Committee on June 18, Dr. Roger F. Murray, a foremost authority in the field of savings and pension plans, professor of banking and finance, Columbia University, and director, pension research project, National Bureau of Economic Research, appearing for the American Thrift Assembly, stated:

"We are being asked to consider this bill on the assumption that in the next year or two, self-employed individuals will make payments to restricted retirement plans in amounts of $1 billion a year.

"What about this as an assumption? It seems totally unrealistic. Experience shows that it takes many years of aggressive promotion to develop anything like this flow of funds. Because saving habits are slow to change and because new plans require education and personal solicitation, it is a conservative statement to say that this level of deposits under restricted retirement plans for the self-employed is not likely to be reached for 5 years or more. * * * A billion dollars in average deposits of, say, $1,000 means that a million self-employed will have to be educated and sold on this new savings plan. * * *

"For the first year following adoption of this plan, I would estimate the tax deferral at $75 to $100 million as a reasonable upper

level of estimate. In the light of the record of experience with savings plans, the time required to make the necessary arrangements to receive deposits, and the results of our survey on the subject, it seems clear that the Treasury Department's estimate of a $365 million tax deferral is unrealistic and inadequately supported by objective evidence. Actual experience is likely to be similar to that in Great Britain where the tax deferral in the second year of a similar plan turned out to be about one-sixth of the Inland Revenue's advance estimate. I should add that my estimate is supported by leading economists who have studied the question."

That there is an inequity in the tax treatment of pension plans is no longer in dispute. It could be argued therefore that even if the legislation would defer revenue amounting to $365 million, an estimate which is not supported by any survey or experience, the Federal Government is not entitled to this revenue, since it is unjustly obtained. It also has been estimated that the revenue loss resulting from existing pension plans exceeds $1.8 billion per year. It is difficult to understand why the Treasury is concerned with revenue loss only when tax savings would benefit the self-employed.

Another objection brought forth by the Treasury Department is that this legislation does not cover the pensionless employed. On this point, Ross L. Malone, president of the American Bar Association, told the Senate Finance Committee on June 17, that in connection with the 1955 hearings before the Ways and Means Committee, the Treasury Department, while conceding that both the pensionless employed and the self-employed were being discriminated against under existing law, said that on balance it might be better to limit the benefits of any new provision to the self-employed since employees, at least potentially, may benefit from qualified pension plans set up by their employers. "Tax relief," the Department said, "seems most clearly indicated for self-employed individuals who do not have even potential tax benefits under existing law in providing themselves with retirement income."

H.R. 10 has been criticized because it would not cover the employees of self-employed persons. In answer to this contention, Dr. Roger Murray stated to the Finance Committee:

"This is obviously true for the simple reason that such employees already stand to benefit under existing legislation providing for the deferment of taxes on their employers' contributions to qualified pension plans. This encouragement is already provided under the Internal Revenue Code. In any event, it is difficult to imagine anything more encouraging to the establishment of such benefits for the employees of the self-employed than to permit the self-employed to have their own retirement programs.

"If the Treasury Department is sincerely concerned about the people not now covered by programs other than OASDI, it would seem that the extension of the tax-deferment benefit to the self-employed should be welcomed as a plan to encourage supplemental old-age protection to the largest single group not now being reached in increasing numbers. Is it not reasonable to rely upon competition in the terms of employment and existing legislation to assure the continued spread of coverage to the employed?"

Congressman KEOGH, commenting before the Finance Committee on this contention, said:

"Mr. Chairman, much has been said today about requiring the self-employed to include their employees in such plans. That is a radical and novel departure from the basic and historical concept of retirement legislation. The 165 plans under the 1939 code, the 401 plans under the 1954 code, have never been made compulsory. Those are voluntary plans. This is the typical, historical American way of permitting one person voluntarily to do for himself that which people more and more want the Government to do for them.

"Now, Mr. Chairman, I want to point out that we are dealing with this group of seven million people for whom nothing has been done. And certainly, obvious equity and fairness should impel us to do something for them before more is done for those for whom so much more has been permitted."

It has even been stated that this is class legislation; that is, the principal beneficiaries are said to be professional persons in the upper income brackets. On this contention, Dr. Murray told the committee:

"With a highly progressive personal income tax structure, it is, of course, self-evident that the application of any uniform pattern of tax deferment will provide greater dollar and proportionate benefits to those in the higher income brackets. But is this a relevant argument? Is not the correct comparison between the successful self-employed individual and the successful employed individual? This bill is designed to place them on the same footing, except, of course, for the eliminations in the case of the self-employed. It is designed to remove the economic pressure which is being exerted against working for one's self.

"I think that we need to be very careful in interpreting any of these figures on income distribution. The individual who might qualify for the full $2,500 deduction this year may have spent 20 or 30 years of his life earning substantially less than $25,000 a year. His lifetime benefit can hardly be appraised on the basis of his peak earning capacity. The groups classified by income are by no means static, particularly among the self-employed. We are in danger of misreading the facts if we do not recognize this to be true. Furthermore, the breadth of support for this legislation suggests that numerically we are discussing a proposal predominantly for the benefit of middle-income groups."

And, in answer to a question on this point, David Lindsay, spokesman for the Treasury Department, told the committee: "I think so long as you have progressive income tax rates where the more you make the more you pay, it is not unfair to have the benefits go in the same direction where there is an appropriate deduction."

It should also be pointed out that only 1 person out of 17 who are self-employed is from the legal-medical-dental professions.

There has been some criticism of H.R. 10 because it does not extend to contributions made by employees. But this is not the issue raised by this measure. The purpose of H.R. 10 is to allow a tax deferment on the employer contribution. Since the self-employed is both employer and principal employee, H.R. 10 seeks only to provide for the self-employed person tax treatment comparable to that enjoyed by the employee with respect to the employer's contributions.

The 10 percent contribution allowed under H.R. 10 is not an unreasonably high employer contribution. This is apparent when a comparison is made with qualified corporate plans. Most corporate pension plans are noncontributory; that is, the employer pays the entire amount to maintain the fund. Under a qualified profit-sharing plan, an employer may contribute up to 15 percent of an employee's salary. In the case of qualified pension plans, there is no definite limit; if it is actuarily set up, the employer contribution could be as high as 25 percent of an employee's salary.

For example, an employee earning $7,000 could have contributed annually for him over $1,000 in a qualified profit-sharing plan of as much as $1,750 under a qualified pension plan. H.R. 10 would limit the deductible contribution to the self-employed person earning $7,000 to 10 percent or $700. In the case of a person earning $50,000, the difference is much greater. The self-employed is limited under H.R. 10 to a ceiling of $2,500. Yet the $50,000 executive could have contributed for him each year by his company as much as $7,500 in a qualified profit-sharing plan or $12,500 in a qualified pension plan, and the tax would be deferred on such contributions until paid out as retirement income.

One other contention which has been made is that consideration should be deferred until general tax reduction is possible. This completely disregards the fact that a general tax reduction would not remove, but would only perpetuate, the present discrimination against the self-employed.

After reviewing the arguments brought forth during the hearings before the Senate Finance Committee, one would conclude that this legislation is a fair and reasonable approach to the correction of an admitted inequity in our tax laws which has existed for more than a quarter of a century. The passage of H.R. 10 by the U.S. Senate is not only of direct concern to the lawyer, but is of equal importance to the many self-employed businessmen and farmers in his community.

There is a definite trend away from the professions and small business into corporate and government employment, due in a large part to the retirement advantages and other fringe benefits which are not available to self-employed persons. Certainly it is not unreasonable to expect the Congress to remove a gross inequity in our tax laws and thus encourage individual enterprise, initiative and thrift.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Appendix

Santa Clara University Engineering Center

EXTENSION OF REMARKS
OF

HON. CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 18, 1959

Mr. GUBSER. Mr. Speaker, recently I inserted, under leave to extend my remarks, a résumé of the history of the University of Santa Clara, and a report on the splendid course of study which is currently offered students at this oldest institution of higher learning in the State of California.

I am proud to say that this university is not resting on its laurels but is constantly improving and building for the future. Today I should like to present portions of a publication which presents plans for the new and modern engineering center at Santa Clara:

SANTA CLARA UNIVERSITY ENGINEERING CENTER

One hundred and eight years ago a Jesuit priest, Father John Nobili, arrived at the Mission Santa Clara with $150 in his purse to lay the foundations of a new college.

Today we are blessed with the fruits of his labors—the oldest institution of higher learning in the State of California, founded in 1851, chartered as Santa Clara College in 1855, and as the University of Santa Clara in 1912.

Here thousands of students have studied, worshiped, and lived, emerging as men imbued with the Christian ideals and the trained intellect envisioned in the university motto:

"To mold men after the model of the Man-God, and thus form them to serve their fellow men, their country, and their God."

A CENTER FOR CREATIVE THINKING

Another milestone in the development of an old and great university is the start of construction of Santa Clara's new engineering center—a monument to the spirit of creative thinking which has long permeated the historic campus.

While the enrollment will continue to be highly selective, the new facility will make possible the acceptance of twice the current number of candidates for undergraduate engineering degrees, provide room for expanded research activities, allow initiation of graduate programs in engineering, and offer additional services to the engineering profession.

Modern in design, complete in facilities, the engineering center will give to the Far West a new facility for training the truly creative engineer—more than a draftsman, more than a skilled technician—a professional man in the finest sense.

AN HISTORIC DATE: APRIL 29, 1959

The historic ground-breaking date selected for the new engineering center—April 29—has long had special significance at Santa Clara and in the scientific world.

Just 54 years ago to the day, the first pilot-controlled glider flight in history came to a successful conclusion with a landing on the old Eberhard tannery property across from the University of Santa Clara.

The cornerstone of the engineering center will be set where the 45-pound glider—designed by a Santa Clara professor, John J. Montgomery, and flown by an adventurous Irish employee of the university, Daniel Maloney—completed the first flight of a heavier-than-air craft to a designated spot.

April 29, 1905, marked an event hailed by Victor Lougheed (pronounced "Lockheed," as in the aircraft firm which now bears his name) as the "greatest single advance in the history of aerial navigation."

The same day in 1959 will be commemorated by future generations as the beginning of a new era in the training and development of men for outstanding and specialized engineering careers.

ONE HUNDRED AND FIFTY THOROUGHLY TRAINED ENGINEERS READY FOR POSITIONS EVERY YEAR

Purpose of the new engineering center is to provide sufficient facilities to graduate each year 150 men—trained in the Santa Clara tradition.

These graduate engineers will not only possess the finest technical education possible, but also will have been taught basic principles of living, such as respect for authority, willingness to take responsibility, and the return of a full measure of work for the salary received. Santa Clara's engineering center will continue to be one of the few nationally accredited colleges of engineernig—under Catholic auspices, but open to students of all faiths.

CURRICULUM FOR A PROFESSION

Offering degrees in civil, electrical, and mechanical engineering, the engineering center curriculum naturally will continue the Santa Clara tradition of thorough grounding in mathematics, physics, and chemistry.

As in the past, the curriculum will include a sound liberal arts program so that students can properly express themselves orally and in writing, and gain a broad knowledge of the humanities, including social sciences and philosophy.

Finally, the upper division program will offer the faculty, classrooms, laboratories and other facilities to make possible further development in distinctive phases in the basic branches of engineering.

Add to these the requirement that students spend at least two summers on practical engineering work; also that they write an acceptable senior thesis on a subject approved by the college, and you see emerging each year from the new Santa Clara Engineering Center, 150 graduate engineers intensively trained to assume positions of responsibility in their particular field of creative thinking.

For the more talented students there will be "premasters" and "predoctorate" courses. These lead to the possibility that Engineering Center graduates may seek advanced degrees oriented toward research and development, or to engineering management. Because of the wealth of nearby industrial firms with strong engineering programs, it would be possible to make use of qualified industry-employed instructors, and to schedule graduate work at hours convenient to industry and business employees.

EXPANDING TO INCREASE OPPORTUNITY

Despite its great accomplishments of the past, the College of Engineering now is physically inadequate in the light of present and future needs.

The Montgomery Laboratories, built in 1924, the second floor added in 1930, and the Alumni Science Hall, built in 1924, are not only outmoded, but also limit enrollment, faculty research and addition of new courses.

Construction of the new Engineering Center will make it possible to add new and desirable engineering laboratory facilities which will allow expansion of the senior thesis program. These facilities will further enrich the undergraduate education through research in such fields as electronics, nuclear physics, municipal design and planning, data processing and high energy propulsion.

It is almost tragic, in light of the demand for trained engineers and scientists, to note that although the present freshman engineering class had the highest academic standing of any in the history of the college, a number of highly qualified and equally promising applicants could not be admitted.

NEEDED: A LARGER PLANT

This calls for construction of four engineering units, a science annex and the provision of utilities for them.

The planned units will form a quadrangle. One side will consist of a two-story unit of classrooms, lecture hall, and administrative and faculty offices. Opposite will be the mechanical engineering laboratories. The third and fourth sides of the quad will be occupied by the electrical and civil engineering and mechanics laboratories. Total space will be 70,000 square feet. These buildings will double classroom space, provide reading rooms, drafting rooms, seminar and conference rooms.

CREATIVE THINKING: A SANTA CLARA TRADITION

The University of Santa Clara always has endeavored to attract and hold outstanding lay and Jesuit teachers. Its history is marked with distinguished men: Rev. J. Neri, S.J., who installed San Francisco's first arc-light system; Rev. Joseph Bayma, S.J., professor of mathematics, who John Tyndall said "is a hundred years ahead of his time in the science of mathematics"; Rev. Richard H. Bell, S.J., whose experiments in wireless telegraphy verified those of Marconi; and Prof. John J. Montgomery who designed and flew the first heavier-than-air machine, antedating the Wright Brothers flight by 2 years.

Added to the list of Santa Clara greats should be Rev. Jerome S. Ricard, S.J., "Padre of the Rains," famous for his sunspot theory; and still active, the world-renowned "Glacier Priest," Rev. Bernard Hubbard, S.J.

A half a century ago, the first lectures in engineering were instituted at Santa Clara; 4 years later, in 1911, the college of engineering was established.

Thus, as construction begins on a new engineering center at the University of Santa Clara, we find that creative thinking already is a university tradition, with a long record of accomplishment.

Our Responsibilities and America's Future

EXTENSION OF REMARKS
OF

HON. ANDREW F. SCHOEPPEL

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, August 19, 1959

Mr. SCHOEPPEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very fine address entitled "Our Responsibilities and America's Future," delivered by the Postmaster General in the city of Washington, D.C., on August 12 of this year, wherein he addressed himself to our responsibilities and America's future.

The address was delivered before the 55th Annual Convention of the National Rural Letter Carriers Association, in Washington, D.C., on August 12, 1959.

It is such a fine address that I am sure many people in the country would like to have the benefit of it in the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

OUR RESPONSIBILITIES AND AMERICA'S FUTURE

(Address by the Honorable Arthur E. Summerfield, Postmaster General of the United States, on occasion of the 55th National Convention of the National Rural Letter Carriers Association, Washington, D.C., August 12, 1959)

It is a real pleasure to be with you tonight. I know that you have been amply welcomed before, but let me just say again that we are very happy for this opportunity to get together with you.

The rural letter carriers of the U.S. Post Office Department are a vitally important part of the great service we are proud to render to our Nation.

Over the years, your faithful performance of your duties, your very warm and neighborly relationships with the people on your mail routes, and your leadership as outstanding citizens in your community's affairs, have added greatly to the prestige and traditions of the Post Office Department.

And may I also express our admiration and respect to your splendid ladies auxiliary, which over the years has contributed so much to better civic life.

The presence here tonight of so many Members of the Congress is a well deserved tribute to your organizations. I join with these distinguished leaders of the Congress in saluting you as good Americans and outstanding public servants.

We are delighted that you have come here to your great Nation's Capital for your convention. I know that your stay has been inspiring as well as most pleasant and highly informative.

I am well aware of the fact that you are citizens in the fullest meaning of that word. I know that you maintain a deep interest in matters of importance not only to the postal service, but to the strength and progress of our Nation.

It is for this reason that I should like to discuss with you tonight three subjects that go beyond their immediate concern to us, to be of utmost significance to all our people.

These are, first, the Department's crusade against the most insidious racket of our time—the sending of obscene materials through the mails, especially to the children of America.

Secondly, I should like to discuss with you briefly the critical problem of inflation, and the means of successfully meeting it.

And third, I believe this evening you would like me to touch upon the future of the U.S. Post Office Department, the world's greatest communication system, of which you are so much a part.

You are familiar, I know, with the war we have declared on the use of the U.S. mail for the conduct of mail-order business in obscene and pornographic material. Many of you have taken an active part in this campaign in your communities.

This vicious business—the mailing of filth to children—is a challenge to every decent-minded American citizen. And it can be met only by the firm, positive action of our people, in all parts of the country.

It gives me some satisfaction to report that our efforts against this racket have made encouraging progress. This progress is due, in large part, to the broad support we have received from the Members of Congress, from the Nation's newspapers, radio and television commentators, civic-minded organizations and the public.

Congress has intensified its serious study of the problem, and many Members have taken active leadership in bringing this matter to the attention of their constituents.

Throughout the country, the press has not only described the growing menace of mail-order obscenity in the news columns, but has urged the public to action in editorial columns as well.

Civil and religious organizations, deeply shocked by the concentration of this racket on children, have mobilized their members for programs to help meet the challenge.

Within just the past 2 months, I have had determined verbal expressions from the leaders of many of these organizations. I have received copies of resolutions adopted by many groups which pledge their vigorous assistance in this effort.

We are deeply gratified by this support.

I think you will agree that this, indeed, is a good start. But I cannot emphasize too greatly the importance of conducting this war to the finish. Persistent, intelligent, intensive action on a nationwide scale will be absolutely necessary for a long time to come, to cope with the determined plans of the filth racketeers to continue expanding their operations.

Even as we are striving to rally the American people to put them out of business, these vicious racketeers are continuing to violate the homes of the Nation with complete arrogance.

Our inspection service estimates that as many as 1 million children will receive obscene material in the family mailbox during this year. This is 1 out of every 35 school-age children in America.

In large part, this smut will be sent to children without their advance knowledge or consent, in the form of lewd solicitation literature seeking to sell them even more obscene trash.

The volume of business done by these racketeers has tripled since World War II; it has doubled in just the last 5 years; and unless we put a stop to it, it can double again over just the next 4 years. In that event, it would amount to over $1 billion a year.

In due time, if we do not fight to rid ourselves of this blight, we may expect that organized crime will take over the obscenity racket, with its vast revenue, to a far greater and more vicious extent.

It will victimize more and more of our children, adding to the already swollen rolls of juvenile delinquency. The undermining of the moral fiber of our young people will spread, with the poisoning of increasing millions of minds.

Sex crimes will become far more prevalent than they are even today.

And overall, as the effects spread throughout our society, we could expect an ultimate breakdown in moral strength and order and decency in this country.

My friends, this monstrous crime has got to be stopped.

How can we do it? What do we need to meet this problem?

We need legislation adequate to deal effectively with these vile criminals.

We ned the conscientious support of law enforcement authorities and courts.

We need the dedicated efforts of you who make up our postal service.

And, of course, we need the support and cooperation of parents and decent-minded citizens throughout our country.

To this end, we are carrying forward a continuing program that is fourfold:

1. To draw maximum public attention to the menace of this racket;

2. To urge parents to help us apprehend the mailers of filth to their children;

3. To help mobilize community support behind adequate law enforcement of local ordinances or State laws when these purveyors are apprehended and brought to court;

4. To rally public opinion behind new and stiffer legislation on obscenity.

With respect to this fourth point, I should point out that Congress last year passed legislation which has been extremely helpful, and that the current Congress is giving earnest and sympathetic attention to proposed legislation which can close loopholes and help further to bring the mail-order obscenity racketeers to account.

In the past, these smut merchants have had little difficulty evading punishment.

In certain large cities, the courts set a pattern of soft rulings which established virtual sanctuaries for them.

Usually, even those few offenders who were convicted were let off with a slap on the wrist—a light fine or a brief jail term. To racketeers operating on a big scale, this kind of sentence is nothing more than a minor discomfort.

If we are to drive these vultures out of business, we must convince them that they are no longer going to be tolerated or coddled anywhere. A consistent pattern of stiff sentences, wherever they are convicted, is the one sure way to meet their defiant challenge.

I would ask that all the members of this organization continue to take part actively in this crusade, working in your own communities to further the four points of this program. I know that the ladies auxiliary has been active in this effort. I want to compliment all of you on what you are doing, and to urge you to continue your good and most essential work. We dare not fail.

May I turn now to another problem which also demands the attention and earnest effort to all of us.

Over the past year, I have taken every opportunity afforded me to urge that every American serve in the battleline against inflation.

I feel that especially I should not neglect the opportunity to discuss this vital subject with you.

I know I do not have to persuade this audience that the American people must maintain a sound economic philosophy, within which the Government must provide sound economic policies.

But I do want to emphasize the utter importance of keeping these convictions foremost in our minds, and in the minds of all our fellow citizens.

We know how inflation has wrecked other nations in the past.

We have seen what the ravages of this deadly force can do here in our own country.

We have seen it make our money worth less and the things we have to buy cost more.

We have found it boosting our cost of living by 100 percent in a period of 20 years.

We have seen it rob our dollars of their real value—and rob every American of that value in the process.

We have seen inflation feed on the incomes and savings of every individual, every family and every enterprise in America.

We have observed how it deals most cruelly with those who can least protect themselves.

I suspect almost everyone in this room knows of someone whose savings, insurance, social security, or retirement income—carefully nurtured through half a lifetime—now is tragically inadequate to meet his needs.

As rural community leaders, you are only too well aware of what inflation brings in rising costs and taxes.

And finally, I would point out that the problem affects in equal measure the cost of maintaining the operations of our Government.

Never have the American people faced a greater challenge than this one of bringing a rampant inflationary momentum under control.

Over recent months, our people have rallied vigorously to the fight to do all that must be done.

There is now a vast public consciousness of the scope of the menace that inflation presents. There is ever-increasing expression of the desire for fiscal policies, on the part of our people and our Government, that will keep our country on a sound, strong, and progressive economic course.

At present, our Nation has reached the highest level of prosperity in our history. We have the healthiest, strongest economy America has yet known.

Our people are enjoying higher wages and better living standards than ever before.

Overall output is at record levels, and rising steadily.

Employment is rising steeply. Unemployment is falling sharply.

For more than a year, the cost of living has remained generally stable.

The battle for a sound dollar is closer to success than at any time in the past two decades.

These are bright and encouraging facts, but we cannot allow them to mislead us.

They do not mean that our battle against inflation is over. Rather, they mean that we have gained a strong vantage point from which to carry on the offensive.

We face constant, heavy pressures for a continuation of the inflationary process. As a people, we must be sure to move together along courses that we know will surmount these pressures.

I believe our people are in wide agreement as to our Government's role. Our Government must maintain sound fiscal policies, with respect to spending, balancing the budget, taxation, financing, debt management—in short, throughout its vast economic operations.

This applies every bit as much to local and State governments as to our Federal Government.

Our governments must meet all the legitimate needs of our people. But this must be done within the framework of prudent spending, on a pay-as-you-go basis, without extravagance, without incurring deficits which add to the already staggering public debts that exist.

We must, in fact, maintain as one of our prime goals the reduction of the national debt.

It is vital, also, that we practice good sense in our civilian economy—our business economy—to keep prices from spiraling upward.

We must insist upon real statesmanship by all who are in position to influence the factors that bear on prices, and thus the cost of living.

I urge you to keep these matters in mind as you go about your activities at home. As good citizens, building your own future and the future of our country, stand up strongly for fiscal wisdom—for the same sound financial practice in Government that you follow in your own economic affairs.

In this you will contribute to the strong and steady growth of our country. And we are indeed a fast-growing nation. We can see this fact quite clearly in the demands upon the postal service.

With this in mind, let me devote the remaining time to my final subject—a brief look into the future of the Post Office Department and the better mail service it can, and should, render in the years ahead.

In any consideration of the future, one paramount fact overshadows all others: our constantly growing volume of mail is expected, in 25 years, to double today's enormous annual load of over 61 billion pieces of mail, and more than a billion parcels.

Any plans for the future must, in my judgment, be based on this fact—that adequate facilities, post offices, terminals, and other means, must be available to handle twice as much mail by 1985. And it must be done with the efficiency that the American people well know and deserve in the years ahead.

As you know, some 3,000 new post offices have been built in the past 6½ years, financed by private industry and leased to the Department.

Many of you are now working out of these new post offices, and you know intimately how much better and more efficient they are than the obsolete structures they replaced. You are also familiar with the greatly improved working conditions in these new facilities.

This program, of course, is on a nationwide basis. To meet the needs that face us, it will be necessary to modernize, replace or build in new communities, from 12,000 to 15,000 post offices in the years immediately ahead.

Not only do we need to replace obsolete post offices in expanding communities, in every State of the Union, but we must mechanize the sorting and distribution of the mails—especially in the large gateway post offices, which handle such a large proportion of our volume.

Fortunately, we have reached and moved beyond the breakthrough stage in mechanizing postal operations.

The essential first step was the development of modern methods, comparable to those so effectively used by industry.

This has been done to an impressive degree, as I believe anyone will agree who visits our post office here in Washington, D.C. This is now the world's most mechanized post office, but even it does not represent a plateau in our program. In that same building you will find even more advanced machines under test in our new laboratory operations.

If there are any of you who have not visited the post office here, I would urge you to do so. I am sure it would be one of the most important and enlightening highlights of your visit.

From the development of these modern methods, the next step is to apply them in key post offices throughout the country.

This, of necessity, will take time and funds.

But the important fact is that, after many years of neglect in research, engineering, and equipment development, a responsive Congress is cooperating with the Post Office Department in launching a major long-range program.

The time has come when we have put a full-scale effort underway to provide the best, most modern and most efficient service of which the Post Office should be capable.

Many people do not fully realize how important this development is to the provision of better mail service to people who do not live in the large metropolitan areas.

In Michigan, for example, nearly two-thirds of all the mail going into that State passes through the postal facilities in Detroit.

In Oregon, about one-half of the State's mail goes through the postal facilities of Portland.

In Pennsylvania, approximately three-fifths of the State's mail flows through the postal facilities of Philadelphia and Pittsburgh.

It is readily apaprent that any improvement in the handling of mail in these gateway facilities will result in better and speedier service in the smallest communities.

Modern mechanization of mail handling is so vital to better service that our Department now has under contract, for completion by the fall of next year, a completely new working-laboratory post office in Providence, R.I.

Serious consideration is being given to another laboratory post office, using different concepts and techniques, in another part of the country.

Engineers and postal experts in these two post offices, as well as those in our laboratory here, will be constantly developing and checking mail handling machines and methods—so that the U.S. Post Office, the world's greatest communication system, will keep abreast of the opportunities provided by modern science and industry.

As you know, the ultimate goal of your Post Office is the next day delivery of letter mail.

The Nation is now nearly blanketed with our new metropolitan plan, which assures netx day delivery of letter mail in the large metropolitan areas.

By next June, we estimate that 85 metropolitan areas, serving some 125 million people, wil be providing next day delivery.

We are confident that we have established the know-how to provide next day delivery throughout our service. We feel certain that, with the help of a cooperative Congress, ways will be found to finance the necessary expenditures to asure this service to the American people.

My good colleagues in the Post Office Department, let me sum up now by saying just this:

All of us believe that our people will continue to build the strongest, freest way of life the world will know.

We are determined that our grandchildren will inherit this way of life, and no other.

To assure this future, we must keep our Nation morally and economically strong.

We must give our children a wholesome climate, of dignity and decency, in which to mature into tomorrow's citizens.

We must continue to build a sound and solid economy, free of inflation, which assures the greatest opoprtunities for all our people.

We must continue to advance in science and technology, in Government operations as well as industry—an advance in which our postal progress will be an important part.

Communications are the soil in which knowledge is rooted, and we who operate this great communications system have a high responsibility indeed.

Let us make certain we uphold this trust. Let us continue to add luster to the proud traditions of the U.S. Post Office Department.

I know you will do your part—and more. And in the doing, you will have the gratitude of 175 million fellow Americans you help to serve so well.

Private Industry and Redevelopment

EXTENSION OF REMARKS
OF
HON. WALTER M. MUMMA
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 12, 1959

Mr. MUMMA. Mr. Speaker, the question of redevelopment over large sections of our country is a situation almost daily discussed in the Congress by either the other body or the House. This morning there came over my desk a release addressed to the industrial realtors and bankers. This went on to say that under the auspices of the Pennsylvania Power & Light, a group of these businessmen were going to be conducted over one of the major areas needing redevelopment in the country—that is, the Pennsylvania hard coal fields. The reading of this enclosed notice will give you an idea of what they are going to do. It is quite commendable.

This is an approach to the situation which I think may enable these districts to pull themselves up by their own bootstraps with a limited amount of aid from the State and Federal Government. I commend this to your reading as I think it is something new, worthwhile, and should produce results. It is as follows:

INDUSTRIAL REALTORS, BANKERS TO TOUR AREA COMMUNITIES

One of the largest promotions in years to attract new industry and payrolls to this area will take place August 27 and 28 when approximately 70 industrial realtors and bankers will tour communities in the Scranton, Wilkes-Barre, Hazleton, and Williamsport areas to inspect available shell buildings and industrial parks.

The industrial realtors and bankers will be brought here from the New York, Philadelphia, Newark, and Baltimore areas under the sponsorship of Pennsylvania Power & Light Co. After arriving here, they will be the guests of local chambers of commerce.

Many of these industrial realtors and bankers represent large, nationally known industries in their real estate and new plant transactions. Such people are, therefore, highly important to the area's industrial development and economic expansion.

Pennsylvania Power & Light Co. personnel and the cooperating chambers of commerce plan to dramatically demonstrate the industrial potentials of these communities with the aim of attracting reputable and financially sound new industries. The tour features the fact that better buildings are available in central eastern Pennsylvania at costs which are less than in comparable areas, and that the available shell buildings and the growing industrial parks are suitable for almost all types of industry.

The tour has been so scheduled that communities will be given sufficient time to promote and sell their communities and facilities. Detailed data and information on all industrial parks as well as outstanding, available buildings and sites will be supplied all the visitors. A chartered, 80-passenger airplane, will provide transportation so that the group may spend the maximum amount of time in its inspections.

The industrial realtors and bankers, together with their Pennsylvania Power & Light Co. escorts, will arrive at Avoca Airport, Thursday morning, August 27, to inspect the Scranton, Wilkes-Barre, and Hazleton areas.

The tour will include a new shell building in Old Forge. The group will then travel by bus to Wilkes-Barre to inspect Crestwood Industrial Park, and the Wilkes-Barre Chamber of Commerce will host the group for lunch at the Sterling Hotel. In the afternoon, the group will go by bus to Hazelton to tour Valmont Industrial Park. An inspection of an available industrial building in Freeland will follow. Dinner has been arranged at the Scranton Country Club with the Scranton Chamber of Commerce as host. The visitors will spend the night at the Hotel Casey, Scranton.

Friday morning, the visitors will enplane for Williamsport. There, they will inspect a shell building in the Williamsport Industrial Park; the new, most modern plant of Vidmar, Inc. If time permits, they will also visit the Williamsport Technical Institute. In the afternoon, the group will attend the Little League world series, followed by dinner at Williamsport Country Club with the Greater Williamsport Chamber of Commerce as host. Immediately following the dinner, the tour guests will be flown back to Philadelphia and Newark airports.

Labor Reform

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 18, 1959

Mr. THURMOND. Mr. President, by and large the people of my State and the daily newspapers which are circulated in my State favor passage of a strong and effective labor reform bill. I ask unanimous consent to have printed in the Appendix of the RECORD a sampling of editorial comment from various newspapers on the recent passage by the House of Representatives of the Landrum-Griffin labor reform bill. These editorials are as follows: "The People's Victory," from the August 14, 1959, issue of the Evening Herald, Rock Hill, S.C.; "Six Congressmen Vote Right on Labor Bill," from the August 16, 1959, issue of the State, Columbia, S.C.; "The Solid Front," from the August 15, 1959, issue of the Greenville News, Greenville, S.C.; "Georgian in the Spotlight," from the August 15, 1959, issue of the Augusta Chronicle, Augusta, Ga.; "House Vote on Labor Bill Responds to People's Demand for Reforms," from the August 15, 1959, issue of the News and Courier, Charleston, S.C.; "Now Up to U.S. Senate," from the August 15, 1959, issue of the Charleston Evening Post, Charleston, S.C.; "Will of the People Pays Off in Congress," from the August 15, 1959, issue of the Spartanburg Herald, Spartanburg, S.C.; "Plenty of Back-Home Support for Curbing Union Racketeers," from the August 16, 1959, issue of the Anderson Independent, Anderson, S.C.

In addition I ask unanimous consent to have printed in the Appendix of the RECORD a news column by the distinguished writer, Mr. David Lawrence. It appeared in the August 15, 1959, issue of the Augusta (Ga.) Chronicle.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Rock Hill (S.C.) Evening Herald, Aug. 14, 1959]

THE PEOPLE'S VICTORY

When the U.S. House of Representatives yesterday approved the Landrum-Griffin labor bill, many newspapers termed it a smashing victory for President Eisenhower.

It is not Eisenhower's victory. It is a victory for the people and for union members.

Eisenhower certainly had an instrumental part in the victory. His nationwide television address in which he threw his support behind the bill was undoubtedly a major factor in passage of the bill.

The bill is a comparatively strong piece of legislation aimed at ending corruption in labor unions. The bill contains clauses intended to protect the rights of rank-and-file union members, to ban blackmail picketing and to require union financial reporting.

What separates the Landrum-Griffin bill from others and makes it the toughest of the lot is that it goes further than the others. It would forbid most forms of organizational picketing, would ban all secondary boycotts and all forms of hot-cargo agreements, and provide criminal penalties for union officials who violate members' rights.

The bill is a comparatively tough one but apparently it is one which is needed to curb the power of the likes of Jimmy Hoffa of the Teamsters Union.

The real winners yesterday were the people who need to be protected from union leaders who use their power for their own benefit.

[From the State, Columbia, S.C., Aug. 16, 1959]

SIX CONGRESSMEN VOTE RIGHT ON LABOR BILL

We commend the six Members of the House of Representatives from South Carolina for their forthright "yes" vote on the labor reform bill.

ASHMORE, DORN, HEMPHILL, MCMILLAN, RILEY, and RIVERS, each answered in the affirmative when the roll was called. And they are to be praised for being in their seats and casting weight on the right side.

Encouraging is the fact that when the bill came up for passage on Friday the margin of victory was considerably wider than when on Thursday the House had substituted the administration-backed proposal for the milder measure supported by Democratic policy leaders. On Thursday the vote was 229 to 201, but on third reading Friday the House sent the tougher bill to the Senate by a 305 to 125 decision, a majority gain overnight of from 28 to 86. This, we hope, is a significant omen.

The question of labor reform is now up to the Senate. Let's hope the upper House will do as well as the lower. Let's hope we can say that the South Carolina delegation in the Senate—JOHNSTON and THURMOND—voted as a unit, too, in favor of the stronger legislation.

In the House it was a coalition of southern Democrats and Republicans that brought about this great victory. Let's hope the southern Democrats and Republicans will team up as effectively in the Senate. It would be a blow to good government for the House-approved bill to fail in the upper body.

[From the Greenville (S.C.) News, Aug. 15, 1959]

THE SOLID FRONT

South Carolina's six Congressmen are to be congratulated for their unanimous vote in favor of the antiracketeering union bill which was passed by the House Friday.

By their vote, the Representatives struck a heavy and necessary blow at the corruption, brutality which has invaded the union movement, and they moved the Federal Government toward restoration of balance in management-labor disputes.

It was, we are sure, not an easy vote for some of them to make. The House Democratic leadership, and the labor union bosses themselves, bitterly opposed the bill and used every device at their disposal to put pressure on all Members.

The six South Carolinians are all Democrats, but they are South Carolinians first and they knew that what their constituents wanted was not a "sweetheart" bill like the one proposed by the Democratic leadership but a really meaningful one; one with some teeth in it to gnaw away at the Hoffas and the Dios and the monopolistic unions which already hold life-and-death power over much of the economy.

The bill is much stiffer than the one passed by the Senate, and it now has gone to a Senate-House compromise committee. It is not likely that any compromise can be reached, and it seems likely that the House-approved version will come before the Senate for action sooner or later.

The battle there promises to be as hot and furious as it was in the House. And the prosepct for Senate approval is not at all reassuring in view of the number of liberals on the Democratic side of the aisle.

The eyes of South Carolinians will be directed on their two Senators and their vote on the union-control measure. Senators JOHNSON and THURMOND have a handy guide to show them the way; the unanimous vote of their colleagues in the House.

[From the Augusta (Ga.) Chronicle, Aug. 15, 1959]

GEORGIAN IN THE SPOTLIGHT

Georgians are proud of the fact that a Georgian is one of the cosponsors of the labor reform bill passed in the House of Representatives this week. Representative PHIL M. LANDRUM, Jasper, Ga., attorney, is not as widely known nationally as are some other Members of Congress. The chances are, however, that he will be more and more in the forefront of national affairst from now on.

Mr. LANDRUM has already gained a reputation in the inner circles of Congress as a hardworking representative of the people, quite capable of making sound decisions and of acting courageously to sustain his convictions.

Representative ROBERT P. GRIFFIN, of Michigan, cosponsor of the labor reform bill, also is expected to forge farther forward into the national spotlight. He is a Republican and LANDRUM, of course, is a Democrat. They made an effective pair when they teamed up to get action on needed labro reforms.

The Landrum-Griffin bill, of course, does not cover all angles of the labor problem but it does go farther than any of the several other bills which were introduced in the House. It will, if Senate concurrence can be secured, curb some of the evils that beset the Nation in connection with the abuse of power by labor union leaders.

If the Senate should decide to adopt the House bill, the measure could be sent on quickly to the White House for the President's signature. Predictions have been made, however, that the Senate will not endorse the House bill. In that case a conference will be needed to secure an agreement on a compromise bill. The prediction has been made that no strong bill can be passed in the Senate.

That remains to be seen. It is now up to the Senators of the United States to prove to the People that they are not the stooges of labor union leaders who boast of their power to control legislation and utter threats against those who oppose their dictums.

[From the Charleston (S.C.) News and Courier, Aug. 15, 1959]

HOUSE VOTE ON LABOR BILL RESPONDS TO PEOPLE'S DEMAND FOR REFORMS

No matter what course the Senate takes, approval of the Landrum-Griffin bill by the House of Representatives has brought stern pressure on labor leaders to reform. The House vote reflected an uncompromising popular demand for new standards of justice in union dealings with employers, employees, and the public.

Of the 303 Representatives who joined the conservative coalition to support the Landrum-Griffin bill, a substantial number might have ridiculed such a suggestion a few weeks ago. They have been underestimating the force of public sentiment favoring an anticorruption measure with teeth.

As late as Thursday morning, the day of decision, experienced political observers failed to count correctly the number of Representatives whose minds were changing in response to demands from back home. Informed opinion held that the vote might go either way. The prediction was for a margin of victory razor thin. The bill passed by 178 votes.

It is not surprising that the temper of the Nation was so misjudged. Forty years have passed since the behavior of labor unions was called into question by substantial numbers of voters. The signs of a changing climate have been forgotten.

It is fitting that the Members of the House should have been the first to recognize and act in accordance with the new sentiment. That was the way the Founding Fathers hoped things would work. They arranged the structure of the Constitution to make the House sensitive to the wishes of the people.

The shock of the setback handed to the union bosses may be felt even in the Senate. There the people's representatives are insulated to some extent from the currents of popular opinion.

A straw in the wind is a hint from Senator JOHN F. KENNEDY, Democrat, of Massachusetts. Senator KENNEDY has steadfastly opposed the tough provisions of the Griffin-Landrum bill. He is a contender for the presidential nomination. Naturally he prefers the Kennedy-Ervin bill, a weaker measure already passed by the Senate which he helped to write. After hearing results in the House, Senator KENNEDY began to talk of compromise.

Sitting with Senator KENNEDY in the Upper Chamber are other Senators who are presidential hopefuls. Some of them may consider that the House action puts them in an awkward spot.

Before making up their minds how they will vote, they will study the character of the groundswell of public opinion which is battering the labor bosses. Though it was slow to gather, it has developed great force. We predict it will be slow to recede. The people will remember for a long time how their Senators vote on this crucial issue of effective labor regulation.

[From the Charleston (S.C.) Evening Post, Aug. 15, 1959]

NOW UP TO U.S. SENATE

If the U.S. Senate concurs with the House of Representatives an effective blow will be delivered against corruption and other abuses in labor unions.

The House, backing President Eisenhower's plea, passed a bill aimed at vicious practices that have been exposed in certain fields of labor-management relations.

If enacted into law, it will ban secondary boycotts, blackmail picketing, and hot cargo agreements; and it will provide criminal penalties for union officials who violate members' rights. These evils have been particularly flagrant in the James Hoffa Teamsters' regime, but by no means confined to his organization. It is a matter of protecting not only union members, but nonunion workers, employers, and the general public also.

A milder bill was passed by the Senate some weeks ago. Thus differences remain to be settled between the two legislative bodies. The fight has thus been shifted from the House to the Senate. It may be that widespread public sentiment favoring the House bill will prompt the Senate to adopt the latter measure. The House majority resisted tremendous pressure from union lobbyists, which suggests that the lawmakers had heard from the folks back home. AFL-CIO President George Meany opposed even the milder Senate measure and a tepid bill approved by a House committee. The bill voted by the House had been introduced on a bipartisan basis, by Representatives PHIL LANDRUM, Georgia Democrat, and Representative ROBERT GRIFFIN, Michigan Republican.

The outcome of the House vote was another demonstration of the power of a coalition of Republicans and Southern Democrats. Most of the 95 Democrats who backed the bill on the first and crucial test were from this section. They included all six representatives from South Carolina, and we believe they merit strong commendation.

[From the Spartanburg (S.C.) Herald, Aug. 15, 1959]

WILL OF THE PEOPLE PAYS OFF IN CONGRESS

The will of the people has had its day in Congress.

The House dramatically reflected the force of public opinion in its adoption of the Landrum-Griffin bill Thursday. This was the only effective, and the strongest, labor reform bill introduced.

The victory was in the face of such opposition as:

1. Such powerful Democratic leadership as House Speaker Sam Rayburn, who usually has his way.

(2) Concentrated Big Labor lobbying, the like of which seldom has been witnessed on Capitol Hill.

3. A Senate bill of much milder nature, championed by the crusading Kennedy brothers; and the threat that strong House bill would invite uncompromising opposition, resulting in no reform bill at all.

But these forces were out of step with the American people. The people are fed up.

They have seen enough of Big Labor leaders' arrogance and contempt for the rights of individuals—union and nonunion alike. The crime, cruelty, crookedness and ugliness they have seen emerge from high union officers has sickened them.

The hierarchy of Big Labor, even the "clean" leaders, have shown their scorn of public opinion by an insistent stand against any effective legislation. They have not cleaned up the outrages we have seen, and we have seen too much.

Southern Congressmen deserve commendation from their people for standing strong on this issue. The Herald particularly congratulates the six representatives from South Carolina. All of them stood for the Landrum-Griffin bill.

They are Representatives ROBERT T. ASHMORE, ROBERT W. HEMPHILL, JENNINGS BRYAN DORN, L. MENDEL RIVERS, JOHN J. RILEY, and JOHN L. MCMILLAN.

The scene now shifts to a Senate-House conference committee. Its duty will be to compromise the labor legislation passed by the two branches and recommend a single measure.

But the Senate itself is more the center of battle. The voice of the people has become more urgent, and easier heard, than

it was when the Senate passed its compromising legislation.

Senators and through them the members of the committee will do well to listen again. The people are fed up and they are looking for action.

South Carolina's Senator J. STROM THURMOND is firmly on record in favor of effective labor reform legislation. The position of Senator OLIN D. JOHNSTON is not so clear.

We hope they get the same opportunity to be counted as the House Members did. And the vote of the House should provide a good clue as to how the people back home feel about this thing.

[From the Anderson (S.C.) Independent, Aug. 16, 1959]

PLENTY OF BACK-HOME SUPPORT FOR CURBING UNION RACKETEERS

House approval of the Griffin-Landrum labor bill marks a bipartisan victory for the people over the union czarism threatening to strangle the Nation at a crucial period in history.

The House was confronted by three versions of legislation. Proponents claimed each version was sufficient to curb racketeering by labor union leaders.

The House Labor Committee's version, known as the Elliott bill, had the support of the House leadership.

The Shelley bill was a creature of the labor unioneers.

The Griffin-Landrum bill, authored by Representative LANDRUM, of Georgia, a Democrat, and Representative GRIFFIN, of Michigan, a Republican, was the "tough" version; i.e., the bill with sufficient teeth to change the pattern of union activities in the disorderly fields of mass picketing and escondary boycott, just the kind of two-fisted legislation needed to cope with this problem.

Terrific pressure was exerted by the labor unioneer leaders to block this bill.

In addition to proposing curbs for union excesses, the bill also provided a say-so in union affairs for rank-and-file members.

If there is one thing the unioneer bigwigs do not want it is democratic rule within the unions, from the locals on up.

While millions of American workers belong to unions—in many cases they are forced to belong if they want to work—they have steadily lost voice in the way union affairs are run.

The legislation passed by the House is designed to return some measure of union control to the workers, where it belongs. The bill had plenty of back-home support among union members themselves, or else it never would have passed.

The South Carolina House delegation voted solidly for the Griffin-Landrum measure, the Third District's Representative BRYAN DORN among them.

We commend the South Carolina delegation for its stand on this vital issue.

The time has come to call a halt to union abuses.

[From the Augusta (Ga.) Chronicle, Aug. 15, 1959]

FAILURE TO ENACT LABOR REFORM BILL WILL RESULT IN UNDERWORLD TYRANNY

(By David Lawrence)

WASHINGTON.—Are the American people really aware of the disgraceful conduct of certain labor-union leaders and of the menace which they present today to this country? Will the public be fooled by the claim that corrective legislation is not needed because there are only a few gangsters and by the propaganda cry that legitimate unionism might be harmed by new laws?

The answers to these questions deal with a phase of human rights that is more important than any other problem now before Congress. For if public opinion falters after the sensational disclosures by the Senate Investigating Committee headed by Senator JOHN L. MCCLELLAN, Democrat, of Arkansas, then a period of labor anarchy and underworld tyranny may be expected to develop in the coming years.

President Eisenhower has appealed to the Nation to back him as he asks that Members of Congress, irrespective of party, be told by the people that the country wants strong legislation to correct abuses. The type of thing which, unfortunately, the labor unions themselves have been unable to remedy is fully explained by the report of the McClellan committee. In commenting on the affairs of the Teamsters Union—the largest in the country—the committee report says in part:

"The power of the Teamsters Union president is so extraordinary that the committee finds the fact this power is now lodged in the hands of a man such as Hoffa tragic for the Teamsters Union, and dangerous for the country at large. * * *

"In fact, the 1958 hearings produced testimony of an even more sordid nature than that of the previous year.

"Ignominy was piled on ignominy as the testimony wove through stories of violence, financial manipulations, callous repression of democratic rights and racketeer control.

"This is an ugly situation. The continuing attitude of Hoffa and other teamster leaders that they are above the law can only serve to intensify the apprehensions of decent union members and decent people throughout the country. * * *

"Time and time again the committee has found Hoffa to be faithless to the members of his own union. He has betrayed these members so frequently that it has become abundantly clear that Hoffa's chief interest is his own advancement and that of his friends and cronies—a great number of whom are racketeers. * * *

"In addition, Hoffa has used union funds for his own benefit and that of his friends.

"Hoffa has consistently supported the interests of racketeer friends over those of his own members.

"Hoffa and his chief aids have consistently repressed democratic rights within the union. union.

"Hoffa has connived with and maneuvered union insurance to racketeer friends, bringing these friends gigantic profits. While the cost of insurance has risen, the benefits to the members of his union were drastically reduced.

"In the history of this country it would be hard to find a labor leader who has so shamelessly abused his members or his trust. * * *

"The committee is convinced that if Hoffa remains unchecked, he will successfully destroy the decent labor movement in the United States. Further than that, because of the tremendous economic power of the teamsters, it will place the underworld in a position to dominate American economic life in a period when the vitality of the American economy is necessary to this country's preservation in an era of world crisis. This Hoffa cannot be allowed to do."

What have the decent labor-union leaders done about all this? They have, of course, criticised Hoffa and have deplored what he has done. But they are not willing to back the kind of legislation President Eisenhower says is really needed to prevent Hoffa and his ilk from continuing to exploit the rank and file of American workingmen.

No group likes restrictive legislation. Big business doesn't like antimonopoly laws, and big unionism doesn't like the prospect of any restriction either. But it is the public as a whole which is damaged by any abuses of power exercised by private groups.

It will be interesting to see whether the majority in Congress will rise to the occasion or whether the labor unions, with their political pull and promises of bigger campaign contributions to those who do their bidding, will be able to scare Members of the House and Senate away from the legislation that ought to be passed in order to end the rule of dictators, tyrants and crooks inside the labor-union movement in free America.

Puerto Rico Is Different

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, August 14, 1959

Mr. PORTER. Mr. Speaker, by any human measure of ability and character Luis Muñoz-Marín is one of the giants among the world's leaders. In an article in the New York Times Sunday magazine, August 16, 1959, he discusses why "Puerto Rico Does Not Want To Be a State," which under unanimous consent is included hereafter.

The article follows:

[From the New York Times, Aug 16, 1959]

PUERTO RICO DOES NOT WANT TO BE A STATE—DESPITE THE EXAMPLES OF ALASKA AND HAWAII, SAYS GOV. MUÑOZ MARÍN, ITS PRESENT COMMONWEALTH STATUS BEST SUITS BOTH THE ISLAND AND THE UNITED STATES

(By Luis Muñoz-Marín)

(Luis Muñoz-Marín became the first elected Governor of Puerto Rico in 1948. He was reelected Governor in 1952 after the territory had been designated a Commonwealth.)

SAN JUAN, P.R.—Puerto Rico, now a vigorous self-governing Commonwealth within the American political system, would be smothered if some of its misguided stateside wellwishers, like Senator DENNIS CHAVEZ of New Mexico and Representative VICTOR ANFUSO of New York, had their way. They have introduced or proposed to introduce bills for Puerto Rican statehood. The bills have no chance of approval in Congress, and only minority support in Puerto Rico.

Recently, in the lobby of a Washington hotel, an old friend greeted me, "Well, Governor, pretty soon we should be seeing you up on the Hill as a Senator from the 51st State." He meant it as a high compliment to Puerto Rico, and I was touched by both his warmth and enthusiasm. In the wake of Alaskan and Hawaiian statehood, a similar status for Puerto Rico seemed logical, simple, and desirable to him. He melted into the milling crowd of the lobby before I had an opportunity to outline to him the great complexities of Puerto Rico's circumstances, which make statehood neither logical nor desirable for Puerto Rico or the United States.

When I say that it is far better for Puerto Rico to remain a Commonwealth, it is with no insensitivity to the high honor which statehood implies. Nor is it because we seek independence—we definitely do not. Nor does it mean we are content to be less than a federated state—because, definitely, we are not less, but only different. Nor is it because we do not wish to share in the common expenses of the Federal Union, of which we are a part in a new way—since Puerto Rico is now proposing a formula by which it would begin to pay into the Federal Treasury as its economic growth allows it to do so.

Puerto Rico's history has been far different from that of Alaska and Hawaii, and the understandable tendency to speculate on possible statehood for Puerto Rico after the

rapid accession of Alaska and Hawaii can lead men of goodwill far astray. Puerto Rico was a populous island with a long history and well-defined culture when it first came into the American orbit in 1898 following the Spanish-American War. Alaska and Hawaii, on the other hand, were sparsely settled and ripe for colonizing from the mainland.

Alaska and Hawaii became incorporated Territories, clearly destined for cultural integration and eventual statehood. Puerto Rico's special circumstances were early recognized when it became the first unincorporated Territory, which implied that it would not be slated for statehood. At the same time it would have been obviously contrary to the American spirit that Puerto Rico should remain a colony forever.

Economic factors were very different, too. Both Alaska and Hawaii have been for many years notably wealthier than Puerto Rico is even now after 14 years of rapid economic progress since the end of World War II. The net annual average income of Hawaii, and probably of Alaska, is more than $1,800, very little below the 1957 national average of $2,027. Puerto Rico's per capita income of $470 is still less than half of that of the lowest income State of the Union, Mississippi. Puerto Rico has little land in relation to population, no fuels, no significant mineral resources. That is why we have called the program by which we progress Operation Bootstrap.

These economic and cultural factors have, since 1898, made Puerto Rico's political evolution unique, and clearly different from that of Alaska and Hawaii. Indeed, as late as 1940, many sober, informed men in the United States considered Puerto Rico's economic and political problems insoluble, and were resigned to Puerto Rico's being a dependent poorhouse on a kind of permanent dole from the Federal Treasury, a place where poverty and hopelessness would constantly churn up social and political instability.

It took a double-barreled attack on these problems in Puerto Rico itself to lead to the relative prosperity of today, and to the visible social and political health and vigor of the island. First came the attack on poverty, temporarily foreclosing political debate. Only when Operation Bootstrap was well under way did Puerto Rico address itself to finding a political status which answered the needs of its special relationship with the United States and its own economic and cultural circumstances.

To those who forget that peoples are the creators of political formulas and not their slaves, Puerto Rico seemed to have no way to turn. Continued existence as a Territory or colony was impossible. The corrosive effects of colonialism, even a benevolent colonialism, could no longer be accepted, especially in the post-war period. Neither dignity, nor the swift course of history, nor commonsense, nor the American tradition, would permit the continuation of such a system in the American context.

In contemplation of the inevitable end of colonialism, a sterile debate had raged for many years in the island between adherents of independence and those of statehood. The great majority of Puerto Ricans rejected independence on two counts: Puerto Rico's economy was by then so integrated with that of the United States that separation would have meant economic suicide and, equally important, Puerto Ricans had developed a deep and genuine attachment for their fellow United States citizens and for United States political institutions.

The great majority also rejected the possibility of statehood as totally unrealistic. Economically, statehood then would have meant another form of ruin for Puerto Rico—and still would, as we shall see in a moment.

The circumstances called for the same kind of political pioneering which created the Original Thirteen States themselves—a new projection which would be in the spirit of the 20th century, taking due recognition of the mutual interests of both the United States and Puerto Rico. The concept of a self-governing commonwealth had been foreseen as long ago as 1912 by Henry L. Stimson, then Secretary of War under President Taft. With farsighted statesmanship, Stimson observed that he saw no inconsistency between U.S. citizenship for Puerto Ricans and the ideal that Puerto Rico should have, when ready, for it, completely autonomous local government within the American system.

This is essentially what happened when Puerto Rico became a commonwealth in 1952. The official Spanish translation is Estado Libre Asociado—Associated Free State: Puerto Rico, in the generic sense of the term, is a new kind of state. Puerto Ricans are U.S. citizens, sharing with their fellow citizens in the continental United States a common defense, a common foreign policy, a common market, a common currency, and the operation of practically all Federal laws. Puerto Ricans differ from other Americans in that they do not vote in national elections, have no voting representation in Congress, and have, on the other hand, autonomy in directing their local affairs, including the collecting and spending of their own taxes.

Nearly 7 years after its hopeful inception, how is the Commonwealth doing? It is doing remarkably well, I am happy to report. "Operation Bootstrap" has raised the per capita income from $121 in 1940 to today's $470. Living standards have virtually doubled in 15 years, perhaps the most rapid economic advance in any underdeveloped region in the world.

Certainly development has been dramatic enough to attract high officials, technicians, and students from all over the world to study our methods. Nearly 9,000 visitors from 107 different countries—from Nepal to Saudi Arabia, from Morocco to Bolivia—have studied how we have raised life expectancy from 46 years in 1940 to 68 years today, how we are rapidly winning the fight against illiteracy and how a whole people can be raised, in a few years, from despair and deepest poverty to relative prosperity and dynamic purposefulness.

The creation of the Commonwealth had political as well as economic lessons for the world. It was a notable achievement, in the postwar era, to end a colonial relationship in such a constructive, fruitful manner, devoid of the bitterness and violence which characterized the end of colonialism in many parts of Asia, the Near East, and Africa. Puerto Rico clearly gave the lie to the persons (Communists and others) who are always ready to raise the cry of "imperialism" against the United States. It was patently impossible to square imperial exploitation with a people who are self-governing, who sent 40,000 of their sons into the Armed Forces during the Korean conflict (90 percent of them volunteers) and who are so effectively dramatizing the quality of U.S. democracy to thousands of earnest observers from all over the world.

The dignity of self-government has not only engendered an explosion of energy in economic affairs in Puerto Rico but has seen a lively ferment in cultural realms as well. No one who has visited Puerto Rico recently can be immune to the feeling that things are happening. The Casals Festival, lively drama, ballet, opera, and symphony orchestra seasons are all part of the energized local scene. Puerto Rican painting and writing are in obvious renaissance. A people with new pride and new confidence and new creativity are clearly on the march.

In the light of this progress, it may seem strange that the sterile debate regarding possible statehood at any time in the foreseeable future should have been revived in Puerto Rico. Certainly persons who make any serious study of Puerto Rico's economics are aware that statehood, at this time, or for many generations to come, would mean a fatal crash for the island. It would be like a fully loaded airplane about to be airborne having half its motors suddenly stopped.

Federal taxes would about double the already high taxload that the Commonwealth must impose upon itself in order to keep its public works and public services in line with its rapid economic development. Federated statehood would mean either breaking the back of the taxpayer and thus making further economic development impossible or cutting the public services so drastically that their decay would constitute a bottleneck for private enterprise and economic development.

There has been nothing automatic about Puerto Rico's progress to date. Only hard, uphill work has brought it about. And while this progress has been notable enough to attract interest in many countries, our living standards, as I have indicated, are still far below those of the mainland United States.

The Federal Government has long been cognizant of the different economic situations of Puerto Rico and the harsh handicaps imposed by a population concentration of 658 persons per square mile in a mountainous island with virtually no resources. Never, since Puerto Rico was first associated with the United States, has the Federal Government applied Federal taxes here. This was to give the island a chance of economic development as well as to honor the principle of "no taxation without representation." Without this to compensate for the other disadvantages I have mentioned, Puerto Rico would still be in deepest poverty.

Most Federal grants-in-aid apply in Puerto Rico. These grants, like those allowed to the States, are apportioned on the theory that they will benefit the United States as a whole. Matching funds for building certain roads and for hospital construction are cases in point.

The United States tariff is collected in Puerto Rico on foreign imports—which, by the way, are few, since most of our trade is with the United States—but the receipts go into the Commonwealth treasury after the cost of collection is deducted. In this way American manufacturers are protected from foreign competition while the Puerto Rican treasury is benefited. This is important because Puerto Rico is one of the world's greatest per-capita consumers of United States products, spending $700 million a year on them. The Federal excise tax on Puerto Rican rum, while it serves to protect American distillers, also reverts to the Commonwealth.

On the other hand, our association with the United States imposes some penalties on the Puerto Rican economy, for which our treasury is not compensated. Under the Sugar Act of 1946, for example, Puerto Rico loses considerable potential income by being denied the right to refine more than 11 percent of its own sugar production. In addition, shipping rates between Puerto Rico and U.S. ports are artificially high because they are governed by the coastwise shipping laws confining cargoes to American vessels. While these laws have the legitimate objective of subsidizing U.S. shipping for defense purposes, in practice they place a heavy share of this defense load on Puerto Rican consumers.

From the U.S. point of view, the accession of a state unable to pay Federal taxes except at the cost of economic ruin is obviously inconceivable. Puerto Rico, which as a Commonwealth is a showcase of American de-

mocracy before the world, would, as a federated state, become exactly the opposite: an economy in shambles, having to be kept alive by a W.P.A. type of charity, with a people far more hopeless than during the worst of the great depression.

Nor has the United States the desire or interest to force the cultural assimilation of Puerto Ricans in Puerto Rico. Indeed, the fact that Puerto Ricans are probably the most bilingual people in the hemisphere, with deep understanding of and ties to both their fellow U.S. citizens and their Latin neighbors, has made Puerto Rico a valuable meeting place for people and ideas at a time when Latin America is in a state of farreaching flux. Its unique position has been an undoubted assets for the United States in sensing changing currents in Latin America, and in translating its hemisphere policy into action.

But even now, however limited our means, Puerto Rico wants to make it clear that it intends to begin contributing to the Federal Treasury as its economic circumstances permit. There is now a bill before Congress whose purpose is to define the permanent association of Puerto Rico with the United States. One principle is clearly established: That Puerto Rico wishes, of its own accord and within its abilities, to help shoulder the Federal burden by contributing money to the Federal Government and by performing some functions in Puerto Rico now underwritten by U.S. taxpayers.

Puerto Rico is not looking for a free ride. On the contrary, it is just as anxious to carry its share of the financial load as its sons were to risk their lives in Europe and Korea—as a matter of pride and dignity, as our contribution to the whole.

When the strident chorus of nationalism begins to fade in Europe, Asia, Latin America and Africa, some ingenious formula may permit the rational regrouping of new and old sovereign units on a sounder economic basis, just as the United States and Puerto Rico found a workable formula. The world has become too small, too complex, too interdependent to permit indefinite political fragmentation at the price of widespread poverty. Where blind insistence on rigid, 19th century style sovereignty exists in defiance of economic logic, new forms of federalism are called for. Puerto Ricans are proud that they are contributing to the American political system a new form of federalism.

In dedicating the Puerto Rico Supreme Court Building, Chief Justic Earl Warren expressed this in words that remind us of the creative political genius of the United States:

"In the sense that our American system is not static, in the sense that it is not an end but the means to an end—in the sense that it is an organism intended to grow and expand to meet varying conditions and times in a large country—in the sense that every governmental effort of ours is an experiment—so the new institutions of the Commonwealth of Puerto Rico represent an experiment—the newest experiment and perhaps the most notable of American governmental experiments in our lifetimes."

A new way of abolishing colonialism has been born.

Problems of the Migratory Workers

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Wednesday, August 19, 1959

Mr. WILLIAMS of New Jersey. Mr. President, the Washington Post and Times Herald published this week three articles which should be of interest to all who are concerned about economic and social justice. The author, Laurence Stern, discusses the migratory workers of Maryland. He tells why most citizens ignore the problems of migratory workers, and why a few are deeply concerned. He also describes the initial moves made by the Maryland Commission on Migratory Labor.

I ask unanimous consent to have the first two articles of this series printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald]

MARYLAND'S MIGRANTS HIT BY BAD WEATHER—HUNGER SPECTER RAISED FOR VAST FORGOTTEN HORDE

(By Laurence Sterm)

Tally McNeil lives in a dingy, one-room shack on the Eastern Shore with his pregnant wife, five children and his worries.

They share three cots, a two-burner stove and a gnawing uncertainty over where the next dollar will come from.

"In the last 2 days I ain't picked more than $2 worth of tomatoes," said Tally, head hunched between his husky shoulders. "That don't buy us much."

When the harvest is good, a migrant picks until his knees are sore and his back aches. In a bad season, there is the specter of empty stomachs for himself and his family.

Maryland's newly established Commission on Migratory Labor is looking into the living and working conditions of thousands of migrants like Tally who annually pour into the Shore's great truck farming belt.

DROUGHT, RAINS HALVE CROP

This summer the Shore has been hit by a devastating combination of drought and heavy rain. Because of the weather, there has been only half the usual crop of tomatoes, cucumbers, beans and peppers.

Nevertheless, Tally McNeil, his parents, five brothers and two sisters will be back from Pompano, Fla., next year to gamble again with nature, just as they have for the last 11 years.

Last summer 5,455 migrants swarmed into Maryland to pick the crops and haul them to canneries and other markets. Most are Negroes from Florida. Others come from Mississippi, Alabama, and Louisiana.

The tri-State Eastern Shore lies along one of the three broad corridors through which some 1 million American and foreign migrants stream northward each year as crops ripen.

Another waves moves upward through the tier of Midwestern States and a third comes up through California.

Waddell's Migratory Camp, where the McNeils live, was built by the Federal Government to house Bahamians and Jamaicans brought there during the war years to relieve the farm manpower shortage.

It was taken over by the Dorchester County Truck Growers Association and is operated by the State department of employment security.

BETTER THAN MOST CAMPS

Waddell's may be worse than some camps in a three-county area surveyed by the Washington Post. But it is better than most.

There are 53 weathered frame shacks jammed into a large, circular clearing. As many as 140 laborers, their wives and children make their home there during the peak of the 4-month harvesting season.

The camp yard is littered with empty half-pint bottles, beer cans, and other debris. A group of children play around a smoldering pile of leaves.

Inside a cabin you hear a woman singing and several pairs of hands clap in rhythmic unison.

At each corner of the camp stands a row of outdoor privies, doors yawning open.

Living accommodations at Waddell's and nearby Preston camp come in two sizes.

Most of the migrants live in small shacks, 8- by 10-foot cubicles equipped with cots, a small cook stove and a light bulb. Rent, $2 a week.

LARGER FAMILY MODEL

The model for larger families is almost double the floor area and has a higher roof. Rent $4.

This price distinction is not respected by the swarms of mosquitoes and flies which infest the camps. Officials say that all the cabins were once screened.

Sometimes screens are ripped out so that it is easier to toss out garbage or dirty dishwater. Or else they just deteriorated.

"The migrants have become adjusted to this life," said the Rev. Carlton W. Veazey, a 23-year-old Howard University divinity student. As a member of the National Council of Churches migrant ministry, Mr. Veazey has five migrant camps under his supervision.

"I know deep in my heart that they want better things. They are doing an important job in harvesting the crops. I feel they are entitled to better facilities," he said.

With the help of the camp managers, the young minister fixed up a room for religious services where half of the camp's inhabitants come to worship each week.

Across Route 331 from Waddell's camp a group of pickers combed a field for small "Italian" tomatoes—the remnants of this year's spoiled harvest.

A picker gets 15 cents a basket for small tomatoes and 10 cents for large ones. An additional 3 to 5 cents a basket goes to his crew leader—the man who recruited him and brought him North.

ONE HUNDRED BASKETS A HEAD

When the harvest is plentiful a hardworking crew will pick from early morning to twilight, averaging as much as 100 baskets a head.

"You crawl along on your knees," explained William McNeil. "When they begin to hurt you stand up and pick. When your back starts bothering you, down on your knees again."

Beulah Simmons, a graying, dignified woman in her mid-forties keeps count of the baskets. Other women and children pick in the fields along with the men.

"We can't count children as workers," explained one camp official. "But whether we count them or not, they'll be picking in the fields with their parents."

For infants and toddlers, makeshift nurseries are set up in the trucks and buses which carry the migrant to the fields.

Geraldine Simmons is a bright, attractive 13-year-old. She had to drop out of her sixth grade class in Apaka, Fla., 2 weeks early to come north with her parents.

Next month she will enroll at Hurlock School, some 3 miles from the camp, until they leave for home in mid-October.

"Do you have much trouble catching up with your schoolwork when you get home?" she was asked.

"Naw," she replied. "Not too much."

MARYLAND'S MIGRATORY WORKERS—CREW LEADER'S ROLE PUTS HIM IN MIDDLE

(By Laurence Stern)

Each spring, crew leader John Graham loads up his battered schoolbus with workers and hauls them from Florida to Maryland's Eastern Shore.

To the 55 pickers in his crew, Graham is a combination of policeman, father, banker and boss.

A grizzled, friendly man of 50, he has a reputation of dealing fairly with his workers. Some crew leaders, on the other hand, are known to exploit their crews ruthlessly.

Crew leaders like Graham form the elite of an army of 1 million migrant workers who harvest the Nation's crops. The farmer depends on him for manpower and the picker looks to him for a livelihood.

I talked to crew leaders and pickers alike in the three Eastern Shore counties where Maryland's migratory population is most heavily concentrated, Dorchester, Somerset, and Caroline.

One leader at Somerset Migratory Camp near Princess Anne drives a shiny, new Oldsmobile and owns a fleet of six trucks. Another was barely scraping along with a dilapidated moving van.

PEOPLE PENNED IN TRUCKS

Most of the trucks in the migratory camps had neither seats nor benches. As many as 40 men, women and children are penned into these vehicles for the 900-mile trip. If they are lucky they may find a bean hamper to sit on.

In June, 1957, a truck carrying 41 migrant workers crashed in North Carolina. The death toll was 21.

Six months later the Interstate Commerce Commission adopted a safety code for transportation of migrants. Among other things, it requires that a secure seat be furnished for each passenger.

Each winter Graham and other crew leaders sit down with Maryland employment officials in Florida and chart a work schedule for the following year. The labor procurement agent is armed with a list of work orders from farmers back home.

A crew leader's earnings may run as high as $10,000 in a season or as low as $800, depending on the quality of the harvest and the size of his work force.

The basic economic cards of the migratory labor system are stacked heavily in his favor.

GETS FLAT COMMISSION

A crew leader is paid a flat commission for each basket of tomatoes. This share varies from 3 to 5 cents a basket. The picker gets 10 cents.

By the season's end the crew leader may earn more than 10 times as much as one of his laborers. In the field he oversees the workers but does not do any picking himself.

Migrant workers first came to the Shore during World War II when the pinch on agricultural manpower was at its worst. They have been coming back ever since.

Until the farmer can harvest his tomato, bean, cucumber, and pepper crops by machine there will always be a market for the migrant.

He is the cement that holds the Shore's farming economy together. The farmer is first to admit it.

"Without the migrant our canning industry would just have to shut down," maintains Robert McWilliams, who runs 6 farms sprawling over nearly 1,000 acres in upper Dorchester County.

CANNERY IS KING

In the Eastern Shore's agricultural breadbasket, the cannery is king.

Not everyone agrees that the migrant is either necessary or desirable, least of all Charles Cornish who is lone Negro member of the Cambridge city council.

"The migrant undercuts our domestic labor," said Cornish. "These people are being exploited by their own crew leaders. If the farmer was willing to pay a decent wage, he would be able to get plenty of local help."

Cornish owns a bus service. In the days before the migrants arrived he carried local farm laborers to the fields.

"A good many of the local Negroes feel the way I do," said Cornish. "The migrants have taken something away from them."

Soviets in Secret Places

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 17, 1959

Mr. HIESTAND. Mr. Speaker, the following editorial from the Los Angeles Herald Express calls attention to our peculiar inclination to show off our innermost secrets to our worst enemies. The editorial also pays tribute to our distinguished colleague, the Honorable GLENARD P. LIPSCOMB, for his protest to the State Department and the Atomic Energy Commission for allowing visiting Communists to see and photograph our industrial secrets.

The editorial follows:

SOVIETS IN SECRET PLACES

In these modern days when the tendency in some quarters is to hand the Communists (American and foreign) whatever they desire, it is encouraging to know that we have at least some congressional watchdogs on the job.

Los Angeles Congressman GLENARD P. LIPSCOMB has protested sharply to the State Department and the Atomic Energy Commission, and has demanded to know who authorized the tour of the University of California Radiation Laboratory by Soviet Deputy Premier Kozlov.

Declaring that "we're just too soft," Congressman LIPSCOMB remarked:

"It is ridiculous for us to go ahead blindly showing them all over the Nation when there is no place they go that they are not looking for information to advance their cause—the destruction of our form of government."

It seems like playing with fire to invite our enemies into our A-laboratories, even though some officials assert the Soviet visitor only saw "fundamental unclassified research equipment." If it was so unimportant, why not just show him the Golden Gate Bridge?

Adding fuel to the fire were other dangerous incidents.

Soviet photographers were allowed to photograph at close range in steel and automobile factories, focusing on intricate automation and other machinery, which one steel official called industrial espionage.

They also photographed industrial and defense areas which easily could become pictorial targets of destruction in the event of a Soviet-United States war.

And it was clearly evident that anti-United States propaganda for the Russian people was being produced in wholesale quantity, with the Soviet cameramen photographing only hovels, slums, poorly dressed children and older people as illustrations of "living standards."

Meanwhile, Vice President NIXON is getting a cautious reception from Soviet officials to his request to be allowed to visit Russian areas rarely opened to foreigners.

And Soviet Premier Khrushchev continues to voice loud threats of Soviet destruction of the United States unless we toe the proper marks.

Mr. NIXON correctly analyzed the situation when, at the recent dedication of the Los Angeles Sports Arena, he declared:

"While Kozlov is talking peace here, Khrushchev is talking war and blackmail in Moscow. * * * We should be courteous but under no circumstances fail to stand up for what we believe."

Mayor Mariani, of Detroit, and Governor Williams, of Michigan, may not have been so adroit or diplomatic in their reception of the Soviet visitor. But they made it plain that many Americans do not go along with the attitude of some official and private bigwigs who scrape and bow every time a Soviet higher-up deigns to smile at them.

Dam at Rampart on the Yukon

EXTENSION OF REMARKS
OF
HON. ERNEST GRUENING
OF ALASKA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 19, 1959

Mr. GRUENING. Mr. President, the public works appropriation bill, an excellent bill, which we trust will shortly become law, contains an item of great importance not only to Alaska but to our entire Nation. It is a $50,000 appropriation for further studies leading to the construction of a great dam at Rampart on the Yukon.

In this connection, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject of this dam entitled "The Big One," by Harold L. Moats, Chief of the Civil Works Planning Branch of the Corps of Engineers, which was delivered at the eighth annual meeting of the Alaska Rural Electric Cooperative Association on August 7, 1959.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE BIG ONE

It has been said that without dreamers there is no progress. I would like to spend a few minutes discussing a dream which is truly fabulous.

For some years people have spoken of a dam in Rampart Canyon on the Yukon about 100 air miles northwest of Fairbanks. Lots of talk, but nothing accomplished.

It was not until the Corps of Engineers started our report on the water resources of the Yukon and Kuskokwim River Basins in the fall of 1954 that any serious consideration was given at this site.

With a small staff and little money we have made a preliminary evaluation of the water resources of the Yukon and Kushokwim River Basins. The report is now nearing final form and we expect that it will be submitted in late November or early December. In our studies of the water resources of Alaska we have found it possible to develop about 18,500,000 kilowatts of hydropower. This, compared to the 25,500,000 installed hydropower in the smaller 48, provides our long-range planners with some interesting facts to play with.

The major part of this potential power, some 11,300,000 kilowatts, is found at nine sites in the Yukon and Kuskokwim River basins.

This morning I would like to tell you of some of the things our preliminary studies have revealed about the big one.

The Rampart Canyon site on the main stem of the Yukon River can be developed to produce about 3,700,000 kilowatts of prime power. The installed capacity would be 4,760,000 kilowatts. A concrete gravity dam 1,300 feet long at present water level, 2,700 feet long at the crest and 500 feet high will develop a usable head of about 440 feet. The regulated flow would be about 118,000 cubic feet per second.

Big figures alone mean little to most of us; let us relate them to others that most of us have seen.

At Rampart Canyon, the dam, with only about three-fourths of the volume of the dam at Grand Coulee, will impound enough water to warrant an installed capacity of 4,760,000 kilowatts; about 2½ times the present installed capacity at Grand Coulee.

The area and capacity of the reservoir is interesting. The reservoir will cover an area of about 10,700 square miles, or an area about 10 percent greater than Lake Erie. Due to the great area of the reservoir, it is anticipated that the seasonal drawdown will be under 4 feet. The total reservoir storage will be about 1,300 million acre-feet, better than 40 times the storage at Lake Mead behind Hoover Dam.

There are many interesting areas of speculation that open up as we study this tremendous project.

What, if any, will be the effect of this large reservoir on the climatic regime? It is almost certain that this area of water would increase precipitation to some extent. The water mass would cause the mean annual temperature to rise—how much we cannot say—but assuming that it might be 2 or 3 degrees, it is interesting to note that a few days longer growing season would enhance the agricultural potential of the region.

It has been said that the reservoir area contains enough timber to sustain a small pulp mill during the filling period.

The short but extremely pleasant summer weather of the region might well induce recreational activities here that would compare favorably with those at some of the popular reservoirs in more populated areas.

Let us look more closely at the structure itself. The dam will be a gravity arch structure with adequate fish-handling facilities. Cargo-handling facilities would be constructed in lieu of locks. Because of the huge reservoir capacity, it is anticipated that a spillway, required for safety, will never be used, and it is tentatively planned that the spillway function will be provided by a rupture section in the low earth levee which will close the saddle in the Texas Creek drainage opposite the main dam.

Power will be developed by seventeen 280,000-kilowatt generators.

It is anticipated that ultra high voltage transmission, probably about 500,000 volts, will serve ice free industrial sites at Valdez, Anchorage, Whittier, and Seward. Fairbanks and other interior communities, as well as many mining operations, will be served by conventional transmission lines.

The construction of the dam in stages will probably not prove feasible because of the high cost of mobilizing men and equipment. Our tentative plan therefore is to initially construct the entire dam and to install four or five of the 280,000-kilowatt generators. Installation of the remaining generators will follow as the load develops.

Preliminary estimates indicate that the cost of this initial installation, including transmission to one ice-free tidewater industrial site will be about $900 million and that the delivered cost will be about 5 mills per kilowatt-hour. The total installation will cost about $1,340 million and the kilowatt hour cost at the tidewater sites mentioned above will be reduced to about 3½ mills.

Based primarily on these results of our preliminary studies, the Public Works Committee of the Senate, at the request of Senator GRUENING, on April 24 of this year, directed that the Corps of Engineers make a detailed study of the Rampart Canyon hydroelectric site. We anticipate that this study will require 4 years to complete and that we will receive an initial allotment of funds to start the work this fiscal year.

Many times during the last few years I have been told we were wasting our time and the taxpayers' dollars, dreaming of a dam that would never be built.

Years ago, skeptics talked just like that about development of the Columbia River and the Pacific Northwest. It is my firm belief that industrialists are just as alert as they were 25 years ago. I know that the power demand is now much greater than it was then and it is inconceivable that this mighty giant will continue to lie dormant in the face of such need.

Rampart Canyon, the big one, is Alaska's most valuable resource, and as it is developed Alaska will take her rightful place in the family of States contributing richly to the economy of the Nation and to the welfare of the whole free world.

What I Believe

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 18, 1959

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Hon. James A. Farley, chairman of the board, the Coca-Cola Export Corp., which appeared in the June 1959 issue of the Atlantic Monthly:

WHAT I BELIEVE

(By James A. Farley)

(A lifelong Democrat who was born at Grassy Point, N.Y., 71 years ago, James A. Farley received his first appointment under Gov. Alfred E. Smith as port warden of New York in 1918. He served as chairman of the Democratic National Committee from 1932 to 1940, and he bore the heaviest political responsibility in the advent and development of the New Deal. He mastered the complexity of party organization with a direct, man-to-man approach. In this article he tells how he went about it.)

I was born at Grassy Point, N.Y., on the west bank of the Hudson. My parents were of Irish descent and profoundly religious. I inherited from both a strong physique, a good home, and I hope, some sense of humor. While I was still a very young boy, my father died as the result of a kick from a horse. But the benediction of his affection and the example of his personal honor had already descended to his children. My mother never faltered as the full burden of responsibility fell upon her young shoulders. She taught us that working was part of living and both were the gift of God. "In the sweat of thy face shalt thou eat bread" was not God's punishment to Adam but the first step to man's salvation, at least as taught in the Farley household.

Of course, we didn't have much choice, but under my mother's leadership we spent no time or energy lamenting the lack of it. At that time, the principal way to improve your affairs was by improving yourself. Some expensive psychological excuses have been developed in the latter decades, but I am old-fashioned enough to think that the most reasonable of excuses are not substitutes for Ben Franklin's yardstick of actual performance.

I early became interested in politics. Grassy Point was a misnomer, politically; it was the one thing neither party allowed to grow under its feet. This was particularly true of a Democrat in Rockland County. Grassy Point is a community in the town of Stony Point, up which Mad Anthony Wayne was carried on a litter to victory. All of his sentries together couldn't have marched as many miles as I did, door to door, in the forlorn cause of the Stony Point Democrats. And General Wayne couldn't possibly have felt a fuller flush of victory than I when I was elected town clerk. This face-to-face personal contact I believe to be the heart and core of the American system. There is no substitute for it. In the week prior to the 1936 election I mailed more than 8,000 letters to every county chairman, vice chairman, city chairman, State chairman, and the members of the Democratic National Committee. In a few weeks following the election I sent more than 26,000 letters of congratulation and thanks to the successful Democratic candidates for county, city, State, legislative, congressional, and senatorial offices. I knew the contents of the letters, which I signed myself because many were going to men and women whom I knew intimately and who were active in the Democratic Party and instrumental in its great victories. I signed all the letters "Jim" because I realized that the personal touch would be helpful and, incidentally, save time instead of signing my full name. At any rate, no one had to instruct me on the importance of the postal system when I became postmaster general.

On the east bank of the Hudson, some time before the loss of my father, another young boy, Franklin Delano Roosevelt, had lost his father. We were to be joined by the flow of events, far more than by the river which flowed past our doors. Oddly, we were to separate eventually (against a third term) into which his grandfather had been born and into which my grandfather had come as an immigrant.

So much has been written about the split between F. D. R. and myself that our long years of close cooperation are often overlooked. Actually, when Mr. Roosevelt took office to handle the crisis of 1933, the Jeffersonian concept of complete unity of legislative and executive departments through a party responsible to the people was the modus operandi. The President delegated the passage of legislation to me as chairman of the Democratic National Committee. It is interesting to note, as Speaker RAYBURN has pointed out, that of the hundred and more major acts passed at that time, not one has been repealed and by far the overwhelming majority have been accepted by both parties as basic legislation.

But here and now, I should like to identify the philosophy, as I saw it, behind that social legislation. On March 4, 1933, when Mr. Roosevelt took his oath of office, there were serious flaws in our national patterns, moral as well as economic. By moral, I mean that a vast preponderance of the American people over the age of 60 were dependent upon relatives for support. Also, millions of children who should have been at school were working. Collective bargaining was a theoretical illusion. Company towns and company stores were a polite expression for economic serfdom. We eliminated these sinkholes. But it seems to me that the philosophy underlying these programs has been badly twisted out of its original meaning and intent. More particularly, to build a floor over a community of quicksand is quite different

from putting a ceiling over the productive and creative elements of the individual. It is one thing to put in a minimum wage level, it is quite another to put a ceiling on personal incentives, which our present hodgepodge tax system does.

At cradle and for some time after, and at graveside and for some time before, a human being often needs assistance. People occasionally need crutches, too, but these aids are only a substitute for the moment when the person can stand on his own two feet. Accordingly, to see purely remedial measures transformed into a cradle-to-grave philosophy under the so-called security programs of welfare states is, in my opinion, as silly as to argue that crutches were invented as substitutes for legs. Welfare states develop a wheelchair philosophy in able-bodied people, and I am against both. It seems to me it is American to hate dependence of any kind. The Indians no longer accept the idea of the Great White Father at Washington; indeed, they now have good reason to know there never was one. Idols, including welfare states, notoriously have feet of clay. The best insurance against the clay feet of idols is to stand on your own.

Ironically enough, because I have favored—and favor—every bit of progressive legislation to distribute risk, the conservatives regard me as a liberal. And because I insist that the distribution of common risk can never be a substitute for individual effort, the liberals regard me as a conservative.

A great deal has been written about the personal teamwork of Franklin Delano Roosevelt and myself, much of it inaccurate. I know the warm comradeship which existed between us, and he was as close a friend of mine as I was of his. We fought together in his first two presidential campaigns. During those first two terms we worked side by side, and there was never a question of either, as a man, being below or above the other.

But when our paths separated in 1940, our different backgrounds were contrasted in reams and reams of copy. Those who had no insight into the facts offered the erroneous explanation that a great social gulf had always existed between us. I practically had to repel the continued suggestion that I was the injured underdog, a barefoot boy done wrong by an unfeeling Grotonian. What particularly irked me were the background articles emphasizing my quote humble unquote beginnings. I am an American of Irish descent. I have known many people of Irish descent. Fat, thin, tall, short—loquacious, taciturn, ebullient, and morose—but never in my life have I met a humble one. It just doesn't run in the strain. The fact is that I have met few men of Irish descent who were not their own figurative secretaries of state. Whatever else they may lack, it isn't opinions or the willingness to fight for them. As to authenticity as Americans, while the *Mayflower* passenger list will be combed in vain for their names, 16 Kellys, 17 Murphys, and hundreds of others of old sod ancestry have won the Congressional Medal of Honor—enough to assure even the unfairminded that the credentials of Americans of Irish descent are in order.

And, frankly, I resented the inference that those whose fathers' homes happened to be more propertied than my mother's were more endowed than I. As to material advantages, the same three R's were taught at Grassy Point as at Groton and St. Marks. There is no royal road to learning, whether your seat is in the family kitchen or in an endowed library. It is the individual himself who counts. A youth who isn't willing to make an effort via the commuters' train to New York isn't very likely to make much more of an effort in the marble halls of a great university. As Mr. Lincoln demonstrated, if a person has the will to improve himself, the back of a slate will serve as a writing pad. In any event, I want to make it clear, if only for the future thinking of my grandchildren, that while my mother couldn't afford my tuition to college, I wouldn't exchange her teaching for the biggest financial endowment in the country.

Actually, it seems to me that it is as hard for a boy to survive his advantages as it is his adversities. I often thought when I was chairman of the New York State Athletic Commission that having an important family name is somewhat like being a champion fighter. That is, all a title can do is get a man into the ring. But when the gong sounds, the title doesn't fight—the man must win by himself. Rich or poor, the test of a champion is his heart, his ability to get up off the floor and go on to win. To become Governor of New York, Al Smith of Fulton Fish Market and Nelson Rockefeller of Pocantico Hills had to fight the same fight in the same ring; and in the great American tradition of fair play the people of New York judged each on the size of his fighting heart, not on his banking account.

Human beings, like political parties, have basic platforms. I consider myself an indomitable, and careful, optimist. As a human being, I think this is my fundamental approach; only an egomaniac could be a cynic about mankind, particularly in the 20th century. Every jet in the sky, every miracle drug, every electronic device testifies to the miraculous progress of the race as a whole. On the other hand, no intelligent man can be other than a skeptic. This is nothing more than saying that for every experiment which produces a magnificent discovery a thousand fail. The courage of one's convictions is noble; uncoupled with the vigor of one's doubts, however, it is static and hence frequently fruitless.

For example, the great sweep of a suspension bridge across a bay is a majestic sight. To most people it appears as almost a symbol of effortless grace and character. But it seems fair to suppose that a bridge engineer sees far more than the beauty which meets the eyes of the layman, and additional beauty not on its apparent strength but on its nonapparent resiliencies, its flexibilities, and its expansions, without which its arches would crash. Built rigidly for either the summer's heat or the winter's cold, and without regard to the wind, its great towers would topple.

So it seems to me a nation, any nation, is like a supension bridge, whose rigidity and flexibilities must be and are in a constant state of balance and rebalance, though not readily apparent to the naked eye.

Now, to carry the bridge analogy further, what makes the American Republic the most beautiful political structure in the history of man is not only the lofty intellectual towers erected by the Founding Fathers but the magnificently ingenious built-in devices of flexibility by which each succeeding generation could bring its own faculties to bear on its own problems. The beauty of the American Republic is that the past provided for the future by permitting the present to take care of itself. It is argued that it is not businesslike. It wasn't intended to be. Constitutional friction was designed to provide the continuing sparks of liberty.

Naturally, this concept can scarcely be described as a tenet of the Republican Party or for that matter a guiding concept of the Democratic Party, but it most certainly is the reason why James A Farley consistently urged the value of the two-party system. Of this, a few scholars who have taken the trouble to read my papers are thoroughly aware, although that great American President and my close firend, F.D.R., was not among them. Fundamentally, it was upon this concept that we parted. As I see it, the conservative needs the pressure of the liberal to expand, and the liberal needs the pressure of the conservative to keep from shattering by explosion. The reciprocal pressure of each upon the other is needed by a healthy state, the liberal to provide the yeast of growth and the conservative to insure the continuity of form. Great oaks from little acorns grow; between the liberal demanding a full-grown tree and the conservative reluctantly yielding each new advance, continued form and reasonable predictability are part of a wholesome growth.

Since I believe that such ordered growth of the Nation does not depend on one party, I obviously still less would subscribe to the thesis that it depends upon any one man, and it was on this basis that I resisted the third term of F.D.R. Even more particularly, I refused to bolt the party when I failed. I thought, and I think, that the two-party system is more important to the effective expression of the American people than F.D.R. and certainly James A. Farley.

Accordingly, I view with satisfaction the 22d amendment, which prohibits a third term, on the premise of reciprocal action which I have set forth. Furthermore, I reject the hypothesis that the whole equilibrium and hence continuity of the American state should be predicated on the heartbeat of any one mortal man. It is the fundamental character of the American people from which is derived the mightiness of the American state. The American people will be out of character, and the American state will be out of balance, if the tragic day ever comes when they accept the belief that their character is derived from the mightiness of their state and, even worse, any single man who runs it.

Any declaration of principle on the body politic ought to be accompanied by some definition of terms. What, then, is the American democracy? To me, it is the guarantee of an equal chance to every citizen. But an equal chance is a long, long way from enforced equality; indeed, it is quite the oposite. I conceive of our democracy as an equilibrium of human beings, not an equality of mass distribution. Thus I think of our democracy as a system by which a person rises or falls according to his own worth, talents, and industry. If this definition is accepted, it follows that the American democracy is the only system which allows for the bloodless rise of an aristocracy based upon effective functioning.

It seems to me that to say that the 20th century is the era of the common man merely points to the great benefits derived from the common heritage of broadening culture. For example, an ordinary citizen can buy at a corner drugstore, for a very small sum, a magic drug for which Louis XIV would have given half of France. But the fact that this is the so-called century of the common man does not mean that being average should be held forth as an ideal to our youth. This term, "century of the common man," marks the debt of us average human beings to the very uncommon men whose genius makes this modern world possible. By any standard, Edison, Marconi, Pasteur, Burbank, and Salk were more gifted than us ordinary mortals, and certainly we all enjoy the fruits of their genius. Accordingly, it will be a sad day for our country if the only ideal before our youth is to be an ordinary man in the century of the common man. Our youth should have before it the ideas of deepening its talents, in order to excel and to compete, with the bright possibility that devotion and perseverence may result in a contribution to the general culture to which we are all so deeply indebted. In simple terms, what man could weave his own suit or construct his own electric light? Yet all these things are at an American's elbow. These con-

veniences, boons, and unearned rewards are so much a part of our daily lives that while I concur in our national motto, "In God We Trust," it seems to me that each individual citizen's daily prayer should be "Forgive me, O Lord, for taking so much for granted."

It follows that I deplore the entrance into our language, particularly; for the young, of the word "security." In the first place, if this means a safe-conduct pass through life, there is no such thing; and, in the second, if there is, it is alien to the American spirit. There was precious little security for the signers of the Declaration of Independence on July 4, 1776, and what little there was was thrown to the winds when John Hancock picked up his pen. Gen. George Washington forsook the material security of Mount Vernon for the chance bullets of Bunker Hill and the snows of Valley Forge. In the 19th century, no Americans looked for safety on the decks of the *Constitution*, nor were the prairie schooners breaking out in the new frontier safe fortresses of comfort for the magnificent men and women who made the West. It is time that the grand old colonial adage, "Beaten paths are for beaten men," be dusted off and placed before American youths. The fact is, the greater the responsibility and duty the less the security. After all, every man in a battle fleet knows exactly what he must do except the admiral who must give the command. To him comes the agony of responsibility in constantly reviewing the calculated risks. Chance—and therefore insecurity—is the heavy price of command. Chance means challenge. A person who refuses the challenge of life has died without ever living.

Politics to me is the supreme challenge of American life. Some men find full expression as professional engineers; I find full expression in affairs of state. I recognize that "politics" is an unpopular word. However, I consider the science of government at least as useful and honorable as, and in most respects more difficult than, any other calling. Certainly a profession which numbers among its practitioners Washington, Jefferson, Jackson, Lincoln, Cleveland, F. D. R., Churchill, and Adenauer has little for which to apologize.

I regard politics as among the highest and most useful callings open to American youth. It is my further opinion that there is no line of endeavor more mobile, and by this I mean none in which merit rises so quickly to its proper recognition. I believe that in the long run, counting all factors and even hard luck, the better man will win.

From this, I hope it appears that however much people may disagree with me, neither friend nor foe need guess where I stand. To my own satisfaction, at least, I have never stood in the middle of the road, as a result of which I have never been very far from the middle of the fight.

Maryland Migratory Workers

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Wednesday, August 19, 1959

Mr. WILLIAMS of New Jersey. Mr. President, the third article in a series by Laurence Stern of the Washington Post and Times Herald concludes a discussion of Maryland migratory workers. I believe that this article gives a clear account of some of the difficulties facing all who would do something to end or ease the hardships often faced by these wandering workers. The concluding paragraph, I think, sums up an important truth.

I ask unanimous consent to have this article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald, Aug. 18, 1959]

MARYLAND'S MIGRATORY WORKERS—FEW CONCERNED OVER CONDITIONS

(By Laurence Stern)

Robert McWilliams bought an abandoned church camp at Shiloh, Md., last year and converted it into housing for his migrant labor crews.

The effect on the good villagers was electrifying.

They swooped down on the Dorchester County Commissioners with complaints that the migrants would infect their community with crime, filth, and disease.

Yet migrants have been working in the fields near Shiloh since World War II when local farm manpower became scarce. Several labor camps have operated for years just a few miles away.

Most of the camps are hidden away along side roads on the outskirts of town. Many migrants live right on the farm at which they work.

It's easy for the average citizen to forget about the migrant's existence—until he reads about a stabbing or sex attack in a labor camp or finds an empty half-pint bottle on his property.

WELL-BEHAVED AND EDUCATED

The farmer sometimes talks about the migrants with touching solicitude.

"He's a human being, just as civilized, well-behaved and educated as our local workers," said McWilliams, who is Dorchester County's biggest employer of migrants.

Nevertheless the farmer is first to howl against any effort to guarantee minimum standards of decency to the migrant in housing, health, or education.

This summer McWilliams bought 70 beds, 100 mattresses and paid $100-a-month electrical bills for his migrants. The water they drink, he insists, is just as good as his own.

McWilliams cannot understand why anyone wants to force him to observe minimum housing standards.

In 1957 the Maryland Department of Health made an exhaustive study of migrant living conditions. It found that 66 percent of the camps had unapproved water systems. Privies in 72 percent of the camps were below minimum sanitary standards.

Housing in general was found to be in an unsound and dilapidated state.

A survey of the three Eastern Shore counties, Dorchester, Caroline and Somerset, which depend most heavily on migrant labor, did not refute these findings.

HEALTH OFFICIALS POWERLESS

Yet health officials are powerless to act since labor camps are not under their control. Without a vote, the migrant is readily overlooked by the politician.

"I've never been in a migrant camp in my life," said Senator Frederick C. Malkus, who has represented Dorchester County in the legislature for 13 years. Malkus thinks the migrant is a local problem in which he, as a lawmaker, should not meddle.

If a migrant is hurt on the job, there is no formal machinery for getting him into a hospital. At best he gets medical attention through the back door, with the help of a minister.

Local citizens, who know the migrant cannot pay his hospital bill, are resentful.

As a nonresident agricultural worker, he is exempt from workmen's compensation, unemployment and minimum wage safeguards. Organized labor sometimes looks sympathetically at his plight, but has made no serious attempt to do anything about it.

Maryland this year took its first step toward opening a window into the forgotten world of the migrant. Last winter the legislature and Governor J. Millard Tawes created a Commission on Migratory Labor similar to agencies that exist in 23 other States.

MINIMUM HOUSING CODE

This group 2 weeks ago proposed a minimum housing code, such as Pennsylvania, Delaware, New Jersey, and New York have already adopted.

When it is unveiled at public hearings, it will probably be denounced by the Eastern Shore's growers.

There have been a few exceptions to the general apathy over the migrant's lot. Foremost is the National Council of Churches which has attempted, through its "Migrant Ministry," to cultivate "a sense of personal worth, belonging and responsibility" in the migrant.

"Considering the amount of work the migrant does and the money he brings into an area, State and county officials should take more responsibility for his welfare," said the Reverend Carlton W. Veazey, a 23-year-old Howard University divinity student serving on the Migrant Ministry.

At Westover Camp near Princess Anne the council runs a model day care center for migrant children. Two more are in operation at Hurlock, Md., and Staytonville, Del.

CENTER IS IMMACULATE

The Westover center is staffed all summer by two Somerset County teachers. Each child has a desk and clean cot. The center, once a ramshackle farm cabin, is kept in immaculate condition. But most migrant children who are too young to pick still wait for their parents in the bus or the truck which carries them to the field, just as other children have for years.

At Preston in Caroline County, the State Health Department has opened a clinic for expectant and new mothers. Migrants are also being tested for venereal disease and tuberculosis.

"There are still many gaps left uncovered," said the Reverend Samuel A. Snyder, Jr., the Migrant Ministry's southeast regional director.

"The basic problem of the migrant is his nonresident status," added Mr. Snyder. "Help comes to him only on an emergency basis."

Invite to Khrushchev—The Pearl Harbor of 1959

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 17, 1959

Mr. LANE. Mr. Speaker, in ancient times, an army was laying siege to a walled city.

Finally realizing that it could not conquer the city by direct attack, it conceived the stratagem of building a huge wooden horse and presenting it to the people of the city, as a sign of friendship and coexistence.

Impressed, the people pulled the generous gift inside the walls, but made sure to lock the gate. That night, when all but the guards on the walls were asleep, secret doors in the hollow horse were opened, and armed men poured out to capture the city from within.

Our Government, in 1959, says: "Why not make it easier?"

And so it has opened the gates and has invited the besieger—Khrushchev—to come in and enjoy the hospitality of his intended captives. Wearing the mask of friendship while respectability is conferred upon him by those who are so anxious to appease, he will score the greatest propaganda victory in the history of communism.

Not all Americans or editorial writers agree with this open-the-door policy toward communism.

The Lawrence Sunday Sun, published in Lawrence, Mass., believes this invitation to be a political blunder that is similar to the visit of two Japanese diplomats in 1941 who were talking peace at the very moment that their air fleets were taking off to bomb Pearl Harbor.

I recommend for your attention the hard-hitting editorial titled "The Baby Kissers," from the August 16 issue of the Lawrence Sunday Sun:

THE BABY KISSERS

Not too long ago, some wag in the newspaper field typified the provincial American politician as an arch baby kisser, on the presumption that seekers of public office could win more votes by paying attention to youngsters in carriages than by direct vocal appeal to the parents. It could be that this holds true today, because most adults like to bask in the imagined sunshine of the fellow who happens at the moment to hold the center of the stage.

In center stage today is a character known as Nikita (Nick) Khrushchev, the No. 1 figure in Russian politics.

Nick is preening his feathers and strutting around the international barnyard in preparation for his visit to the United States of America next month, on which occasion the powers-that-be in this land of the free will roll out the long Red welcome mat and spread the board lavishly with vodka, caviar, champagne and all the other fixin's which are a familiar part of our way of doing things on this side of the world. Thankfully, we have plenty of these items. The bill for them will be included in the national budget and you and we shall find ourselves picking up the check.

Nick will grow fat during his stay in our dining room. He will feast on the best things of life. More importantly, he will dine to the gorging point on the propaganda which the world will pour over his communistic head.

We'll qualify that last statement. He will wax fat on the tears of all the millions of people of the far-off places of our sphere who have been existing under the heel of and in the yoke of the most brutal government and political philosophy in all of history.

Looking back nearly 20 years, we have fresh in our memory a "friendly" visit by two Japanese diplomats to Washington. While they were here on a mission of good will, the sneak attack on Pearl Harbor occurred, setting off a worldwide armed conflict that cost millions of lives.

Do you remember how long it took Russia—Red Russia—to get into that fight? The wily Commies waited until they were sure of which side was winning, and they stepped in and grabbed all the glory that was lying around—grabbed all the booty they could get, and that was plenty.

It has been estimated that some 10 million Russians died in that war; not necessarily men bearing arms, but the people of the bombed-out cities; the women and children enslaved by Nick and his gang. Even "Uncle Joe" Stalin was a sacrifice to the insatiable Commie lust for gain.

Is there any reason why we should trust Nick today after the manner in which we placed our innocent confidence in the two Japanese delegates who were patting Roosevelt on the head while their bombs were dropping on our Pacific Fleet and on Henderson Field nearly two decades ago?

Nikita Khrushchev is a rat representing a swarm of rats in the gang which has set itself up as the representatives of the good people of Russia. He and his mob figure there is a lot of choice cheese in the United States of America, and that once they have tunneled their way into this almost-last bastion of democracy, they can undermine it and pull the rest of the world down with it. That is the avowed aim of communism: To dominate the world. It's not a new objective by any stretch of the imagination. Ages ago, Genghis Khan tried it and slaughtered his way to the gates of Rome, all away across the blood-drenched fields from the Orient to the seat of Western culture.

The Caesars tried it and eventually came to doom, only to be overrun by the Huns they set out to vanquish.

Napoleon ventured into the matter of world conquest and eventually was smeared.

The infamous Kaiser Wilhelm responded to the urge to subjugate the world and what happened to him is still fresh in the minds of multiple millions of people living today.

The Japanese Empire fell into the same terrible trap.

The Communists are still riding high, wide, and handsome—tall in the saddle—over the graves of millions of people slaughtered in the now enslaved little nations of our increasingly small world.

Now, in a futile gesture to give some assurance of peace within our time, we are going to entertain Nick-the-Knifer in this wonderful, free land of ours in exchange for the welcome given RICHARD NIXON in Russia—a visit that backfired even on the propaganda experts of the Commie regime. Let us give him as his only welcoming "honor guard" the Hungarian refugees who have sought sanctuary here.

The Great Disillusion

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, August 19, 1959

Mr. WILEY. Mr. President, we recognize that an important battle between freedom and communism is taking place in the vast reservoir of land, natural resources, and people in Asia.

With cultural, educational, religious, philosophical, and other traditions differing from our own, Asia has been a particular challenge for the free world in terms of combating communistic penetrations, by efforts to present our own ideas and ideals of freedom.

Fortunately, a substantial number of countries and people of Asia speak the language of freedom. Through these voices, as well as through our own policies and programs, efforts are underway to counter the offensive of communism.

Unwittingly, the Communist ideology, itself, sometimes serves as its own enemy. The crushing of the people of Tibet by the Chinese Communists is a prime—but terrible—example of communistic ruthlessness that is rudely awakening the Asian people to the dangers of communism. In addition, among Asiatic nations there is an increasing awareness of the real threat which that despotic, atheistic way of life poses for them.

Although the signs of a new awakening in Asia to the dangers of communism are heartening, we must not delude ourselves that victory will soon be achieved—and all by itself. Rather, our policies and programs designed at blocking expansion tactics of the Communists must be continued—and, as necessary, expanded—to deal effectively with the challenges in that area of the globe.

The New York Times of August 17 published an informative editorial entitled "The Great Disillusion." The editorial outlines the ways in which the Asian people and nations are becoming increasingly aware of the great dangers of communism. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE GREAT DISILLUSION

The great change in Asian attitudes toward communism since the days when Premier Chou of Communist China beguiled the Bandung conference of 1955 with his pleas for peaceful coexistence is demonstrated anew by some of the latest developments. The change, building up slowly as Asia watched China sink into slavery, received a tremendous impetus from the Chinese Communist rape of Tibet, which was to Asia what Czechoslovakia and Hungary were to the West. Now more and more Asian countries begin to feel the hot breath of the Chinese Communist dragon and are beginning to look to their defenses.

The most notable convert to this new attitude is Prime Minister Nehru of India, long a defender of Communist China and still a proponent of its admission to the United Nations. Having had to oust the Communist regime in the Indian state of Kerala, he now sees the Chinese Communists massing troops in Tibet, violating Indian trade agreements with that country and vowing to "liberate" Indian territories while at the same time launching a virulent propaganda campaign against Indian imperialism. As a result, despite continued caution Mr. Nehru has been compelled to tell Parliament that he has protested to Peiping against both the propaganda and the violations and to serve notice that India will defend its borders against any Communist encroachment.

Increased defense measures against Communist infiltration from Tibet have also been announced by Premier Koirala of Nepal.

In Laos, which is actively fighting a Communist rebellion and a Communist invasion from North Vietnam, crowds at the national capital cheer Premier Phoui and roar defiance to the Communists. Burma, after 6 years of rejecting it, has now asked for American aid. And even in Indonesia, where President Sukarno has been flirting with the Communists, the tide is turning and the Communists have been told by the military authorities to cancel their party congress.

This recognition of a common danger has not yet ripened into a common defense front. But the way the wind is blowing is indicated by Premier Kishi of Japan who, after studying the collective defense arrangements in Europe, is pressing for a firm military alliance between his country and the United States in which Japan would assume added defense responsibilities. And talks are apparently underway for a new alliance linking Japan, South Korea, the Philippines, and Taiwan. Asia is awakening, not to Communist siren calls but to the Communist thunder, and the free nations are beginning to see more clearly eye to eye on the great issue confronting them.

Widespread Significance of Home Rule

EXTENSION OF REMARKS
OF
HON. RALPH J. RIVERS
OF ALASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. RIVERS of Alaska. Mr. Speaker, although the issue of home rule for the District of Columbia has played a prominent part in the news reporting and editorial comment and in reporting by other news media in the District of Columbia, it has not been a matter given major coverage in most other parts of our country. Nevertheless the vigor of the basic principles upon which our great Nation was founded continues unabated throughout our land, as manifested by the following resolution adopted by the City Council of Anchorage, Alaska, urging action by the Congress to bring about home rule for the District of Columbia. The resolution follows:

CITY OF ANCHORAGE, ALASKA, RESOLUTION 1059 URGING ADOPTION OF HOME RULE LEGISLATION FOR THE DISTRICT OF COLUMBIA

Whereas local self-government is the bedrock of free government;

Whereas the rights and benefits of local self-government should be available to all American citizens;

Whereas the residents of the District of Columbia are denied the rights and benefits of local self-government;

Whereas the Congress of the United States has the authority to assure local self-government by granting home rule to the District of Columbia;

Whereas the principle of home rule has been endorsed by a substantial majority of the residents of the District of Columbia;

Whereas the Board of Commissioners of the District of Columbia have unanimously endorsed proposals for granting home rule to their city; and

Whereas the Senate has passed a home rule bill for the District of Columbia five times during the last 10 years, while in the same period such measures have been bottled up in the District Committee of the House of Representatives, and no hearings held: Now, therefore, be it

Resolved by the City Council of the City of Anchorage, Alaska:

1. That the Congress be, and it is hereby, urged to approve home rule legislation to assure local self-government to the residents of the District of Columbia; and be it

2. *Resolved further*, That members of the House of Representatives be urged to sign a discharge petition so that the Commissioners' bill, otherwise known as the Territorial bill, be brought on to the floor of the House so that the full membership can have the opportunity at last to vote on the measure; and be it further

2. *Resolved*, That a copy of this resolution be forwarded to the President of the U.S. Senate, to the Speaker of the House of Representatives, to the majority and minority floor leaders of the Senate and the House of Representatives, and to the State delegation to Congress.

Publication of this resolution shall be made by posting a copy hereof on the city hall bulletin board for a period of 10 days following its passage and approval.

Passed and approved by the City Council of the City of Anchorage, Alaska, the 11th day of August 1959.

HEWITT V. LOUNSBURY, *Mayor.*

Attest:

B. W. BOEKE, *City Clerk.*

Labor Reform

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 19, 1959

Mr. THURMOND. Mr. President, yesterday I offered for insertion in the Appendix of the RECORD a number of editorials from daily newspapers which are circulated in South Carolina on the subject of the need for favorable Senate action on a strong and effective labor reform bill.

Since that time another editorial from another South Carolina newspaper has come to my attention. The editorial entitled "House Action on Landrum-Griffin Bill Promises Labor Legislation" was published in the August 18, 1959, issue of the Florence Morning News of Florence, S.C. I ask unanimous consent that this excellent editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Florence (S.C.) Morning News, Aug. 18, 1959]

HOUSE ACTION ON LANDRUM-GRIFFIN BILL PROMISES LABOR LEGISLATION

After the House passed the Landrum-Griffin bill by a safe majority, on a vote said by the Democratic whip to have been the largest in that Chamber's history, the conference committee should encounter no insurmountable difficulties in reconciling it with the Senate's Kennedy-Ervin measure.

For one thing, the size of the total vote serves notice that the American people want a labor reform law and will have little patience with any deadlock over anything that to them might appear relatively minor. For another, the House debates and several votes have made clear how close together the three bills—the Landrum-Griffin, the Elliott, and the Kennedy-Ervin—have been in all save one major area. All three have dealt in relative degrees of firmness and detail with safeguards around union funds, democratic procedures in conduct of union internal affairs, and against convicted felons occupying official positions in unions, in employer associations, or as labor-management consultants.

The major area of difference now pertinent between the House and Senate measures embraces secondary boycotts and blackmail picketing. The former extends Taft-Hartley prohibitions to all industries and to threats as well as to actual strikes against secondary employers. By an extraordinary, prearranged colloquy with the sponsors of the Landrum-Griffin bill the House put into the record for the guidance of courts and, no doubt, of the conference committee, a clue to its intention not to draw a hard, fast line around its definition of secondary.

As for blackmail picketing: The two bills differ chiefly in the length of time they require after a representation election before any union not thus chosen may picket for recognition.

By amendments the House made a move toward the Senate's position by striking out injunctive authority in enforcement given the Secretary of Labor, and away from the text (although toward the tone) of the Senate bill by reducing the severity of criminal penalties for violations of the bill of rights.

The Senate had dealt lightly with secondary boycotts and picketing, hesitatng to write restrictions that might upset the balance in bargaining strength between industry and labor. The House evidently felt that these tactics have been so exploited by the wrong kind of union leadership to keep itself in posts of power that they should be curbed in the interests of decent unions and honest labor-management dealings.

But the Landrum-Griffin bill is not a watered-down bill as industry should view it. And, reconciled with the Kennedy-Ervin bill, it should not be a tough, certainly not an unfair, bill from the standpoint of labor. Much will depend on how the precise wording of the final product works out as applied to specific stuations. The administrative bodies and the courts are usually reasonable. And should major revision later prove needed there will come other Congresses.

Irresponsibility in the House

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 10, 1959

Mr. ALGER. Mr. Speaker, an editorial in the New York Herald Tribune, entitled "Irresponsibility in the House," described the action taken in the Ways and Means Committee on interest rate ceiling, a matter of grave importance to our Nation. I submit it to my colleagues and to the people as an accurate and brief analysis of the facts:

IRRESPONSIBILITY IN THE HOUSE

The House Ways and Means Committee last week voted 15 to 10 in favor of a compromise bill giving the President authority, for 3 years, to lift the present 4¼-percent interest rate ceiling on Government bonds when necessary. Behind this was the simple fact that going market rates are above 4¼ percent, meaning that the Treasury has been unable to market long-term securities—the only ones to which the ceiling applies. Yesterday the same committee suddenly reversed itself, voting 14 to 11 to pigeonhole the measure it had previously approved. All 14 votes for pigeonholding were cast by Democrats.

From the start congressional Democrats have treated the interest rate issue as a political football, hoping to use it as a means of pinning on the Republicans a phony "high interest party" label.

But interest rates are merely the price of borrowed money, and are set by the forces of a free market. Without freedom to adjust to these forces the Treasury hasn't the means to manage the national debt soundly. Yesterday's action was not only fiscally imprudent but politically irresponsible.

Youth Conservation Corps

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Wednesday, August 19, 1959

Mr. WILLIAMS of New Jersey. Mr. President, one of the most successful projects of the Roosevelt administration was the establishment of the Civilian Conservation Corps. And I am glad to know that the experience we gained from the job the CCC did prior to World War II in giving useful employment and at the same time rehabilitating and improving our national forests and parks has not been lost. I refer, of course, to the bill to establish a Youth Conservation Corps which passed this body last week.

Sponsored by the senior Senator from Minnesota, the ideas embodied in the original CCC have been updated to solve the growing conservation needs of our nation and, at the same time, help our youths who are faced with uncertainties as to employment as they leave school.

I believe this extremely worthwhile program will insure a better future for many Americans.

I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Camden Courier Post of August 19 which describes the job this corps can do.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REVIVED CCC MIGHT DO GREAT JOB

By the narrow margin of 47 to 45, the Senate has voted to approve a program that would amount to a revival of the Civilian Conservation Corps. It may be recalled that this was one of the most successful New Deal projects in the early administraton of President Franklin D. Roosevelt.

The program would start with 50,000 boys between the ages of 16 and 21, and grow to 150,000. It would be a Federal-State operation, with participating States required to match Federal expenditures. The latter are estimated at $125 million for the first year, growing to $375 million in the third and later years.

Youths enrolled in the program would receive $60 a month plus subsistence, with increases for those who reenrolled, for leaders, and for those showing special skills.

The program is sponsored by Senator HUMPHREY, of Minnesota, 19 other Democrats and 1 Republican. Its principal objective is declared to be the development and conservation of natural resources and maintenance of rest and recreational facilities in the national parks, forests, and wildlife refuges.

Second, the program is advanced as "an investment not only in conservation of natural resources, but in the conservation of youths who face uncertainties as to employment as they leave school." Its proponents say the number of youths in the 16–21 age group is increasing faster than employment opportunities. This, they say, creates the chance of a large number of them being turned out on the streets to become potental juvenile delinquents.

"The corps would not be juvenile delinquency oriented," says one sponsoring Senator, but "is not intended to exclude young men because they have been apprehended by juvenile authorities."

Recruits for the corps would come in part from areas of substantial unemployment and in part from other areas under a State-by-State quota system.

Opponents of the plan, mostly Republicans, say it would amount to instituting a depression program during an era of prosperity. They claim it is deceptive in that its main aim is actually to help solve the delinquency problem, not conservation of natural resources as its advocates assert. They predict that President Eisenhower will veto the bill if the House passes it.

The prediction may turn out to be erroneous. Both the objectives of the bill seem worthy enough. It doesn't particularly matter which is the man objective and which the secondary.

The CCC did a great job of giving useful work to idle hands during the years prior to World War II. It also did a great job, which has not been adequately done since, in rehabilitating and improving our national parks and forests. The money the Senate has proposed to spend in reviving this youth corps might turn out to be exceedingly well spent.

Amending Section 5801 of the Internal Revenue Code

SPEECH
OF
HON. CECIL R. KING
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 18, 1959

Mr. KING of California. Mr. Speaker, the purpose of H.R. 4029 is to amend the National Firearms Act to eliminate the proration of the occupational tax on persons dealing in machineguns and certain other firearms, to reduce the occupational and transfer taxes on certain firearms, to make the transferor and transferee jointly liable for the transfer tax on firearms, and to make certain technical changes in the definition of the term "firearm."

The National Firearms Act—sometimes referred to as the Machinegun Act—was enacted by the 73d Congress in 1934 to provide a making and transfer tax of $200 on machineguns and certain specified firearms which has become a national crime problem in the prohibition era. In addition to machineguns, the act applies to a silencer for a firearm and to sawed-off rifles and shotguns. The law does not apply to pistols and revolvers or to ordinary sporting rifles and shotguns. Any weapon defined as a firearm by the National Firearms Act is required to be registered with the Department of the Treasury and becomes subject to the prohibitive tax provision of the act. Several technical provisions of the law have resulted in a severe hardship on law-abiding gun owners and particularly gun collectors without adding to the effectiveness of the act as a crime prevention measure. Also, at least one provision in the law has left open a loophole by means of which unscrupulous persons have been able to evade the tax which Congress decreed should be placed upon the transfer of machineguns. It is the purpose of my bill to correct these technical shortcomings.

The National Firearms Act provides in part that a shotgun or rifle having a barrel of less than 18 inches in length is a firearm and subject to the $200 making and transfer tax, except that rifles of .22 caliber are exempt if the barrel length is 16 inches. An area of inequity arises here from the fact that a number of popular sporting rifles and a number of rifles having great value to gun collectors have barrel lengths just slightly under 18 inches. While such rifles could not be considered concealable, and while they do not enter into the crime picture, they still must be classed as a firearm subject to the taxation provisions of the law. It is one of the purposes of my bill so to amend the definition of the term "firearm" under the law that it will not apply to any rifle which has a barrel of at least 16 inches in length. This will mean that all rifles having a barrel length of at least 16 inches will be exempt from the law, not .22-caliber rifles alone as at present.

Another area of inequity from the standpoint of law-abiding shooters and gun collectors arises from the provision in the law which defines as a firearm, in addition to a machinegun or sawed-off rifle or shotgun, "any other weapon, except a pistol or revolver, from which a shot is discharged by an explosive if such weapon is capable of being concealed on the person." It is apparent from this language that Congress did not intend the prohibitive tax provision of the Machinegun Act to apply to pistols or revolvers. The law, however, does not define the terms pistol or revolver; and it, therefore, becomes a matter of administrative interpretation as to what is a pistol, excepted under the act, and what is any other weapon, prohibited under the act. We see here a complex administrative problem. If a particular weapon is clearly recognizable as a pistol or revolver, it meets a specific exception in the National Firearms Act. However, if the weapon is concealable and is not clearly recognizable as a pistol or revolver, then it must fall into the loose category of "any other weapon" and become immediately subject to a prohibitive $200 transfer tax.

Highly valued items to gun collectors are the guns which mark stages in the development of firearms from their earliest beginning. In the process of experimentation, trial and error, and plain American inventiveness which have led to the modern pistol and revolver, many strange firearms have had brief moments on the scene. Some are clearly recognizable as a step in the development of a modern pistol; others are not. Many, by administrative edict, now fall in the "any other weapon" category under the National Firearms Act and are, therefore, subject to its prohibitive controls.

Since pistols and revolvers make up the vast majority of weapons capable of being concealed on the person and, since for good and sufficient reasons the Congress felt that pistols and revolvers should not be included in the Machinegun Act, it would seem just and equitable that the full $200 transfer tax not be applied to the very small minority of concealable weapons which may be interpreted to be neither a pistol nor a revolver. To the contrary, it would appear that the purpose of the act would be better served by a nominal tax on this category of weapon which would permit them to be possessed and traded by gun collectors while retaining the records and controls now maintained by the Department of the Treasury under the National Firearms Act.

Experience through the years has demonstrated that the type of concealable weapon controlled under the National Firearms Act which has most frequently figured as a crime problem is the weapon that is made from a rifle or shotgun by cutting it down in length so as to make it concealable on the person. Under the present law, if a rifle or shotgun is altered by cutting off the barrels so that the barrel length is less than that prescribed in the definition of a "firearm," then the weapon clearly becomes subject to the criminal provisions of the law. In many cases, however, the criminal not only cuts off the barrel of a conventional rifle or shotgun but also may cut off the shoulder stock and thus create a one-hand weapon of greater concealability than had he sawed off the barrel alone. In the past, criminals apprehended with such weapons attempted to avoid prosecution on the ground that the weapon they created by cutting off the barrel and the stock of a shotgun or a rifle was in fact a pistol since it was a one-hand weapon. In the view that it was just this type of criminal weapon that Congress sought to control in the National Firearms Act, I am suggesting an amendment to the definition of the term "firearm" by adding the language, "or any weapon made from a rifle or shotgun—whether by alteration, modification, or otherwise—if such weapon as modified has an overall length of less than 26 inches."

The National Firearms Act provides for an annual $200 tax for persons engaged in the business of dealing in machineguns and those categories of weapons defined as "firearms." At present the payment of this occupational tax may be prorated on a monthly basis established on the fiscal year. It has been called to my attention that certain persons other than bona fide dealers have been able to take advantage of this provision to avoid the payment of the transfer tax on machineguns by paying the dealers' occupational tax for 1 month only. A person engaged in the business of dealing in machineguns and who has qualified for and paid the occupational tax provided for in the law is permitted an exemption from the transfer tax. As the law now stands, a man may qualify as a machinegun dealer in June by paying only one-twelfth of the normal $200 dealers occupational tax. He may then purchase machineguns without paying the $200 transfer tax and, at the end of June, may simply elect not to renew his dealer's status by paying his occupational tax for the following year. It is one of the purposes of my bill to remove the pro rata feature with respect to the occupational tax so that a person qualifying as a dealer, engaged in the business of dealing in machineguns, will pay the $200 occupational tax for a year or fraction thereof.

Another weakness in the present language of the law has been that the transferor alone has been responsible for the transfer tax on machineguns. If, through false pretenses, an individual not actually a bona fide dealer has been able to secure a machinegun transfer tax exempt, the Government has no recourse since no liability for the tax rested on the transferee. The purpose of my bill is to correct this by providing that, if a firearm is transferred without payment of the transfer tax, the transferor and transferee shall become jointly and severally liable for the tax.

The amendments I suggest will improve the enforcement of the National Firearms Act with respect to machineguns and sawed-off shotguns and will at the same time, alleviate some of the inequities that plague gun collectors and shooter-sportsmen without contributing to the effectiveness of the law.

Visit of Premier Khrushchev to the United States

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Wednesday, August 19, 1959

Mr. DODD. Mr. President, a few days ago I received a letter from the mayor of Bristol, Conn., the Honorable James P. Casey, a letter which was characterized in the Connecticut press as an attempt to dissuade me from my opposition to the visit of Nikita Khrushchev to this country.

Mayor Casey's letter is an illustrative example of the widespread misunderstanding of the position of those who oppose this visit, and it is representative of what I consider to be the confused thinking of many well-meaning and influential Americans.

Mr. President, I ask unanimous consent that Mayor Casey's letter and my reply be printed in the Appendix of the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

CITY OF BRISTOL,
OFFICE OF THE MAYOR,
Bristol, Conn., August 11, 1958.

The Honorable THOMAS J. DODD,
Senate Office Building,
Washington, D.C.

MY DEAR TOM: Remember when Harry Truman in 1948 was counted out by the political wiseacres and Tom Dewey enshrined in the White House even before voters went to the polls? In a "give 'em hell" campaign the former President got up off the deck and proceeded to knock the stuffings out of Dewey with a total disregard for the Marquis of Queensbury rules.

It was a grand, rough and tumble brawl. The American people responded with cheers and huzzahs for the little guy who took on the Republican behemoth, then Governor of New York State. As I recall, you were the only politician in Connecticut who gave Truman a chance in the elections, and, in fact, seconded his nomination at Philadelphia. The rest of the Connecticut delegation floundered around ready to throw its support to any one but the man who made it—even to one man name of Dwight David Eisenhower.

It seems to me that, lacking a crystal ball, no one can predict the results of Nikita Khrushchev's grand tour of the United States. The Communists after 40 years of intensive propaganda, brainwashing, and wholesale butchery have failed conspicuously to convert the people in the satellite countries to the joys to be had in the workers paradise.

Consequently, I don't think that at this point the American people are going to be infected by the Communist virus if Nikita in the Kremlin shows his face in America. A look at the greatness, the power and the glory of the United States and a realization of the spiritual forces which inspire men and women here may deter him from throwing his Sunday punch. After all, a talkathon between President Eisenhower and the Russian Premier is preferable to extermination by a hydrogen bomb.

This brings us to DICK NIXON and the union of the United States and Poland, and Lord knows how many more of the enslaved peoples of Europe and Asia. NIXON took on Khrushchev in the latter's own back yard, on the home grounds so to speak, not in a contest of haughty words and stinging phrases, with 5,000 miles separating the combatants. NIXON slugged it out toe-to-toe with Nikita and the "you-don't-know-everything" retort was a crack heard round the world.

NIXON's tumultuous reception in Poland was also a startling revelation. Americans have always felt confident and sure that, in an abstract way, the people in that benighted country were on our side. The instant, spontaneous expression of love and friendship, in the face of their oppressors, I believe, however, to be unprecedented in the whole history of mankind. The Poles love the United States and its people. They want to identify themselves with us and this in defiance of the Kremlin gangsters. NIXON was a symbol of America and, while it truthfully may be said that any other man, officially representing the United States as Vice President, would have been received in like manner, the fact is that it was he who brought it off.

Poland, like Ireland during the massacres in the mid-17th century, has through history suffered one terrifying blood bath after another and, in each instance, has emerged more than ever determined to fight for a freedom that is so essential to man's salvation.

In the Warsaw demonstration there has been unveiled a secret weapon on the Communist front that scientific research or inventiveness can neither create nor destroy; namely, the spiritual fire which consumes a devout people in its fight for peace, freedom and justice. It is as though the old and neglected Christian virtues had taken on new life and vigor in an age wherein materialistic values have seemed to be transcendant.

Americans cannot help but rejoice with the Polish people in their collective, bulldog resistance to the power and barbaric tyranny of the Communists. Newsmen with NIXON

have reported that, with the exception of Moscow, the American entourage was warmly and enthusiastically received in cities throughout Russia and this in itself should give pause to the more reckless impulses of Nikita and the bureaucrats in the Kremlin.

Khrushchev had better take another look into the mind and soul of his Russian subjects and those in adjacent areas before he embarks on further adventures in his quest for other worlds to conquer.

Your many friends in Bristol hope and pray that you have recovered from the food poisoning which recently caused you to be hospitalized and that as of now you are well.

Sincerely yours,

JAMES P. CASEY.

AUGUST 14, 1959.

The Honorable JAMES P. CASEY,
Mayor of Bristol, Conn.

DEAR JIM: I have received your letter after already reading the published version of it in the Connecticut press.

You say that you don't think "the American people are going to be infected by the Communist virus if Nikita in the Kremlin shows his face in America." Apparently you are suggesting that this is my view. If that is your inference, then I must say that it is an absurd caricature of the position which many of us hold concerning Khrushchev's visit. I do not believe the American people will be infected or converted by Khrushchev, but I do feel that they will be disarmed and put off their guard.

I oppose the visit for a number of reasons.

First, a White House summit meeting with Khrushchev represents a major diplomatic defeat. Our Government, which has insisted that there could be no such meeting without prior concessions by the Communists, has backed down, and the world knows it.

Second, it is a major moral defeat. Our people are asked to welcome to our shores as an honored guest an infamous dictator who was personally responsible for the murder of countless thousands and who is the embodiment of the system of atheistic tyranny which is the mortal enemy of all decent people.

Third, it is a major propaganda defeat. Khrushchev's visit will be made to appear as a great personal triumph which will discourage our friends in the satellite nations, confuse and soften up the people of the free world, and signify to the people of uncommitted nations that communism is legitimate, accepted, and in the ascendancy.

Fourth, it is a major ideological defeat. Our response to the challenge of communism has been ineffective because so many of the world's people do not understand the essential evil of communism and the inherent good of freedom. Visits by Khrushchev to the United States and other non-Communist nations will further blur understanding of the fundamental antithesis between communism and freedom.

Fifth, it will have the effect of a major military defeat. It will help delude the free world into thinking that all is well and that there is no need for the heavy sacrifices required to build up military strength.

I do not share your admiration for the conduct of Vice President NIXON in Russia. I thought that far too many of the Vice President's statements were superficial and weak.

He told the Russian people that Khrushchev was "a self-made man who worked himself up from the bottom," as if it were unimportant that he had done so through mass murder, treachery and the betrayal of his own people. He placed primary emphasis on the luxuries and conveniences which our people enjoy, when he should have been talking about our freedom and our faith in God.

I am surprised that you should consider the pro-American reception which NIXON received in Poland as a startling revelation. Anyone who has followed conditions in Poland should have expected it. Approval for the United States was one way in which the Polish people could publicly express their hatred for the Communist system which has enslaved them. The NIXON reception was merely a verification of what many of us have been trying to bring home to the American people for many years. I am sure that our act of welcoming Khrushchev to the United States will dishearten the Polish patriots who greeted NIXON.

This morning's Washington Post carried an account of the arrangements which our Government is now making to procure Communist flags which will be flown all over Washington during Khrushchev's visit. You perhaps regard this sort of thing as a step forward but I do not share your enthusiasm.

I know that you must have spent some time in preparing your letter and I have, therefore, tried to answer it in detail.

Sincerely yours,

THOMAS J. DODD.

Paying as We Go

EXTENSION OF REMARKS
OF
HON. CHARLES M. TEAGUE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 19, 1959

Mr. TEAGUE of California. Mr. Speaker, under leave to extend my remarks, may I call the attention of my colleagues in the Congress to an excellent editorial appearing in the August 14, 1959, edition of the Oxnard (Calif.) Press-Courier, entitled "Paying as We Go":

PAYING AS WE GO

Yesterday's news from the House Ways and Means Committee indicated that the Federal highway program would be continued without fastening a new bonded debt upon the Nation.

The compromise the committee agreed to would sustain the principle of pay-as-you-go highway building. The gasoline tax would be increased from 3 cents to 4, for a period of 22 months, beginning September 1. Then a part of the automobile excise tax would be diverted from the general fund to the highway fund.

The higher gasoline tax maintains the practice of asking the motorists who use the highways to pay for them. They don't object too much, although the automobile associations and the oil companies and the automobile makers don't like it.

By agreeing to take a bite out of the excise tax on automobiles the House committee, in effect, said that there would be no early reduction or elimination of this tax. That, too, is a continuing hardship on the automotive industry, which would like to eliminate the excise tax and thus save the customer 10 percent of the cost of the automobile.

But what would you do? There is a clamor for the Federal highway program. The traffic load on the highways grows daily—and so do the risks of motoring. The ambitious Federal program will do much to relieve this congestion. Continuing the program will continue employment and help the industries that supply the materials. The Governors a few days ago in Puerto Rico, when they got down to business other than weighing Nelson Rockefeller's presidential chances, asked that the highway program be maintained, suggesting bond issues.

If we want these desirable things, we ought to be willing to pay for them. If we need them badly, then again we ought to be willing to pay the cost to satisfy the need. It is a sorry custom to pass on to our children and grandchildren the burden of payment. They have no voice in accepting or rejecting the burden.

The compromise agreed to by the committee may not get through Congress, which is still largely populated by Members who want to order all kinds of projects "for the public good" without providing ways of paying for them.

The compromise on the highway program is not all that the President wanted. He asked for a straight cent-and-one-half increase in Federal gasoline taxes. It is not what the gay spenders wanted; they tried to think of financing measures that would postpone paying the bill with no tax hike. The compromise finally agreed to provides at least for using cash and not promises to pay in the future.

There could be another benefit, although only an optimist would hope it will come to pass. When part of the automobile excise money is taken from the general fund and devoted to the highway program, the general fund will be shorted millions of dollars.

How will that be made up? The optimist will say that when this fund diversion begins, in about 2 years, Uncle Sam will cut down on some of his spending from the general fund, because he won't have as much cash as he has been accustomed to.

That may be a foolish hope. And yet economic sanity is gaining support, bit by bit. If the next President will fight for it as wholeheartedly as President Eisenhower is doing, the highways may yet be built and finished, and be paid for when they are done, and the national debt won't have a few more hundreds of millions of dollars piled on to the present staggering total.

Monroney's Brainchild

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 19, 1959

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a timely article on the proposal of the Senator from Oklahoma [Mr. MONRONEY] as carried in the Washington Post and Times Herald of August 19, 1959. The program of loans, not grants, is the key point in the setting up of in International Development Bank—IDA—as originally propounded by Senator MONRONEY several years ago. Carroll Kilpatrick refers to it—and it is—"MONRONEY's Brainchild."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MONRONEY'S BRAINCHILD—PROGRAM OF LOANS, NOT AID, KEY POINT OF INTERNATIONAL DEVELOPMENT BANK

(By Carroll Kilpatrick)

Secretary of the Treasury Robert A. Anderson's proposal for a billion-dollar Inter-

national Development Association (IDA), which will be the chief subject of debate at the annual meeting of the World Bank here next month, has three principal objectives:

1. To provide a new source of free world funds for the underdeveloped countries.

2. To persuade Western European countries and Japan to put more capital into these development programs.

3. To make fuller use of the so-called "soft" currencies which the United States is accumulating at an increasing rate every year.

IDA is the brainchild of Senator A. S. (MIKE) MONRONEY, Democrat, Oklahoma, who first conceived the idea several years ago after a trip to Southeast Asia.

FROM AID TO LOANS

MONRONEY thought it was important to shift from a program aid to one of loans. At the same time, he was impressed by the growing accumulation by the United States of foreign currencies, mainly from the sale of surplus commodities.

If these currencies could be used, MONRONEY argued, they would help promote American foreign policy without in any way hurting the American taxpayer. The United States is now holding about $2 billion in soft currencies. MONRONEY has estimated that in another year the total may reach $5 billion.

"A valuable new source of development funds may be opened," MONRONEY said. "With 30 or 40 local currencies to choose from, borrowers can work out ways to use larger quantities of these currencies by shopping in the world market for items they require for their development projects."

At first, the administration was cool to the MONRONEY idea. It began to take it seriously after the Senate Banking and Currency Committee held a series of hearings and strong support developed in the Senate.

Anderson's acceptance of the idea has drawn considerable criticism, however, mainly along these lines:

Most of the foreign currencies which the United States has accumulated really are of very little value, particularly when it comes to using them for purchases to help develop the backward countries.

The Europeans and Japanese won't put up enough capital for long-term, low-interest loans to have much effect on the tremendous need for capital that exists in Africa, Asia, and Latin America.

A lending institution with a capital of only $1 billion can make only a token effort. MONRONEY himself is on record as saying IDA should have "2 billion or more in hard currencies."

It is misleading to contend that a loan repaid in a soft currency is in fact fully repaid. It would be more honest to call the loan a giveaway in the first place.

All these questions have been argued back and forth for almost a year between Treasury officials and representatives of foreign countries. The debate will be continued when the annual World Bank meeting convenes here September 28.

AGENCY OF BANK

Anderson has sent a "guidelines paper" setting forth this country's views to the 67 other members of the Bank. Under the proposal, IDA would be established as an agency of the Bank to be administered by President Eugene R. Black, who has the full confidence not only of American officials but of many foreign financial authorities as well.

The World Bank makes loans on a strictly bankable basis. They must be repaid in 20 or 25 years at 5¼ percent interest, and repayments must be in hard currency.

IDA would be authorized to make loans repayable perhaps over 40 years at rates as low as 2 percent in a mixture of hard and soft currencies. According to MONRONEY, the World Bank "needs this secondary institution." It would serve to supplement hard loans with second mortgage financing, he said.

"The borrowing nation might be short on dollar or other hard currency earnings, and thus unable to repay 100 percent of the project cost in these scarce currencies over the short repayment time," MONRONEY said. "It would be permitted to repay IDA's second mortgage loan over a longer time at lower interest, partly in hard currency and partly in its own or other local currencies.

"An important part of this proposal is that IDA would mix hard and soft currencies when necessary in its loans and be repaid in a similar ratio."

Some of the sharpest critics of IDA are found in the World Bank's sister institution, the International Monetary Fund. Their criticisms may be reflected in the debates at the Fund and Bank annual meetings next month. But apparently Anderson believes that he has overcome the major resistance both in Europe and Japan and in the soft currency countries.

Not Sufficient

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 19, 1959

Mrs. ST. GEORGE. Mr. Speaker, as we drone on to an uneasy adjournment, it might be well to look back and note how successive Congresses have piled monetary agencies and committees one on top of the other until no one is responsible for anything and we have develped the greatest "buck passing" carousel in all history. How and why did we get into such a situation?

Mr. Speaker, perhaps the following editorial in the Wall Street Journal of August 19 gives the answer: "Not Sufficient."

And at the last, the power and wealth of the United States may prove to be not sufficient:

NOT SUFFICIENT

Once upon a time there was established the International Bank for Reconstruction and Development and the International Monetary Fund.

This was during World War II and the idea, in case you have forgotten, was to provide a capital fund for economic development loans and for currency loans to the war-torn countries and the underdeveloped countries of the world.

But this did not prove sufficient, and so we had the U.S. loan to Britain, the U.S. loans and grants under the Marshall plan and the U.S. loans and grants under the many names of what is now the International Cooperation Administration.

But this was not sufficient, and so we increased the resources of the U.S. Export-Import Bank.

But this was not sufficient, and so we set up the U.S. Development Loan Fund to make "easy" loan repayable in local currencies.

But that was not sufficient, and so the World Bank was broadened to include an International Finance Corporation to invest in special enterprises in underdeveloped countries.

But this was not sufficient, and so we are now organizing a Latin American Bank to make special loans south of the border, and we have proposed a similar Middle Eastern Fund to make special loans in that part of the world.

But this was not sufficient, and so this week the United States launched a campaign to establish a $1 billion world agency to be called the International Development Association. It will be used to spur economic development in underdeveloped countries on easier terms than those poor countries can get from the World Bank, the Monetary Fund, the Export-Import Bank, the U.S. Development Loan Fund, the Latin American Bank or the Middle Eastern Fund or the International Finance Corporation or from the International Cooperation Administration.

We just thought you'd be interested in knowing, since all of these roads lead directly to the U.S. Treasury, of what might be called the U.S. Taxpayers Cooperative Funds. The question in the end, we suppose, is whether that fund will be sufficient.

Eulogy to U.S. Flag

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Wednesday, August 19, 1959

Mr. WILLIAMS of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address given in my home State, New Jersey, by Lee A. Wiley, at Atlantic City on July 7, and "Eulogy to U.S. Flag," by a former Member of this body, the Honorable Albert W. Hawkes.

There being no objection, the address and eulogy were ordered to be printed in the RECORD, as follows:

THE APRON OF FREEDOM

(Address by Lee A. Wiley, illustrious potentate, Crescent Temple, A.A.O.N.M.S., Trenton, N.J., at the opening services of the 1959 imperial council session in Atlantic City on July 7)

Most worshipful grand master, imperial sir, illustrious sirs, distinguished guests, nobles, and ladies, I bring you the greetings of the more than 11,600 Masons who are members of Crescent Temple. Many of them are in Atlantic City for this great meeting of our Imperial Council of the Shrine of North America. They are prepared and eager to help you in every way possible.

At the parades, in the hotels, along the boardwalk and on the beaches, activity and happiness of every kind beckon you and your gracious ladies and we sincerely hope your stay here will be a most pleasant one in every way. Even though our beautiful mosque is located 75 miles away in the capital city of Trenton, Atlantic City is an important part of the oasis of Crescent Temple. On behalf of our Nobility, we cordially invite you to visit the Delaware Valley area as you return home from this pilgrimage. On your way up the Delaware River, you will find Burlington, the location of our beautiful Masonic home. In historic Trenton, you will find, in addition to our magnificent mosque, the oldest Masonic temple still standing in the State of New Jersey and one of the oldest along the Atlantic seaboard. It is used now as a museum and stands next to the present handsome Trenton Masonic Temple in close proximity to our

state house. After leaving Trenton, and on the outskirts of Philadelphia, you will see the Philadelphia unit of our Shriners Hospitals for Crippled Children.

We extend these invitations with pride because Crescent Temple has grown to be the tenth largest in our great fraternity in an area fraught with history and filled with indications of thoughtfulness of others.

The Shrine was formed, we are told, to find a means to relax from the more arduous work in the symbolic lodges. But no matter what relaxation the Shrine has given, Shriners themselves owe and give their first devotion to the most honored badge in the world, which we have chosen to call at this convention, the apron of fredom.

The Reverend Joseph Fort Newton in his book "The Builders," perhaps expresses the sentiment best. He said:

"Some day, when the cloud of prejudice has been dispelled by the searchlight of truth, the world will honor Masonry for its services to freedom of thought and the liberty of faith. * * * Down through the centuries * * * often in times when the highest crime was not murder, but thinking, and the human conscience was a captive dragged at the wheel of an ecclesiastical chariot * * * always and everywhere Masonry has stood for the right of the soul to know the truth. * * * Not freedom from faith but freedom of faith has been the watchword, on the ground that as despotism is the mother of anarchy, so bigoted dogmatism is the prolific source of scepticism. * * * Against those who would fetter thought in order to perpetuate an effete authority, who would give the skinny hand of the past a scepter to rule the aspiring and prophetic present and seal the lips of living scholars with the dicta of dead scholastics, Masonry will never ground her arms. Her plea is for government without tyranny and religion without superstition."

Government without tyranny and who has fought through the years for this great precept? We must say the fight has been by those who wear the apron of freedom.

Here in the United States, we are all well aware of the tremendous contributions made by Masons in the founding and development of our great country. In every country and in every clime, when tyrannical men raise their ugly heads to whip a docile people into submission, the first organization to be banned is the society of Freemasons. From Jacques DeMolay to Hitler and communism, it has been Freemasons, banded together by their esoteric symbolism, who have clung tenaciously to truth and freedom, and have fought to preserve them. God willing, it will always be true.

But more than political freedom, wearers of this apron of freedom have sought to bring other types of freedom to their fellowmen. In all elements of human freedom, education, medical research, and the relief of the distressed, our brethren of grand lodges, the York Rite and the Scottish Rite have done a tremendous amount of good.

To this we may add the great contribution that we are wearers of the red fez and this proud apron, have added with our work in freeing thousands of crippled children from their unfortunate bodily defects. Without the great work already accomplished, in the process of being done, and being planned by all of our brethren in various bodies, countless thousands would be unable to enjoy true freedom.

Channing said, "The only freedom worth possessing is that which gives enlargement to a peoples energy, intellect, and virtues. * * * Progress, the growth of intelligence, and power, is the end and boon of liberty." And so, Freemasonry has shown and is showing that it does believe in freedom, an all-inclusive freedom that is worth possessing. Masonry teaches love of our fellowman, a love that is translated in the help Freemasons ever have given to those less fortunate, whether they be members of our order or not. The blue lodges, the rites, and the Shrine have given of themselves and their treasuries that the glow of happiness might shine from the faces of those they touch.

The apron of freedom is not within the gift of prince or potentate; of commoner or president; of rich or poor; of saint or sinner. It must be sought by those who have faith that the light of truth must eventually prevail; that love of neighbor must be greater than love of self; that the soul is immortal and is the property of the individual, not the state. And once sought and received, it must be remembered that the receipt of this apron does not make a man a Mason, it only means that he is a member of a Masonic lodge.

Listen to these words from the Scottish Rite: "To sow that others may reap, to work for those who shall labor after we are dead, to be an inspiration in the lives of men yet unborn, to bless with the glorious gifts of truth and light and liberty those who will never know the giver * * * this, is the true office of a Mason and the proudest destiny of a man." And so there hangs on this stage a badge, a symbol—one of the greatest the world has never known—the apron of freedom, the theme chosen by our Imperial Potentate to permeate this session of the Imperial Council of the Ancient Arabic Order, Nobles of the Mystic Shrine.

Thank you.

EULOGY TO U.S. FLAG

(By Hon. Albert W. Hawkes, former U.S. Senator from New Jersey)

I salute our beautiful American flag, emblem of each of our citizens and symbol of liberty, justice and human dignity.

In this dark hour of history, when the ungodly, brute forces in man are seeking to impose their evil will, on people of good will, thereby destroying life, liberty, the pursuit of happiness, and equality under a rule of laws—your stars and stripes shine out more beautifully than ever.

Your silence is golden—you do not speak in words, but in the deeds which created you. Your 13 stripes of red and white, with a star for the sovereignty of each State, stand for decency in human relations, unity and strength, honor, loyalty, and courage to make the supreme sacrifice whenever necessary to preserve the principles announced in the Declaration of Independence and recorded in our Constitution, then guaranteed by the Bill of Rights.

The flag, speaking as it waves aloft, says to each citizen:

"I represent you all in honesty, justice, and the spirit of the Golden Rule. I can be no more, than you by your deeds, make me. Remember, up to date all nations which have ascended to leadership have ultimately failed and disappeared on the horizon of history. Perhaps, because they put the mad race for money, place and power in first place, and relegated character, morals, adherence to principle, and their trust in God to second place.

"I will remain with you always, if you keep faith with the principles under which I was born, and if you and each succeeding generation teach the next to do the same. Teach them never to forget the little white markers all over the world, and to keep faith with those men, and the millions of others, who offered to make the supreme sacrifice. Teach them the only way to keep faith with those who created our blessings and freedoms is to exercise their right of suffrage intelligently and have eternal vigilance, coupled with action on time.

"You will survive to do good on earth in perpetuity, only if you follow the rules of equity that flow from God's Commandments and the Golden Rule; only if you make our way of life good enough to impel any fair-minded citizen to make the supreme sacrifice, when necessary to preserve it.

"We have been blessed with fine neighbors to the North and to the South, whose announced objectives are similar to ours.

"God grant us and others the power to put first things first—avoid temptation—and in His name help humanity to rise to higher levels and better standards in Freedom's institutions here on earth."

A Bill To Expand the Advisory Board of the St. Lawrence Seaway Corporation From Five to Six Members

EXTENSION OF REMARKS

OF

HON. JOSEPH W. BARR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 19, 1959

Mr. BARR. Mr. Speaker, when the St. Lawrence Seaway Act was approved on May 13, 1954, it provided for certain administrative officers and an Advisory Board consisting of five men. There are eight States which are directly affected by the St. Lawrence Seaway—New York, Pennsylvania, Ohio, Wisconsin, Michigan, Illinois, Minnesota and Indiana. Every one of these States fronts either on the Great Lakes or on the seaway. When the Seaway Corporation was put together the Advisory Board was made up of men from Michigan, Wisconsin, Ohio, Pennsylvania, and New York. Illinois was represented by the Administrator and Minnesota was represented by the Deputy Administrator. Of all the States having a direct interest in the seaway, only Indiana was omitted.

I have this date introduced a bill which expands the Advisory Board of the St. Lawrence Seaway Corporation from five to six members. I am advocating this expansion in the hope that the sixth man will be chosen from the State of Indiana, so that Indiana can be represented in the development of this enormously significant undertaking.

The St. Lawrence Seaway still faces a tremendous number of problems. The locks are probably not as large as they should have been; the Welland Canal is proving a bottleneck that only permits a maximum of 28 ships a day to pass through its locks; and the canal itself is too narrow to permit the safe passage of ocean vessels moving in opposite directions. No one knows for certain whether or not the seaway will turn out to be as successful as we all hope.

The State of Indiana has a vital stake in making this seaway successful. I believe that it deserves to be represented on the Advisory Board.

The Halbouty Story

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, August 19, 1959

Mr. YARBOROUGH. Mr. President, Michel T. Halbouty of Houston, Tex., is an oustanding pioneer and leader in his profession—the oil industry. His activities have helped provide this Nation with the vitally needed petroleum products to keep the wheels of industry and—when necessary—weapons for freedom operating.

Mr. Halbouty has showed his leadership in many fields; geology, research, mechanics, and other phases of the complex industry.

Recently, the Inch magazine told the story of Mr. Halbouty's outstanding contributions to the oil industry. I ask unanimous consent to have printed in the Appendix of the RECORD an article from the spring 1959 edition of the Inch entitled "The Halbouty Story."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE HALBOUTY STORY

Genius, someone has said, consists partly of doing the right thing at the appropriate time.

In the oil business, Michel T. Halbouty is known as something of a genius. Whether it's taking just one more core, drilling in an area surrounded by dry holes, or risking millions on leases in an untested oil domain, Mike Halbouty seems to make the right move instinctively.

As a result, the dynamic Mr. Halbouty is recognized as one of the most outstanding geologists and petroleum engineers in the Nation, and is internationally respected for his scientific ability to find oil and gas. An authority on the geological and engineering problems of the gulf coast of Louisiana and Texas, he ranks as one of the top experts on the geology of piercement-type salt domes, those underground monuments to the earth's eccentricity that have trapped so much petroleum.

Rounding out his reputation as a triple-threat oil man, Halbouty is one of the most aggressive and successful independent oil operators in the country. Geologically responsible for the discovery of oil and gas fields and extensions all over the world, he is one of the growing number of producers who supply natural gas to Texas Eastern Transmission Corp.

A fearless individualist, Halbouty has become almost a legend in his own time by his refusal to develop preconceptions about Mother Nature. He doesn't subscribe to geological theories simply because others accept them. What's more, he always backs up his sometimes revolutionary experiments with his own money. On an amazing number of occasions, his ideas prove out.

Statistically, how does Halbouty stack up in a competitive, high-stake game where the dice are loaded 9 to 1 against finding oil or gas with a wildcat well? Pretty fair, according to the record. Over the past 10-year period, he's hit 44 percent of his wildcats, 86 percent of field development wells, and 67 percent of all wells drilled. Hardly anybody has taken such tremendous strides toward making an exact science of geology, generally considered an inexact one.

It's a giant step from a newsboy's bailiwick to a position of prominence in the rugged oil business. Mike Halbouty made it with a combination of scientific preparation, dogged perseverence, supreme confidence in his own judgment, and—as Halbouty is the first to admit—a generous helping of good luck. To understand how he did it, you have to go back 50 years. It's quite a story.

Born Michel Thomas Halbouty in Beaumont on June 21, 1909, Mike was one of six children of a hard-working Lebanese grocer. He grew up in a town where the smell of oil was heavy, and the wooden derricks of Spindletop were not too far distant. People stood on street corners and spoke of the geologic derring-do of Patillo Higgins and Capt. Anthony Lucas just as they do today.

When he was 6 years old, young Halbouty became a newsboy for both the Beaumont Enterprise and Journal. Even then, he was a hustler and a two-fisted scrapper. Some of the other newsboys didn't like the way he parted his hair (which, even today, is distinctly right down the middle). More especially, they didn't like the fact that his hawking spot, the old post-office corner, was the best in town. But Mike didn't relinquish that corner until several years later, when he went to work at the Magnolia Refinery, loading gondolas with coke in his spare time.

When he was 14 and a junior in Beaumont High School, Mike took his first job (a summer one) in the oilfields. It was 1925, during the second boom at Spindletop, and Halbouty hired on as a dollar-a-day waterboy with the Yount-Lee Oil Co. Even then, Mike wanted to be a scientist—a geologist and an engineer—in the oil business.

So, at 15, giving up a contract with the old Beaumant Oiler Baseball Club of the Texas League, he headed for Texas Agricultural & Mechanical College. There he earned a bachelor of science degree in geology and petroleum engineering in 1930, and a master of science degree a year later, having been granted a fellowship for outstanding scholastic work. Twenty-five years later, in 1956, he was to receive a professional degree in geological engineering from his alma mater (the first to be conferred by Texas A. & M.).

On the College Station campus, he was president of five undergraduate societies and editor-in-chief of the yearbook which won all-American honors as the best college or university annual in the country. While an undergraduate, Halbouty further distinguished himself by working out the geology of Atascosa County, and making the first base map of the Charlotte-Jordanton-Leming fault system, where Humble Oil & Refining Co. was later to discover two major oilfields.

The story of Halbouty's first big break already an oil industry classic, has a strong Horatio Alger flavor. Just out of college, Mike had taken the lowliest job in the oilfields as rear rodman on a surveying chain gang and later moved up to roustabout and roughneck. Then, at High Island salt dome in Galveston County, it happened.

A drilling crew of Yount-Lee Oil Co. had hit what they thought was "suitcase sand" and were about to abandon site. But Halbouty noticed a small oil stain at the bottom of the last core and begged the drilling superintendent to take one more core. "Can't do it," said the superintendent. "My orders are to tear the rig down."

Undaunted, 22-year-old Mike Halbouty jumped into his model-T and raced 60 miles across rough country roads to talk to Mr. Frank Yount himself. Yount, already a famous wildcatter, was giving a garden party at his Beaumont mansion for Jan Paderewski, world-famous pianist and Polish premier. Halbouty barged right in and cornered Yount in the kitchen. "Mr. Yount, there's oil down there," he said. "Let me prove it."

Yount had given birth to the second Spindletop boom in 1928, and probably knew more about gulf coast salt domes than any other man alive, but he liked the headstrong spirit of this brash young man. "All right," he said, and then he called High Island to order another core. The result was the discovery of an overhang in the old salt dome and a rich oil reservoir was found.

Halbouty, as he himself puts it, was in. Yount made him chief geologist and petroleum engineer, built him the finest geological laboratory in the Southwest, gave him a free hand in research, and was his frequent companion. During this period, the Yount-Lee Oil Co. was the largst independent oil company in the world, and discoverer of many fields on the Texas-Louisiana gulf coast.

While he headed up Yount-Lee experimental lab, Halbouty was responsible for the development of a complex set of drilling mud formulas. These formulas, worked out to solve the company's "heaving shale" problem, were never patented. If they had been, Mike guesses he would be making more money off them today than he is from his many oil wells. As it is, he derives a great deal of pride from the fact that his mud formulas have become standard throughout the drilling industry.

With the untimely death of Mr. Yount, Yount-Lee Oil Co. was sold to Stanolind, now Pan American Petroleum Corp. Halbouty, figuring a major company would cramp his style, wasn't in the bargain. Instead, he took the advice of W. E. Lee of Houston, Yount's surviving partner, and entered business with Mr. Lee's son-in-law—another phenomenal young man who was destined for big things in the oil business. His name: Glenn McCarthy.

Halbouty, who had attended Texas A. & M. with McCarthy, was Glenn's chief geologist and petroleum engineer, vice president, and general manager for 2 years. Halbounty recommended Anahuac, where McCarthy made his first million, and then West Beaumont, which was even bigger. There was also North Cotton Lake, and Palacios.

"Glenn and I made a good team," says Halbouty, "because we were much alike in some ways. But then the time came for the parting of the ways, and we did."

Halbouty still holds the greatest respect for the dethroned king of wildcatters, especially for his uncanny business intuition. Mike tells the following story to illustrate the point:

"We had just found the West Beaumont field, and we went out to check on our second well. Everything seemed fine, but Glenn was uneasy. Nothing I said shook him out of his premonition that something was wrong.

"That night he paced and repaced the floor of our hotel room. He was unable to sleep and full of worry about the well. Finally, he woke me up and excitedly pointed to a red reflection in the west. I told him it was probably just a gas flare, but Glenn didn't agree. At that precise moment, the telephone rang. It was the company toolpusher saying our No. 2 Longe had blown out and caught fire."

Out on his own as a consulting geologist and petroleum engineer in 1937, Halbouty saved enough to stake his first wildcat, in the Cedar Bayou structure of Chambers County. That first venture is a dramatic portrayal of the fact that the oil game is a gamble, and no bed of roses.

"The first well was a dry hole," Mike remembers. "So was the second, third, and fourth. By that time I had blown $125,000, was flat broke, and had to go back to consulting work. And you know something?

Right this minute there are 52 flowering wells in the same area I had to leave for lack of money. "That," he says with a shrug, "is the oil business for you."

Then came World War II. Immediately after the bombing of Pearl Harbor, Reserve Officer Halbouty was ordered to Fort Benning, Ga., Infantry School. Earlier, he had brushed aside civilian status via an "essential occupation" deferment. At Fort Benning, in competition with regular Army officers, Captain Halbouty was the top graduate of the battalion commanders and staff officers school.

Just before Halbouty was to ship out overseas, the War Department's Joint Chiefs of Staff stepped in to name him chief of the production section of the Army-Navy Petroleum Board, with duties to coordinate foreign and domestic oil production. It was a big job and Halbouty performed it well. By war's end, he had a lieutenant colonel's rating and a good part of the credit for boosting production in Carribean and South American oil fields, at a time when vast quantities of oil were vital to Allied victory.

Halbouty returned from the service determined to make a go of it as an independent oil operator. After one dry hole, he drilled his first successful wildcat in Natchitoches Parish, La., and found the Ashland oilfield at 3,228 feet of the Woodbine sand (the only field yet found in Natchitoches Parish). It was Louisiana's first well for the year 1946, coming in but 4 minutes after midnight on January 1. A few months later, he brought in another wildcat in Red River Parish. Then at old Pine Island field he completed 48 wells, using a new acidizing idea in getting production from the old sands.

In the 13 years since he has been drilling wells as an independent oil operator, Halbouty has discovered 33 new oil and gas fields and extensions on the Texas-Louisiana gulf coast. They include such prolific oil producing fields as the South Boling field, Wharton County; the northeast and northwest extensions of the South Liberty field, Liberty County; West Saratoga field, Hardin County; Pheasant and Citrus Grove fields, Matagorda County; Port Acres field, Jefferson County; Fostoria field, Montgomery County; and the Orange field, Orange County—all in Texas. There are also the West Hackberry field, Cameron Parish, and the South Bell City (Cibicides Zone) field, Calcasieu Parish—both in Louisiana. Halbouty owns an interest in and operates producing wells in 40 oil and gas fields in Texas and Louisiana, and there are more than 200 producing oil and gas wells on these leases.

The hub of Halbouty's farflung operations is a rambling, T-shaped office building in southwest Houston. Built at a cost of $400,000 in 1956, it reflects Mike's aesthetic taste, both in architecture and interior decoration. A tile mosaic cross section of the Spindletop salt dome in vibrant greens and blues dominates the colorful and functional outer lobby.

Mike's personal office is a far cry from that of the old days when he worked out of a one-room cubbyhole in Houston's Shell Building. Visitors are awestruck by a massive mural on one wall which depicts the search for oil in the gulf coast area. Mike dreamed up its design himself. At one corner of the mural a hand out of nowhere is grasping a rock. "Symbolizes the never-ending challenge of finding oil," Halbouty explains.

Another wall holds one of the best petroleum libraries in the country; still another is covered with dozens of framed photographs of Mike's family, friends, and business associates; and the fourth, of glass, looks out onto a palm-surrounded patio.

Mike, the man, hardly fits the popular conception of the Texas oil millionaire. Conservative in dress and manner, he might be taken for a banker or a real estate executive. He is, in truth, both of these. Dark, handsome, and graying at 50, Halbouty is a dynamo of human energy. Even when sitting still (which isn't often) he's a man who seems to be in a hurry. He doesn't smoke, he says, because he simply doesn't have the time.

Keeping his hustling organization in high gear in nine States and Canada, from Louisiana to Alaska, Halbouty makes or receives more than 100 telephone calls each day and puts in 40 to 50 flying hours each month. A January itinerary took him to 15 major U.S. cities on business matters. He has his own airplane, but it goes aloft only in the best of weather.

Despite his rigorous schedule, Halbouty finds time to be active in 15 professional societies, a number of social organizations, and many civic functions. Ex-president of the Houston Petroleum Club, he is a member of the board of trustees of St. Luke's Episcopal Hospital, where he donated a special ward for premature babies. Education, too, is close to his heart. In 1948, he established three Texas A. & M. scholarships in geology and petroleum engineering. He also backed an educational TV series "The World and Physics," narrated by Dr. Edward Teller of the University of California.

If Halbouty has a pastime, it's golf. Shooting a good game, he still comes in second to his attractive wife, an excellent amateur tournament golfer. She is the former Fay Renfro of Shawnee and Tulsa. Their two children are 9-year-old Linda Fay, and Tommy Kelly, 28, who is a resident geologist for the Halbouty firm in Anchorage, Alaska.

Right-hand man in the Halbouty organization is George C. Hardin, Jr., with the title of manager of exploration, production, and lands. Hardin is a noted geologist and engineer in his own right; many technical papers, in fact, carry the double byline of Halbouty and Hardin.

Members of the Halbouty executive team, all recognized as dynamic men in their respective fields, are James Ward, drilling superintendent; Ted Dobson, chief engineer; Jim Etheridge, head of the land department; John Walters, division geologist; Abe Wagner, division geologist; James Noel, general counsel; Frank Bruce, manager of the Halbouty Alaskan investments; Neil Parks, comptroller; and Louis Darilek. In all, 130 employees work for Halbouty; 62 of them in the Houston headquarters.

That Mike Halbouty believes in sharing scientific knowledge is evidenced by his many papers in professional and trade journals. He has written and published 48 technical articles as well as a scientific book with the jaw-breaking title of "Petrographic and Physical Characteristics of Sands From Seven Gulf Coast Producing Horizons."

He's something of a petroleum historian, too. With his Beaumont boyhood pal, James A. Clark, he is the co-author of "Spindletop," the story of the well that ushered in the modern oil industry and one of the best-selling books on petroleum ever written. Halbouty and Clark are currently at work on two more books. "The Last Boom" is the story of the fabulous east Texas oil field, and "The Book of Oil" will be a layman's handbook on the oil industry.

Oil Writer Clark, whose "Tales of the Oil Country" column appears in a Houston newspaper, knows Halbouty as no other man does. "The first time I say Mike," Clark recalls, "he was pulling a gang of rowdies off me. I sold newspapers in Beaumont, too, and my corner was almost as good as Mike's."

Clark attributes Halbouty's success to boundless energy, a high degree of intelligence, and a burning enthusiasm for any job he tackles. "He would have made a go of anything he tried. Journalism. Sports. Politics. You name it."

"Another thing that sets him apart," says Clark, "is that meticulous honesty of his. He'd go a thousand miles out of the way and lose money to be sure he's doing the right thing by everybody. His word is his bond. That's the mark of a majority of our great independent oil operators."

Mike, much in demand as a speaker before industry as well as nonoil groups, is an eloquent spokesman for the new breed of independent oil men who believe in the scientific approach to oil-finding. In an era when many are sounding the death knell for the independent, Halbouty says the species is not dying out—not the good ones.

"Independents are the heart of the domestic oil industry," he says. "They drill 80 percent of the wells and find two out of three new oil fields. Those who modernize their operations and update their own thinking are the ones who will survive. The oil patch is not a protected playground. It's a tough and changing world."

Halbouty scoffs at predictions that the country is running out of oil. "I believe there are thousands of major untapped sources of oil right here in this country," he says. "The old salt domes, for instance, have given up only a fraction of what they will give up when man finally learns to solve all of their mysteries."

Halbouty began to realize the potential of natural gas early in his career, when it was being flared as a waste product. Today, he is even more emphatic about its future. "Natural gas is destined to become the greatest of all natural energies—with the possible exception of solar and atomic energy. Oil, in many cases, is rapidly becoming secondary. There's no question that natural gas will be the greatest immediate source of energy for the next 20 years."

Mike's newest project is the multimillion dollar Halbouty Alaskan Oil Co., christened Halasko. One of the first Texans to become interested in the newest State, he and his associates own substantial acreage in oil leases covering some of the more promising geological basins. Halbouty was also the first independent to move a rig into Alaska during the present boom; his first well is now being drilled on the Kenai Peninsula.

Halbouty, who plans to build a skyscraping hotel and office building overlooking Cook's Bay in Anchorage, believes Alaska is America's last frontier. "I believe the Klondike gold rush was child's play compared with what is coming," he says. "Alaska has 31 of the 33 strategic minerals, and none of them have been developed to any extent." Hardly anybody doubts that Mike Halbouty knows what he is talking about.

Mike admits he is an incurable optimist. "Maybe," he explains, "that is because I can't think of a single pessimist who ever succeeded in the oil business, and only a few realists who have made the grade. That is because of the surprises you are bound to find in any quest into the unknown. And hunting for oil and gas is an unknown."

If Mike Halbouty has a personal philosophy about the search for oil, it was expressed a couple of years back by Father James Keller when Halbouty appeared on the Christopher television program alongside singer Giselle McKensie and actor James Cagney. Father Keller, whose Christopher theme maintains it is better to light one little candle of hope than to curse the darkness, said he believed that God placed oil and gas in the earth for men of faith to find and help make a better life for mankind.

In the oil business, Michel T. Halbouty—geologist, petroleum engineer, and independent oil man—has already lighted some mighty big candles. The biggest and most brilliant, probably, are yet to come.

Americans Should Know the Answers to Communists' False Claims

EXTENSION OF REMARKS
OF
HON. LAURENCE CURTIS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 19, 1959

Mr. CURTIS of Massachusetts. Mr. Speaker, leading citizens have called attention to the need for more teaching in our schools about the differences between communism and democracy.

It is shocking to read a news report, under a Los Angeles dateline, stating that a majority of high school seniors, when asked to choose a statement best representing their ideas of an economic system, quoted Marxist dogma: "From each according to his ability, and to each according to his need." What kind of teaching have they received?

I include as part of these remarks my newsletter of August 12, 1959, which comments on the above, and cites other examples which indicate the need for better teaching about communism and about our heritage of freedom and democracy, as follows:

Half the Americans over here in Europe have not the slightest idea of why they are Americans or what a democracy actually is. Most of them cannot say a word against communism. * * * The American schools * * * have missed the basic issues with those civics courses. * * * We are told over here that the only person the Communists fear is the one who thoroughly understands the system.

So wrote a chaplain in the U.S. Armed Forces stationed in Berlin. He was expressing his support of Cardinal Cushing's proposal that young people should be taught about communism and the answers to its false doctrines. A previous newsletter quoted from the Cardinal's television address on that subject.

A news story from Los Angeles published here gives striking confirmation of the need. Under the headline, "Students' Attitudes Called Shocking," it said:

In a survey of 86 high schools, members of the senior classes were asked to indicate their preferences for various statements descriptive of economic systems. Fifty-five percent selected the old socialist slogan, "From each according to his ability and to each according to his need."

This slogan is Marxist dogma, and could be enforced only by police state methods. Who would determine whether people were contributing according to their abilities, or what their needs were? Imposition of such a system would require a Communist form of government. Apparently these students did not have the background of information necessary to figure that out.

Further confirmation of the need for teaching about the answers to communism was given by Mr. Lloyd Wright of California, former president of the American Bar Association, and recently chairman of the President's Commission on Government Security. Testifying this spring before a Senate Subcommittee on Internal Security, he said:

Our children are not being taught in the schools sufficiently the true philosophy of our Government. They have been brainwashed with infiltrated textbooks, some of which go so far as to advocate that it is wrong to be proud to be an American citizen, but rather you should consider yourself a citizen of the world.

Patriotic Americans will surely support and applaud the timely suggestion that young people should be taught about communism.

The cost of living was recently reported at a new high. At his news conference, the President said that even a tiny increase could bring about "a new high," but that since 1953 "the curve of increase has been so much less."

High prices and dollar devaluation are two sides of the same coin. Taking the 1939 dollar as 100 cents, the course of its devaluation has run as follows: 1942 85.2 cents; 1945, 77.2 cents; 1948, 57.8 cents; 1953—under Eisenhower—51.9 cents; 1957, January, 50.3 cents; 1958, January, 48.6 cents; 1959, January, 48 cents; 1959, June, 47.7 cents—the most recent figure and the publicized "new high."

In other words, during the 14 years before Eisenhower became President the value of the dollar dropped about 48 cents, and during nearly 7 years since he became President, it has dropped about 4⅓ cents. The President is fighting to stop this drift and maintain a sound and stable dollar.

The heat is really on Members of Congress in connection with labor legislation. We have to remember former President Truman's warning: "If you can't stand the heat, you had better get out of the kitchen."

As Castro and Communists Take Over Cuba's Unions

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 19, 1959

Mr. JOHNSTON of South Carolina. Mr. President, I send to the desk an article from the U.S. News & World Report of August 17, which deals with the problem of Communists in Cuba taking over that nation's unions. This article relates how followers of Fidel Castro working with Communists now run the unions and how former labor leaders have been placed in jail or have fled the country in exile. The article states that organized labor has become a tool of the Government and that Communists are seen gaining stadily in prestige and power within the Cuban unions.

I likewise send to the desk an editorial from the State of August 14 dealing with the general situation of the Castro regime in Cuba. I think the editor of the State sums up precisely and correctly the situation in Cuba. I quote from that editorial:

Today, the Castro regime stands revealed as another dictatorship, but potentially the most dangerous movement that has gained success in Latin America to date.

Mr. President, 2 years ago I filed a report in the Senate dealing with the threats of communism in Latin America. At that time the large liberal newspapers such as the New York Times ridiculed my position. They promoted the Castro revolution declaring that it was one of freedom loving people and that there was no Communist element among its followers. Today we know better but I fear that it is too late.

I hope that the Santiago, Chile, conference will be able to cope with the extremely dangerous situation that has developed in the Caribbean. If the elements of war are not deterred in the Caribbean, I fear that the situation there will spread to other areas in Latin America and our Pan American Union will fall apart at the seams.

Nothing would please the Communists more and nothing would give them a greater advantage to move into other nations in Latin America and build up the threat to our security.

Mr. President, I ask that the article from the U.S. News & World Report entitled "As Castro and Communists Take Over Cuba's Unions" and the editorial from the State entitled "Revealing Himself" be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the U.S. News & World Report, Aug. 17, 1959]

AS CASTRO AND COMMUNISTS TAKE OVER CUBA'S UNIONS

(Take a look at what has happened to labor unions in Cuba since the revolution. Castro's men, working with Communists, now run those unions. Former labor leaders are in jail, or in exile. Organized labor is becoming a tool of the Government. Result, for United States and Cuban employers: Labor troubles of all kinds are mushrooming.)

HAVANA.—Fidel Castro and the Communists now are completing a joint conquest of Cuba's once independent labor unions—and troubles here are mounting for employers.

Elections going on at present in the 33 national labor federations show this:

Two-thirds of the federations, so far, have voted. In each case, slates organized by Castro's 26th of July movement have been swept into office.

CASTRO MEN AND REDS

These slates usually are made up of a combination of Castro's followers and Communists. Reds now are estimated to hold as many as one-fourth of all the posts in the various federations. They also have a foothold in the powerful Cuban Confederation of Labor, which controls the 33 federations and Cuba's 1.2 million organized workers.

Today, organized labor is becoming a tool of the Government.

The Castro government has given itself power to settle any and all labor disputes by decree. In one such ruling, it ordered junior officers and other key employees in both foreign and Cuban-owned banks to join the bank employees' union.

Employees are forbidden to fire workers, no matter how inefficient they may be or

whether there is any need for them. Some companies have been forced to rehire all workers fired—whatever the reason—during the regime of former President Fulgencio Batista. One sugar company reportedly had to take back 100 former employees.

MORE SICK LEAVE

An executive of this company said that the volume of sick leaves in his mills is five times what it used to be. He added:

"Quiet a few of our men have been pretending that they're sick. They have the right to send a substitute who gets full pay. The 'sick' man gets full sick pay—and we know that substitutes often kick back part of their pay to the regular employee."

In the past, he explained, workmen claiming to be "sick" had to be certified as ill by the company physician or have a letter from a local doctor. That provision can no longer be enforced.

Under Batista, unions were relatively nonpolitical and were considered stronger than most unions elsewhere in Latin America. Now Castro's 26th of July Movement has barred opposing political movements in unions, except for a small Catholic group.

EXILED LEADERS

At least 95 percent of the men who ran unions during the Batista regime have been eliminated. About half have escaped the country. The former secretary general of the confederation is hiding somewhere in Europe.

The Castro government has jailed, on three different occasions, Ignacio Gonzales Tellechea, who had been reelected last December to his third term as president of the Inter-American Labor Organization. He is now in hiding. A visiting official of that organization found that 25 to 30 other former labor leaders are being held in jail here with no charges entered against them. Still others have been expelled from unions—some for 10 years, others for life.

These included many leaders, particularly in the electrical, transport and telephone workers' unions, who had been against Batista for years but were not affiliated with Castro's rebellion.

ANTI-AMERICAN LEFTIST

Now emerging as the single most important man in Cuban labor is David Salvador, acting secretary of the Cuban Confederation of Labor. Once he belonged to the Communist youth organization. Some say that he has been expelled from the party, but it is widely agreed that he is still a leftist revolutionary—and virulently anti-American.

When Castro came into power, a 22-man directorate headed by Salvador and including five known Communists ran the confederation. Then the group was reorganized into a nine-man body. Known Communists were dropped—but Salvador remained.

When all of the federations have held their elections, they are to call a national congress to elect an executive council of the confederation. As most observers see it, Salvador is certain to be elected secretary general of the confederation.

BIG TROUBLE AHEAD

All of this is seen as raising serious problems, not only for American and Cuban employers but for the nation's economy. The sugar industry now is paying wages based on an assumed price of 4.7 cents a pound—at a time when the average price is only about 4 cents.

No end to this squeeze is foreseen at the present time. Communists are seen as gaining steadily in prestige and power within the unions as they become instruments of Fidel Castro's government.

[From the State, Columbia, S.C., Aug. 14, 1959]

REVEALING HIMSELF

In the early days of his guerrilla campaign against the Batista government, Fidel Castro was praised by many as a man who wanted to restore democratic government in Cuba. The State noted that Castro was an unknown quantity, and that he might be no improvement.

Later, there was some fairly widespread hope that Castro himself might be less dictatorial than Batista, but this hope shortly dimmed when it was learned how many avowed and suspected Communists were serving as Castro lieutenants and advisers.

The executions of Batista followers shocked a good many people who had been supporting Castro, partially because the executions were staged as big shows for the masses. Public opinion apparently forced Castro to drop the matter momentarily.

Now it appears at least 3,000 "counter-revolutionary plotters" have been rounded up. Their fate is unknown. However, it is known that the Communists and pro-Communists in the Castro regime are gaining influence and power. Government announcements reflect more and more the language and concepts of Marxism.

Castro and his subordinates are imposing a rule quite as harsh and arbitrary as the one they fought to depose. In fact, economic conditions are said to be much worse than they were under Batista. And there have been no elections since the "revolution."

Today, the Castro regime stands revealed as another dictatorship, but potentially the most dangerous movement that has gained success in Latin America to date.

Resolution of Town Council of Bloomfield, N.J., in Support of H.R. 5596

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 19, 1959

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I wish to include herein a letter from Mr. H. Joseph North, town clerk of Bloomfield, N.J., and a resolution adopted by the Town Council of Bloomfield in support of H.R. 5596:

THE TOWN OF BLOOMFIELD, N.J.,
August 6, 1959.

The Honorable PETER W. RODINO, Jr.,
House of Representatives,
Washington, D.C.

MY DEAR MR. RODINO: Enclosed please find copy of a resolution adopted at the meeting of the town council held August 3, 1959.

Respectfully yours,
H. JOSEPH NORTH,
Town Clerk.

"Whereas by virtue of the provisions of the Transportation Act of 1958 it is permissible for certain railroads to discontinue passenger service of interstate trains (or ferries) without first applying to the Interstate Commerce Commission for permission and without public hearing with respect thereto; and

"Whereas Senate bill 1331 and a companion bill in the House of Representatives (H.R. 5596) are pending and such bills would amend the Transportation Act of 1958 to provide for public hearing before an approval by the Interstate Commerce Commission to discontinue passenger service; and

"Whereas it appears that the aforesaid amendment is salutary and in the public interest: Now, therefore, be it

"Resolved by the Town Council of the Town of Bloomfield, N.J., That said council expresses its approval and urges the passage of the two bills pending in the Federal Legislature and known as Senate bill 1331 and H.R. 5596; and, the town clerk is directed to forward a copy of this resolution to the Senators from New Jersey and to the Member of the House of Representatives of the 10th Congressional District."

I hereby certify that the above resolution was duly adopted by the Town Council of the Town of Bloomfield at a meeting of said town council held August 3, 1959.

H. JOSEPH NORTH,
Town Clerk of the Town of Bloomfield.

I hereby approve the above resolution.

DONALD H. SCOTT,
Mayor of the Town of Bloomfield.

Parkinson's Law and Civil Defense

EXTENSION OF REMARKS

OF

HON. STEPHEN M. YOUNG

OF OHIO

IN THE SENATE OF THE UNITED STATES

Wednesday, August 19, 1959

Mr. YOUNG of Ohio. Mr. President, a recent editorial "Parkinson's Law," which was published in the Washington Daily News, a member of the Scripps-Howard league of newspapers, on August 17, 1959, is worthy of careful study.

This great newspaper and the entire Scripps-Howard league have long been aware of the waste and the danger in our civil defense program, and have repeatedly called for its complete overhaul.

I believe the editorial presents convincingly the waste of taxpayers' money on an ever-increasing futile bureaucracy which will only perpetuate the already useless and inept Office of Civil and Defense Mobilization. It points out clearly the danger in allowing any further expansion of tihs bureaucracy along the line of its present and past operations.

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD. I commend this to my colleagues in the Senate.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PARKINSON'S LAW

Give the House credit for a stout fight against a $12 million boondoggle which may yet be avoided.

This is the proposal to finance a new army of civil defense employees, working at the State level, paid half by the States, half by the Federal Government.

The Senate has approved the project. The House turned it down yesterday, for the third time. Something has to give. The item is part of the independent offices appropriation bill, containing money for a variety of essential Government operations.

We hope the House holds the line because this $12 million is only a foot in the door, opening the way for still further expansion of this especially futile bureaucracy.

Insistent pressure for this needless addition to the public payroll is best explained in terms of the law expounded by C. Northcote Parkinson, Raffles professor of history at Malaya University in Singapore, as follows:

"In any public administration or organization, the number of new subordinates increases at a predictable rate, irrespective of any variation in the amount of work (if any) to be done."

A Minority View

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 19, 1959

Mr. WILSON. Mr. Speaker, several months ago the Joint Economic Committee issued a report evidencing the alarm of some people about the economic future of our country. At the time this report was published, not much credence was given to the minority report. Today, Mr. Speaker, the minority report has proved to be overwhelmingly sound and has without doubt let the air out of the alarmists who wanted to go on a big spending spree. Following is an article which appeared in the August 17, 1959, issue of the New York Times:

A MINORITY VIEW—AN APPRAISAL OF THE DISSENTING STAND IN A CONGRESSIONAL REPORT

(By Edward H. Collins)

"The New York Times has published two or three very thoughtful editorials and your column" writes a correspondent, "which have discussed the errors in the majority findings of the Joint Committee on the Economic Report. I am respectfully puzzled as to why you have never given credit or identification to the minority report, prepared by Representative THOMAS B. CURTIS, Republican of Missouri, which proved to be correct."

There is a good deal to be said for the point raised by this correspondent. That fact is strongly confirmed when one rereads this document today, 5 months after its publication, over the signatures of, besides Representative CURTIS, Representative CLARENCE E. KILBURN, Republican, of New York; Representative WILLIAM B. WIDNALL, Republican, of New Jersey; Senator PRESCOTT BUSH, Republican, of Connecticut; Senator JOHN MARSHALL BUTLER, Republican, of Maryland, and Senator JACOB K. JAVITS, Republican, of New York (who concurred with reservations and attached a statement of certain additional views of his own).

A STRIKING CONTRAST

In one vital area in particular does the closely reasoned argument of the minority contrast strikingly with the air of wishful thinking and straw-grasping that permeates the statement of the majority. This is its trenchant discussion of the nature of economic growth, and its development of the thesis that, if one accepts its premises on this point—premises that are hardly open to serious dispute—then the conclusion that sound fiscal policy calls for a balancing of the Federal budget in 1960 becomes logically inescapable.

The majority report had contended that "principal emphasis on public policy this year should be placed on prompt and full recovery from the 1957–58 recession. Achieving maximum employment and production, therefore, should be given the highest priority." To its authors what did this mean in terms, let us say, of monetary and fiscal policy? With respect to monetary policy it meant, one finds, that the Federal Reserve should abandon what the report referred to as its "restrictive" program, and that it should resume the pumping of additional money into the economy on the scale traditionally reserved for periods of recession. As to fiscal policy, this typical passage is perhaps illustrative of the majority's general attitude:

"While a balanced budget, or even a surplus, is desirable in times of maximum employment, neither the soundness of our money nor our potential for economic growth and stability * * * necessarily depends on balancing a $77 billion budget in fiscal 1960."

For their part the authors of the minority report argued:

"In our opinion, the surest way now to provide additional job opportunities is precisely that called for under the Employment Act of 1946, namely, to create a climate in which industry, agriculture, and the service trades will be enabled to expand, thereby creating jobs and the purchasing power with which the products of maximum production may be moved."

As to the question of economic growth, the minority had no quarrel with the definition of the majority as "the process of capital accumulation." However, it had very definite ideas concerning the conditions prerequisite to achieving this process. Capital accumulation (or formation), it pointed out, requires two things. "It requires (1) the incentive to invest * * *, and (2) the real savings needed to finance such investment." It added: "It is useless to urge a higher rate of growth for the economy if we are unwilling to take the steps necessary to provide the conditions under which private investment incentive and real savings will be adequate for this purpose." On the closely related subject of inflation it observes:

"Stabilizing the price level is not an alternative objective to achieving a higher rate of economic growth. On the contrary, it is a basic requisite for continuing growth without violent swings in the level of employment in a free economy."

Commenting on the President's proposal for a balanced budget and its bearing on stable prices, the minority finds the latter is fundamental to achieving this aim. "The consensus of the experts testifying before this committee," it notes, "was that the economy would reach high and record levels of employment, production, and purchasing power in the period covered by the President's budget. Failure to achieve a balanced budget under such conditions of record-breaking prosperity, as the minority sees it, would be regarded as a green light by everyone who was looking for a sign from the Government as to whether it was genuinely determined to leave no stone unturned in its fight on inflation.

GROWTH AND INFLATION

The August issue of the Monthly Review of the Federal Reserve Bank of New York carries the third of a series of studies dealing with the relationship between economic growth and inflation. The two earlier studies were titled, respectively, "Creeping Inflation" and "Growth Without Inflation in Britain." The current inquiry concerns the incidence of inflation on one specific category of countries—the underdeveloped countries. While the observations of the minority committee on the Economic Report are not similarly confined, they become particularly impressive when considered against the background of this pioneering piece of research. After considering the case histories of 16 more or less typical and diversified examples of underdeveloped countries over the period 1950–57, the authors of the study find justification in its results for two broad, though qualified, generalizations. They find that (1) in countries where price advances have been comparatively nominal or nonexistent, rates of economic expansion, "which, by and large were steady," clustered around an average of 6 percent. They find that (2) by contrast, in countries where sustained inflationary pressures developed during the period, rates of growth showed widely varying and somewhat sporadic gains. Average rates of expansion ranged from less than 1 percent to as high as 7 percent, with the group average about 4 percent. In short, if these studies have any meaning, the report concludes (in words that are almost an echo of those employed by the minority report of the congressional Economic Committee), it is that they lend no suport to the contention that price stability (in underdeveloped countries at least) is incompatible with rapid economic expansion. On the contrary, they would seem to confirm the view that, while stable prices tend to promote an orderly and fairly rapid expansion in output, inflation tends to lead to uneven and often lagging, rates of overall growth.

Admiral's Flags Are Furled

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
AND
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Wednesday, August 19, 1959

Mr. WILLIAMS of New Jersey. Mr. President, the death of Adm. William F. Halsey has saddened all Americans and many friends of Americans in other nations.

In Elizabeth, N.J., the news was particularly poignant because this was the admiral's home city, the city of his youth.

Since both of New Jersey's U.S. Senators are residents of Union County, and because we are proud to live in a county where Admiral Halsey once lived, we ask in this joint statement for unanimous consent to have this editorial from the August 18 issue of the Elizabeth Daily Journal printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Elizabeth (N.J.) Daily Journal, Aug. 18, 1959]

ADMIRAL'S FLAGS ARE FURLED

The admiral's flags have been furled. Never again will they wave in triumphant glory from his beloved *Enterprise*, the flagship he loved so dearly and fought in vain to preserve. Adm. William F. Halsey is dead.

The square-rigged old salt, who took his place among the greatest naval heroes of all time and who became an inspiring symbol of the American fighting spirit when he cleared the Pacific of the Japanese fleet in the Second World War, died with his "boots off" and in his sleep. It was a prosaic ending for the warrior who had lived so close to death in so many places since he went off to don the Navy blue of an Annapolis midshipman.

What stories have been revived for the hometown folk since the news of his unexpected death reached Elizabeth Sunday—the old Brewster home in West Jersey Street,

where his mother lived until her marriage to Lt. William F. Halsey and where the admiral himself was born; his own home around the corner in Chilton Street, where "Billy left the gate open" and his unattended younger cousin, Henry Bayard Clark, got a memorable tumble; the Pingry days, Annapolis, and the solid middy in his summer whites returning for a stay with his maternal grandparents and to visit the family of his father's brother, Charles H. K. Halsey, the bank president.

Always there were those home ties, the ties of family, of the native health remaining strong and calling him back no matter where duty sent him and regardless of honors. One of the touching human interest stories of the Second World War was the meeting far out on a Pacific island between Admiral Halsey and Pfc. Christy DeMaio, the stout boy from Peterstown, fondly remembered by prewar boxing fans as the "Pants House Kid." But let Christy tell it again.

"I'm standing by the side of the road and I give the thumb to a car coming straight at me. Then I'd like to die. It stopped and who looked out at me, but the big boy from Elizabeth himself—Admiral Halsey. So, he said, 'All right, soldier, get in.' And when he found out that I was from Elizabeth too, boy, did we cut it up for 25 miles. Real pals, we were. No brass. What a guy he is."

"What a guy" he was to the thousands who claimed every possible vantage point to see and cheer our greatest hero on that memorable November 7 in 1945 when Admiral Halsay returned to his own people and his old hometown while the rest of the country looked on in envy. We were bursting with pride that autumn afternoon and bursting with promises that have not been fulfilled.

We are bursting with pride now, even as we grieve, while newspaper headlines the world over tell the story of the Elizabeth boy who led naval forces in exploits President Eisenhower has termed "a brilliant part of American military history"—of whom Adm. Chester Nimitz has said "he has left for all of us a shining example of courage and service."

What has he left us here in Elizabeth aside from the reflected glory of his immortal deeds? Is it enough that we clogged the streets, 100,000 strong to cheer when he returned a hero acclaimed by the world? Is it enough that we swell with the pride of possession as the same world bows in sorrow at the passing of the Pingry lad who scaled heights few attain?

It is not enough. If ever a community was mandated to perpetuate through fitting memorial the example and the inspiration Admiral Halsey has left available for all the future generations of hometown boys Elizabeth has been given its directive. If we have forgotten the promises of 1945, Elizabeth now has the charge anew to erect a living memorial to the native son a few remaining oldtimers knew as "Billy" Halsey. But make it a living memorial. The marble shafts have never been more than just resting places for pigeons.

The Khrushchev-Eisenhower Visits

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. BROOKS of Louisiana. Mr. Speaker, a few days ago the world was electrified by the announcement that Khrushchev and our President were trading visits.

I, like many others, had very mixed emotions on this visit.

On August 18th the American people were informed that Hungary executed eight men who had been involved in the freedom fight in that unfortunate country.

Now does anyone have any idea that the philosophy of government in Russia or the satellite countries has been changed by these impending visits?

Mr. Speaker, I am worried that the American people may relax when this smiling and happy extrovert, Mr. Kruschev has completed his tour of America.

I want to believe these Communist countries want peace but such demonstrations as this in Hungary prove once again that this tour of America—I fear—is just a new disguise for Communist world domination.

I include the following news item:

[From the Washington Post, Aug. 18, 1959]

HUNGARY EXECUTES 8 LINKED TO 1956 REBELLION

BUDAPEST, August 17.—Communist Hungary has executed eight men recently convicted of political crimes, according to an unconfirmed report circulating today among Western diplomats.

The report of the executions is the final chapter of a secret trial story that has been heard in western circles since last spring. It has been impossible to verify the reports through official sources.

A Foreign Ministry spokesman would neither confirm nor deny the reports of the executions.

The trial rumors never clearly spelled out the charges on which the men were supposedly brought to court. They allegedly stemmed from the Hungarian revolt of 1956.

According to the most persistent reports, the men involved were mostly workers from Ujpest, an industrial suburb of Budapest.

Ten were reported sentenced to death in the original trial but two of these sentences were reduced to life imprisonment in an appeal hearing last month. About 15 other persons reportedly received prison sentences.

Sources for the execution reports were unable to give any names.

Why Special Loyalty Oaths for Students Only?

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, August 19, 1959

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a thoughtful editorial from the Medford Mail-Tribune of July 28, 1959, on the question of special loyalty oaths in the national defense scholarship bill.

This editorial quotes two eminent and outstanding Americans in support of repeal of such an oath—Senator John F. Kennedy of Massachusetts, and ex-Gov. Charles A. Sprague of Oregon. One of these leaders is a Democrat, the other is a Republican, but both are men of wisdom and sound and intelligent liberalism.

The author of the editorial in the Medford Mail-Tribune is Eric Allen, managing editor of that daily newspaper, which is published in Medford, Oreg.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SPRAGUE, KENNEDY AGREE

Quite by coincidence, statements by two writers concerning the so-called loyalty oath now required of recipients of educational aid from the Federal Government, came across the desk yesterday morning.

Also coincidentally, the writers are of opposite political faiths. One is Charles A. Sprague, editor and publisher of the Oregon Statesman in Salem, former Republican Governor of Oregon. The other is JOHN F. KENNEDY, U.S. Senator from Massachusetts and a leading contender for the Democratic nomination for President next year.

Both, Republican ex-Governor, and Democratic Senator, are highly intelligent, literate, and thoughtful men. And both think the loyalty oath is silly.

Here are excerpts from Sprague's editorial:

"After the national defense education bill was passed last year, colleges woke up to the fact that it required students receiving loans or scholarships and fellowships to take a loyalty oath. * * * It is not the simple oath pledging loyalty to the Constitution and laws but one of those abjuring oaths which have caused serious commotion in academic circles—professors are willing to take oaths of loyalty * * * but dislike swearing to some negative oath. * * * Affirmative loyalty oaths, yes; negative oaths, no."

Senator KENNEDY'S views were contained in a letter, a portion of which follows:

"It seems to me that we must encourage the development of all the best minds of our Nation, regardless of student tendencies toward nonconformity or other personal objections to signing this vague, unworkable and almost meaningless declaration. Though there are still those who favor reverting to the age of the test oaths that were already discredited when our Constitution was written, it is dangerous to permit such anachronisms in this hour when building up our intellectual resources has become crucial."

He also referred to attempts to repeal the oath as an important step toward the elimination of the atmosphere of suspicion and fear that has for many years enveloped many of our national attitudes.

We agree with both of these distinguished men. Disloyal people have no objection to signing a perjured oath. But many honest and conscientious people do object to the negativism of the present requirement.

The sad postscript is that last week the Senate voted, 49 to 42, to send the repealer bill back to committee, thus killing it for this session.

The Foreign Aid Funnel

EXTENSION OF REMARKS

OF

HON. ROBERT W. LEVERING

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 19, 1959

Mr. LEVERING. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I want to insert an editorial from the August 7, 1959, issue of the Mount Vernon (Ohio) News deal-

ing with a subject, foreign aid, which I feel is most pertinent and should be brought to the attention of my colleagues.

This editorial is entitled, "Taking a Harder Look," and I believe it accurately reflects the fears of many, many individuals that too much of our foreign aid money has been frittered away, either through outright errors on important, needed projects, or careful expenditures of funds in countries where we should not be spending the money in the first place. Many of the countries that have been getting our help actually are using this capital to get into a position to undercut U.S. producers in their own home market and to push them out of auxiliary foreign markets. Thus, U.S. workers suffer through the competition of our own capital.

I commend this editorial to my colleagues.

The material follows:

[From the Mount Vernon (Ohio) News, Aug. 7, 1959]

TAKING HARDER LOOK

Evidence of public restlessness over the vast expenditures for foreign aid and congressional suspicion of the manner in which specific sums are being dispensed and handled have caused Congress to take a harder look at the whole foreign aid program at the current session.

Any fairminded person will agree that foreign aid is necessary as a means of holding the free world together and putting itself in a position to fight back effectively if attacked.

But there are widespread reports that a great deal of the money is being wasted by both dispensers and recipients of the aid money. That is not fair to the American taxpayer out of whose pocket comes every penny of the funds sent to foreign countries.

Neither is it fair to give economic aid to those countries whose economics are already in such flourishing condition that they have become competitors of the United States in world markets. Every time a sale of competitive products is made by a foreign country, which has been supported by American money and which would have ordinarily gone to an American industry or business, it deprives American interests of revenue and American workmen of jobs.

If they can compete with us in world markets, including the United States, they most certainly should be able to stand on their own feet, economically speaking.

Military aid is an entirely different matter. There are few free world countries, outside the United States, which can afford to support great military machines without levying taxes to the point where decent living standards could not be provided by their peoples.

America needs the military strength of these nations to back it up if war should break out and arming allied countries is multiplying our own strength to the extent that foreign allies are able to increase their own power.

There are exceptions, of course. These exceptions are poverty-stricken nations where human beings are slowly starving to death and where disease, due to lack of proper medical care, is taking a heavy toll. They should be helped for purely humanitarian reasons.

But there seems to be no question that there has been great waste in our foreign aid programs. Congress is particularly concerned about this. Foreign aid legislation now on its way through the legislative halls provides for a $19,000-a-year inspector general and comptroller for the International Cooperation Administration, the agency now in charge of distribution of foreign aid money.

If he can eliminate the major share of the waste reputed to exist he will have earned his salary many times over, plus the undying admiration of the American people.

YDC Told of Pitfalls at Rally

EXTENSION OF REMARKS
OF
HON. B. EVERETT JORDAN
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 19, 1959

Mr. JORDAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two newspaper accounts of a speech delivered by Senator GALE MCGEE, of Wyoming, on August 8, 1959, at a statewide rally of Young Democrats in Durham, N.C. Senator MCGEE delivered a thought provoking and inspiring address that was unusually well received.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Greensboro (N.C.) Daily News, Aug. 8, 1959]

YOUNG DEMOCRATIC CLUBS TOLD OF PITFALLS AT RALLY—TALK BY MCGEE HEARD BY GROUP

(By Guy Munger)

DURHAM, August 8.—Senator GALE W. MCGEE, Democrat, of Wyoming, tonight urged Democrats to develop a long-range national program and not try to build a political party on the blunders of the Republicans.

MCGEE was the principal speaker at a dinner which concluded a summer rally of State Young Democratic Clubs here. We were introduced by North Carolina's Senator B. EVERETT JORDAN.

Governor Hodges and numerous State officers and legislators were among the more than 200 persons who attended the dinner.

MCGEE said that "while the temptation will be great to get even with the Republicans for winning two presidential elections" in 1952 and 1956, Democrats should resist any "mink, pinks, and stinks" attacks such as the GOP used in its campaigns.

"I don't think you can build a political party on the mistakes of the opposition," the freshman Senator said.

OUTLINES ISSUES

In an interview before the speech, MCGEE outlined some of the issues that he thought should be included in the long-range Democratic program:

1. An honest balanced budget, not a Madison Avenue balance. MCGEE said the Democrats should survey the Nation's needs, considering national security and demands of a growing population, then draw up a budget that will do the job.

A. An effort to solve the problem of the so-called surpluses in agriculture. MCGEE said the surpluses were really failures in distribution.

3. A foreign relations program that will accentuate the positive. For too long, said MCGEE, the United States has had a foreign policy which is primarily a negative reaction to the Russian threat. He said the final test will come, not on how the United States has responded to Russian initiative but on how this Nation has approached the problem of living standards, human beings, people, helping others to help themselves.

MCGEE also called for passage of a moderate civil rights bill and effective controls on labor unions. Despite criticism of Senator LYNDON JOHNSON by some Democrats, MCGEE said he thought JOHNSON had done a masterful job as Senate majority leader in putting together the variety of opinions of all segments of the party.

[From the Durham Morning Herald, Aug. 9, 1959]

MCGEE URGES SPEEDUP AGAINST REDS

(By Herald Staff)

The United States must take a more positive stand in foreign relations and make a dynamic expansion in its domestic economy if it is to meet the challenge of Communist Russia, Senator GALE MCGEE, Democrat of Wyoming, asserted here Saturday night.

MCGEE, addressing a statewide rally of young Democrats, pointed out that the Soviet Union has been increasing its productive capacity at a rate of 10 percent a year while the U.S. economy has been advancing a mere one and a half percent.

He called for a speedup rather than a slowdown of American production, both industrial and agriculture.

As for international affairs, MCGEE warned that the United States too long has taken only a negative stand against communism, "as we should have," but had failed to stress this Nation's own political and economic stature.

"Our resources," said MCGEE, "are not armies or jets. The greatest weapon in our armory is ideas."

In an era of awakening peoples, MCGEE said, "our Declaration of Independence has fired more revolutions than the Communist manifesto ever did."

What former colonial peoples want, he added, "has nothing to do with Karl Marx or communism or Mr. K."

Rather, he contended, they want the kind of political freedom for which the American colonies fought.

Adding his encouragement to exchanges with the Soviets, the Senator said that "what we have is infectious."

His recommendation for American tourists visiting Russia was that they carry Montgomery Ward catalogs and American magazines—even such Republican periodicals as Time.

MCGEE, who visited Russia 3 years ago, praised North Carolina's Gov. Luther Hodges and eight other American Governors who recently urged the upcoming Eisenhower-Khrushchev exchange visits.

Hodges, who attended the Young Democratic Clubs rally, commended MCGEE for his blunt address and commented: "That's the kind of talk I would like to hear in the keynote speech at the Democratic convention next year."

The Governor gave the Senator momentoes of North Carolina, including a package of Bull Durham, which made this city and this State famous.

MCGEE was introduced by Tar Heel Senator B. EVERETT JORDAN.

Other political leaders here for the rally included Attorney General Malcolm B. Seawell, Labor Commissioner Frank Crane, State Treasurer Edwin Gill, and Insurance Commissioner Charles Gold.

Mrs. B. B. Everett of Palmyra, national committeewoman, and Mrs. Mary Laurens Richardson of Raleigh, vice chairman of the senior party, spoke briefly at the banquet.

Art Vann of Durham, State Young Democratic Clubs president, presided.

The Young Democratic Clubs executive committee chose Asheville as the site for the State Young Democratic Clubs convention to be held October 1, 2, and 3.

In his advocacy of an expanding American economy, McGEE recalled the World War II days when people thought Franklin Roosevelt was crazy for demanding 30,000 planes a year.

Actually, noted the Senator, F.D.R. got 50,000 planes in the all-out effort by American industry.

McGEE also recalled that "another crazy man, Henry A. Wallace" had called for 60 million jobs in postwar America.

Actually, the Nation's industries are employing many more than Wallace's prediction, the Senator pointed out.

The need for expansion, the Senator argued, is imperative because the Soviet Union has gone from the ox cart to the space age in one great leap.

Aid to Federally Impacted School Districts

EXTENSION OF REMARKS
OF
HON. WALTER H. MOELLER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 19, 1959

Mr. MOELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement which I made this morning before the Subcommittee on General Education of the House Committee on Education and Labor. That subcommittee is now considering administration proposals to weaken the benefits presently available to school districts with a school age population which includes a substantial number of children of employees of Federal installations. I believe that the effect of these damaging proposals in my district is of sufficient interest to warrant publication in the RECORD as a means of helping to forestall approval of the proposed legislation.

The statement follows:

FEDERAL AID TO IMPACTED SCHOOLS

Mr. Chairman and members of the subcommittee, thank you for the privilege of appearing before you this morning and testifying in behalf of the school systems in my district with respect to proposed changes in Public Laws 874 and 875. I know that you have received a great deal of testimony on this most important problem and I do not wish to take up too much of your time. However, because of the adverse effect the proposals made by the administration to reduce benefits would have on the schools in my district, I do wish to make this brief statement.

Approximately 20 separate school systems in my district have been receiving Federal funds to help support their schools because of the increased school enrollments caused by the influx of people employed by Federal establishments or firms having defense contracts with the Federal Government. These include schools operated by cities, by local school districts, and by certain of our counties. The total amount involved each year, about $102,000 according to the figures I have at hand, is not large by the standards of many areas or when compared to the total amount of such assistance rendered to all the schools in the United States. However, it bulks extremely large in the tax structure of our local areas which are not among the most prosperous in this country.

Approximately 1,200 school age children of parents employed directly or indirectly by the Federal Government provide the basis for this aid to our schools. By far the largest percentage of these are the children of parents who work in Federal installations not actually located in the school district. The few others are the children of people employed by defense contractors. In any event, they are all so-called B category cases.

Thus, the effect of the administration proposals embodied in the Kearns bill, H.R. 7140, would be to cut the funds our schools are receiving almost exactly in half—from $102,000 to $51,000 per year. To impose such an additional tax burden on these 20 school districts would be extremely difficult. I fear that the net result would be a lowering of the standards of education instead. This penalty would apply to all of the children alike, whether their parents were or were not newcomers to the district or were or were not employees of the Federal Government. It is manifestly unfair to ask the citizens of my district or of any area to assume such a penalty, or to shoulder an additional burden of taxes to maintain the standard of education in their schools, when the increased cost of operating the schools can be traced directly to a Federal activity, which must be the case under the present terms of Public Law 874 to make them eligible for the aid they are now getting.

The problem is similar with respect to funds for equipping new school buildings in these areas under Public Law 815. It is expected that increased school enrollments will require abandoning some of our smaller schools and the construction of new consolidated schools to accommodate to the changing conditions. At least a part of such increased enrollments are traceable to the Federal activities of which I have been speaking. I strongly oppose any changes in the present law which would deprive us of the minimum amount of Federal aid in financing this new construction to which we are entitled under the present law.

To address myself for a moment to the philosophy behind Public Laws 874 and 815, it seems to me self evident that when the Federal Government engages in an activity which has among its results the addition of an appreciable number of children to the school rolls in an area, then the citizens of that area have every right to expect that they shall not be required to bear alone the cost of providing for the education of such children. After a great many years, when all the effects of this radical change in the community structure have worn off; when the employment at the Federal activity has been stabilized for a long period of time; when the newly arrived Federal employees have become property owners and have been absorbed into the community completely, with particular respect to their bearing a full share of the tax load; and when the costs of expanded school operations have been completely amortized; then we may think of reducing the amount of Federal aid required. At present, however, the funds we have received from the Government do not begin to pay the fair share of the additional cost which might be expected.

Certainly the time has not yet come when school districts located adjacent to or near other districts in which a Federal installation is actually located should be discriminated against. Where large installations are involved particularly, such as Lockbourne Air Force Base and Whitehall Army Depot near my district, the problem raised is actually greater than that for a school district which may have a part of the installation within its geographic area. These establishments are of such size and employ so many persons that it would be physically impossible for any large percentage of their employees to live in a school district which at the same time overlaps the installation's boundaries. Thus, the heavier burden is thrown on those nearby communities which house the employees. This is the case for communities in Fairfield County in my district and in Lancaster, the county, seat, where I reside. To a lesser extent it involves also school districts in Hocking, Jackson, and Athens Counties.

For that reason I am particularly opposed to the aspects of the Kearns bill which give preferential treatment to school districts within whose bounds a Federal property is located.

As a supplement to these remarks I wish to introduce for the record of these hearings two letters I have received from Mr. J. E. Brown, Superintendent of Schools in Lancaster, Ohio, and from Mr. Paul R. Cummins, Superintendent of the Fairfield County Schools, which give more explicit details with respect to the situation in their jurisdictions.

Thank you Mr. Chairman for your courtesy in hearing me this morning.

Report No. 1's Disturbing Goal

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 19, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Donald I. Rogers, business and financial editor of the New York Herald Tribune. Mr. Rogers' article appeared in the New York Herald Tribune of August 19, 1959:

REPORT NO. 1'S DISTURBING GOAL

(By Donald I. Rogers)

Most Americans were unaware, undoubtedly, of the existence of an august little Washington group known as the Cabinet Committee on Price Stability for Economic Growth, an operation headed by none less than the United States and dedicated to the attainment of a utopian existence in some misty economic Shangri-La.

There has been presented, now, report No. 1 from this Cabinet Committee, for the edification of the rest of us who are presumed to be less thoughtful than those who have spent months contemplating the functioning and malfunctioning of the economic machinery of the land.

The 1,600-word initial document issued by the Cabinet Committee, was entitled "What Do We Really Want From Our Economy?" In case you don't know what you want, it tells you what you should want, if you're a normal American who wants something from his economy.

If you are not a normal American and don't want anything in particular from your economy, it won't benefit you to read the treatise, anyway, chances are you read something like it, or even wrote something like it when you were in high school.

According to a spokesman for the Cabinet group—as you know Cabinet-rank spokesmen must be protected from identity—the primary concern of the committee is to promote the growth of the economy.

This reassuring attitude on the part of the administration will be welcomed by all who might have feared that some Cabinet members were opposed to growth in the economy.

LISTS THREE GOALS

The Nixon task force has come to grips with the whole terrible problem of business

administration in a free society. It decided that rather than come right out with some suggestions, it should first condition us with some educational discussions on the subject. It lists three economic goals of the Republic: (1) Economic growth—that is, a large and expanding output of goods and services; (2) maximum employment opportunities, meaning not only a chance to work, but a chance to hold a kind of job that suits you best; (3) reasonable stability of the price level.

The first two of these goals, revolutionary though they are, sound vaguely familiar. Personally I can't see myself, at my age, doing much about expanding my own output of goods and services. And as for the job that suits me best, I am positively sterling at clipping coupons.

It is the last goal, however, which is disturbing.

Price stability should be no real objective in a truly expanding economy. The words sound nice, like that wonderous bearded phrase of predepression days, "sound fiscal policy," and they're just about as meaningful.

OUTLAWED BY COUETS

The courts did away with fixed prices. They were found unfair and unsatisfactory. Prices that are not fixed are generally "unstable" in the true meaning of the word.

If prices fluctuate in this free economy, it's no more than we can expect, for we do not want to discourage other factors from fluctuating—like wages and production costs.

If what the Nixon committee means is that we should be wary of a too-rapid increase in prices because of inflation, or a too-rapid decrease in prices because of resulting recession, then they're on the right track.

But nowhere in the report is the word "inflation" mentioned.

Maybe it'll be in lesson No. 2.

Slave Labor in Russia Today

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 19, 1959

Mr. WOLF. Mr. Speaker, when Mr. Khrushchev is visiting America, I am wondering if anyone in a high place will have the courage to call on him to explain why this peace-loving government which he heads continues the terrifying practice of slave labor.

On this subject I would like to include here an open letter to Mr. Harriman which is taken from the American Bulletin which is published by the Czechoslovak National Council of America.

The letter follows discussing slave labor:

OPEN LETTER TO MR. HARRIMAN

Threats were hurled at Mr. Averell Harriman, former U.S. Ambassador to the U.S.S.R., by Mr. Khrushchev himself.

Prior to the interview, Mr. Harriman had written a number of articles on his Russian visit to the New York Times. One dealt with a visit to Krjukovo near Moscow, a "correction center" (June 3). Mr. Khrushchev assured the American visitor that forced labor camps had been dissolved.

Khrushchev's statement is flatly denied in an open letter by Dr. Frank Polak, an escapee from Communist Czechoslovakia, who had spent 7 years in Soviet slave-labor camps.

"Nikita Khrushchev knew why he permitted Mr. Harriman to inspect the camp in Krjukovo and not a slave camp in Vorkuta, the Urals, or Siberia where millions of inmates still work on construction projects and communications, in factories and mines. In Siberian Norilsk hundreds of thousands of Soviet slaves still work under incredible living conditions. Instead, Mr. Harriman was shown a model labor camp near Moscow where 1,000 inmates live behind barbed-wire fences and work in the camp factory or on constructions. The security chief did not explain, however, that by camp discipline he meant 'the discipline of work,' a favorite Soviet practice of withholding food from a worker if he fails to fulfill his quota, and that nonobservance of the working order is punished by the cat-o-nine-tails treatment, solitary confinement up to 5 days, or transfer to one of the other stricter camps. He did, however, inadvertently admit that there are camps with much harsher regimes. Another important confession unwittingly made by the camp chief concerned work compensation for it shows that there is no difference whatsoever between forced labor camps and the newly labeled 'colonies of correction.' If an inmate completes his norm, he is paid 200 rubles a month from which the authorities deduct 92 rubles for food and clothing (poor as it is). The work output of colony inmates is as high, and ofter higher, as that of the free workers whose monthly wages, according to Soviet statistics, amount to 700 rubles. In other words an inmate receives only 35 percent of a free worker's wage. The difference between forced and free labor wages is clear profit for the regime and for this reason the Soviet Union does not intend to give up slave labor. Furthermore, without forced labor it would be impossible to colonize and exploit economically the far north and other remote regions."

"The question of forced labor in the U.S.S.R. and the satellites cannot be solved by denying its existence or by giving it another name," writes Dr. Polak, author of two books on slave-labor camps and Communist practices in the Soviet Union. "If the Soviets have dissolved forced labor camps, as they claim, why not permit an impartial Western commission to investigate conditions? The last time the Soviets made such a claim, the United Nations Commission found the opposite to be true and a resolution, condemning Soviet practice, was passed by the General Assembly on December 7, 1954. There the matter rests as nothing has changed."

Walter Lee

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 19, 1959

Mr. CANFIELD. Mr. Speaker, along with my colleagues and many friends of Walter Lee, I am sorry to learn of his retirement at the end of this session of Congress as Legislative Assistant to the House Subcommittee on Claims.

I have known Walter Lee ever since his arrival on Capitol Hill some 21 years ago. I have always found him to be most affable, most friendly, and most helpful to Members and their staffs. His straightforward advice with regard to the merits of any proposed legislation was always appreciated. I will miss Walter from the Capitol Hill scene, and I know it will be so with many others, but in his well-earned retirement I wish for him and his family many years of good health and happiness.

Hon. Ken Regan

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 13, 1959

Mr. TEAGUE of Texas. Mr. Speaker, we in the Texas delegation lost a good friend last week with the passing of our former colleague, Ken Regan. Ken had a brilliant and colorful career and under leave to extend my remarks I wish to include an article from his hometown newspaper:

HON. KEN REGAN

Former U.S. Representative Kenneth M. Regan, 66, died at 7 a.m. Saturday in a Santa Fe, N. Mex., hospital after a long illness. He underwent extensive surgery in Washington last April from which he never recovered.

The colorful Midlander had maintained a home in Santa Fe as well as this city since 1958.

Funeral services will be held at 4 p.m. Monday in the First Presbyterian Church of Midland with the pastor, Dr. R. Matthew Lynn, officiating. Interment is planned in Resthaven Memorial Park.

TEXAN SINCE 1920

The body will be brought overland to Midland Sunday. Newnie W. Ellis Chapel has charge of arrangements here.

Last January, Regan returned to Washington as a representative of Texas railroads.

The former Congressman had come to Texas in 1920 after service as a Signal Corps flier in World War I. He first studied dentistry but decided against drilling teeth and came to Texas to drill for oil instead.

His first well found oil but produced only briefly. Then came a succession of dry holes, but finally he struck and got on his feet.

The wildcatter was elected Pecos city alderman and then served several terms as mayor. He went to bat for ranchers in Austin over an adverse Supreme Court decision on mineral rights, and the ranchmen helped elect him to the Texas Senate.

In the senate, he played an important part in adjustment of inequalities for land left vacant by early surveys and refunds to cotton farmers for pink bollworm protection. He also had a part in acquiring the first land for the Big Bend Park.

Regan served 4 years in the senate, starting in 1933, but did not seek reelection. He was given the unusual honor of being elected president pro tempore as a freshman member. The honor usually goes to a veteran.

WORLD WAR II CAPTAIN

In World War II, Regan was an intelligence officer in the Air Corps, rising to captain. After the war, he moved to Midland, where he continued oil operations. The family home is at 1207 West Texas Street.

The tall, affable Regan went to Congress in 1947 after winning a special election to fill the vacancy when R. Ewing Thomason, of El Paso, resigned to take the Federal bench. He won his first term in 1946, serving the 19-county 16th Congressional District two more terms. He was defeated by

the present Representative, J. T. Rutherford, of Odessa.

NATIVE OF ILLINOIS

Regan was born in Mount Morris, Ill. After coming to west Texas, he acquired farm and ranch lands along with extensive oil properties.

Active in civic circles here, he was a chamber of commerce director, a Mason and Shriner, and a Rotarian.

Survivors include the widow, Roberta, and two brothers in California.

Debt Management Legislation Debacle

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. CURTIS of Missouri. Mr. Speaker, on June 8, 1959, the President sent a message to the Congress outlining a legislative recommendation designed to provide for economical management of the public debt. Since that time the Committee on Ways and Means has conducted 3 days of public hearings and spent 11 days in executive session which have, by virtue of a Democratic House leadership decision, produced absolutely nothing. That decision of the majority party came to light yesterday when the majority members of the Committee on Ways and Means, with one exception, voted to suspend any further action on the President's legislative request.

I sincerely regret that the majority party has taken this irresponsible attitude in regard to this urgent legislation. The Democratic decision to do nothing means that the holders of series E and H bonds will be denied a fair return on their investment in America's future, means that the Federal Government will have to continue to finance the huge public debt in the short-term money market in competition with the borrowing needs of small business and consumers, and means that the cost of debt management will be higher than it would have been if this proposal had been favorably acted on.

The Democratic Party must take sole responsibility for this decision. The Democrats have thwarted endeavors by the Republican members of the committee to have favorable action taken on this legislation, and they have rebuffed Republican pledges of support to the leadership on this important proposal.

Mr. Speaker, in this morning's New York Times there was an editorial dealing with this subject. This editorial should receive the thoughtful consideration of the public and certainly of those individuals in positions of responsibility on the Democratic side of the aisle who refused to deal responsibly with this important issue of debt management and fiscal policy.

The editorial follows:

INVITING INFLATION

The House Ways and Means Committee acted yesterday to pigeonhole the request of President Eisenhower that it authorize him to raise the prevailing ceiling on Government bond interest rates, which are 4¼ percent in the case of marketable securities and 3.26 percent for savings bonds.

This move, which reverses the committee's approval of such a request only last week, comes not only as a complete surprise but as an extraordinary example of fiscal irresponsibility. It makes strange reading, indeed, when one considers it against the background of the general directive the committee included in last week's approval of the President's request.

"It is the sense of Congress," declared that directive, "that the Government shall take into account * * * the importance of achieving the maximum sustainable rate of economic growth, maintaining reasonable stability of the purchasing power of the dollar, and assuring that the cost of managing the public debt is kept to the minimum consistent with these vital objectives."

In the early postwar years, when the Treasury was insisting on the maintenance of "pegged" rates on Government securities, at least it confined its arguments to (1) the low cost at which the Treasury was able to raise its money, and (2) the bugaboo of a possible collapse of the Government bond market if the "peg" should be removed. Its policies were indefensible in terms of fiscal policy, but at least the Government was not hypocritical enough to argue that it was pursuing this program in the knowledge and belief that it was furthering the policy of "achieving the maximum of sustainable rates of economic growth" coincident with "the maintenance of reasonable stability in the purchasing power of the dollar."

What yesterday's action by the Ways and Means Committee means is that, by denying the Treasury the authority to liberalize the terms under which it can raise the funds it has to raise in the months ahead through the sale of long or medium long securities, thus tapping to that extent the savings of the people, it has compelled it to raise such funds through the sale of short-term paper. Since such paper finds its way largely into the commercial banking system, it is "purchased" by credit created for the purpose—that is, by an inflation of the supply of credit.

Amending Section 5801 of the Internal Revenue Code

SPEECH

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 18, 1959

Mr. SIKES. Mr. Speaker, for a number of years there has been a need for clarification of firearms legislation to remove inequities which have been shown to exist in present laws. I am very pleased to see the bill which is now before us and which comes to the House with a unanimous favorable report of the Committee on Ways and Means. Identical bills were introduced by me and by other Members of the House following a series of conferences between representatives of the Alcohol and Tobacco Tax Division, the National Rifle Association, Sporting Arms and Ammunition Manufacturers Institute, American Gun Dealers Association, Importers Association, National Chiefs of Police Association, Metropolitan Police Department, and many individual sportsmen and collectors. It was as a result of these meetings that the legislation now before us was written. I believe that a much better understanding now exists between the various segments of the firearms industry and that there is general agreement that the proposed legislation will be beneficial.

It has taken several years of hard word to get this bill to the floor. One problem has been the difficulty of getting a favorable report from the Treasury Department where there seems to have existed a great deal of misconception regarding the purposes of the legislation and the need for a revision of present legislation. Fortunately, there does exist a better understanding in that agency at this time and I am very glad to note the cooperation which the agency is now giving.

Collectors and sportsmen will benefit in particular from the new language; there can be very little, if any, loss of revenue to the Government by virtue of the reductions of some excessive fees which presently are charged and I can see nothing in this bill that would provide any measure of satisfaction for the criminal element or open any loopholes to them which they do not now possess. In fact, some loopholes will be closed.

The amendments which were added by the committee are in my opinion sound and I trust that the bill as it now appears will speedily be adopted by the House and the Senate and that it will become law.

Politically Potent Rural Postal Men Heartily Welcomed

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Post and Times Herald:

[From the Washington Post and Times Herald, Aug. 16, 1959]

POLITICALLY POTENT RURAL POSTAL MEN HEARTILY WELCOMED

(By Jerry Kluttz)

A relatively small group of Federal employees which packs a big political wallop is the independent National Rural Letter Carriers' Association.

Official Washington, from the President down, went out of its way to give hearty greetings to the nearly 3,000 delegates to NRLCA's 55th annual convention which ended over the weekend.

Few organizations of any kind have come even close to matching NRLCA's long list of distinguished and influential guests who attended its banquet at the Sheraton-Park.

Vice President RICHARD NIXON praised the public service of the group in recalling the extra little favors by the rural carrier who served his family for many years in Whittier, Calif.

But it was House Speaker SAM RAYBURN who expressed the sentiments of many of the 21 Senators and 150 House Members present. Said he:

"Rural carriers are most popular. They take the farmers something they want and they never ask for anything. But when you give them something they always let you know they appreciate it. In contrast, some other groups will say you should have given it to them sooner."

Robert Ramspeck, the toastmaster, recalled that when he was first elected to Congress 30 years ago a politically wise Member had advised him "to stick to the rural carriers because they have more friends than anyone else."

Postmaster General Arthur E. Summerfield and his top postal staff were generous in their praise of the rural carriers and their organizations. Senator OLIN D. JOHNSTON, Democrat, of South Carolina, and Representative TOM MURRAY, Democrat, of Tennessee, the respective chairmen of the Senate and House Post Office and Civil Service Committees, joined in heaping praise on the group.

The NRLCA, an organization of 37,000 members, or nearly all active rural carriers, has the respect and good will alike of Republicans and Democrats, liberals and conservatives. It works quietly and effectively with the different political factions to gain its goals. It refuses to indulge in name calling when someone disagrees with it.

NRLCA doesn't give its president a chance to entrench himself and to dominate it. Its presidents usually serve 2-year terms and they return to their rural routes. Half a dozen former presidents, most of them back carrying mail, attended the convention.

Another interesting fact is that rural carriers usually are not selected under a pure civil service system, although their jobs are under the merit system. In fact, the selection process is politically tainted in most instances. The political party in power usually manages to appoint its followers to rural carrier openings in spite of the civil service system.

Charles R. Larson was reelected president for a second 1-year term; Tommy Martin, vice president, and John W. Emeigh, secretary, by the convention. They have offices here in the Warner Building.

Here We Go

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 19, 1959

Mr. ULLMAN. Mr. Speaker, I am certain a recent editorial printed in the Record-Courier of Baker, Oreg., will be of interest to my colleagues. Many of them will recall a contention made by the Idaho Power Co., during the Hells Canyon fight, that private development of the Middle Snake River would be accomplished "at no cost to the United States."

Yet legislation is now before Congress which would pay a Federal subsidy to the Idaho Power Co. and to other private upstream dam operators for alleged benfits received by the Government at Federal downstream projects. I am unalterably opposed to such legislation and, as I pointed out in my statement before the House Subcommittee on Communications and Power—

It was a mistake to grant a Federal license to this company [Idaho Power Co.] to underdevelop this stretch of the Middle Snake in the first place; it would compound the tragedy to play Santa Claus again and hand the Idaho Power Co. an unanticipated windfall amounting to millions of dollars.

Mr. Byron Brinton, editor of the Record-Courier, is to be commended for his excellent editorial on this subject. I trust his comments will be carefully read by my colleagues:

[From the Baker (Oreg.) Record-Courier, Aug. 6, 1959]

HERE WE GO

During the heat of the recent river resource battle in which a private utility was given Snake River damsites, there crept into the discussion the then-pending legislation which wold have granted upstream power companies financial benefits for any water that subsequently went through public project generators lower down the river. The legislation was sidetracked, obviously, so that Idaho Power Co. could avoid any charge that they intended to exert control over the river, because part of the low dam issue was whether the private Wall Street financiers or the people would control the Nation's water.

Sufficient time has now elapsed that the financial interests, thinking the public has forgotten and acting through President Eisenhower's Federal Power Commission, have now reactivated the legislation which would not only permit upstream utilities to have their dam sites and all the power they produce, but would also have the lower power projects belonging to the people pay the non-Federal utilities for the public water that goes through the private dams.

As these ghosts of the Hells Canyon fight come up, we are privileged to from time to time to remind the area that "we told you so." Idaho Power Co. then denied any contention it was seeking a water right. Now the claim to downstream benefits is based on the assumption it has a claim on the water. If that claim is validated by legislation it will cost the public millions of dollars to use its own water for which some of us at least fought so hard to try to get the public to keep.

Not only do the non-Federal utilities expect to exert the water rights granted them—even though they promised they wouldn't, but also they intend to make the taxpayer pay through the nose even though the private low dams were supposed to be a gift of private enterprise to the Nation at no cost to the taxpayer.

And a third ghost of the bitter dam fight is also incorporated in this new effort to gouge the public to the benefit of the private dams. It has to do with the sacredness of obligations. The FPC license has only a few things in it as to what the low dams are to do. One of them in a feeble way attempted to compel the utility to make good its boast that its low dam would be a comprehensive, full development of the river. The license required the company to operate the project and its system in coordination with the Northwest power pool. Now the non-Federal utility people through water legislation are attempting to make the public reimburse them from downstream for water stored upstream when in fact their very license, as one of the conditions of the low-dam grant, required them to coordinate the project hydraulically.

Here we go again. One year it was a river giveaway, then a quick tax writeoff, then a 40-percent tax-free dividend gimmick, now a downstream benefits bill. Thanks to a few of our Congressmen and Senators some of these raids on the taxpayer by the low-dam scheme have not worked. But give the financial crowd time and lower the guard and they'll own the whole river, Grand Coulee, Bonneville, and all. That's the big plum. The little raids on the taxpayer—like the claiming of water rights, tax-free dividends, etc.—are merely little battles along the way—to make the public so calloused it won't know what the big job looks like when it does come.

Politics and the Labor Bill

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 17, 1959

Mr. COHELAN. Mr. Speaker, under permission to extend remarks in the RECORD, I include Columnist Joseph Alsop's article on labor reform legislation in the Washington Post of August 19, 1959. In this and previous analyses, Mr. Alsop has thoughtfully outlined the key points of view bearing on this issue and, for this reason, his remarks should be made part of the permanent RECORD:

POLITICS AND THE LABOR BILL

(By Joseph Alsop)

The next act in the great labor bill drama is going to be dominated by two forces, one obvious, the other as yet unseen. The force that has emerged already is the conviction of the Congress that the voters want a strong labor reform bill.

The other force will emerge soon. It is the determination of Senator JOHN F. KENNEDY, of Massachusetts, to fight to the end against the specially severe prohibitions of organizational picketing and secondary boycotts that the House of Representatives included in the labor bill.

As the author of the original labor reform bill, and as chairman of the Senate conferees, KENNEDY has the power to deadlock the Senate-House conference. He does not want to do so. He is not opposed to regulation of organizational picketing and secondary boycotts. He wants a compromise. But KENNEDY is convinced that in their present form, the picketing and boycott clauses in the House bill go decidedly too far and are even, in patches at least, doubtfully constitutional.

"What everybody ought to understand," he says, "is that these clauses in the House bill won't make a dime's worth of difference to big labor, including Jimmy Hoffa and his Teamsters. What they will do is bring the union movement in the South to a dead, screeching halt. And I'm not going to vote for that, much as I want labor reform."

If he can get no compromise of the sort he wants, KENNEDY can deadlock the conference, because he can be sure of the support of the Senate's other Democratic conferees. By the same token, a majority of the House conferees will surely support their leader, Representative GRAHAM A. BARDEN, of North Carolina. BARDEN wants the labor reform bill to be as severe as possible, and is far from adverse to impeding the unionization of the South.

As KENNEDY will deadlock the conference if he cannot get a compromise, the question really is whether BARDEN and company will offer a compromise. The answer quite largely depends, in turn, on the estimates of the legislative temper of the House and Senate reached by BARDEN'S Republican allies, such as Senator BARRY GOLDWATER, of Arizona.

The most natural result of a deadlock in conference will be to present the Senate with a choice between no labor reform bill at all, or acceptance, en bloc, of the labor bill passed by the House. If GOLDWATER thinks the Senate will take the unchanged House bill, he is likely to want a conference deadlock. It is not at all impossible that just this conclusion will be reached by GOLDWATER and his fellow Republican conferee, Senate Minority Leader EVERETT DIRKSEN, of Illinois.

Besides all the sectional and labor-management strains, the labor reform bill is also supercharged with presidential politics. On the Republican side, the House's affirmative response to President Eisenhower's plea for a strong bill was very fine ointment, but there was a civil rights fly in it all the same.

House Republican Leader CHARLES HALLECK almost tearfully, and quite unconvincingly, denied any deal to obtain southern support by helping to block action on civil rights. Almost within minutes, the Republican-southern Democratic coalition downright pridefully exhibited its unity and power. This kind of thing is not a source of unalloyed delight to Republicans like Vice President RICHARD M. NIXON, who think civil rights ought to be a vote-getting Republican issue.

On the Democratic side, Senator KENNEDY'S position is painful, but it is slightly less painful than the positions of his rivals. He and his brother, Robert, have worked hard and successfully to make labor reforms their family issue. If KENNEDY votes against the House bill on a matter of principle, he can still hope to retain much of the support he has gained by his own and his brother's work. For the Senate's other Democratic presidential aspirants, however, the choice can lie between being against labor reform, which the country wants, or being against labor, which will have much power at the Democratic convention.

The choice is especially painful for the leading unavowed and inactive candidate, Senate Majority Leader LYNDON JOHNSON, of Texas. His State is so desirous of a strong bill that most of the Texas Congressmen, including the Member from JOHNSTON'S own district, refused to support their revered chief, Speaker of the House SAM RAYBURN. Yet labor opposition, if added to JOHNSON'S southern handicaps, would be a severe blow to JOHNSON'S presidential hopes.

As JOHNSON is in the middle, however, and as he has a genius for finding ways out of dilemmas of this sort, a compromise both he and KENNEDY can vote for may perhaps be agreed on somehow.

The Labor Bill

SPEECH

OF

HON. JOHN J. McFALL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 13, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 8342) to provide for the reporting and disclosure of certain financial transactions and administrative practices of labor organizations and employers, to prevent abuses in the administration of trusteeships by labor organizations, to provide standards with respect to the election of officers of labor organizations, and for other purposes.

Mr. McFALL. Mr. Chairman, I am in full accord with what I believe to be the overwhelming desire and determination of the people of the United States and the Members of this House to put an end to the racketeering and abuses in the field of labor-management relations as exposed by the McClellan committee.

I long have been ready and am prepared today, if given an opportunity, to vote for a strong and effective bill to drive out the racketeers, chiselers, and hoodlums who have established themselves in the labor movement against the wishes and over the opposition of the great number of legitimate and honest leaders and members of organized labor.

I am equally determined to do all I can to put an end to the just as despicable activities of conniving, bribing, and extortion by middlemen and management in the field of labor relations, as are the overwhelming number of legitimate and honest businessmen.

However, I will not vote for any legislation that, in the guise of racketeering reform, would actually cripple the legitimate activities of millions of honorable union officials and workers.

Last year I voted for the Kennedy-Ives bill which was designed to cure the abuses exposed by the McClellan committee. This bill was approved by a 88 to 1 vote of the Senate but it died in the House on a 190 to 198 rollcall when certain interests decided they would prefer to have an election issue rather than labor legislation .

Of the measures before us today, it is generally agreed that there are really only two choices—the Elliott committee bill, H.R. 8342, and the substitute Landrum-Griffin bill, H.R. 8400.

Robert F. Kennedy, chief counsel for the McClellan committee, and the man who knows the abuses uncovered by the committee better than any other man, has given his all-out support to the committee bill.

Kennedy, whose opposition to labor racketeering has reached the point of a personal crusade, said yesterday that the committee bill would carry out all of the recommendations of the McClellan committee.

Kennedy said the committee bill would provide:

First. Safeguards for union funds, with appropriate penalties for the falsification or destruction of union records and the embezzlement of union dues.

Second. Safeguards for union member rights and democratic procedures, including secret ballots, regular elections and an opportunity for opposing nominations.

Third. Safeguards against secret conflict of interest transactions by, or loans to, union officers.

Fourth. Safeguards against employer payoffs to interfere with union organization, or for sweetheart contracts.

Fifth. Safeguards against the abuse and prolongation of union trusteeships.

Sixth. Safeguards against the use of felons as union officers.

Seventh. Safeguards against the use of picket lines to extort money.

Eighth. Safeguards against hot cargo contracts and fictitious unloading fees.

Ninth. Safeguards against surreptitious and improper activities of undisclosed management middlemen.

While differing in some detail, the Elliott bill and the Landrum-Griffin substitute, as well as the Shelley bill, all agree pretty well on the above points. Page after page of the language is identical. The issue of corruption is well handled in each of the measures.

But the issue before us today is not shall there be labor-racketeering reform. On that point we are all agreed.

The issue is whether or not we should follow the dictates of those whose economic position would be bettered by handicapping the union movement to place in the law under the excuse of "labor reform" legislation that would cancel out the historic balances of basic labor-management relations that over the years have resulted in the greatest opportunities, the greatest advances, and the greatest prosperity for both business and unions that this Nation has ever known.

The same forces that have tried to foster the right-to-work philosophy on this country want that kind of a bill.

The Landrum-Griffin substitute is their bill.

Among other defects, this proposal would virtually put an end to legitimate organizational picketing, a historic right of unions, even under the Taft-Hartley Act. It would impose impossible criminal penalties for actions in the internal working of union meetings. It would leave the vast majority of small unions and managements in the so-called "no man's land" without any uniform relief from the NLRB.

I am in favor of the middle-of-the-road approach advocated by our Speaker and will oppose the unduly restrictive Landrum substitute.

There are three areas in which it is most oppressive:

First. No man's land: The Landrum language on the no man's land is conflicting and generally unsatisfactory. It would pass on to the States the authority to arbitrate cases that the National Labor Relations Board did not accept. Uniform justice would not be possible under this setup. More than half the States now have no machinery for such action. State laws vary widely. The committee bill takes the reasonable approach that every union and management, no matter how small, should have the right to NLRB processes, and calls for the expansion of the NLRB and directs it not to refuse to handle any case.

Second. Hot cargo and secondary boycotts: The Landrum substitute, by unqualifiedly barring hot cargo contracts in all trucking, makes strikebreakers out of all Teamsters and requires them to cross picket lines of any union. The Elliott bill had the same provision applicable to interstate carriers but added wording to specify that the hot cargo contract ban did not apply to a member's right not to cross a primary picket line without losing his job and did not re-

quire a union member to cross a primary picket line.

The Landrum bill made illegal all secondary boycotts in all industries and even banned a union from encouraging individual members to engage in a secondary boycott. Acting in concert to encourage secondary boycotts is banned by present law, which forbids secondary boycotts.

Third. Picketing. The Landrum language would make it virtually impossible for an honest union to picket for organizational or recognition purposes, to advertise by peaceful picketing as "unfair to union labor," despite Supreme Court decisions that permit this as an exercise of free speech.

Specifically, it would outlaw recognition or organizational picketing if the employer recognized another union, if there was a valid election in the past 12 months, if the union could not demonstrate a "sufficient showing of interest"—signed cards of 30 percent—to support a petition for a recognition election or where picketing had been going on for a reasonable time—up to 30 days—and no petition for election had been filed. It contained no provision for a defense if the employer was charged with unfair practices in the election.

The Elliott bill restricted organization picketing but not so severely. It outlawed organizational picketing by a union only if another union was validly recognized by the employer or the picketing union had lost a recognition election within the preceding nine months, and could not show that it had since come to represent a majority of the employees. A charge that the employer had engaged in unfair labor practices in the election would be a defense against an allegation of illegal picketing.

Extortion or blackmail picketing would be banned by both bills.

Should the Landrum-Griffin substitute be finally adopted, the bill will go to conference along with the Kennedy-Ervin bill adopted by the Senate earlier this year.

It is my deep and sincere hope that reasonable minds and responsible attitudes will prevail and out of this conference will emerge a sound, workable and fair bill which will bring about real reform in the labor-management field but which will not destroy the ability of labor to achieve its legitimate objectives.

Labor Reform

EXTENSION OF REMARKS

OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 4, 1959

Mr. RHODES of Pennsylvania. Mr. Speaker, in view of the concern over labor reform legislation among Members of Congress, I would like to call attention to a resolution on labor reform adopted by the Board of Social and Economic Relations of the Methodist Church on April 23, 1959. Under leave to extend my remarks, I include the full text of this comprehensive resolution:

LABOR REFORM

The disclosure of corruption, racketeering, and collusion in labor-management relations is of concern to the Christian conscience. The historical teachings of the Judeo-Christian tradition of justice and righteousness call the Christian to appraise the ethical issues involved. The church early recognized the right of workers and employers alike to organize to safeguard and promote their interests (par. 2020, "the Methodist Discipline"). The church has a like concern when irresponsibility and malpractice is uncovered in labor-management relations. The concern of the church is not alone with the intentional graft and abuses that have been uncovered but also with some of the unintentional abuses that can creep into every organization and can be overlooked or concealed by the complexity of the institution.

The values of a materialistic society are revealed in the disclosed racketeering and violations of trust in some labor unions. This same behavior can be found in certain segments of the business community as well. The church calls an entire society to repent when society stresses the status of those who are affluent, rewards those who "get ahead" and are a "success" regardless of the means employed; when society places social approval on acquisitiveness for its own sake and rewards the gaining of profit regardless of the social effects. These are the temptations of other segments of society beside the labor unions. However, this can in no way become an excuse for the labor unions to fail to remove the abuses and corruption for which they are responsible.

It is important to recognize that though we are rightfully concerned with the evident abuses in labor unions, these evils are not a general practice of most labor unions and are found only in a minority of cases. The Senate committee investigating labor-management corruption cautioned in its published report that it, "in no way intended to reflect on the overwhelming majority of the labor unions and businessmen of the Nation, of whose integrity the committee is firmly convinced." We should beware of the danger that in suggesting reforms we go beyond those which are necessary and wise and actually hamper and harm the legitimate role labor unions play in the development of our economy.

Among the abuses that need correction within certain sections of labor-management relations are:

1. Lack of democratic procedure in some unions.

2. Unwarranted control by an international over local union.

3. The misuse of union funds, particularly expense accounts, pension funds, and health and welfare funds.

4. Collusion between employers and union leaders.

5. Illegal and improper actions by certain managements, unions, and certain industrial relations consultants.

6. Infiltration of gangsters into some unions.

7. Lax policies of law enforcement.

If these problems are to be met adequately and in ways by which a continuing program of correction is made possible, both now and in the future, reform will have to take place at least on four levels:

I. PERSONAL INTEGRITY

When dealing with labor reform, no legislation by the Government nor changes within the corporate structure of the union are ever a substitute for the basic need of personal integrity. This need for personal integrity and responsibility is universal and is most needed in people elected to positions of leadership. The church must encourage men of integrity who are presently in leadership in labor unions and encourage others of similar qualities to be willing to accept leadership. There is also a need for personal integrity and responsibility on the part of the rank and file of the union members. A responsible union is one in which the members do actively participate. Only with basic integrity on the part of union members and leaders will the labor movement continually be able to play its proper and constructive role in our economic life.

II. WHAT THE UNIONS CAN DO

We recognize and wish to encourage the move on the part of unions to institute internal reform measures, such as, AFL–CIO Ethical Practices Committee, the Appeal Board of the International Upholstery Union, and the Public Review Board of the UAW.

There are other reforms which unions can institute:

1. Giving honest respect to opposition within unions by creating a climate of free discussion and debate where minority viewpoints are freely welcomed. (This may demand that some unions will have to remove from their constitutions any provisions which prohibit criticism of leadership and limit the freedom of members during union elections. This would demand specific guarantees in the constitutions of these unions of freedom of speech, expression and right of petition.)

2. Regular elections of officers by secret ballot.

3. Full public disclosure of union funds, and particularly such as pension, health and welfare funds.

4. Creation of public review agencies to which aggrieved union members can appeal.

III. ENFORCEMENT OF EXISTING LAWS

(Federal and State)

Enforcement of existing laws is sometimes bypassed by both labor and management. At the same time both seek legislation to control their opposites while decrying legislation affecting themselves as meddling in the affairs of free men.

Regulatory laws, Federal and State, are in existence which if properly enforced would control many of the malpractices which have developed in labor-management relations.

Just laws serve the Nation and protect and extend the freedom of persons in the community. Their effective enforcement will aid in the development of good labor-management relations.

IV. SOME SUGGESTIONS FOR NEEDED LEGISLATION

There are areas of labor-management reform which should be covered by new legislation if the public good and the welfare of workers and management is to be protected. Existing statutes regulating these relationships should be amended in the light of 12 years of court and agency decisions. Constructive legislation to provide for labor-management reform should include:

1. A requirement for all unions to hold elections at regular intervals (not less than every 4 years) conducted by secret ballot, without restraint and upon due notice and to conduct the business meetings of the union according to customary democratic procedures.

2. A requirement for all unions to file with the Department of Labor, and/or proper State authorities adequate financial reports, these reports to be furnished to all union members.

3. A requirement for financial reports of all pension, health, and welfare funds, including those administered by management, to be filed with the Secretary of Labor and/or proper State authorities. For example, the report should include the amount of rebates

and commissions and to whom and when paid.

4. In order that there be no conflict of interest, a requirement for unions, union officers, and employers to file with the Secretary of Labor and/or local State authorities reports of any financial transactions between them other than bargaining agreements.

5. A requirement for a clear delineation of the rights and authority of the international and member local unions one to another.

6. A requirement for a secret ballot on all strike votes with due notice to the entire membership.

7. A requirement that striking union members may participate in decertification elections.[1]

8. A requirement that unions may strike "farmed-out work."[2]

9. A requirement that there be proper supervision of union trusteeships.

---

[1] When a manufacturer or producer accepts work from a plant on strike, then the union should have the right to use sanctions against that producer or manufacturer.

[2] When in a strike situation an employer hires new workers to take the jobs of those on strike, the striking workers should have the right also to participate in an NLRB election to determine the legitimate bargaining agent.

Pandora's Box in the Caribbean

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, August 14, 1959

Mr. PORTER. Mr. Speaker, much has been written about the Dominican Republic in the last couple of years, both good and bad, in the CONGRESSIONAL RECORD and in the press. Peter Edson, in the Washington Daily News for August 14, 1959, has summed up the two points of view rather neatly. If we could leave the box he speaks of unopened and just enjoy the outside, it would be pleasant indeed. However, it is perfectly natural to want to see what the box contains, and inside we find the sordidness described with some restraint by Mr. Edson.

Under a previous consent I include his article:

DOMINICAN REPUBLIC RIDDLE

(By Peter Edson)

The United States is in something of a box over its relations with the Dominican Republic.

The outward appearance of the box shows this little country costing the United States less money and trouble than any other Latin American government. Its aid program is under $200,000 a year. This all goes to 13 Americans giving technical assistance in education.

The United States signed a military assistance agreement with the Dominican Republic in 1956. It had a U.S. Air Force mission for 5 years. Now there is only a 13-man naval mission, running a training program on antisubmarine warfare. Arms shipments to the Dominican Republican are embargoed.

The United States has made no loans to the Dominican Republic. Its economy is one of the solidest in Latin America. Up to now it has had a favorable trade balance with the United States exporting principally sugar, coffee and cacao.

Private American investments in the little country—under three million people in an area about the size of Vermont and New Hampshire, east of Haiti on the Island of Hispaniola—are $100 million. There are 6,000 Americans there, many of them Puerto Rican.

Diplomatic relations are correct under the U.S. policy of maintaining friendship with all Latin American countries without intervening or implying either approval or disapproval of their internal form of government.

That is the good side of the United States-Dominican Republic relations — the outside of the box, so to speak. The inside of the box makes an entirely different story and it smells terrible. This may come out at the current Santiago, Chile, conference of Latin American foreign ministers, with dire consequences.

U.S. relations with the Dominican Republic's dictator Trujillo regime began to go to pot in 1956 over a succesion of incidents.

First was the disappearance of Gerald Lester Murphy, an American pilot believed to have flown a drugged revolutionary leader, Jesus Gallindez, back to an unknown fate in the Dominican Republic.

Second was the failure of Rafael L. Trujillo, Jr., son of the Dominican Republic's Generalissimo, to win a diploma from the U.S. Army Command and Staff School at Fort Leavenworth. This followed his goings-on with Kim Novak and Zsa Zsa Gabor in Hollywood.

This caused the Dominican Congress to pass a resolution denouncing all U.S. aid agreements. This was never put in effect by the Dominican executive branch of government and it was later revoked.

But in October 1958 it was revealed that the Dominican Secretary of Commerce had written eight U.S. chambers of commerce—with copies to the State governors—recommending action against Congressmen "villifying the Dominican Republic."

Finally, the Dominican Republic granted asylum to dictators Juan Peron of the Argentine, Perez Jiminez of Venezuela, Fulgencio Batista of Cuba and Rojas Pinilla of Colombia. This did not endear Trujillo in Latin America.

Liquor on Airplanes

EXTENSION OF REMARKS
OF
HON. GEORGE E. SHIPLEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 19, 1959

Mr. SHIPLEY. Mr. Speaker, there has been a considerable amount of discussion in regard to the serving of liquor on the airlines, and I would like to take this opportunity to let my colleagues know my feelings on this matter.

Effective regulation of the consumption of alcoholic beverages on domestic airplane flights has become increasingly difficult since the practice has become more prevalent. This fact has been attested to by those who should know best, namely, the Airline Pilots Association and the Airline Stewards and Stewardesses Association. It is their contention that the practice of serving alcoholic beverages on airplanes is a deterrent to the efficient operation of the crew and that it creates a potential safety hazard.

There are also many passengers who object to the serving of alcoholic beverages in the close confines of an airplane where they can neither avoid the obnoxious inebriate nor can they be certain that the disgusting "drunk" will not be a danger in the event of an emergency. He may, in fact, even create an emergency.

Strict regulation, or curtailment, of the practice of selling or serving alcoholic beverages on airplanes has been urged by these groups, then, not on moral grounds as a prohibition measure, but because the practice causes unnecessary discomfort to other passengers, interferes with the efficient operation of a flight, and constitutes a potential safety hazard.

In hearings held by the 85th Congress about this same problem, the testimony of many witnesses supports the view that self-regulation by airlines has not appreciably remedied the situation. The airlines usually adopt one of two codes in an effort to control alcoholic consumption on flights. One code specifies that only two drinks may be sold or served to any one passenger. The other code places no specific limitation on the number of drinks which may be sold or served to any one passenger except that only two may be sold to any passenger who appears to have become intoxicated. In all codes, however, the airline crew is cautioned to be careful never to imply to a passenger that he is intoxicated. According to the testimony of airline crew members, this latter stipulation has rendered the administration of most rules controlling the consumption and sale of alcoholic beverages on flights virtually impracticable. For instance, the present regulations which allow the serving and sale of alcoholic beverages on flights have left effective control of the passenger who brings his own alcohol on board in a virtual "no man's land." When alcoholic beverages are sold on a plane it is also very difficult, if not impossible, to refuse to allow a passenger on board who has obviously been drinking unless he is intoxicated. Two drinks for this pasenger may be too many.

It is true that the captain of a plane has the authority to deplane an obnoxious or unruly imbiber. But the physical operation of this rule makes it a "last resort" in that obviously, it is not always possible to land a plane immediately. The very fact that alcohol is served on airplanes makes such rules ambiguous, and, of necessity, the crew is more lax in invoking the measure of either deplaning an inebriated passenger or refusing him aboard the plane.

According to pilots', stewards', and stewardesses' testimony, the present regulations do not afford them a truly practicable means of controlling alcohol in the air. For instance, in one of the few incidents cited in which an inebriated passenger was deplaned, this procedure was invoked because the man was waving a gun and had become violent. An-

other inebriated passenger removed himself voluntarily when he mistook the main cabi.. exit for another door.

The problem of controlling the unpleasant or even potentially dangerous results of allowing the consumption of alcoholic beverages on flights is uniquely related to compact size of an airplane. There can be no separated club car or an isolated lounge as there can be on a train or an ocean liner. Only one obnoxious drinker may cause extreme embarrassment and difficulty on an airplane, whereas on an ocean liner or a train, the situation may be remedied more readily as there are more facilities for separating such a passenger from others.

An airplane is built and manned with a view toward maximum efficiency and safety. Yet the actions of one inebriate may even require that the pilot leave the controls to cope with him. This clearly is neither safe nor efficient, but it has occurred on those flights which serve alcoholic beverages. Although there has been no airplane accident which was conclusively attributed to the actions of an inebriate, it was pointed out by many qualified witnesses during the hearings that it hardly seems necessary to wait for an accident before we make any provisions to prevent one.

I share the opinion of many, including the majority of airline pilots, stewards, and stewardesses, that the only effective way to control the unique problems resulting from the consumption of alcohol by passengers on airplanes is to completely prohibit it. It is, I am convinced, the responsibility of this Congress to provide the necessary legislation to prevent a practice which affects the safety and well-being of many Americans and their families.

Herbert Hoover

EXTENSION OF REMARKS

OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 19, 1959

Mr. DORN of South Carolina. Mr. Speaker, Herbert Hoover is one of the greatest men in the history of the world. His life and service is an inspiration to me personally in my work here in the Congress. I doubt if any contempory world figure could have endured the false charges and abuse with the same dignity, lack of vindictiveness, and total absence of bitterness. Mr. Hoover's character, patriotism and forgiving spirit should be emulated by every young American. The following article by Jim Bishop is a great tribute to our former President on his 85th birthday. I wish for Herbert Hoover many more happy birthdays and years of outstanding service to the United States.

The article follows:

HERBERT HOOVER: A BIRTHDAY SALUTE

(By Jim Bishop)

The pencil whirls, dances, pirouettes. It fashions the letters, the words, the sentences, the thoughts of the man behind it. He sits impassively at a catercornered desk 31 stories above Park Avenue in New York City, writing another book. He does all of his own writing. Herbert Hoover, at the age of 85, has four books in the making. He is, from any angle, a 170-pound slab of stone which only a mining engineer could identify.

This is an enduring rock, one which has known the crashing foam of adversity and the warm flow of public acclaim. The edges of the rock have been worn smooth by these contrary actions and now, in the late years, Herbert Hoover appears to be a bigger, better, sounder statesman than ever.

The pencil stops. The 31st President of the United States stands. He selects some finished sheets, and gives them to the little lady with the big eyes, Miss Bernice Miller. She is Mr. Hoover's longtime chief secretary. She is also his fence of barbed wire against the rude instrusions which plague all authors.

"I will file these papers," Mr. Hoover says. He lifts some from his desk and drops them into a wastebasket. "My filing cabinet," he says, looking solemnly at Miss Miller. He walks around the edge of the desk to one of the two radios in the room. There is a steady, deliberate quality in almost everything that Mr. Hoover does.

His step is brittle, but the face and frame have not aged in keeping with the tick of time. Any child who studies American history would be able to pick the face of Herbert Hoover out of a crowd. The thick shock of hair is now white and thin and combed straight back. The brows are thicker and heavy with frost. The face is square, as always, and the skin is like a polished apple. The blue eyes, now more deeply set, twinkle with humor. The stiff collar has been replaced with a soft one, but the tie, as always, hangs slightly to the right of center. The hands, big and well muscled, are as certain reaching for his pipe as they once were reaching for a piece of quartz.

Hard work and curiosity, it would appear, keep the ex-President young. He puts in 10 or 11 hours at work in any normal way. If, in the middle of the night, he awakens with what he thinks is a good thought, he will get out of bed, walk into the combination living room and office in the Waldorf Towers, and write. But he says most 4 a.m. thoughts go into the wastebasket at 9 a.m.

His curiosity, especially in the field of public affairs, is insatiable. He listens to news broadcasts almost as frequently as a foreign monitor. Sometimes, he will tune in on the hourly news and then, 30 minutes later, listen to another broadcast hoping for later dispatches.

Added to this, he uses all mealtimes to invite statesmen, domestic and foreign, for conversation and an exchange of views. The Chief, as almost everyone calls him, is a good listener and an able oral fencer. People are invited to sit with him at breakfast, at lunch, and at dinner.

He seldom listens to television, unless a public affairs program is shown, or a baseball game. Mr. Hoover is a San Francisco Giants fan. That is his hometown. Long ago, in college, The Chief played shortstop. He could not have been clever because, as a matter of fact and tact, his teammates talked him off the field by offering to make him manager.

He sits near the radio, facing an oil portrait of Lou Henry Hoover, his late wife. The blue eyes flicker over the sweet face, but not a word of sentiment passes the lips of this man. His personal feelings are his own, and he shares them with no one. She died 15 years ago, and the portrait remains young as he grows older and older.

Miss Henry was a good student at Stanford. She, as well as her future husband, earned a bachelor's degree. He was a young and very serious mining engineer. She became a whiz at languages, including Chinese. The first book Mr. Hoover published was "Principles of Mining" still a college textbook. But more important was a translation from the Latin of "De Re Metallica," a book about mining written in 1556. The translation bears Mrs. Hoover's name as well as his.

There were 44 years of marriage before Mrs. Hoover died in 1944. There are two sons, both engineers. Herbert Junior was Under Secretary of State; Allan is with a banking firm. There are six grandchildren; nine great-grandchildren.

Mrs. Hoover's blue Chinese porcelain pieces now stand in his livingroom, cherished cups and bowls hundreds of years old selected over a long period during and after the time they lived in China. Mr. Hoover studies them, smiles a little, and says: "They belong to my daughters-in-law. I'm allowed to keep them as long as I live here."

This man, gracious and impersonal, first came to public attention in World War I, when he was 43. President Woodrow Wilson appointed him to be U.S. Food Administrator. Hoover fed millions of undernourished people in Europe so well that President Wilson, a Democrat, moved the young Republican up step-by-step in his economic councils.

Hoover did not hold press conferences, make claims or take bows. He was the cloistered monk of the Wilson and Harding regimes. Even today, if his name comes up in conversation, someone is bound to say: "Love the way he runs that FBI."

This particular Hoover always had a couple of jobs running simultaneously. In 1921, he was Secretary of Commerce. At the same time, he was Chairman of the Colorado River Commission, a member of the Federal Narcotics Board, on the Federal Board for Vocational Education, on the Committee on Organization of the Executive Department and a member of the Advisory Committee for the Limitation of Armaments Conference.

Mr. Hoover cut down on his outside work when he served as President of the United States in 1929–33. Many people blamed him personally for a worldwide depression which was in the making before he assumed this high office. From 1933 until 1946, when the Democrats mentioned his name, it was with malicious glee. The Republicans tried not to think of him.

Then Harry Truman brought the chief out of obscurity. The Missourian has respect for anyone who holds high office and, although it is hardly in the province of a Democrat to resurrect a Republican, Mr. Truman asked Mr. Hoover to be Chairman of the Commission on Organization of the Executive Branch of the Government. The chief, then 73, thanked him and went to work. He served in the same capacity again in 1953–55 and did himself and his Nation proud.

Little by little, the Republican Party began to take the chief to its heart. Convention by convention, the welcomes became louder, more vociferous. Herbert Hoover was one of the two living former Presidents in 1956, when the Republicans in San Francisco gave him a bigger ovation than they did Eisenhower.

Still, work is the last of Herbert Hoover's old friends. He labors a full day in his hotel suite and covers a few miles walking from

his desk to the other parts of the office. The suite of rooms is large and comfortable. As Hoover's activities grew in the post-Presidential years, so did the space requirements. Four of the rooms are offices. There are two bedrooms (one for visiting children), a dining room, a living room and a service kitchenette. Mr. Hoover works in the south side. The staff is on the north side.

There are seven persons—all women—working for Mr. Hoover. Miss Miller runs the office. Mrs. Loretta Camp, of Florence, N.J., has been secretary to Mr. Hoover for 20 years. Miss Marietta Fuller of Brooklyn and Miss Ellen Brumback of Toledo, Ohio, assist him in research. The others are assistant secretaries. Among former secretaries of Mr. Hoover who did well in life are Lewis Strauss, Robert A. Taft and Christian Herter.

Appointments are kept to the minute. Should a friend be invited to lunch at 1 p.m., Mr. Hoover doesn't expect him at 12:55 or 1:05. He is as conscious of time as a navigator. His daily life is an instrument of precision with little tolerance.

He is out of bed shortly after 7 a. m. Most men of his station have a valet; a man of 85 would be expected to have some assistance. Mr. Hoover does everything for himself. By 8 he is in the living room reading the morning newspapers. He reads them column by column, page by page.

At 9, his guests are present for breakfast. It may be a foreign minister, a university president, a journalist—it may be all three. The Chief talks softly, steadily, eyes veiled under the brows, a small part of his attention devoted to the food. The others speak a little loudly, because Mr. Hoover's hearing is impaired. He does not wear a hearing aid.

Within an hour, the breakfast is over and the morning mail ready. Letters are stacked on his desk in four piles. The first is fan mail; he reads practically all of it. Invitations are in a second pile; across some of these, he scrawls, "decline with thanks," across others, "decline gently." Mail which does not require his immediate attention, but is written by people known to the Chief, is in a third pile. Important mail makes up the fourth pile.

He disposes of this chore quickly. Neither words nor minutes are wasted. He knows what is in his mind to do, and there is no hesitation. When it is done, he reaches into a deep dish filled with yellow pencils. He picks one, sets out some sheets of paper, and marshals his thoughts. No phone calls except the most urgent are put through as Mr. Hoover works on his book.

This one is called "An American Epic," and treats of American relief work in Belgium and France and, more than that, will deal comprehensively with American relief all over the world in the last 45 years. He works steadily, referring to charts and statistical tables and published research. Should he tire, or the fluid thought congeal, he stops, stands and tunes in a news broadcast.

Or he may do a little work on the Boys Clubs of America, of which he is chairman, or put in a little work on a few of the dozen charities, scientific institutions and universities of which he has management responsibilities. After he passed his 80th year, Mr. Hoover tried to trim his workload and resigned from all 12 temples of learning and science. Not one would accept the resignation.

"The idea behind the Boys Clubs," he says, "is to teach young boys that it is better to join a team than a gang." When the Chief assumed the direction of these clubs—most of which are located in slum areas—the organization included 50 clubs. It now has 529 clubs with an increase of from 140,000 boys to over 600,000.

"In one part of Chicago," he said, "the court required 10 men just to book juvenile delinquents, and 85 percent of the boys were in the hands of the police during a year. We put a Boys Club in that area. Not long ago I was in Chicago. The magistrate called on me. He said that only one man is needed for work in juvenile delinquency and the crime rate was under 12 percent."

At 1 p.m. lunch is served in the dining room and a few guests sit with Mr. Hoover for up to an hour. At 2, he moves off to his room for a nap. At 3 he is back at work with a fresh pencil.

Word by word, page by page, the new book comes to life. He seldom indicts anyone, even a political enemy. No one hurt Hoover more than Franklin D. Roosevelt, who not only defeated him in the campaign of 1932, but who also blamed him for the depression. Still, in the Hoover books, he quotes the Roosevelt charges and says with gallantry, he was "misinformed"; he was "mistaken."

In spite of the great humanitarian work Mr. Hoover has done for the world, he is one of the least known of American Presidents, and this is his fault because the side he has chosen to present to the public is one of cold dignity. I sat talking with him one noon about the ovation he received at the Republican National Convention in 1956 at San Francisco. He smiled a little. "Yes," he said softly, looking down at his napkin, "that was immediately after the autograph incident."

"The autograph incident?" I said.

He nodded. "At the foot of the ramp, behind the speaker's platform, two men were ready to escort me up. The music started. A spotlight was turned on. At that moment"—he looked up, the twinkle was back in his eyes—"a lady came up to me and asked if I would give her my autograph.

"I said 'Yes, if you have a pen and some paper.' The men were pulling at me and the lady was rummaging through her purse. She found a pen, but she couldn't find a piece of paper. It was embarrassing. I said that I would have to go on. She looked at me and held up one of her knees and smoothed the hem of her skirt on it. 'Would you please autograph this?' she said."

Mr. Hoover chuckled.

"Tell me," I said, "did you autograph the hem?"

"Of course I did," he said laughing. "At my age a man doesn't get many joyous moments like that."

He works unremittingly until 5:30, when the afternoon newspapers are brought in.

At 7:15 guests arrive for dinner. A dry martini is served, and Mr. Hoover sits happily and expectantly, like a schoolboy at a picnic. He enjoys the exchanges of ideas with people who have earned his respect. An entire hour is given to this meal.

By 8:30 Mr. Hoover and his guests are in the living room. It is always a small group, from three to five persons on the average. If there are more, and two or more speak at once, he cannot understand and it irritates him to miss anything.

Sometimes he will suggest a game of canasta. Sometimes the guests will sit on the broad settees and talk. At 10 p.m. the guests begin to make their farewells. Coats and hats are brought in, and the Chief leads the way to the door. His right hand comes up in half-salute and he bows to the ladies. In a half hour Mr. Hoover is in his room getting ready for bed.

He is alone, yet not lonesome. He is accustomed to doing his own thinking, and his own work. At the age of 85, no one helps this man—this rock—with his shoes or his tie. He believes in God and he subscribes to the credo that God will help those who help themselves. Don't forget, he plans to complete four more books.

Freedom in the Western Hemisphere

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 18, 1959

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include therein a most interesting and impressive article from a recent edition of Latin American Events entitled "A Brief Sketch of Editor Dr. Nunez Portuondo."

I think that we will all agree upon the great desirability and the need of maintaining the most cordial, friendly, and mutually helpful relationships with our Latin American neighbors.

We are bound together as members of the Western Hemisphere community of nations and we truly cannot do too much to further and advance the great cause of hemisphere friendship and solidarity.

Nor can we do too much to combat the malignant and evil activities of the Marxists conspiracy whose minions are so busily engaged in trying to divide us from our Latin American friends so that communism can destroy free institutions and control and dominate free nations.

We must be deeply interested, too, in supporting and helping honest and sincere democratic governments and leaders in this hemisphere dedicated to the high aims of preserving our free religious, economic, social, and political institutions.

We must not only view with alarm the presence of terror and ruthless dictatorship, murder, anr corruption, but as a matter of national policy, we must be committed to join with all truly liberty-loving God-fearing, democratic-minded peoples to safeguard and preserve the free heritage of democracy and justice which is currently so gravely threatened and imperiled by monolithic communism.

We must ever continue to recognize that freedom is the central theme of the all-American political systems. Wherever it is threatened or repudiated by force, violence, and conspiracy, that great, priceless freedom of ours is in danger.

The article follows:

A BRIEF SKETCH OF EDITOR, DR. NÚÑEZ PORTUONDO

After a lifetime dedicated to international problems and principally devoted to the annihilation of the most damnable plague of the centuries—communism; and after trying to bring about a better understanding between the countries and Governments of Latin America and the United States of America, I have come to the conclusion that the majority of mistakes, many of which have caused incalculable damages to the solidarity between the Americas and have facilitated the development of Russian imperialism, that they are the result principally of the lack of adequate information about the problems and aspirations of these countries and governments.

For the last 7 years I have been the permanent representative of Cuba to the United Nations; I have been, during a 2-year period, a member of the Security Council of the United Nations and of its Disarmament Com-

mission. I have presided at each body on two occasions: in the difficult days of the conflict for the Suez Canal and during the barbaric invasion of Hungary by the Soviet hordes. For 3 years, I also represented my country in the Socio-Economic Council of the United Nations. I have attended, as a delegate of Cuba, a great many inter-American conferences.

I have always been of the opinion that it is necessary to unite all the countries and governments of the world to stop the advance of international communism. I feel, for many reasons, the United States of America is the natural and logical leader for the democratic cause and freedom throughout the world. Precisely because I have held firmly to this opinion, the spokesmen of the Moscow government has singled me out as the No. 1 enemy of international communism in Latin America. They have pictured me through their press, magazines, radio, and television as an unconditional servant of the United States of America and its foreign policy. Of course, this accusation is false. It is enough to read the minutes of the diaries of the sessions of the General Assembly, of the Socio-Economic Council, and of the Security Council of the United Nations to prove that no state no matter how powerful has acted in a more independent manner than Cuba in the last 7 years. I never undermined a vital interest of the United States because I feel that anything that may weaken it in these tragic times in which we live means helping the Soviet Union, her satellites, and secret allies so that they will succeed in their objective to convert all the world into a vast concentration camp.

With the same sincerity I must offer my opinion that I have been able to ascertain that the American people and its ruling bodies, as a general rule, lack the proper information about the existing problems beyond the confines of their geographical frontiers. This ignorance about Latin America and its political affairs, economic and social problems, is surprising and sad. There are some in America who consider us semi-savages with a very low standard of civilization and culture, incapable of enjoying the fruits of freedom and democracy.

The main obstacle to the rightful understanding between Latin Americans and North Americans is the erroneous concept of many American citizens that think that their way of life, their culture, their philosophy, and their science are unique and perfect. These groups of Americans feel that we must follow their guidance because we are incapable of doing for ourselves. They cannot see that the Anglo-Saxon countries have to be different, in virtues as well as in defects, from the Latin Americans, of Latin origin. Different but one not necessarily better than the other. This is also the main obstacle between a better understanding between the rest of the world and the United States of America.

I believe that the United States has made the mistake of not appreciating adequately the importance of Latin America, from the political point of view as well as from the economic point of view. Military alliances of great importance may be made outside America, but it is quite obvious that in case of war with the Soviet Union, the position of the United States would be untenable without the loyal adherence of all the Latin American nations. To count with this loyal adherence as a sure thing and unconditional is an error of incalculable consequences.

When a pro-Communist and anti-American regime took over in my country and I resigned irrevocably the office of Ambassador from Cuba to the United Nations, I find it a duty, following the trajectory of all my life, to try to inform in a truthful and impartial way the public and the ruling bodies of the United States what I think are the true conditions in the countries and governments of Latin America. I will also inform the Latin Americans of the true intentions of the United States in their relations with us.

To this end we are going to start our task by publishing a weekly letter, in English, which we will send to anyone interested in knowing our opinions, and facts about our America, and on some occasions we will give our opinions on world problems. Later, we will publish weekly letters in Spanish with different contents, trying to inform the different Latin American countries about events and decisions of the Government in Washington which may require explanations so that they can be rightfully interpreted. Fundamentally, because we think it is the most important, we will expose the gigantic maneuver which the Kremlin is undertaking to gain important factions of the public opinion and territories in the Latin American nations.

Labor-Management Act

SPEECH

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 13, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 8342) to provide for the reporting and disclosure of certain financial transactions and administrative practices of labor organizations and employers, to prevent abuses in the administration of trusteeships by labor organizations, to provide standards with respect to the election of officers of labor organizations, and for other purposes.

Mr. O'HARA of Illinois. Mr. Chairman, what we are voting on today is the industrial survival of the North. Let us put the cards face up on the table.

Our distinguished colleagues from the Southland know exactly what they are doing, and at least they are loyal to their constituents. If they can hoodwink Republican Congressmen of the North into joining with them in the raid on northern industries, I cannot withhold the compliment of saying that they are smarter than their allies.

And yet, Mr. Chairman, while they are smart on one front, I sometimes wonder if on another front they exhibit the same evidence of awareness.

While to the industrial advantage of the South in its economic cold war with the North they are playing cronies with northern Republicans, very quietly, very cleverly, very effectively northern Republicans have infiltrated into ownership and control of the great newspapers of the South. Today most of the great daily newspapers south of the Mason and Dixon line are owned and controlled by northern Republicans. Temporarily the local managements of these Republican-owned newspapers play the southern game, taking on the garb of virtuous independence and seemingly adopting southern viewpoints, but when the shots are called on matters that count the command comes from Republican ownership north of Mason and Dixon.

I am not quarreling with the march of progress. I merely am pointing out the outlines of that progress that those who take the trouble to note what I am saying may make their own appraisements. The fact is that the old southern editors, men like the late Col. P. J. H. Mooney of the Scimitar in Memphis, are gone. Northern Republicans call the shots.

So when I see northern Republicans march up the aisle with southern Democrats, who no matter how much they may differ with their northern brethren in some areas do have a common share in the democratic heritage of Thomas Jefferson and Andrew Jackson, I wonder really who is being hoodwinked and who is being duped.

PRICE OF THE PRESIDENCY IN 1952

It may gain a temporary political advantage for northern Republicans to gang up with southern Democrats to speed the departure of mills and factories from Illinois, Michigan, Massachusetts, Connecticut, and the other States in the Middle West, the East, New England. Conceivably in the election of 1960 the alliance might bring a repetition of 1952 when Southern States gave their electoral votes to General Eisenhower and the price was paid in full by northern Republicans voting with southern Democrats to give to four Southern States the tidelands oil potentially worth twice the amount of the national debt and which thrice the Supreme Court of the United States had decreed belonged to all the people of the United States.

In those tideland oils was the wealth to carry the heavy load of popular education for all the children of all the States in the Union. There was the wealth, once the properties were developed, to pay off the huge national debt and restore this country to a condition of solvency, when every citizen could go to bed at night in the calm reflection that his country owed to no man as much as 1 red penny.

The alliance still holds that gave these properties, thrice by the Supreme Court of the United States declared to be the properties of all the people, to Southern States for their exclusive use and advantage.

I see no inconsistency with what is happening now with the giveaway of the tidelands oils properties to pay a Republican political debt.

SOUTH CONSCIOUS OF GREAT CHANGES

A great change is taking place in our United States, and of some of the repercussions the South is conscious and its Members in the Congress are alert. I am not as sure as the Republican leadership that the North is asleep in its complacency. There is too much talk in my own city of Chicago of industries planning the hike southward to contradict the Republican gamble on a complacent North. What happened to the textile industry of New England can happen to the industry of the Middle West.

From 1946 to 1954 there was an alarming migration of textile plants to the South.

In the Mid-Atlantic States—New York, New Jersey, and Pennsylvania—some 190 textile firms employing 56,000 textile workers were liquidated in that period. These figures only refer to liquidations and do not take into consideration the hundreds of firms whose plants in 1954 were only operated from 50 to 75 percent of normal operations. In fact, the textile industry which employed around 1,280,000 in 1948, 6 years later employed some 950,000, a total loss of some 330,000 jobs.

In a speech before a meeting of the American Management Association in the fall of 1955, John C. Whitaker, chairman of the board of R. J. Reynolds Tobacco Co. of North Carolina, condemned some southern communities for trying to lure plants from the North with promises of cheap labor and tax concessions.

"Such companies do not make good employers or first-class neighbors, no matter where they are located," Mr. Whitaker was quoted as saying in the New York Times of September 29, 1955.

Since 1955 the drive has been intensified. Its threat holds over the city of Chicago. It is a real, an immediate threat. As industrial plants need modernizing, just as the textile plants faced that need, Southern States reach out for them with the inducement of tax exemptions and cheap nonunion labor. Let my Republican colleagues from the North who today are voting with the South to take industries from the North and replant them in the South not underestimate the intelligence of our northern people.

MULTI-BILLION-DOLLAR DRIVE

I have said that inducements to northern industry to run away to the South are: First, financial help in relocation and exemption from taxes, and second, low nonunion labor. From the northern standpoint, one is bad enough, the two together can be fatal.

Newsweek in its edition of February 11, 1957 said:

> In the multi-billion-dollar contest for new plants, every (Southern) State except two has a tax-supported agency to sing its siren song.

Tennessee offers tax-free factories to new industries through issuance of municipal bonds which are exempt from Federal taxation. There the taxpayers throughout the United States unwittingly give a subsidy to industries moving into Southern States.

Mayfield, Ky., offered $9,500,000 in industrial building revenue bonds for constructing an industrial building project "to be leased and used by the General Tire & Rubber Co."—Bond Buyer, April 4, 1959.

Delhi, La., offered $200,000 in bonds for the purpose of "acquiring an industrial plant building and providing necessary appurtenances therefor to be used for the purpose of manufacturing boats and trailers and leased by the town to Delhi Manufacturing Corp."—Bond Buyer, March 21, 1959.

Mississippi: As of 1955 built 99 new plants with the aid of a municipal bond issue. January 31, 1959, Bond Buyer listed industrial bond sales for the State totaling $1,790,000.

FIFTY-CENT-AN-HOUR WAGE SAVING

Challenge, December 1955, reported that Greenville Mills, Inc., saved $170,000 a year in municipal taxes and 50 cents an hour on average employees' wages, and was able to set higher work quotas because of the absence of organied labor.

Gainesville, Fla., is financing the construction of a Sperry plant with funds from the city employees' retirement fund.

Alabama, Louisiana, and Mississippi all allow tax exemption of new manufacturing establishments.

South Carolina allows a 5-year exemption on all but school levies.

Arkansas permits a 7-year tax exemption in textile mills. Source: National Municipal Review, March 1957; Dunn's Review, and Modern Industry, April 1958.

This is only part of the picture. It is sufficient, however, to show to our people in the industrial North that this is no child's play on the part of the South. The South is playing dead earnest and for keeps. Newsweek describes it as a multi-billion-dollar drive. My distinguished northern Republican colleagues, who either unwittingly or to grasp for a fleeting political advantage, are aiding and abetting, it seems to me are gambling pretty recklessly that their constituents are not smart enough to read the writing on the wall. I know men and women in the North pretty thoroughly. There are not any smarter people anywhere in the world and when you give them the facts you can bank your life on their common sense.

LOW WAGES THE CLINCHER

So much for the financial help and tax exemption part of the South's drive on the industries of the North. That threat, serious as it is, and certainly not to be laughed off, in itself would not be sufficient. The North might be forced to meet money with money, tax exemption with tax exemption, all of which would place greater and ruinous tax burdens on our States and communities.

But the clincher in the South's drive is the other half of the lure—cheap nonunion wages.

I want every section of our great country to prosper, and I want every section of our country to share in the bounties of the greatest land on earth. But I want every section to get its share in fair competition with other sections. I do not like what is now happening. I do not like to see Northern Republicans, in their grasp for a passing political advantage, walk up the aisle arm in arm with a Southern bloc that has the objective, worthy enough from the Southern standpoint, to take from the North its industries. Nor do I think that it is healthy in a democracy for any section of our great country to swap away control of its newspapers, which are expected eventually to influence if not control public sentiment, for a bunch of run-away factories.

In the Middle West our industries are unionized. Collective bargaining has given to our workers wages and working conditions that we wish to maintain. They cannot be maintained if the goods they produce must come into competition with the wares from factories where each individual worker must deal with his employer and accept what he is offered or go unemployed.

GOOD WAGES BENEFIT EVERYONE

Everyone in the Middle West has a stake in the outcome of the present economic cold war between the North and the South. Management and labor, of course, but in equal measure the merchants, who benefit from the buying power of a well-paid labor force. If organized labor should be crushed the clock in every home in Chicago would be set back half a century or more.

Hence in Chicago we have a real, a personal interest in the enactment of strong legislation that will strike effectively at crooks, scoundrels and racketeers, whether they operate within labor or within management. Because so many of our people are members of unions, and because all our people share in the benefits to our economy, we want to back up honest and responsible labor with legislation that will assure, as far as it is in human power, absolute integrity and full opportunity for democratic participation by the rank and file.

Our distinguished colleagues from the South who are backing the Landrum-Griffin bill do not have that interest. Their interest is not in remedying labor abuses, but in no unions at all. As long as the South can keep out the labor organizations, it will have a powerful weapon in the economic cold war with the North. My colleagues from the South know exactly what they are doing. I give them credit for astuteness.

LITTLE KNOWN ABOUT BILL

The Landrum-Griffin bill came from goodness knows where. It was never presented to the committee. It has been discussed very little in this debate, and then only in broad outlines. Busy as he is, I would venture to say the President of the United States has never read the bill. That is no reflection on the President. There are not many Members on this floor that have read the bill. And everybody who has read the bill seems agreed that it will require interpretation by the Supreme Court to determine what some of the language really means. It is probable that the Court will hold that under the terminology of the bill all peaceful picketing is prohibited. Some smart lawyers say so. I do not know. No one knows. In fact, no one knows very much about the Landrum-Griffin bill in detail.

But it does two things that have no relation to labor abuses and that bear directly on the issues of the economic cold war of the North and the South.

First, it makes almost impossible the unionizing of runaway plants from the North by providing that no work of organizing such as the posting of a peaceful picket line shall proceed until 30 percent of the employees have come out in the open. Under such circumstances, workers when their jobs are at stake, and their families may suffer, are not likely to venture far in bringing up their

wages to those of the North. If southern industries do not pay the same wages as northern industries to workers doing the same work on products that meet in competition on the national market it is self-evident that either the North will lose its industries or that low nonunion wages will be forced on the North to the tragic ruin of our economy.

The Landrum-Griffin bill throws every roadblock in the way of legitimate union organization. And until labor is organized in the South as it is in the North, so that one American worker gets the same pay for doing the same work, regardless of the State in which he works, the North will be under an unfair disadvantage. Provisions tucked in the Landrum-Griffin bill stack the cards against both management and labor in nothern industry.

SOUTHERN COURTS TO DECIDE

Secondly, the Landrum-Griffin bill will take certain labor disputes from Federal jurisdiction and throw them into State courts for determination. That, as a writer in one of Chicago's great daily newspapers says, in the South probably could mean the end of many unions. In a State determined to keep out unions in order to attract industries from the North, the legal means are supplied for plenty of discouragement to labor organizers.

Mr. Chairman, I have tried sincerely to be fair to my colleagues from the South. I think they realize that the time will come when industry in their section will be organized as it is in my section, but in their justifiable ambition to have an industrial South they understandably want to ward off the inevitable long enough to get a full haul of Northern factories with the lure of low wages, no unions.

CURRENT NEWS FROM SOUTH CAROLINA

If the North is not alert, there is every evidence of alertness in the South. I have in my hand a copy of the Charlotte Observer of August 7, 1959. That is certainly current—the news up to a week ago. Permit me to read from a dispatch in that newspaper from its correspondent at Columbia, the capital of South Carolina. Here is the dispatch:

Can a community discourage one plant with union affiliation and encourage another with union ties?

This is a problem that may confront this South Carolina capital soon.

It is a problem that could grow out of the way Columbia handles its present problem.

For this industry-hungry city is now tempted by a choice morsel to which it may have to say: "No thank you."

The possibility has been raised with the prospect that one of the Nation's largest shirt manufacturers, Cluett-Peabody, may locate a sewing plant here.

The company, maker of Arrow shirts, is highly reputable and responsible. But its plant would be the first unionized sewing shop in an area where other established plants have resisted the unions.

Suppose Cluett-Peabody was politely and courteously told about the local problem and asked to look elsewhere.

And, suppose a week later a giant Detroit automobile manufacturer would announce plans to build a plant here.

Would that industry be welcomed?

The automobile plant would bring more jobs, more money. It would be a tremendous shot in the arm to the local economy.

But it would bring in bigger and stronger unions.

AND A LETTER FROM MISSISSIPPI

That, Mr. Chairman, is the current situation in the fair city of Columbia in the great State of South Carolina. But the lure of low wages, no unions has been held out to northern industrialists from the very beginning of the economic cold war. Here is a letter of 5 years ago from a town in Mississippi, photostatic copies of which have been published:

PELAHATCHIE, MISS, *June 10, 1954.*

MR. HOBART J. HENDRICK,
President, H. B. Ives Co.,
New Haven, Conn.:

Greetings, Mr. Hendrick, as we cordially invite you to visit our beautiful community. We want your company to have the harmonious and highly successful experiences of operating in a veritable industrial paradise, and see how our wholehearted cooperation will do it for you.

For either a main or branch plant, we will provide the site and building just as you want them, make the carrying charges easy—eventually becoming as low as $1 per year, with taxes being exempted up to 99 years, and you make no capital outlay for them.

Then our wonderful labor, 98 percent native born, mostly high school graduates, will lower average hourly industrial wage rates 6 to 49 cents below other Southern States, and from 50 to 95 cents below Northern States. You will also get a much higher man production, some plants even getting double what they got in their northern plants. This labor is truly American, not inflicted with the something-for-nothing idea and works together joyously with management for the success of both.

Here you will also enjoy savings in power, fuel, utility, tax, and other costs. Raw materials are convenient, transportation facilities are good. No one will tell you whom you must employ and all detrimental State laws for industrial operations have been repealed. The closed union shop has just been outlawed in Mississippi.

You would be located in the heart of the entire southern area with its great markets for your products and not much competitive production of them in it. For a number of years ahead, the percentage of growth of these markets will probably be greater than in any other section of the United States. With the large savings in wage, production, and operating costs, while your plant is operating peacefully and successfully, it will put your company into a most favorable competitive position not only in the entire South but also over most of the country.

Our deep spirit of warm, friendly cooperation always behind your company will surely be an inspiration to your for its phenomenal success, which many industries in our State now enjoy. So we again most cordially invite you to visit our wideawake town. When you visit us, you will be delighted to see how we can make good on this and you, too, may like very much to join with us and together achieve and enjoy that phenomenal success. Will you come?

Sincerely,

TOWN OF PELAHATCHIE, MISS.
H. C. RHODES, *Mayor.*

TURNING BACK THE CLOCK

Mr. Chairman, I have finished. The Landrum-Griffin bill seems assured of passage. I shall vote against it, and I shall hope and pray that when the bill goes to conference with the Senate the good in the bill will be left, and the bad, or the ill advised because inadequately considered, will be extracted.

I am 77. I have been through the fight of our people of many long years to bring the wages and working conditions of labor in the North to the present standards under which the worker enjoys dignity and the community benefits from the buying power of labor. I will not be a party to turning back the clock. I have put too much of my life into a cause which, to me, has been worthwhile in broadening the horizons of human contentment.

The South has advantages in climate, nearness to international markets, many advantages, and industry inevitably will be divided, according to the circumstances and requirements of each industry, between North and South. The economic cold war between North and South will terminate in advantage to both. But it will reach no such termination until the worker in the South receives, for the same work, the same pay as the worker in the North. Nor will the economy in the South be on the same wholesome basis as that in the North; nor will the southern merchant benefit from the same market with similar buying power, until organization of honest labor has rescued the southern worker from the condition of bargaining individually with his employer and accepting what he is offered or going unemployed.

Today the average annual income of an American in the State of Mississippi, after personal taxes and basic expenditures, is $418 as compared with $5,691 in the State of Illinois, according to the 1958 report of the U.S. Department of Commerce. When I was Lieutentant Governor of Illinois in the period beginning in 1913, and chairman of a commission investigating the wages of the workers of our country, the average annual wage of all workers in Illinois was slightly over $600. But for organized labor we would still be in a condition comparable to that now of Mississippi.

With all respect for the loyalty to the South of my southern colleagues, I must respectfully remind them that in the present economic cold war the loyalty of the gentleman from Illinois is to Illinois and his constituents in the city of Chicago.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Appendix

A Portrait of Individualism: The Student Is

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES

Thursday, August 20, 1959

Mr. JOHNSON of Texas. Mr. President, every State is proud of its university, and particularly of its State university. Texans are proud of the University of Texas for many reasons—for its progressive educational policies, for its stimulating atmosphere, and for its distinguished faculty.

The University of Texas has, in addition, an excellent newspaper, and I ask unanimous consent that an article from that paper, the Daily Texan, of August 14, 1959, entitled, "A Portrait of Individualism: The Student Is" which describes life at the university, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A PORTRAIT OF INDIVIDUALISM: THE STUDENT IS

(By Jo Eickmann)

We are the students of the University of Texas.

In one respect we are all alike—we are students, in the United States and, more specifically, in Texas. This you can say about us all. But here you must stop. For this is the point at which classification breaks down, at which you must no longer refer to us as the student body as a whole but instead as the student body individually.

For one thing is certain. We are individuals. Those who seek to pigeonhole us with the words, "beat, irresponsible, going to the dogs, conformists, security seekers, radicals" or any other of the thousand oversimplified labels, do so because they do not know us.

Being American students, we form a cross section of our society. We cannot be justly compared to our contemporaries in Europe. They are often the intellectual elite or the economic aristocrats of their countries. We are not.

Do not sneer and say that we are not as politically conscious, as well-informed, as thirsty for knowledge as they. Some of us are. Do not look for all 18,000 of us to unite in some great student movement to protest this action or to lead the fight against that injustice. Chances are that we will not.

Don't look for any action by the whole student body. The entire student body will never act, only individuals or groups (sometimes large) of individuals within it. When you look at us as a whole, we are deceiving. We appear to have no causes to support, no ideals to fulfill, no goals to seek. When you look at us as a composite picture, we cancel out each other's attitudes and beliefs—the segregationist is balanced by the integrationist, the liberal by the conservative, the States-righter by the civil righter.

We are a plurality, not a unity.

Oh, there are trends that unite us, ideas that we hold in common, fashions of thought and action that bind some of us into "a majority of the students."

For instance, we are weary of a good many of the things that were the essence of college life in our parents' days. We are not as interested as we "should be" in the activities that people think we should be concerned about. The raccoon coat and college pennant are not gone, but they certainly are hidden in the closet. The school spirit that we haul out each fall at football games is as much of an act as the frightening poise with which some of us meet the "older generation."

Without really being blase, we are not ready to get excited about things. We are not so anxious to picket the President's Office or march on the Capitol as we once might have been. We have fewer "causes" and are less willing to support tenaciously any single idea or plan of actions as "the only way."

Perhaps it is because we are complacent. Many of us are having too much fun to be concerned about anything. But some of us are vitally concerned about—international politics, religion, art—a thousand interests. Still, we are less intense than we might be, less fanatical than the traditional view of the student. Perhaps this is because our worlds have broadened, because we are more cosmopolitan.

At the university we meet people not only from all parts of American life, but also from most of the cultures and countries of the world. Provincialism has to yield, if only a little bit, under the influence of these contacts.

There are unifying norms of "accepted" behavior that bind us together with a common slang, a Saturday football game, a coffee break, and a school "uniform". We wear our white socks and fraternity pins in a frantic search for acceptance and group identity. There is a security in this superficial conformity that most of us find comforting.

But always some of us find the accepted patterns stifling and become loud rebels. Like fetishes we wear our "individualism" on the sleeves of our boat-necked tee shirts and form our own, equally rigid code of behavior; organize our own groups.

Perhaps because the university is big, we can never become the student body as a whole. Perhaps we can never establish a bond of spirit to unite us in a common purpose. You see, many of us never see the university as a whole. For 4 or more years we isolate ourselves from the big picture by revolving in our own little spheres of activity.

We stick our noses deep into our special corners of the campus—athletics, sorority or fraternity, boardinghouse, church foundation, library—and take care never to come out. Thus we live in a vacuum, and some of us are contented. Some of us are lonely. But right or wrong, we are isolated.

Yet even in our isolation, we are a paradox, for superficially we are the friendliest, most open people in the world. Our loneliness, our inability to communicate with one another are hidden behind a smiling facade of southwestern hospitality and American informality.

There is not, of course, the warmth of a small college atmosphere about the 40 acres. The university is too large for that. But the "big hello" is practiced by more students than campus politicians, and a smile from a stranger is not too hard to come by. Granted, one must make the first effort but friendship is there for the taking if one seeks it out.

The openness, however, is only smile deep. For love of privacy or fear of being hurt, many of us sharply close the door on more meaningful friendships. We keep our souls a secret, and are afraid or unable to tell each other about the things that matter most to us.

Some of us don't care. Some of us are content with bridge playing or beer-drinking buddies. For some, "college is a blast, man, and what's this bit about communicating anyway?"

But deep inside, after all the endless talk about quizzes, dates, sports, and sex is over, some of us are still unsatisfied knowing how lonely we are. So we talk more. And perhaps we find the right people to talk to. We feel accepted, and we know that with these few friends at least, no one will reject us for anything heretical or disappointing that we may say.

These are the times when we stay up all night discussing and questioning—our existence, our society, our religious beliefs. Perhaps for the first time we really share our dreams and ambitions and feel satisfied—knowing that someone understands.

We have come to the university for a thousand different reasons—because we wanted an education; because Mom and Dad wanted us to come; because "a college education is a good thing to have;" because "you need a degree to get a good job;" because we wanted to get married.

Too many of us have come here with only the after-commencement future in mind. We see the university as 4 more years of an educational period separate from living, not as a vital part of life itself. When we get out, probably we will be not so much interested in a better world as we are in a more comfortable one.

A few of us have come to learn. We are excited by knowledge. We will sometimes abuse the sacred cows of class routine to explore books and ideas on our own. For us graduation will be commencement—a beginning of a continuing process of learning.

Some of us will starve for knowledge in the midst of its abundance simply because no one has ever awakened us from the complacency of getting by.

Some of us are good students who deceive our friends and professors into thinking that we are exceptional because we have learned how to regurgitate enough facts and ideas to make good grades. Others are on sco pro because we are hopelessly unprepared for college work.

There are those of us here who will discover the university in its totality, who will graduate having tasted of the finest things Texas has to offer. We will have known and loved university traditions. We will have found the rich human personality of the campus in a hundred scrub women, professors, secretaries, campus policemen, deans, and newsboys. From the university's libraries, art galleries, and cultural events, we will have taken the equipment for enjoying a full life in a world full of beauty.

On the other hand, some of us will be lost here. Overwhelmed by the idea of being one in 18,000, we will learn to know only a handful of people. When we leave, it will be with a sigh of relief that it is over.

We are the students of the University of Texas. Being people, we are different from each other. Rich, poor, world-weary or eager, we blaze our paths or follow our ruts in the world—individually. And you cannot classify us justly, for we are, first of all, ourselves.

A Bill To Eliminate Stock Dividend Exclusion Provisions of the Internal Revenue Code of 1954

EXTENSION OF REMARKS
OF
HON. STEVEN V. CARTER
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 20, 1959

Mr. CARTER. Mr. Speaker, I introduced a bill in the House today which would eliminate the present provisions of the Internal Revenue Code of 1954 which allow an individual to exclude from his gross income for income tax purposes the first $50 of dividends received in a taxable year. In other words, what this amounts to is a repeal of section 116 of the Internal Revenue Code of 1954.

I would like to explain my reasons for introducing this particular piece of legislation. First, let me go into the circumstances which led to the presence of this provision in the 1954 act. It was put there not so much as a benefit to the individual taxpayer as it was a gesture toward eliminating double taxation on corporate profits. Now, I am as much against the idea of double taxation as anyone else, where it can possibly be achieved. However, this particular provision is not of any real help to the taxpayers who derive benefits from stock dividends. The amount which is allowed for exclusion is entirely too small to be of benefit either to the small investor to the large. In fact, there is no real distinction that can be made between the benefits that each one gets, except perhaps that it is proportionally greater for the small investor than for the large one. So what we are really doing under this section of the act, Mr. Speaker, is depriving the Federal Treasury of several million dollars per year in the rather empty gesture, as I said before, of attempting to avoid double taxation. And yet we are not really being of any material assistance to the individual taxpayer. Hence, my reasons for introducing this bill.

Now, to get to the crux of the matter, I completely agree that we should avoid double taxation on corporate profits. However, I think this should be done by either completely exempting stock dividend funds of corporations, or we should levy the full tax upon such funds prior to their distribution, and then after distribution, exempt the individual taxpayer from having to pay any taxes on the money he received.

I am aware that the House Ways and Means Committee is going to undertake a thorough reexamination of our Internal Revenue Code during the adjournment of Congress. I therefore realize that this bill and others which I have introduced affecting our present tax structure will probably never be enacted into law. However, I want to have these particular things a matter of record, and I sincerely hope that the House Ways and Means Committee will see fit to take all pending bills affecting the Internal Revenue Code under study at the time that they deal with this complex but highly important problem.

Payment in Lieu of Taxes to Communities Where Federal Property Is Located

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, August 20, 1959

Mr. WILEY. Mr. President, we recognize that today the high costs are hitting not only the individual American and Uncle Sam, but also State and local governments attempting to meet the needs of ever-increasing populations.

As a matter of fact, a great many local communities are having difficulties in finding the tax money to provide needed water, sewage and other public services.

The difficulty becomes particularly acute in areas in which there is substantial amount of Federal, non-tax-paying property. The existence of such property not only deprives the community of a tax source; it also amounts to an expense since often the area must be provided regular community services.

We recall that earlier this year, the Government Operations Committee held hearings on a bill S. 910—which I was pleased to cosponsor—to provide that under certain conditions the Government would make payments to communities in lieu of the taxes that would normally have derived from Federal property in the area.

As I understand it, the Treasury Department has now withdrawn its objections to enactment of this bill. I would hope, therefore, that the Government Operations Committee will find it possible to give consideration to it as early as possible.

We are aware, of course, that Uncle Sam, too, is having difficulties in finding enough income to meet the outgo. However, the question arises as to whether or not Uncle Sam's money problems can justify the existence of an inequitable situation in which communities are deprived of tax sources as the result of Federal non-tax-paying property. As a matter of fact, such Federal property not only results in loss of revenue, but in addition, adds expense to the local community by requiring public services.

I am aware, of course, that there is on the calendar a bill, S. 2026, which would establish a commission which would have as one of its objectives resolving these problems between local, State, and Federal Governments.

Frankly, I feel the establishment of the commission would contribute toward clarification of these intergovernmental relations. Meanwhile, I would hope that expeditious consideration could be given to the bill S. 910 which would initiate action toward providing greater equity to communities where Federal property is located.

We recognize, of course, that this is extremely important to local governments throughout the country.

This morning, I received a telegram from Mr. B. F. Hillenbrand, executive director of the National Association of County Officials, urging action on S. 910. I ask unanimous consent to have the telegram printed in the Appendix of the RECORD.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

WASHINGTON, D.C., *August 19, 1959.*

Senator WILEY,
Senate Office Building,
Washington, D.C.:

Administration through Treasury Department now supports payments in lieu of taxes bill, S. 910. Major breakthrough. As cosponsors of S. 910 counties urge you request immediate favorable action by Government Operations Committee.

B. F. HILLENBRAND,
Executive Director, National Association of County Officials.

Textile Imports From Low-Wage Countries

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 20, 1959

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Lancaster News, Lancaster, S.C., of August 13, 1959:

OFF THE RECORD

A point made: This week 245,000 Japanese textile employees went on strike for a 15 percent increase in wages On the basis of American pay scales, this is a whopping big demand. But the Japs, who are averaging only $40 a month, are asking just a $6 monthly raise.

Japanese textile manufacturers oppose the increase. They say it would cause a 2 or 3 percent rise in the cost of Japanese textile products and that this would seriously impair the competitive position of the mills in the world market.

Even if this claim of the Jap mill owners is only partly true, it sums up a situation which Congress and the administration in Washington have persistently ignored. Japanese mills have been modernized and rebuilt since World War II. They can buy American cotton under the subsidy program at 8

cents less a pound than can American mills. And, as the strike demands indicated, Jap labor can be hired at $9.25 a week, or less than the average American textile employee earns in a single day.

If the Japs, with all these factors in their favor, fear for their competitive position in the world market, then it should be obvious that the American mills have no competitive position whatever. They can sell in the world market only those products the low-wage countries are presently unable to supply.

American aid programs are working around the clock to build up textile production in the underdeveloped countries. As each mill begins spinning and weaving, the output of that mill must be added to the supply of textile products available in the world market. Because these are low-wage products, the demand for American textiles will be reduced in direct ratio. Japan and India may compete for sales with other low-wage countries but America will be out of the running.

Loss of export sales will be a serious blow to the American textile industry. But even this is minor compared to the damage that will result if Congress and the administration permit any serious invasion of the domestic market by the textile products of these low-wage countries. Japan has already demonstrated her ability to wreck prices in the United States. Imports of textiles must be strictly controlled unless the American textile industry is to be written off as expendable.

Death of Dr. Irvin B. Hill, Director, Fairview Home for Retarded Children, Near Salem, Oreg.

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, August 20, 1959

Mr. NEUBERGER. Mr. President, not all heroes serve on the field of battle, amidst shot and shell. Some are in surgeries, hospital wards, and even nurseries. Such a man was Dr. Irvin B. Hill, superintendent of the Fairview Hospital for retarded children, in our State. Dr. Hill died last week at the tragically young age of 44.

He was a frail, wisp of a man whose physical strength had been sapped by an early bout with tuberculosis, from which he never wholly recovered his original health. Yet he carried on indomitably, dedicated to his young patients and to their eventual return—if at all possible—to mental stability and full recovery.

As a member of the Oregon State Legislature, my wife, Maurine, worked closely with Irvin Hill in sponsoring legislation for the benefit of the retarded children in his care. She and I mourn his passing. We wish we had the benefit of his brave spirit in helping us to promote, at the Federal level, bills which I have introduced to increase grants for the training of teachers who will assist retarded boys and girls.

Mr. President, an eloquent tribute to the gallantry of Dr. Irvin Hill was published in the Oregon Daily Statesman of Salem for August 18, 1959. This editorial is entitled "Well Done." I ask unanimous consent that it be printed in the Appendix of the RECORD in memory of our friend, Irving B. Hill, doctor of medicine and friend of mankind.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WELL DONE

Dr. Irvin B. Hill's figure was so thin it seemed as though a strong wind would carry him away. While he had to live under a careful regimen due to an earlier bout with tuberculosis, actually he kept himself quite fit for his duties as superintendent of Fairview, the State's home for subnormal persons. That is, until this year when he suffered from pneumonia. He returned to duty, but a combination of pulmonary trouble and a weakened heart claimed his life Monday.

As superintendent of Fairview, Dr. Hill carried very successfully a heavy load of administration. He supervised its postwar expansion which brought many notable improvements: a new hospital, new administration building, new cottages. The enrollment kept growing too, but Dr. Hill's goal was to provide facilities so the applications would be kept current. Dr. Hill combined professional skill and administrative talent with human sympathy which is indispensable in ministering properly to the inmates of Fairview, mostly children and youth. Called from duty at the comparatively early age of 44, he deserves the accolade, "well done."

Unjustified Delay in Confirming of Presidential Appointees to the Federal Bench

SPEECH
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 19, 1959

Mr. LINDSAY. Mr. Speaker, the distinguished Senator from New York [Mr. KEATING] performed a service when he spoke out in protest against the continuing delay on the part of the majority side of the Senate in respect of the confirmation of 19 Presidential appointees to the Federal bench.

The protracted and wholly unjustifiable delay in the southern district of New York is particularly outrageous. President Eisenhower has nominated three outstanding members of the legal profession to the Federal bench in New York. To the U.S. Court of Appeals, Second Circuit, he nominated Henry Friendly, one of New York's most distinguished lawyers. Incidentally, the Senate subcommittee has not even seen fit to call a hearing for Mr. Friendly. This particular court, because of the volume and type of appellate cases it hears, is not exceeded in importance by any other.

Two other distinguished lawyers, Charles M. Metzner and Lloyd McMahon await confirmation to the Federal District Court for the Southern District of New York. This court is the busiest Federal trial court in the country. As of June 30 of this year there were 10,937 civil cases pending in this court as yet untried. Under present circumstances it will take 2 years for any one of these cases to reach the top of the trial calendar. This is a condition which has existed for a long time and which everyone agree requires immediate attention. Everyone agrees that justice delayed is justice denied. Everyone agrees that not only should these vacancies be filled, but that additional Federal judges are needed. Nor, is it disputed, even by those who share in the responsibility for feet-dragging on these confirmations, that the nominees for this court, as in the case of Mr. Friendly for the court of appeals, are eminently qualified.

I may say, Mr. Speaker, that these remarks are directed toward the hardship caused the public by this inordinate delay. It is worth noting, however the personal and professional hardships caused these distinguished gentlemen who have been nominated for these posts.

Mr. Speaker, it is beginning to look as if those Senators on the majority side who are in a position to push the buttons which would spring loose these nominations from the political web in which they are ensnarled are satisfied to let the matter drift as long as there is an absence of outraged public indignations. If public pressure and indignation are necessary to make the powers that be bestir themselves, then let us start generating it. The public—and that includes me—has had enough "politicking" with the administration of justice.

Southwest Texas Dean Nolle Retiring

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, August 20, 1959

Mr. JOHNSON of Texas. Mr. President, after 40 years of service, Dr. Alfred H. Nolle is retiring this fall as dean of Southwest Texas State College at San Marcos, Tex.

This school, Mr. President, is my alma mater.

To me, as he has been to thousands, Dean Nolle was a guide, a counselor, a friend, and a great inspiration.

Announcement of this good man's approaching retirement was carried August 16, 1959, in the Austin (Tex.) American Statesman, in an article entitled "Southwest Texas Dean Nolle Retiring," and I ask unanimous consent, Mr. President, that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOUTHWEST TEXAS DEAN NOLLE RETIRING

SAN MARCOS.—Dr. Alfred H. Nolle, dean of Southwest Texas State College, will retire this fall after 40 years of service to the college, 37 of them as dean.

Dr. Nolle came to Southwest Texas in 1919 as a professor of German and became dean of the college in 1922.

Dr. Nolle, a native of Missouri, earned both the bachelor of arts and bachelor of science degrees in education at the University of Missouri. At the University of the South, Sewanee, Tenn., he received his master of arts degree. He earned his Ph. D. degree from the University of Pennsylvania.

Before coming to Southwest Texas, Dr. Nolle studied at the Universities of Berlin and Jena in Germany, where he met his wife, the former Brenda Stewart Wilson, of Washington, D.C. She was a piano student at the Stern Conservatory.

The Nolles have one son, Alfred H., Jr., who is now professor of physics, research scientist (consultant), defense research laboratory; and director of research in properties of liquids and solids at the University of Texas.

Dr. Nolle has taught German at the Universities of the South, Pennsylvania, and Missouri. He wears the Phi Beta Kappa and the Alpha Chi keys, and is a member of Phi Delta Kappa and Phi Mu Alpha.

While in Missouri, Dean Nolle was an instructor in the Student Army Training Corps, the World War I equivalent of ROTC and held the rank of major. He was a charter member and one-time chairman of the Conference of Academic Deans of the United States. He was a charter member of the San Marcos Kiwanis Club and a member of the Kiwanis Legion of Honor.

Dr. and Mrs. Nolle are members of the St. Mark's Episcopal Church in San Marcos. Dr. Nolle, a lay reader, has been a member of the executive board of the diocese of west Texas, and chairman of the West Texas Diocese Committee on the State of the Church.

Highlighting his recent years was the presentation of the honorary doctor of laws degree at East Texas Baptist College in 1957. The dean received many letters of congratulations on that occasion, which have been bound and presented to him.

He carried the nickname "Knuckles Nolle" due to a story about a suspected (though false) "ring of card sharks and gamblers among the progressors" which appeared in the Southwest Texas newspaper in 1947. He was presented a pair of brass knuckles with his name engraved on them.

The dean is quick to correct any notion that his retirement will be inactive. He will move from his present office in the administration building to a new one in the library, where he will attend his duties as executive secretary of Alpha Chi.

He will also continue as the Alpha Chi representative on the National Honors Council and chairman of the committee on standards and classification for the Association of Texas Colleges, of which he has formerly been secretary, vice president, and president.

The Panama Canal and the Monroe Doctrine

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 20, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bulletin of the Southern States Industrial Council, dated August 15, 1959, and written by Mr. J. Clifford Miller, Jr., president of the council:

THE PANAMA CANAL AND THE MONROE DOCTRINE

In its recent declaration of policy the council emphasized its opposition to any surrender of the ownership of the United States in the Panama Canal, and it urged the Congress not to surrender in any degree the jurisdiction over and control of the Canal Zone vested in this Nation under its contract (1903) by treaty with the Panamanian Government.

This course was prompted by action of the Republic of Panama through its National Assembly, incited by Nationalists and other politicians, over the protest of the United States, in extending its territorial waters from the internationally recognized 3-mile limit to a 12-mile limit, and thus asserting control over a 9-mile stretch of ocean between the canal terminals and the open sea.

On January 9, 1959, Representative DANIEL J. FLOOD, Democrat of Pennsylvania, a recognized authority on the Panama Canal, told the House of Representatives that this is only one of many recent moves by Panama to undermine our control of the canal. He said:

"This is a matter that cannot safely be ignored. We must not permit the creation of another Berlin at this artery of world commerce."

According to an article by Demaree Bess (Saturday Evening Post, May 9, 1959.) "The Panama Danger Zone," "However, other Members of Congress did ignore his warning. Not one of them publicly commented on his speech, and it did not get a single line in Washington and New York newspapers which specialize in foreign news."

The only other voice we have heard raised on this situation is that of Senator THOMAS E. MARTIN, of Iowa, who, on May 12, 1959, had excerpts from the Demaree Bess article referred to printed in the CONGRESSIONAL RECORD.

On July 7, 1959, Mr. FLOOD again brought this matter to the attention of the House, and put into the CONGRESSIONAL RECORD an editorial from the Saturday Evening Post of July 4, 1959, which began with this challenging statement:

"For some reason it has been difficult to arouse much concern, among either politicians or the public, about what is going on to the south of us in Latin America."

And it continues, if "a Communist beachhead is being attempted in this hemisphere" the challenge "would have to be met by this country on the principle" of the Monroe Doctrine.

There can be little, if any, question about the dangers confronting us all over the Caribbean. And the fact that we are either ignorant of these disturbing elements or just don't care about their effect on the future of our country is highly disturbing.

Have we become so absorbed in our effort to save Europe, the Mideast, and Far East from communism, that the spirit, as well as the letter of the Monroe Doctrine are as dead as the proverbial dodo? If you say the Monroe Doctrine applied only to European imperialism, I ask, was that imperialism more dangerous to our liberties than is the imperialistic slavery sought to be imposed on this hemisphere by international communism?

In the words of the Monroe Doctrine, we "declare that we should consider any attempt on their part to extend their system to any portion of this hemisphere, as dangerous to our peace and safety."

Sincerely yours,

J. CLIFFORD MILLER,
President.

Reclamation Projects Yield Wide Variety of Essential Benefits

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Thursday, August 20, 1959

Mr. ENGLE. Mr. President, most of us here in the Congress understand why western reclamation is of economic importance to the whole country as well as essential to the development of the West. But not all of our national press does, particularly in the East.

No writers can express the point more clearly than the editors of the McClatchy newspapers in California which publish papers in Sacramento, Modesto, and Fresno. As an excellent statement of the reasons for continuing and expanding western reclamation, I ask unanimous consent to have printed in the Appendix of the RECORD, an editorial from the Sacramento Bee of August 9, 1959, entitled "Reclamation Projects Yield Wide Variety of Essential Benefits."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Sacramento (Calif.) Bee, Aug. 9, 1959]

RECLAMATION PROJECTS YIELD WIDE VARIETY OF ESSENTIAL BENEFITS

In this drought year of 1959, when the main rivers of California would be a series of dry sandbars were it not for projects such as the Shasta and Folsom Dams, it is no less than amazing that there are those who are critical of the western reclamation program.

A recent Washington, D.C., Post editorial deserves note because it reflects the astigmatic view shared by many in the East that the Federal program should be reexamined on the ground it brings more land into agricultural production while the Nation has large surpluses in wheat, corn, cotton, etc.

This is totally fallacious and shows a lack of knowledge of the true nature and overall purposes of these projects.

A quick answer, of course, is to point out the fact the crops largely produced on lands irrigated by those big Federal dams are not in surplus and are not under any Government program. That in itself should be enough but there is much more to the story.

These great multipurpose projects provide a vast variety of benefits aside from irrigation.

They provide flood control. Without Shasta, Folsom, Friant, and other dams, California would have been subjected to a series of catastrophic floods during the last decade. The floods which did occur happened because projected dams had not been built.

They produce electric power. They aid navigation. They hold back the salt water from the sea which otherwise might spell ruin for the fabulously rich Sacramento-San Joaquin delta. They provide recreation for the people. And of extreme importance, they give many communities dependable supplies of domestic and industrial water.

Without the reclamation projects the great development of the West would have been seriously restricted. For example, without its allocation of 390 million gallons a day from Colorado River water stored behind Hoover Dam, Los Angeles would have

reached the maximum of its population and industrial growth some time ago.

To a large extent the reclamation projects in California have not added significant acreages to agricultural production.

They have provided surface supplies to already producing lands which had been irrigated by pumping but which were threatened with extinction due to the failure of the underground supplies.

And in some cases the introduction of reclamation water has made it possible to transform land formerly devoted to grains, which are in surplus, to the production of fruits and vegetables, which are not.

The Post says it is time Congress gave thought to retiring land from cultivation instead of adding more. And by inference one could gather the Post believes it might be a good thing to let the area to be served by the proposed San Luis project dry up.

It is hard to imagine anything more foolish. If ample water were provided, much of the land growing grain and cotton inevitably would be turned to orchards and vegetable crops.

But even were cotton to be the chosen crop, the Post's point still falls flat. The San Joaquin Valley produces a long staple cotton which is in much demand, and the per acre yield is from 5 to 10 times that of some cotton-growing sections of the South.

If there is need to retire cotton land from production, it certainly would make more sense to retire some of the poor and tired land in the South than to let the extremely fertile acres in the San Luis area revert to a desert, which they will without San Luis water.

Moreover, in respect to the Federal San Luis project, while it is designed primarily for irrigation, it also is to be an integral part of a bigger plan to transport water to southern California where it will be needed for domestic and industrial purposes a little more than a decade hence.

The Post is generous enough in its appraisal to say the reclamation projects for the most part pay for themselves.

They do, and more. Not only do the users pay for the projects but the great developments which spring from these projects contribute vastly to the economy of the Nation in general and to the Federal Treasury in particular in the way of taxes.

For one to say the reclamation program is a case of the Government putting out money to which the Government must put out more money is missing the point at both ends. Such a statement either is due to ignorance or is rank misrepresentation.

Youth Conservation Corps Act Would Fill a Vital Need

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 20, 1959

Mr. STRATTON. Mr. Speaker, the other body recently adopted S. 812, an act providing for the establishment of a Youth Conservation Corps, a group which would serve not only to train young men in healthful outdoor conservation activities at a time when employment prospects in many sections of our country are low, but which would also contribute greatly to the promotion of reforestation and conservation projects in many of the key outdoor mountain areas of our country.

Some weeks ago I introduced similar legislation in the House, H.R. 7686. I believe that no finer job could be performed by Congress than passing this legislation before we adjourn for this session.

Under leave to extend my remarks, I include a thoughtful editorial from the Oneonta Star of August 18, 1959, stressing the positive contributions of such a corps in the beautiful mountain and outdoor regions of Otsego County in New York State, and also an editorial which appeared in this morning's Washington Post:

[From the Oneonta Star, Aug. 18, 1959]

SENATE CONSIDERING BILL TO ESTABLISH YOUTH CORPS

The Senate is again considering a bill to establish a Youth Conservation Corps which would enable thousands of young men to work in Federal parks, forests, and wildlife areas, and on other conservation projects. The only sensible argument thus far advanced against this measure is that such a program would be expensive.

In evaluating this argument, one must consider what the program is intended to accomplish, and what it might in fact accomplish. The new youth corps is patterned after the Civilian Conservation Corps of two decades ago, but some of its objectives are different from those of the old CCC. The differences are important.

The CCC was essentially an economic measure, a plan to give employment to young men who otherwise would have been idle. It did have great side benefits for the public; some of the work done by the CCC youths, such as tree planting at Gilbert Lake State Park, is valuable to this day. The Youth Conservation Corps now envisioned would be mainly that—a means of getting young men off the streets and into healthful, productive, character-building outdoor work. And as before, the work done would be of general public benefit.

It is true that the program would be expensive—$375 million annually after the first couple of years. This must be balanced against the benefits in terms of the conservation, both human and material, that would result.

[From the Washington Post, Aug. 20, 1959]

YOUTH AND THE LAND

The plan approved by the Senate to establish a Youth Conservation Corps similar to the depression-born Civilian Conservation Corps deserves to be judged in broader terms than its opponents, including the President, have apparently employed so far. Their objections to the cost of the venture need to be considered, of course, but we cannot for a moment believe that the expense would be anything like the astronomical scare figures cited by Senate Republicans. Indeed, is it not possible that the plan would result in some real—if not bookkeeping—economies?

The proposal is to enlist volunteer boys from 16 to 21 years of age for work in the national parks, forests, and wildlife refuges at basic pay of $60 a month. Make work ought of course to be avoided—but considering the enormous public land holdings and the growing public demands upon national park facilities this ought not to be difficult. An efficiently administered program should increase the value of the parks and refuges in a most economical way, at the same time affording exceptional opportunities for young men to learn useful skills and to round out their own mental and physical development in a wholesome atmosphere. We think the plan could be a happy blending of two of the country's greatest assets—its land and its youth—and that the measure ought to be enacted.

Nixon Missed Great Opportunity in Russia

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, August 20, 1959

Mr. JOHNSTON of South Carolina. Mr. President, I send to the desk an editorial from the Anderson Independent newspaper of Anderson, S.C., of August 19, 1959, entitled "NIXON Missed Great Opportunity in Russia."

I believe this editorial has pointed up a tremendous advantage that the United States missed in teaching the Russian people a lesson that we Americans depend on God in our daily living.

This editorial points out that no news came from Russia to indicate that Vice President NIXON attended church on Sunday while he was in Russia. There is no criticism of Mr. NIXON personally for not having attended church, because we all know he is a regular attender of church in the United States; the point is that Mr. NIXON missed a terrific propaganda opportunity when he failed to attend church in Russia.

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Anderson (S.C.) Independent, Aug. 19, 1959]

NIXON MISSED GREAT OPPORTUNITY IN RUSSIA

Mr. NIXON, who has drawn nothing but praise for his travels in Russia, in our opinion missed one great chance to show the Russians the solid rock upon which this country has built its greatness.

To the best of our knowledge he did not go to a church service while over there.

We read in detail about his spending one Sunday at the country dacha or villa of Premier Khrushchev, the boat rides on the river, the walks in the flower gardens, and all that. If he had been in Washington he and his family would probably have been at church, for he attends regularly. Once, on tour of Florida, he worshipped in beautiful Christ Methodist Church, St. Petersburg, of which Dr. Paul R. Hortin, well known in Anderson, is pastor.

If Mr. NIXON had simply told his Russian hosts that he would like to go to one of the few churches that are left in Russia and in fact had insisted on it and gone, we believe there would have been a different feeling toward him and this country than there is today. The Russian leader may not have liked this procedure, but we believe that he would have appreciated his visitor all the more.

America owes all its greatness to the goodness of God. Its founders realized this gift and acknowledged it. They looked upon God as a partner in their efforts toward liberty and freedom. "In God We Trust" is our motto. America's churches are its strongest

bulwark against any anti-God rule, such as Russia has today.

We don't know what the plans are for Mr. Khrushchev, but we do hope that someone guides him toward a church on a Sabbath morning where he can see freedom-loving people worship according to the dictates of their conscience and in their own way. We have an idea that the Premier, who claims to be an agnostic, but who is a smart man withal, would understand and maybe appreciate the service. We could recommend a large number of churches here in this favored region that would give him a quick insight into the power that religion wields in our lives.

Mr. NIXON could have set the pattern by going to church in Russia even though the Russians might have scoffed at him. Most of all he could have shown the Russians that Americans depend on God in their daily lives.

Deplores Lack of Empathy

EXTENSION OF REMARKS
OF
HON. ROBERT W. KASTENMEIER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 20, 1959

Mr. KASTENMEIER. Mr. Speaker, a letter which appeared in the August 8, 1959, issue of the Waukesha Daily Freeman vividly illustrates the lack of empathy among so many of us. The author, Mr. Tom Miglautsch, chides the editor of the Daily Freeman, which is an outstanding newspaper published in my congressional district in Wisconsin, for his criticism of the Kennedy-Morse bill to raise the minimum wage to $1.25 and of the Forand bill to provide medical and hospital care for our senior citizens. However, it seems to me that Mr. Miglautsch's comments should be read by all of us in Congress, since our inaction on these matters, perhaps, indicates an equal lack of empathy. It is for this reason that I am inserting his thoughtful letter in the CONGRESSIONAL RECORD. The letter follows:

HAPPY FREEMAN HAS DISCOVERED EMPATHY

To the FREEMAN:

It is gratifying to note that the Freeman has editorially discovered the word "empathy"—I quote "the imaginative projection of one's own consciousness into another being (putting yourself in the shoes of someone else)." During years of reading the Freeman editorially, I have been frustrated by the lack of that very quality—empathy.

For example: In recent weeks you have had not one, but two editorials criticizing the proposed increase in the Federal minimum wage from $1 to $1.25 an hour as "inflationary." Now $1.25 an hour—that's $50 for a 40-hour week, or about $40 a week take-home pay—is roughly $2,000 annual salary. This is inflationary? Management salaries run to $50,000, $100,000—even $500,000 a year. No Freeman editorial has criticized them—they presumably are not inflationary. If the Freeman editors lack empathy for the person or family that must subsist on $2,000 income a year, they are obviously not completely without empathy.

Recently the press reported the suicide of an elderly couple. The woman left a note explaining that they were both desperately ill and had no money for medical care. Her closing remarks were, "For God's sake do something to give medical care to old people." Well, the "do-gooders," those "spenders" down in Washington are trying to do just that. They have a bill—the Forand bill—which would provide free medical and hospital care to those retired on social security. Our elder citizens in their day worked—not 8, but 10 and 12 hours, 6 days a week to build this productive America which now gives most of us an abundant life with increased leisure. Yet most retired couples live on less than $1,000 income per year. If it were not for social security (that Socialist bill passed by the "spenders")—millions would be absolute destitute. It takes "empathy" to feel the plight of these aged citizens. The Freeman? They editorially attacked the Forand bill as "the opening wedge to socialize medicine." The American Medical Association (AMA) triggered its members to flood Congressmen with letters against this free medical and hospital care for the aged—the bill died in committee.

I have often wondered why the great American free press has largely gravitated into the hands of those who have such empathy for the well-to-do taxpayer, and so little for those in the lower third of our society. Any student of economics knows that a basic reason for our recurring depressions is the lack of adequate purchasing power among the lower one-third to buy needed goods to clear the retailers' shelves so the inventories don't back up to the factory and throw men out of work. From the very practical and selfish standpoint of keeping ahead of Russia, which has no unemployment, we should subsidize our less privileged citizens if necessary to keep consumption equal to production. It would be so much more gracious if such generosity were inspired instead by empathy—or by that old-fashioned term by which I know it—Christian love of one's fellow men. Nevertheless, it is gratifying that the Freemen editions have become poignantly cognizant of "empathy"—may it be more generously reflected in future editorial policy.

TOM MIGLAUTSCH.

OCONOMOWOC.

Politics Is Still Hobby of Former Governor Hobby

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, August 20, 1959

Mr. JOHNSON of Texas. Mr. President, Texas is fortunate in having seven living ex-Governors.

Included in this notable group is former Gov. W. P. Hobby, a man whose achievements in both public and private life have already secured for him memorable recognition in the history of my State.

Some of these achievements are recounted in an article by Frank X. Tolbert in the August 17, 1959, Dallas Morning News, and I ask unanimous consent, Mr. President, that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

POLITICS IS STILL HOBBY OF FORMER GOVERNOR HOBBY

(By Frank X. Tolbert)

HOUSTON, TEX.—A close friend of William Pettus Hobby, Sr., said: "To show what kind of a modest, good-humored fellow Will Hobby is his favorite nickname is 'Guv.' To me this illustrates why he was one of Texas' greatest Governors. He ran the State the way he runs a newspaper in an informal, casual and yet very efficent fashion."

Before a biography of the 1917–1921 Governor of Texas was published recently, Will Hobby told the authors, James A. Clark and Weldon Hart, that he'd like the book to be called simple, "Guv." Finally, he was talked into another title, "The Tactful Texan," which is also very descriptive of this smiling, 81-year-old natve of Moscow—the cty of Moscow that is in the pine forests of Polk County, Tex.

Mr. Hobby is primarily a newspaperman. Today he is chairman of the board of the Houston Post. He joined that paper on Texas Independence Day, March 1892, at $8 a week. He was in the circulation department yet his real interest was in the editorial staff. The boy's favorite of the Post's newswriters was a fellow named William Sydney Porter. Some years ago, Guv was guest columnist for the Post Card while the regular columnist, George Fuermann, was on vacation. And the publisher wrote in affectionate detail how he used to visit the little cubicle office of the future short story writer, and O. Henry would often send the boy out for coffee and sandwiches and they would have dinner together.

Will Hobby calls politics his hobby. He has an almost incredible knack for analyzing the outcomes of political races. His biographers say that a prominent El Paso politician named Adrian Pool used to call Will Hobby every election day eve to get his predictions. "Almost invariably Hobby called the turn," said Adrian Pool.

Politics might have continued to be Mr. Hobby's hobby if he hadn't been argued into running for lieutenant governor in 1914. He didn't get into the race until near the deadline for filing. He was elected by about 20,000 votes and made such a good record he had no opposition for a second term. The reluctant politician became Governor on August 25, 1917 after James E. Ferguson was impeached from that office. Ferguson ran against Hobby in 1918. And Guv won by 461,479 to 217,012 votes, the most onesided victory in the Texas Governor's race up to that date. Some said this was because Will Hobby appealed to the ladies, who were getting to vote for the first time.

In the early part of this century, Mr. Hobby rose from that $8 a week job to managing editor of the Houston Post. He left the Post to become editor and eventually full owner of the Beaumont Enterprise. In 1922 he came back to the Post, as publisher and part owner. And this is now very much a Hobby enterprise.

His famous wife, Mrs. Oveta Culp Hobby, is president and editor, and works with the same dedication she gave her former jobs as World War II commanding officer of the Woman's Army Corps and as a member of President Eisenhower's Cabinet. Their daughter, Mrs. Jessica Hobby Catto, is a director. Will Hobby, Jr., is an associate editor, and has his desk in the midst of the busy city room. And Will, Jr.'s attractive wife, Mrs. Diana Poteat Hobby, edits one of the better book sections in the Southwest.

Home for Oveta and Will, Sr., is a huge, 3-storied brick mansion at No. 2 Remington Lane in Houston, and the former Governor has the whole third floor for an office. This was once the home of an early day Houston oil pioneer, J. S. Cullinan, a fellow who flew a skull and crossbones flag from his oil company headquarters. (The Jolly Roger was flown at half mast from Houston's Petroleum Building when Mr. Cullinan died.)

When he lived in the mansion, Mr. Cullinan had the driveway 75 yards from the front gallery because he didn't like to smell the gas fumes of early day automobiles. When Will Hobby bought the house in 1947 he moved the driveway in closer to the gallery.

"The Guv didn't want his friends to have to hike when they came to see him," said close friends.

Crime Ratio of 13 Major Cities

EXTENSION OF REMARKS
OF
HON. JOHN L. McMILLAN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 20, 1959

Mr. McMILLAN. Mr. Speaker, I am inserting in the RECORD a statement from the Federal Bureau of Investigation giving the crime ratio in 13 of the cities in the United States with a population of 500,000 to 1 million. We are all delighted to see that the Washington Metropolitan Police force has made an excellent record in solving crimes here in the Nation's Capital.

We all fully realize that the Police Department in the city of Washington is confronted with problems different and of a greater magnitude than the police department of any other city. We have embassies from every country in the world located here in the city of Washington and we have people from every country in the world and every State in the Union. We also have the NAACP headquarters, the heads of all the labor unions, the heads of all the Government departments and the Congress located here in the Nation's Capital.

We realize that we have far too much crime in the Nation's Capital at the present time; however, it is refreshing to know that our excellent police force is solving the majority of the major crimes committed in the city of Washington. We really should have a larger force since crime seems to be increasing in all sections of the country.

Crime index offenses reported,[1] cities 500,000 to 1,000,000 population, by calendar years

City	Calendar year					Percent change			
	1954	1955	1956	1957	1958	1954–58	1955–58	1956–58	1957–58
Baltimore	15,322	16,330	17,151	15,424	15,303	−0.1	−6.3	−10.8	−0.8
Boston	6,122	8,551	10,195	11,439	11,393	+86.1	+33.2	+11.8	−.4
Buffalo	3,367	3,406	3,457	3,706	3,628	+7.8	+6.5	+4.9	−2.1
Cincinnati	3,869	3,869	4,113	4,082	3,998	+3.3	+3.3	−2.8	−2.0
Cleveland	6,477	5,174	6,741	8,261	7,994	+23.4	+54.5	+18.6	−3.2
Houston	9,355	9,968	10,675	13,274	15,620	+67.0	+56.7	+46.3	+17.9
Milwaukee	3,717	3,493	4,444	5,057	(2)	(2)	(2)	(2)	(2)
Minneapolis	6,221	5,435	6,380	6,406	7,437	+19.5	+36.8	+16.6	+16.1
New Orleans	7,532	8,391	12,123	12,277	13,905	+84.6	+65.7	+14.7	+13.3
Pittsburgh	6,961	8,252	9,247	10,500	11,466	+64.7	+38.9	+24.0	+9.2

The White Fleet

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, August 20, 1959

Mr. HUMPHREY. Mr. President, we are receiving literally thousands of letters in support of the Great White Fleet proposal which was advanced in a resolution introduced by myself and the Senator from Vermont [Mr. AIKEN] and in the other body by Representatives EDMUNDSON and BATES. The editorial support of the Great White Fleet proposal is broad and enthusiastic. One of the good editorials which has come to my attention on this subject was published in the Faribault Daily News, of Faribault, Minn., on July 31.

Mr. President, I asked my staff this morning how many communications we had received on the Great White Fleet proposal. The number is more than 11,000. So the proposal has had a considerable amount of enthusiastic support as a result of the publicity given to it and the information about it which was published in Life magazine.

I ask unanimous consent that the editorial may be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Faribault (Minn.) Daily News, July 31, 1959]

AN IDEA WORTH CONSIDERING

The Great White Fleet idea to foster world peace through humanitarian service has been revived and the idea deserves wholehearted consideration from all citizens.

In 1907 President Theodore Roosevelt sent 16 American battleships on a cruise around the world. The "Great White Fleet" (American warships were then painted white in peacetime) carried its intended message: That the United States was emerging from an era of preoccupation with recovering from its own great civil conflict and with developing a continent under a network of railroads—from an era of taken-for-granted security behind the British Navy—and that it now was a world power.

Today an idea initiated by a young Navy commander, Frank Manson, and now sponsored by Senators Humphrey, Minnesota, and Aiken, Vermont, and Representatives Bates and Edmondson—a bipartisan group—is being framed into a resolution asking President Eisenhower to recommission from ships now in mothballs a modern "Great White Fleet."

This would carry aid to disaster-stricken areas throughout the world and technical assistance to nations which welcome it.

There are, of course, practical problems to be solved. Except for emergency rescues, care of the injured, food and shelter, the needs arising from disasters vary greatly. And the fleet could be a long way off from the place it would be needed. But these difficulties are not wholly unsolvable. Even tardy, partial aid would not necessarily be futile. And technical assistance (instruction) could be a continuation service.

As a dramatic, impressive, traveling advertisement of Americans' dominant desire to be helpful, not warlike, the idea has enormous possibilities.

It certainly should be seriously explored and considered.

Need for Joint Committee on a National Fuels Policy

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 20, 1959

Mrs. KEE. Mr. Speaker, I have today introduced a concurrent resolution calling for the creation of a Joint Committee on a National Fuels Policy.

I sincerely hope that the resolution, which has also been introduced by a number of my colleagues, will be approved at this session of the Congress.

There is an urgent need, Mr. Speaker, for the Government to formulate a fuels policy. We have an oil and gas policy and a policy for the development of atomic energy. But the Federal Government has never determined just what the national policy for coal should be. Nor has it determined just how each of these fuels shall be fitted into a national picture.

Tremendous demands for fuels of all kinds can be expected in the future. The United States has a rapidly expanding economy. And we can all agree, I am sure, that adequate fuels are essential to the national security.

The National Coal Policy Committee is strongly supporting this resolution. This new organization represents all segments of the coal industry—mine operators, miners, coal-carrying railroads, and machinery manufacturers.

The new Coal Policy Committee is naturally interested in the growth and development of the coal industry. But more importantly, it is interested in seeing that a national policy, making full use of all of our fuels, is worked out.

I can think of no better way to accomplish this objective than by entrusting the difficult job to a joint congressional committee.

Exchange of Classroom Teachers Would Aid International Understanding

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, August 20, 1959

Mr. NEUBERGER. Mr. President, while peace is fought with different weapons than war, man-to-man contact is an essential factor in both.

In recognition of this fact, our Government has sponsored or supported a series of programs designed to better acquaint people of other lands with America and increase knowledge on the part of our citizens of different nations. Experts in a multitude of fields have been sent abroad to exchange views with their counterparts in another country. Similarly, the United States has played host to numerous foreign delegations. The result has been better understanding.

One field where such meetings have realized spectacular success is education. Many myths regarding Russian education have been dispelled due to knowledge gained by American educators who visited the Soviet Union.

Mr. President, at the annual convention of the National Education Association held in St. Louis earlier this year, the NEA Department of Classroom Teachers approved a resolution which I believe would increase our opportunity to gain from exchange visits. The resolution urged that groups of classroom teachers be sent abroad to communicate directly with teachers of other lands.

I think this is an excellent proposal. I hope that the Office of Education will act upon it. As Ewald Turner, president of the Department of Classroom Teachers and a resident of Pendleton, Oreg., in my State, stated to me in a recent letter:

We feel that selected classroom teachers, by the very nature of their professional experience, are uniquely experienced in the field of human relations and could do much toward building international understanding.

I subscribe to Mr. Turner's sentiments.

Mr. President, I ask unanimous consent that the text of the resolution approved by the NEA Department of Classroom Teachers be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

[From Department of Classroom Teachers, National Education Association]

INTERNATIONAL UNDERSTANDING

The department believes that improved human relations are vitally important to the increasingly significant role our country is playing in world affairs and that it is the responsibility of each teacher to develop and foster in American children respect for the cultures of other peoples.

The department commends the U.S. Office of Education for sending educational officials abroad to study school systems and to promote international understanding. It respectfully proposes that the U.S. Office of Education and other agencies give consideration to sending groups of classroom teachers abroad to observe educational methods and instructional procedures in classrooms and to communicate directly with teachers of other lands.

The Venue Provisions of the Federal Employers' Liability Act Should Be Changed

EXTENSION OF REMARKS

OF

HON. H. ALLEN SMITH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 20, 1959

Mr. SMITH of California, Mr. Speaker, under the present provisions of the Federal Employers Liability Act an action against railroads for wrongful death or personal injuries may be brought in a district court of the United States, in the district of the residence of the defendant, or in which the cause of action arose, or in which the defendant shall be doing business at the time of commencing such action. The jurisdiction of the courts of the United States under this act shall be concurrent with that of the courts of the several States, and no case arising under this act and brought in any State court of competent jurisdiction shall be removed to any court of the United States.

The bill I have today introduced would provide somewhat different venue in actions brought in State and Federal courts. Under the bill an action could be brought only in a district court of the United States within or in a State court of competent jurisdiction of first, the State in which the action arose, or second, the State in which the person suffering injury or death was a resident at the time the cause of action arose. The bill adds a proviso to the effect that if, at any time within the period during which suit on any such cause of action shall not be barred by limitation, the railroad against which the cause of action is asserted shall either not be doing business within the State in which the cause of action arose or shall not be doing business within the State of which the person suffering injury or death was a resident at the time the cause of action arose, in that event such suit may at such time be brought in any district court of the United States within, or in a State court of competent jurisdiction or, any State in which such carrier is doing business.

The purpose of this legislation is to bring to an end the widespread and ever-increasing practice of solicitation and transportation of lawsuits to jurisdictions remote from the localities in which the causes of action arose. It will result in lawsuits being handled by the local lawyers in the communities where the accident occurs rather than by a few soliciting lawyers who improperly take advantage of the unique provision now contained in the Federal Employers' Liability Act.

The public interest will be promoted by the elimination of a practice which has proved to be unjust and burdensome and which has interfered in many instances with efficient railroad operation.

As long ago as June 1946 the Bar Association of Knoxville, Tenn., became aroused as the result of the flagrant practice of solicitation of cases and passed a resolution in favor of limitation of venue under the Federal Employers' Liability Act. Subsequently the Tennessee Bar Association passed a similar resolution. These resolutions led to the introduction in the 80th Congress of H.R. 1639, the so-called Jennings bill. That measure, while not identical with the bill here introduced, contained substantially similar provisions.

Subsequent to the introduction of the Jennings bill, the American Bar Association and the bar associations of 39 States went on record as endorsing the principles of the bill. In addition, hundreds of city and county bar associations and hundreds of practicing lawyers endorsed the bill.

Hearings on H.R. 1639 were held before the House Committee on the Judiciary. The bill, in amended form, was reported and passed the House of Representatives. A subcommittee of the Senate Committee on the Judiciary held hearings and favorably reported an amended bill to the full committee, but the Jennings bill never reached the floor of the Senate.

Many railroads operate through 8 or 10, or more, States, and maintain offices and officers in still other States. It follows, under the law as it now stands, that a suit may be filed in a jurisdiction hundreds and even thousands of miles from the locality where the injured person lives and the accident happened. There is thus afforded an opportunity for abuse by unscrupulous "solicity" lawyers.

The testimony presented at the hearings on the Jennings bill revealed that these opportunities of misusing the judicial processes has not been overlooked. Both the House and Senate committees found that certain unethical attorneys solicited cases under the Federal Employers' Liability Act and transported them to far-distant places for trial and that such lawyers employed runners or touts to solicit business for them, all to the detriment of the legal profession, the railroad workers, the railroads and the general public. The evidence at the hearings showed that the legal business under this act was concentrated in the hands of a relatively small number of practicing attorneys in the United States and that such actions were customarily brought in a restricted number of communities in the country. This situation which was shown to exist in 1947 has not improved. If anything it is worse today than ever before.

Disbarment proceedings have been filed against various attorneys wh have degraded their profession by the solicitation of personal injury status against railroads, and injunction proceedings have been instituted against other attorneys to prevent their further prosecution of other cases. Many attorneys have been censured, some have been disbarred, and others have been ordered to return fees which they have collected. While such actions are of some effect, it is only through the legislative process that lasting relief from these vicious practices can be obtained.

The railroads are also the victims of the pernicious practice of solicitation and transportation of causes of action. The difficulties of trying a lawsuit in a jurisdiction from the community where the cause of action arose are obvious. The bringing of a lawsuit in a distant forum, so chosen by the plaintiff, places the railroad at an unfair disadvantage. As only one example, in order to obtain an adequate and reasonable presentation of the facts in the case the defendant railroad must bring its witnesses for long distances in order that they may testify. Because witnesses who live in one State cannot be compelled to testify in the courts of another State, their attendance can be obtained only by meeting their own terms of compensation and expense allowances; and the cost of procuring their personal attendance in a foreign State may be and frequently is excessive, burdensome, and out of all proportion to the actual value of the claim in litigation.

It should be added that in virtually every case in which an action is brought against a railroad for wrongful death or personal injuries many of the railroads' witnesses are persons engaged in actual railroad operation. That operation is necessarily impaired, and the public interest suffers when those witnesses are required to be absent from their regular duties for long periods of time for the purpose of attending trials at far distant points.

There can be no doubt but that the bringing of lawsuits far from the place

where the cause of action arose constitutes an undue burden on interstate commerce and an unreasonable interference with efficient operation of the national transportation system.

In correcting the evils referred to above, the proposed legislation does not deny to claimants the opportunity to have their cases tried in an appropriate forum. One of the traditional guarantees of a fair trial under our Anglo-Saxon system of law has always been that the trial shall take place where the act complained of occurred, before a jury composed of the peers of the parties. This procedure would save much expense to litigants. It would seem both unusual and extraordinary if, as a general proposition, it would not be to the advantage of a claimant to try his claim in the area in which he lived or in which the accident accurred. The bill here introduced meets these traditional concepts of venue and provides the only choice of a forum which a claimant or his attorney should, in the interest of the parties and the orderly and economical administration of justice, be permitted to have in the enforcement of his rights.

Life at Airbase in Turkey Interesting to Texas Girl

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, August 20, 1959

Mr. JOHNSON of Texas. Mr. President, on August 14, the Amarillo Daily News published an article entitled, "Life at Airbase in Turkey Interesting to Texas Girl." I found this article most interesting and I recommend it to all Members of Congress for good, objective, descriptive reporting.

Mr. President, I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LIFE AT AIRBASE IN TURKEY INTERESTING TO TEXAS GIRL

(By Bob Beames)

Life for an American in Turkey is described as "difficult, but interesting," by an Air Force officer's wife who has spent the past 17 months in Turkey. A huge smile was sufficient to express her feelings about returning to America for a visit.

Mrs. Archie A. Acree, formerly of Wichita Falls, currently is visiting her sister, Mrs. Porter Oakes, 2605 Travis, here. She is the wife of Maj. Archie Acree, now assigned as a technical adviser to the Turkish Language School in Izmir, Turkey. The couple received the assignment in February 1958, and this is Mrs. Acree's first visit home since then. The duty tour to Turkey will end next March.

The trip home for Mrs. Acree was a birthday present from her parents, Mr. and Mrs. Earl Clayton of Pampa. She also has been visiting them and plans a trip to Wichita Falls before returning to Izmir on August 27.

The vivacious visitor admitted that the American military wives in Turkey suffer no real hardships while living in Turkey, but added that many conveniences are lacking. Among the items she missed most are telephones, abundant pure water and head lettuce and corn.

Sanitation in Turkey was described as being greatly inferior to American health standards. For instance, U.S. military personnel stationed in Izmir are allowed to eat no Turkish meats except lamb, and are required to soak fresh vegetables in a strong solution before cooking.

Americans there also must boil all water. This, says Mrs. Acree, is because the sewer and water lines are laid side by side and the frequent earthquakes cause seepage in the lines.

Another major difference between the two countries is in bathing facilities. Because the equipment is not adequate, the visitor said baths are much less frequent among Turks than among Americans.

Military personnel going to Turkey are required to take a 2-year supply of clothing, Mrs. Acree said. She explained that Americans bought few if any clothes there because of style and quality differences. But she mentioned that the PX there has some clothing in stock. Discussing the poor cleaning service available in Izmir, Mrs. Acree said "I send all of my cleaning home for service."

Transportation in the Near East country was described as crude and composed mostly of horses, donkeys and carts. Although there are not enough roads there, Mrs. Acree said most of them were good. However, she added that animal traffic clogged the roads and made travel dangerous.

The illiteracy rate in Turkey is high, says Mrs. Acree, and after the first few years of public education the students are charged a fee to continue. "Of course, the fee is high to these people."

Inflation was described as a major difficulty in Turkey, and Mrs. Acree said it got a big boost some 8 months ago when the lira rate was changed. It is now 9 to 1 and "when it was doubled the prices also were doubled."

Television is unknown in Turkey, but there is some radio available and "the Turks love movies," she said. She added the American wives there generally made their own recreation, usually bridge or similar games. There are some nightclubs in Izmir, but regulations on Turkish food and drinks keep most American military families away, she added.

One fascinating sight in Turkey related Mrs. Acree, is the "public oven." The Turks, and most other living there, have only a one-burner stove. For baking, they use publicly-owned public ovens where one and all bring their food. She described the Turks as good cooks and said "they manage nicely with what they have."

Tobacco was mentioned as the big thing in Turkey and much of the country's economy is built around it. Another big crop is olives, but Mrs. Acree said the Turks can grow almost anything. She described the climate as ideal with little or no rain falling from May through October. "The summers are hot, but the winters are more mild than here," she said. When asked if the dust blew there, she said, "That's an understatement."

Major and Mrs. Acree live, as do most other Americans in Turkey, in an apartment. Pictures of the apartment give the idea that nothing more could be desired, but she said the housing was not at all adequate. Particularly, she dislikes the two to four flights of stairs that must be climbed, and injected the fact that there are only three elevators in town.

Izmir is located on the west coast of Turkey and is surrounded on three sides by mountains. Much of the country is rocky and land is at a premium. With a population of more than 200,000, Izmir is one of the three major cities in Turkey and is a pretty town, according to Mrs. Acree.

Although Turkey is a strange and distant land, it is relatively close travelwise. Mrs. Acree left Izmir August 2 and arrived in Amarillo the next day. During the two-day flight she passed through Athens, Istanbul, Rome, Paris and New York City. She plans to return to Izmir on August 27.

"Yes, I've enjoyed it; I've loved it," she said, but continued "there is nothing like the 'land of the big PX'," as military personnel there refer to the United States.

Need Law To Halt Appraisal Abuse

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, August 14, 1959

Mr. CURTIS of Missouri. Mr. Speaker, when the Congress switched the Federal-State matching formula from 50–50 to 90–10 in the highway program, many people felt that this was an invitation to the States to not be too careful about expenditures. A possible indication of this being the result is now coming to the fore in St. Louis County where appraisers' fees, mostly in regard to the interstate program, have been exorbitant.

The primary point is that the State highway commission which could have appealed these cases failed to appeal them. One local circuit court judge was quoted as saying: "I don't know why everyone should get so excited. After all this is just Federal money."

I am inserting in the CONGRESSIONAL RECORD an editorial from the St. Louis Globe-Democrat of August 18, 1959, calling attention to this abuse. I agree that there certainly should be State law to govern appraisal fees but above all we need to change the 90–10 formula so that there will be a greater incentive on the part of the States to police expenditures.

[From the St. Louis Globe-Democrat, Aug. 18, 1959]

NEED LAW TO HALT APPRAISAL ABUSE

A conference next month of the eight St. Louis County circuit judges is a discerning approach to a situation that over the past 3 years has become greatly imbalanced—to a point of public protest.

This is the matter of excessive fees to condemnation commissioners in fixing land and property values in highway construction projects. The Globe-Democrat in recent days has pointed out the wide variance between proportionate fees paid in St. Louis and those paid in St. Louis County.

Congressman THOMAS B. CURTIS finds the amount of the county fees shocking.

Some of them are. The situation as it has been permitted to develop is appalling. These high rates of pay, in one instance almost 25 percent of the determined value of the property, have been made for relatively brief periods of the appraiser's time, or far in excess of established average rates paid elsewhere in Missouri.

In a few cases the appraisal fee was many times greater than value put on the property.

The State Highway Commission's general counsel has requested an exploratory conference with the county's circuit judges. It will be held after the judges have conferred en banc on their awards, which have been publicized in detail in the last 2 weeks.

This situation would not have developed had there been a regulatory standard by which remunerations to the condemnation commissioners could have been judged.

What is needed is a definite yardstick which can be applied easily and fairly in every condemnation proceeding.

The situation calls for a state law establishing a fee not to exceed $100 a day for each day of a commissioner's time on the appraising job. This we propose in order to revise the indiscriminate court-applied payments.

Such a basic compulsory fee would be fair to all. It would eliminate out-of-line awards through political preference or favoritism. It would eliminate spiraling precedents.

In short, it would relieve courts from the responsibility of arriving at an arbitrary figure.

It should prevent such variances as these: $22,500 in fees to a three-man commission for 10 days of work in appraising 28 acres valued at $216,250; $13,500 in fees for appraising 54 parcels of property valued at only $46,520; $34,500 in fees for 41 parcels of State-acquired property with a valuation of $1,305,350; a $900 fee for establishing a nominal value of $8 in a Daniel Boone Expressway right-of-way dispute.

By contrast in the city, $1,500 was paid for work on property valued at $176,020, the same amount for property valued at $316,500, and $5,250 for property valued at $880,455.

These are among the more disproportionate of the county cases, but they illustrate the difference between the 1-percent rate usually averaged in the city and the much higher rate of the county.

Not all of the condemnation commissioners are, by any means, trained, experienced appraisers. The courts have shown an inclination to appoint political friends and acquaintances, attorneys, State legislators, subsequent holders of county and city offices, and leaders of political parties.

Expert appraisers, members of the American Institute of Real Estate Appraisers, receive $100 a day, and usually $50 to $75 per parcel.

State law provides the commissioners are to receive a reasonable compensation. A fee of $100 fixed by State law would meet that requirement. It certainly would put a halt to the arbitrary manner in which fees have been determined in the past.

The eight county circuit judges are meeting today in an informal discussion preliminary to September's en banc session. It will be an excellent time to consider such a law.

Appraisal fees awarded by the courts are paid by the State highway commission out of State funds. The commission and taxpayers have been abused by the excessive fees in past cases. Further abuses cannot be condoned.

Southerners Can Steady Country

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, August 20, 1959

Mr. THURMOND. Mr. President, during the past few days I have placed in the Appendix of the RECORD editorials from almost every newspaper in South Carolina on the subject of the need for a strong and effective labor reform bill. I ask unanimous consent to have another editorial entitled "Southerners Can Steady Country" printed in the Appendix to the RECORD. This excellent editorial was published in the August 18, 1959, issue of the Columbia Record, Columbia, S.C., which is ably edited by Mr. Henry Cauthen.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Columbia (S.C.) Record, Aug. 18, 1959]

SOUTHERNERS CAN STEADY COUNTRY

Regardless of the forthcoming action of the Senate, pro or con, on the labor reform bill, the demonstration of good sense and its recognition of excesses by the House of Representatives will remain an important development.

One branch of the Congress moving to restore order and restraint to the sphere of trade unionism discloses importantly an interest in the country as a whole. For some years now what have been regarded as the interests of labor, only, have enjoyed favor in the Congress.

It should not be forgotten by the people, and especially by the rank-and-file members of unions, that laws strongly favoring trade unionism will remain on the books. The whole structure of contemporary trade unionism is supported by these laws, many of which are regarded as decidely unfair to everybody else and some of which, despite Supreme Court approval, are held to be unconstitutional.

The action of the House of Representatives in passing what is regarded as a "strong" labor reform bill could represent a decisive change in this country. It could reflect the country's recognition of too much power for any one group and the people's desire to see correction.

How deeply this will impress itself upon the Senate conferees and the Senate itself remains to be seen. But the decision there is likely to show once more that southerners are sound, that they consider the stability of the country as a whole and that much of the generally adverse verdict as to the South by outsiders has not been a just verdict.

The South and its people offer a nucleus for a return to reason in this country. It is notable that the leaders of labor who are most concerned about the action of the House are men who time after time have attacked the South and have joined in the crusade to change, by force, our section of the country.

Perhaps not all southern Senators will vote for an effective labor reform bill in the Senate. There are some whose past records strongly indicate they will join the northern and western "liberals" in the Senate to reduce the House bill to one of weakness.

We believe those southern Senators who would so vote are not correctly reading the minds of thousands in their own section of the country.

They would seem justified, as southerners, in joining in what could be a southern leadership of the country—and in the right direction. Meanwhile, they would be supporting, not opposing that which they have always purported to support.

Southern Members of the House of Representatives, in concert with Republicans, passed the reform bill in the House, with all of South Carolina's six Members voting for it. This was admirable, and the sample of steadying influence for the country.

Current Activities of Communist Party, U.S.A.

EXTENSION OF REMARKS

OF

HON. H. ALLEN SMITH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 20, 1959

Mr. SMITH of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report on the Communist Party, U.S.A.:

CURRENT ACTIVITIES OF COMMUNIST PARTY, U.S.A.

The Communist Party, U.S.A. is currently intensifying its agitation program, designed to weaken America's national security. A close examination of recent Communist moves indicates that the Party is working on a well-planned program. Every American citizen should be acquainted with these sinister moves in order to protect our democratic freedoms.

VISITS OF COMMUNIST LEADERS IN RUSSIA

Since January 1959, a number of ranking American Communist leaders have visited in Russia. This is most significant since it enables the Soviets to personally issue instructions to Communists in the United States. Moreover, this new development is reminiscent of the personal contacts between American and Russian Communists in the days of the Comintern when Party leaders in America, such as Earl Browder and William Z. Foster, streamed to Moscow. This obviously means a much closer affiliation between the Communist Party, U.S.A., and the Kremlin. The highest ranking American Communist to visit Moscow was James Edward Jackson, Jr., presently head of the Negro Affairs Committee. In fact, Jackson, as an official delegate of the Communist Party, U.S.A., addressed the 21st Congress of the Soviet Union on February 2, 1959. At that time, he expressed fraternal greetings to the Soviets and stated that Communists in the United States found great inspiration in the Russian Party. He promised that the Communist Party, U.S.A., would struggle to help in the so-called fight for peace (which is Moscow's presented propaganda line). Jackson was also at the Third Congress of the Polish Communist Party. This visit occurred after leaving Russia. The Worker on April 12, 1959, reported that Jackson, in a speech before the Polish Party Congress, predicted that the day will come when the "workers" in the United States will bring socialism to this country.

AFTERMATH OF JACKSON'S VISIT AMONG COMMUNISTS IN THE UNITED STATES

Jackson's visit to Soviet Russia has served as an invigorating tonic to communism in the United States. Actually, Communist activity has been greatly stimulated with the party (1) consolidating its own internal organizational structure, and (2) increasing agitational activity against non-Communists. It appears obvious that the Communist Party, U.S.A., is presently implementing instructions received in Moscow.

Among indications of increased Communist activity in the United States are the following:

1. Party schools: The party is conducting a number of leadership schools among its membership. The Communists realize that a strong party is based on strong leadership. Leaders must be well versed in Marxist-Leninist principles. This means that they must be thoroughly indoctrinated in party history, Marxist ideology and organizational techniques.

Hyman Lumer, national education director of the party, has recently conducted a number of party schools throughout the country. For example, in June 1959, he conducted a party school in New York City; later that month in Detroit, and Los Angeles, and in July, in Seattle. Topics taught included, among others, class struggle, imperialism, socialism, Communist Party organizational problems and Negro questions. Basic Communist classics were utilized such as the works of Karl Marx and V. I. Lenin.

2. Youth activities: Historically the party has always been interested in young people. The party must recruit, train, and influence young people in order to survive. Plans are underway for a Communist-sponsored youth conference in the fall of 1959. Likewise, the party is interested in starting a Communist youth organization for the purpose of working among young people.

3. Strategy in industry: The party is increasingly interested in infiltrating the Nation's basic industries. Primary targets include, among others, the railroad, steel and automobile industries. The party realizes that to exert influence it must have members in labor unions and in strategic positions in industry. Currently national party headquarters is instructing local units to increase efforts to consolidate party influence in industry.

As proof of the party's interest in this field, a number of party "commission" meetings have been held where specific problems of infiltration have been discussed. The non-Communist industrial leader probably does not realize how closely the party will study his company for the purpose of locating an opportunity to infiltrate. Party leaders are constantly alert for a chance to "get a job" for a Communist member in some strategic industry.

Further proof of the party's interest is the activity of a national labor secretary who is exclusively devoting his time to party industrial work.

As is well-known, labor unions are a favorite target of the Communists. In the past the party has achieved considerable strength in certain unions. During the post-World War II years, much of this strength was lost. At the present time, the party is working strenuously to recapture positions of strength in the labor movement.

4. Negro matters: Another favorite field of communism is the Negro. The party is always attempting to represent itself as the protector of the Negro. Today the party is again trumpeting its so-called interest in Negroes, hoping to build party strength among Negro groups. However, the party is never sincerely interested in the Negro, but only hoping to exploit Negroes to build Communist strength.

5. Future plans: At present the Communist Party, U.S.A., is planning to hold another national convention, the 17th, in December. The party organizational apparatus is being geared to that end. Very recently a national committee meeting of the Communist Party was held which discussed, among other things, plans for the national convention. The party is proposing to publicize a draft program which will set forth the party's line on current national and international issues.

A national convention is always used by the party as a technique to drum up enthusiasm among the membership. Delegates are elected from various party units and they come to the convention to vote on party problems. The occasion is used to increase party financial contributions and propaganda.

Of course, a party national convention is certainly not a true convention in the sense of the operation of free government. Actually the delegates vote slavishly as the leaders indicate. Discussion is limited to minor details, for the convention will adopt the program desired by the leading clique. In other words, the national convention is actually a window dressing designed to show the party as a democratic organization.

INFILTRATION INTO MASS ORGANIZATIONS

The party is increasing its tempo of infiltrating non-Communist mass organizations. The purpose in this technique is to increase party influence and power.

As recently as June 1959, for example, the press carried dispatches concerning an individual by the name of Mr. Sidney T. Efross who had been elected as president of the Glen Haven Elementary School (Silver Spring, Md.) PTA. Efross was summoned before the House Committee on Un-American Activities to answer allegations that he was a former Communist member. At that time Efross invoked the fifth amendment 39 times and later submitted his resignation as president of the PTA.

At the House committee meeting, a sworn statement of a former FBI informant in Ohio was read into the record. The informant, in this statement, identified Efross as an individual whom he had known as a Communist and as head of a faction of the steel cell of the Communist Party.

WILLIAM Z. FOSTER

William Z. Foster is currently chairman emeritus of the Communist Party, U.S.A. He is an old-time party leader and has been a prominent voice in American communism ever since the founding of the party.

In 1948 Foster, along with 11 other leaders of the Communist Party, was indicted for violation of the Smith Act. Foster has never been prosecuted because of ill health.

Foster is now advanced in years but still is able, despite his claims of ill health, to carry on many party activities. He is a prime policymaker and has stood for a strong Marxist-Leninist base for the Communist Party, U.S.A. To show Foster's current activity, for example, Political Affairs (theoretical publication of the party) has carried feature articles under Foster's name in six of the seven issues published during 1959. If a man is able to write so consistently, he must not be in such bad health. It seems that there has been a miscarriage of justice in not bringing William Z. Foster to trial. Foster is presently endeavoring to secure court permission to go to Moscow, ostensibly for medical treatment.

FIDEL CASTRO

To read press comments concerning events in Cuba, the average American may gain the impression that he is witnessing a flamboyant circus—often with more than the traditional three rings. He hears about giant rallies of Cubans, with overtones of drama; the ousting of high officials in the Government on short notice; high-sounding speeches in which neighbors are threatened.

In fact, the Castro regime is a circus—a very deadly and serious circus. It is a "circus" in the sense that Americans have been greatly attracted by what is going on. It is a serious matter in that Fidel Castro may represent a very great danger to the security of the United States. From all indications, this young, bearded revolutionary is greatly influenced by communism. This means that America may wake up some morning and find the island of Cuba a Communist bastion on our very doorstep.

The fact must be remembered that Castro gained power, not by democratic processes, but by the sword—a revolutionary military campaign. As is well known, Castro's revolution was based on a small but disciplinned minority. From a mere handful of some 12 men, a military group sprang which led to the overthrow of the legitimate government. The Castro government is living proof of the ability of a small but dedicated minority to overthrow governmental institutions. Press dispatches indicate that Fidel Castro has associated with individuals who have Communist affiliations. For example, his brother, Raul Castro, reportedly addressed the Communist-directed International Conference for Defense of the Rights of Youths in Vienna in 1953. Later, he reportedly attended the World Festival of Youths and Students at Bucharest. On his way home he visited other Iron Curtain countries. As a student in Havana he associated with Communists.

Another associate, Ernesto "Che" Guevara, also reportedly is of Communist sympathies. He reportedly was active in the Russo-Mexican Institute of Cultural Relations and is believed to be the primary link between Fidel Castro and international communism.

Still another associate known to be connected with Communists is Camilo Cienfuegos y Gorriaran. This individual was arrested in January 1956 while serving as the director of the Havana Communist front, "frente popular."

The leftwing connections of these individuals point out the dangers America faces. Likewise, the Castro regime has brought forth violent anti-American agitation. This country should have the very best of relations with our neighbors. To hear Fidel Castro and his henchmen criticize the United States is to realize that Cuba is a trouble spot which may cause America much grief in the future.

Preston J. Moore, national commander of the American Legion, last June brought valuable facts to the American people concerning Fidel Castro. He said:

"The Communist Party, previously outlawed, now enjoys Government recognition and encouragement.

"The army is peppered with Communists. An ardent Communist commands it. Another has directed the execution of more than 600 Batista henchmen and enemies of the revolution, as the charge was sometimes phrased.

"Communists and fellow travelers dominate a number of national labor unions. Known Communists control some of the largest newspapers. In the communications field—radio and television—and in education at every level, there is active Red penetration. History textbooks for use in the schools are to be rewritten—under the guidance of a commission headed by a fellow traveler.

"This is not hearsay. It is a boiled-down, composite picture of the present situation in Cuba as reported by veteran American newsmen and others on the scene."

Mr. Moore asked this pertinent question:

"What would a Communist Cuba mean to us? It would mean, at least, a massive staging center in our front yard from which Moscow could direct economic and political broadsides against the Americas. It would place an intolerable pressure upon our military defenses in the Caribbean and Panama Canal areas. It would lead inevitably, I believe, to the active commitment of our Armed Forces.

"Pray that the power of our Government and of an aroused public opinion will be asserted to head off these eventualities. When the Red Chinese threatened to take over a couple of islands half a world away from us, we stood up and were counted. We shouldn't need a Communist gun in our ribs to remind us that Cuba is less than half an hour away."

Branch Rickey: Key to the Success of the Continental League

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, August 20, 1959

Mr. KEATING. Mr. President, a key to the success of the third major league

is its newly appointed president, the irrepressible Branch Rickey. Mr. Rickey with his rich background of baseball experience and his proved ability as a pioneer, provides the know-how the Continental League needs to become a reality.

Not the least of Branch Rickey's attributes is his charm—a quality which was displayed very prominently to us during the recent hearings of the Senate Subcommitte on Antitrust and Monopoly Legislation. The Rickey charm and eloquence will be important factors in the progress of the Continental League and will particularly stand in good stead in the new league's dealings with Congress.

These and other facets of Branch Rickey's personality and career were dealt with in an interesting column written by Jimmy Powers, the outstanding sportswriter of the New York Daily News. I ask unanimous consent that this column be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Daily News, Aug. 19, 1959]

THE POWERHOUSE

(By Jimmy Powers)

One of the criticisms of the Continental League was that it did not have experienced baseball men in its top echelon. This flaw was promptly removed yesterday by the appointment of Branch Rickey. The man who brought the Negro into baseball and who founded baseball's great incubating system, is an ideal choice as president. He knows how to organize, how to direct, and how to deal with the backstage maneuvers so necessary to any going circuit but most vital to a new one.

With all due respect to Bill Shea, the original sparkplug of the new setup, Bill is not in the same class with baseball's elder statesman. In his field Bill is excellent. He can round up the capital and smooth the way politically through the various city councils along the route. But Rickey is the man with the tremendous prestige needed to guide the Continental in what will probably be a long series of conferences with Commissioner Ford Frick, the American and National executive committees as well as congressional subcommittee members.

This last group is most important. Rickey with all his charm will need the power of Congress behind him if he is going to make any headway at all. And by the same token, if Rickey cannot pull it off, no one else on the immediate horizon can.

Anyone who has suffered any illness and is along in years will agree with Rickey's philosophy that he feels he will live just as long active as inactive. It was this philosophy that prompted President Eisenhower to resume his duties in the White House and to continue to play his usual 18 holes of golf.

HE'S NO OUT-OF-WORK VETERAN

Bill Shea is not hiring an out-of-work veteran standing on the sidelines hat in hand. Rickey's $50,000 a year contract at Pittsburgh still had 16 months to run. Although 77, Rickey could be well worth every penny of that and more.

Rickey has a reputation of installing a system so well his successors were able to coast along for years under the momentum he set up. In 1917, when he went to the Cardinals as general manager, he and the new owner, Sam Breadon, found the club $175,000 in debt. It was a challenge the bushy browed former lawyer and Chautauqua temperance speaker accepted with relish.

He was unable to compete on even terms with the big money clubs, so his clever mind devised the farm system. He developed it and expended it to the point where the Cards rosters were soon overflowing with talent.

He not only left the Rickey stamp on Rickey-trained players, but on Rickey-trained executives as well. He gave Larry MacPhail his first baseball job at Columbus. He started Warren Giles at St. Joseph, Mo. Gabe Paul, George Trautman, and many, many others followed.

He didn't always have a favorable press, but this did not deter him. He came up with a National League championship and won the World Series in 1926 and from that point on his record was one of new challenges and new successes.

Until he left the Cardinals in 1942 the team finished out of the first division only three times. They collected five more pennants and won three of the next 4 years after he left.

This last is highly significant. When he left St. Louis the momentum was so great and the organizational work so sound the team won without him. When he left the Dodgers the momentum was equally as great and the key farm figures were so shrewdly stationed that the Dodgers won without him.

If he can organize the Continental League and can install league supervisory personnel of his training and choosing then the old gentleman can bow out in a few years secure in the knowledge that the new organization can stand on its own feet and weather any storm.

Rickey always has an eye out for emergencies. He knows how to take appropriate steps. He came to Brooklyn during World War II and immediately began signing bright young men to contracts before they entered the service. When the war was over he had an ample supply of talent. These green youngsters, mixed with a sprinkling of veterans, were good enough to give the Dodgers their second penant in 27 years in 1947.

RICKEY STARTED DODGER SUCCESS

The Dodgers finished no worse than third until Rickey left in 1950. The Dodgers have been a threat ever since and most sideliners agree Rickey put the organization on its feet and is deserving of some credit for its subsequent success.

Rickey sold his Brooklyn stock for $1,025,000 and signed a 5-year contract with the Pirates at $100,000 a year. He spent $496,000 for talent in his first year, but the Pirates did not immediately improve. Rickey quit as general manager and at the end of his 5-year contract took a reduced salary as chairman of the board.

Rickey still may be vindicated. The Pirates finished second last year. They are in the first division this year.

Rickey may be persuasive enough to induce certain National League owners to cooperate with him in noncompetitive areas. He can charm entire boards of directors. He has demonstrated great success specializing in raising underdogs into challenging positions. He is too big to be snubbed by Frick, the National League or the American League. They wouldn't dare. He knows where too many bodies are buried.

This Continental League may be right down his alley. If anyone is going to put it across, it has to be a man with Rickey's ability to con the help, con the boss who writes the checks, and con the customers who turn out to see the new show.

Operation Bootstrap—Reservation Style

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 11, 1959

Mr. BERRY. Mr. Speaker, under unanimous consent, I insert in the RECORD an editorial from the August 10, 1959, issue of the Salt Lake City Deseret News, which strongly supports the plan for Indian self-help which I have copied from Operation Bootstrap in Puerto Rico. The editorial is as follows:

OPERATION BOOTSTRAP FOR INDIANS

The Government of the United States has spent $180 million on Indian welfare programs during the 1959 fiscal year and this amount is expected to increase rapidly in future years. Yet, some 535,000 Indians remain our "poor country cousins," living on remote agriculturally-based reservations, virtually untouched by our vast industrial economy.

The time has come to do something about industrializing and diversifying the Indian economy—if these, our original Americans, can be said to have any economy. Many of them are permanently on relief, because so few jobs are available to them. Approximately 80 percent of our reservation Indians have little or no job opportunities.

Representative E. Y. BERRY (Republican of South Dakota), whose home is on the Standing Rock Sioux Reservation, the old stamping grounds of Sitting Bull, has been living with this problem for upward of 10 years. He has come up with a plan which seems to us a logical and practical solution. The South Dakotan proposes a program that would put the Indian in business, a setup something after the order of Puerto Rico's Operation Bootstrap.

Puerto Rico launched Operation Bootstrap in 1946, a facility under which the Commonwealth government offered long-term tax exemptions and long-term sales or leases on industrial plants to bring new industries to the island. Some 600 new industries have located in Puerto Rico under its now-famous bootstrap program. Now, instead of being "the poorhouse of the Caribbean," Puerto Rico has the second highest standard of living in Latin America. The island has risen from a burden on the U.S. Treasury to sixth place as a major customer for American goods.

It is reasonably certain that Operation Bootstrap could be fashioned to meet the needs of the American Indian. After talks with Puerto Rico's Gov. Luis Muñoz-Marín, Representative BERRY introduced a bill in the House, which would authorize the tribes to sell or lease property for industrial plants on a long-term basis. Of course all this would be subject to the approval of the Secretary of the Interior. Any industries moving in on Indian lands would receive complete exemption from Federal, State, and local taxes for 10 years.

If the setup appears a bit impractical, it should be remembered that Puerto Rico has proved to the world that such an industrialization can be made to work. No question about it, most Indians on a reservation, especially the young folk who have had the advantage of the new schooling opportunities, would gladly swap a Government dole for a weekly paycheck.

The splended thing about the Berry Indian program is that it requires nary a dol-

lar of the taxpayers' money. If it can change the status of our Indian citizens from dependents on the Federal Treasury, to self-supporting producers, as it did the Puerto Ricans, it should be given prompt and preferred consideration by the Congress.

World Challenge to American Medicine

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Thursday, August 20, 1959

Mr. HILL. Mr. President, we know that Medico—Medical International Cooperation—was organized by American physicians for the fundamental purposes of voluntarily giving their professional services on the most basic physician-to-patient level to peoples of the world in need of these services. As a division of the International Rescue Committee, Medico offers to other peoples the great strength of this Nation, not only in medical knowledge, skill, and materials, but in the humanitarian instincts, the generosity, and the compassion of our people.

Dr. Peter D. Comanduras, the distinguished Secretary-General of Medico, recently composed an editorial for the July 1959 edition of Medical Annals of the District of Columbia. Speaking from the background of his experiences with Medico, Dr. Comanduras in this editorial concisely and clearly spells out "The World Challenge to American Medicine."

I ask unanimous consent that Dr. Comanduras' article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE WORLD CHALLENGE TO AMERICAN MEDICINE

(By Peter D. Comanduras)

Alfred North Whitehead, the late mathematician-philosopher, said at one time, "No period of history has ever been great or can ever be that does not act on some sort of high idealistic motives. Idealism in our time has been set aside and we are paying the penalty for it."

An opportunity and a challenge are being presented to the American medical profession today to espouse idealistic and humanitarian motives, worldwide in extent, and universal in their implications. This opportunity is offered by the organization known as MEDICO, or Medical International Cooperation. MEDICO was organized a little over a year ago, on February 4, 1958, as a division of the International Rescue Committee. A national group of American physicians, devoted to international good will, and acutely conscious of the appalling discrepancy between medical care and practice in this country and the distressing medical conditions prevalent in the rest of the world, especially in the newly developing countries of Asia and Africa, decided to go into effective action.

One of the compelling reasons for initiating MEDICO was based on the shocking appreciation of the fact that one-half of the world—over 1 billion people—from the moment they are born until they die have no access to medical care at all. There are areas in the world where the physician-population ratio runs from 1:20,000 to 1:200,000 and over. (The physician-population ratio in the United States is 1:700.) More than three-fourths of the people of the world, with the exception of Western Europe, the North American Continent, and Australia, are born in poverty and misery, eke out an existence during the greater part of their lifetime in semistarvation and semipollution, and, if not crippled, blinded, or deformed during infancy and adolescence by diseases long since preventable, die prematurely from illnesses which are curable in other more fortunate parts of the world. Epidemics of smallpox, diphtheria, cholera, and typhoid fever, which are practically never seen in this country, rage sporadically and extensively in the villages and cities of Asia and Africa, taking an awesome toll of human life. From the Mediterranean to the Pacific, across the entire land mass of Asia, tuberculosis is the No. 1 health problem in every country.

These constitute only a partial segment of some of the medical facts of 20th century life in the larger and more populous sections of the world. They cannot be easily dismissed or quietly deplored. They must be met realistically and pragmatically. The privileges of freedom and democracy cannot remain viable in an atmosphere of poverty, illiteracy, and consuming and persistent disease. The vast and wide chasm that separates the daily life of the American people from the despicable existence that constitutes the burden of the individual in more than three-fourths of the globe is a dire and dangerous situation that has not been sympathetically acknowledged or properly understood and noted by the great majority of the American people. There is not sufficient awareness that in the 20th century when we boast of our scientific advances, the largest element of humanity on this planet does not enjoy the minimum needs of basic subsistence. This is the medical and humanitarian challenge which presents itself to the American medical world today, and which MEDICO accepted 1 year ago when it was founded.

A part of this challenge has been met by international medical organizations such as WHO, ICA, and some private foundations. However, the main emphasis of all these existing medical organizations, with the exception of the religious missionary groups, has been along the line of public health, preventive medicine, and medical education. Until MEDICO came along, there had been no existing international medical machinery to utilize the services and talets of practicing physicians and private specialists in the United States. Here was a large, impressive pool of close to 200,000 physicians lying fallow while the world fairly shrieked its demands for more doctors for its unfortunate and sick millions. It is difficult to imagine and impossible to believe that American private medicine possesses little or no social conscience, no evidence of altruism, no humanitarian tendencies, and no regard for the medical problems in more than three-fourths of the world.

In MEDICO a means now exists which provides opportunities for the expression of these beneficent human qualities. MEDICO is acutely aware of the obvious fact—that the world has shrunk too much in the modern jet age to allow Americans to live "in an isolated mansion in the midst of world slums." MEDICO is fully cognizant that medicine has become a powerful instrument for international friendship. With medicine we can project our humanitarian impulses across national boundaries in a way often unrealizable by the desperately needed but frequently impersonal Government aid programs. The rising expectations of the peoples of Asia and Africa for a better and a longer life have become the most dynamic human force in the world today. We can ignore this universal demand for freedom from disease, privation, and suffering only at the peril of our humanity, and our national existence.

The hand of the healer from time immemorial has inevitably formed firm and lasting bonds of friendship and affection between men. These emotional, intimate bonds between man and man are needed today more than ever. The men of medicine, in the spirit of Schweitzer, through the direct efforts of MEDICO, are extending their hands to peoples all over the world, offering no erudite philosophies, no shining utopias, no ultimate panaceas, and no economic supremacy. The men of medicine extend their hands hoping that the gesture will be accepted by the peoples of the world in kindness and in amity, in mutual respect, tolerance and understanding. In the achievement of these goals, the hopes for world unity and world peace will be inevitably advanced.

Buffalo Heroes Honored

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 20, 1959

Mr. DULSKI. Mr. Speaker, recently the city of Buffalo was honored in having a heavy cruiser, the U.S.S. *Macon*, visit its port. The *Macon* is the flagship of the Operation Inland Seas fleet of the Navy, and one of the first great ships to transit fresh waters.

An impressive ceremony was held aboard the *Macon* to honor two Buffalo heroes. One was Adam Plewacki, the first Buffalo soldier to fall in World War I, and the other was Raymond Pawlowski, a Buffalo sailor who died aboard the U.S.S. *Arizona*, along with 1,100 other crewmen of the battleship when the Japs unleashed their attack against 88 ships at anchor in Pearl Harbor on December 7, 1941.

Invited aboard the *Macon* to pay respects to Mr. and Mrs. Robert Pawlowski, parents of Raymond, was a delegation from the Adam Plewacki American Legion Post 799, named after the World War I hero, which included Post Commander Robert Gredzicki and Past Commanders Walter Sokolowski, Matthew Stukowski, and Leonard Jaskowiak.

Others attending the ceremony were Henry Polanski, Sons of Legion chairman; Raymond Bazamowski, Erie County American Legion finance officer; Eugene Kayne, past 8th district Legion commander; Mrs. Helen Bojanowski, post auxiliary president; Under Sheriff B. John Tutuska; and Representative THADDEUS J. DULSKI of the 41st District. The new generation was represented by a group of 25 young men enrolled in the Sons of Legion.

On behalf of the Secretary of the Navy, Capt. J. C. Wylie, commanding officer of the *Macon*, presented to the parents of Raymond Pawlowski a flag

which had been flown over the sunken *Arizona*. Flags fly from the devastated battleship's superstructure which rises from the wreckage. A Marine guard saluted the flag presentation ceremony.

Young Plewacki, buried in the American Cemetery at St. Mihiel, was killed in action near St. Mihiel April 3, 1918, shortly after he had received the Croix de Guerre from the French Government. He had lived at 753 Best Street and was among the first in the city to enlist.

Oregon: The Permanent Memorial to Gen. Joseph Lane

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, August 20, 1959

Mr. NEUBERGER. Mr. President, in this session of Congress, while Oregon is still celebrating its 100 years of statehood, it seems to me an especially fitting time to call to attention the accomplishments of Gen. Joseph Lane, whose colorful military career and leading role in the fight for statehood for Oregon, followed by many years of statesmanlike leadership in the political life of the young State, qualify him for an honored niche in the history of Oregon and of the Nation.

An outstanding and respected member of the Legislature of Indiana for 24 years, Lane gave up the security of his position to enlist in the Army, at the age of 45, as a private. Two years later, as a general, he was appointed by President Polk as Territorial Governor of the vast Oregon territory, and from that time until his death more than 30 years later, he unfailingly served the interests of his adopted home.

In the selfless efforts of the many who have worked for statehood for Alaska and Hawaii during the past years, we have a reflection of the task which confronted Joe Lane 100 years ago, and in their success, we see more clearly the achievement of Joseph Lane, who gave himself completely, first as Territorial Governor and later as Territorial Delegate in Congress, to that objective. For this service to his State, he was rewarded with election as one of Oregon's first Senators; for his service to his country, he was given the Vice Presidential slot on the Democratic ticket which opposed Lincoln in the crucial election of 1860.

Concrete memorials to this man are few: There is a county in the State of Oregon today called Lane, in memory of and honor to him; his tomb, in Roseburg, Oreg., has been restored by a historical organization, the Descendants of Gen. Joe Lane. Yet a single grand unique symbol of his life and achievements stands as a kind of monument to him—the State of Oregon. The people of Oregon pay special tribute this year to General Lane and those like him, who laid the foundations upon which we are building our State.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a biographical sketch of Gen. Joseph Lane, prepared by Mrs. Marjorie Lane Shantz of Wenatchee, Wash., a great-granddaughter of Joseph Lane, and secretary of the Descendants of Gen. Joe Lane.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GEN. JOSEPH LANE

(By Marjorie Lane Shantz)

I

Joseph Lane was born in Buncombe County, N.C., in 1801. When he was 4 years of age, his family moved to Kentucky and located near Henderson on the Ohio River. At 17 years of age, he moved near to Evansville, Ind., where he worked for various people in stores, etc., and he was very soon elected to the Indiana Legislature. For the next 24 years, he represented his district in the Indiana Legislature, and became a very prominent and influential member of the same.

In 1846, when war was declared with Mexico, he volunteered as a private, and was almost immediately appointed colonel of the Indiana 2d volunteer regiment by the Governor of Indiana. His regiment was moved to Texas, and placed in Gen. Zachary Taylor's army. He fought in the battle of Buena Vista with great distinction, and was badly wounded in the right arm. Because of his ability and bravery, he was commissioned by President Polk a brigadier general. He also engaged in several other battles, participating in the capture of Monterey.

The strategy of the Mexican War changed, and Vera Cruz was picked as the point of landing in order for the American troops to capture Mexico City. General Scott landed and set out for Mexico City. President Polk, in order to reinforce Scott, ordered General Lane's brigade to Vera Cruz, and in spite of every effort being made to keep General Lane from moving from the mouth of the Rio Grande to Vera Cruz, General Lane, on his own initiative commandeered some boats and sailed to Vera Cruz with his brigade. In Vera Cruz, he plunged immediately into the interior of Mexico to help relieve several groups of American soldiers that were surrounded by guerrillas, and even General Scott and his army were having trouble. General Lane, through his ability and the courage and splendid bravery of his troops, fought many battles throughout central Mexico, winning them all, and clearing the country of practically every guerrilla band. He was highly commended by General Scott, and was brevetted major general. Due to his wonderful campaign in central Mexico, he was referred to as the "Marion of the Mexican War." In his brigade he had Indiana troops, Ohio troops, Texas troops, and a few regiments of Regular Army personnel. After the war was over, he was given a tremendous welcome throughout Texas, and at Cincinnati, Ohio, he was proclaimed the outstanding general of the war, and a tremendous reception was held in his honor. Indianapolis and various other Indiana towns vied with each other in entertaining and honoring him.

II

During this time, President Polk was able to come to an agreement on the boundary line between England and the United States as to the disputed Territory in the Northwest known as the Oregon Country. As soon as this was completed, the United States acquired by this treaty all of the territory from the California line to the present Canadian line, and from the crest of the Rocky Mountains to the Pacific Ocean. This was known and labeled the Oregon Territory. It included all of the States of Oregon, Washington, and Idaho, some of Wyoming and some of western Montana. President Polk was very anxious to have the Oregon Territory set up and operating during his term of office and he immediately picked General Lane as the Territorial Governor of this Oregon Territory, and he was notified in August of 1848 of his appointment by Joseph Meek, who had been sent by President Polk to tell him and give him his commission. They left Evansville, Ind., as soon as possible, went by boat to St. Louis, where General Lane and Joe Meek were met by Joe Lane's oldest son Nathanial, who joined the party, and they proceeded to Independence, Mo. At Independence, he contacted the commander of the Army post, and requested an escort, to make the trip to Oregon Territory. The commander informed them that due to the coming winter, they could not move out any troops until the next spring. General Lane then, using his rank as general, secured 25 mounted cavalry soldiers as an escort, and immediately set out for Santa Fe, N. Mex.

Upon this journey it was learned that gold had been discovered in California, and upon their arrival in Santa Fe this was confirmed, and after they had left there on the way to San Francisco, many of the men deserted in order to get to the gold fields. Regardless of the loss of men, they made the trip and finally arrived in San Francisco with seven men. General Lane was able to secure a boat sailing for Astoria at the mouth of the Columbia River. The party now consisted of three men, General Lane, Marshal Joe Meek, and Lieutenant Hawkins, U.S. Army. Upon their arrival at Astoria, they secured canoes to take them to the mouth of the Willamette River, and thence to Oregon City, which was to be the seat of government. During this trip, General Lane personally took his turn at pulling on the oars. They arrived there March 2, and immediately General Lane issued a proclamation and set up the Territorial government in Oregon, thus accomplishing President Polk's desire of having Oregon Territory legally set up during his administration.

President Taylor, who was a Whig, succeeded President Polk, a Democrat, and immediately, because of his jealousy and dislike of General Lane, looked around for another man as Territorial Governor. It was first offered to Abraham Lincoln, but he rejected it, and it was then offered to another man who started out on the journey but failed to complete the trip, and finally a Mr. Gaines was appointed, but, due to the delays and the long overland trip, Governor Lane was not relieved until August 1850. General Lane was then elected as Territorial Delegate to the U.S. Congress. During the time he was Governor he was also the Indian agent and was in charge of the armed troops in the Oregon Territory. He was instrumental in bringing to trial the Cayuse Indians who were accused and hanged for the massacre of Marcus Whitman, his wife, and many others. In addition to handling the Whitman massacre, he engaged in many Indian fights, and was very successful in making treaties. He became known throughout the Territory as a friend of the Indians.

Upon the election of President Pierce, General Lane was reappointed Territorial Governor. However, at this time he was deeply interested in securing statehood for the Territory of Oregon. So he resigned as Governor and recommended his friend Curry for that position, which President Pierce agreed to, and Lane ran for Territorial Delegate to Congress. He was elected and went again to Washington, D.C. There was a move on foot to divide the Oregon Territory along the line of the Columbia River from the Pacific Ocean, and the Territory of Washington took over the northern part of the

original Oregon Territory. General Lane was instrumental in having President Pierce appoint his very good friend, Isaac Stevens, as the first Territorial Governor of the Washington Territory. General Lane and Governor Stevens were both Democrats and very close friends. During his time as Territorial Delegate he was instrumental in putting through claims for the soldiers and settlers who had suffered at the hands of the Indians, as well as to protect, at the same time, the rights of the Indians in the two Territories.

III

Upon the election of James Buchanan in 1856, who was one of General Lane's admirers and supporters, he immediately commenced using every possible connection and friendship to secure statehood for Oregon. Through his efforts, in 1858, the Senate approved statehood, but the House adjourned before the bill could be acted upon. However, immediately upon Congress' meeting in January 1859 General Lane again pushed with all his influence for statehood for Oregon and was successful in getting the Congress to accept Oregon as a State, and President Buchanan made it official on February 14, 1859. General Lane then returned to Oregon and was elected one of the first Senators from the State of Oregon. Two Senators were elected, one for 6 months and the other for 2 years. General Lane secured the 2-year election.

In the presidential campaign of 1860, the Democratic Party was faced with one of the greatest splits that had ever occurred in American history. The northern Democrats, headed by Stephen Douglas of Illinois, were believers in compromise and concession to the fanatical demands of the abolitionists. The so-called border States believed in any compromise between the slave States and the free States, and was headed by Bell. But the southern Democrats, composed of the outstanding leaders of the Democratic Party, stood on the Constitution of the United States, and the rulings of the Supreme Court, which especially in the Dred-Scott decision decided that property, whether it be money, material, or slaves, was entitled to full protection in any part of the United States or its Territories, which was what the Constitution granted. This latter group picked upon Vice President John C. Breckenridge of Kentucky as their candidate for President, and Gen. Joe Lane as their Vice Presidential candidate. During this convention of the Democratic Party in 1860, Governor Stevens of Washington Territory acted as chairman and worked with General Lane in efforts to unite the party. General Lane was picked for this important nomination because of his strong stand for the Constitution, and the rights of the various States and the people of those States, as granted especially in amendments 9 and 10; which was, and is, and should always be fully protected.

Due to the thre-way split in the Democratic Party in the 1860 election, Abraham Lincoln, although a minority candidate in the number of votes cast, was elected. Gen. Joe Lane accepted this defeat, and on March 2, 1861, made a masterful explanation on his stand at those troublesome and critical times in his final speech in the Senate of the United States as the Senator from the State of Oregon.

IV

He then returned to Oregon where he retired, and being 60 years of age, and his right arm because of wounds practically useless, he did not participate in the War Between the States. He was offered a brigade in the southern army, and of course still retained his commission as general in the Union Army. In addition to his age and his disabled right arm, he could not, and would not, fire upon his relatives and close friends that were in the southern army, and he would not fire upon the flag of the United States after he had fought so gallantly and heroically for it throughout his active life. He passed away in 1881, at the age of 80 years. His tomb is located in Roseburg, Oreg., and has been restored by the organization known as the Descendants of Gen. Joe Lane.

Khrushchev's Visit

EXTENSION OF REMARKS
OF
HON. JAMES J. DELANEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 20, 1959

Mr. DELANEY. Mr. Speaker, Khrushchev's impending visit to this country is rightly viewed with deep concern by many thinking Americans.

On August 13, in a notable speech in the Senate, the junior Senator from Connecticut gave forceful expression to this concern.

A former member of the Committee on Foreign Affairs of the House, Senator DODD is recognized as an outstanding authority in this field, and his views must be given serious consideration.

Since Senator DODD's speech was not widely covered by the press, under leave to extend my remarks, I include the following report as it appears in the August 24 issue of Time magazine. I commend this to the attention of those Members who may not have read the speech in full:

FOREIGN RELATIONS—MINORITY VIEW

For all the general cheering that greeted its announcement, the U.S. visit of Nikita Khrushchev is packed with political dynamite. Republican Presidential hopeful RICHARD NIXON, for example, is certain to be blamed if the Khrushchev trip turns diplomatically sour—even though it was arranged by President Eisenhower with little or no real reference to NIXON'S presence in Russia. No one recognizes NIXON'S problem more than New York's Governor, Nelson Rockefeller, who has himself said noncommittally: "We want to contribute to an easing of tensions, but we want it known we are not letting our guard down." On that platform, "Rocky" is in a position to jump either way, depending on how the Khrushchev visit turns out.

Many another U.S. politician has followed "Rocky's" example, either remaining quiet or simply making meaningless noises. But last week Connecticut's able freshman democratic Senator THOMAS DODD delivered the most forceful expression so far of the opposition to a Khrushchev visit. DODD'S speech was made to a near-empty Senate and went virtually unreported by the press—but if the Eisenhower-Khrushchev exchange does turn out badly, then DODD'S words could become the battle cry in one of the decade's hottest political controversies.

"What," asked Connecticut's DODD, "would the Senate and the country have thought if in 1939 President Roosevelt had invited Adolf Hitler to a barnstorming tour of the United States, fresh from conquest of Czechoslovakia, Austria, and Poland and in the midst of his extermination of millions of Jews?" Extending the comparison, DODD said: "Khrushchev rose to Communist prominence as the hangman of the Ukraine. He has maintained himself in power as the butcher of Budapest."

HOPE OF LIBERTY

DODD'S strongest point was that the very fact of the visit would enhance Khrushchev's prestige and position at home and in the Soviet satellites—even while weakening the Western alliance. Said DODD: "We can be certain that the satellite peoples, who still cling to the hope of liberty, will be flooded with photographs of Khrushchev being wined and dined, flattered and applauded by the leaders and people of our country. Khrushchev's visit will be interpreted as a reflection of American acceptance of permanent Soviet domination of their lands."

In the free world, said DODD, the U.S. decision to opt for Big Two talks might seem like appeasement, might have a divisive effect upon U.S. allies fearful of secret deals. U.S. allies under the guns of communism in West Berlin, Formosa, South Korea would interpret Khrushchev in the United States as a softening of our determination to resist. Said DODD: "Those who have been soft on communism will grow softer. Those who are unconcerned about the Communist menace will become more indifferent. Those who have been sounding the alarms will find their difficulties multiplied."

TRUE PEACE

Democrat DODD offered specific recommendations for "salvaging something from this debacle in the hope of limiting the harm wherever possible." Among them: the President should (1) mince no words with Khrushchev on the issue of Europe's captive nations; (2) insist that Khrushchev withdraw his 1958 ultimatum on Berlin before engaging in further negotiations on Germany; (3) declare null and void all the concessions the United States tentatively offered to the Russians at the Geneva Conference, e.g., decreasing Western propaganda activities; (4) emphasize to Khrushchev unmistakably the absolute U.S. determination to defend West Berlin.

In broader terms, DODD had definite notions about how the U.S. people should greet Khrushchev, "I hope," he said, "that during Khrushchev's visit we shall hear church bells in the land, tolling their remembrance for the murdered millions behind the Iron Curtain. I hope there will be public observances of prayer. I hope there will be peaceful demonstrations of our dedication to that true peace which can only be achieved by spreading freedom and justice throughout the earth. Let there be no cheers for the Red dictator, no crowds assembled to greet him, no flattery or flowers. Let our people be civil but silent."

Housing and Youth

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Thursday, August 20, 1959

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial, published in the August 18 issue of the Concord Daily Monitor, Concord, N.H., entitled "Housing and Youth."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HOUSING AND YOUTH

In two votes last week Senators BRIDGES and COTTON not only upheld the President but again demonstrated economy is something more than the subject for a political oration.

Both Senators upheld Eisenhower's veto of the housing bill. Both opposed establishment of a Youth Corps, reminiscent of the old Civilian Conservation Corps of depression days and dedicated to much the same purpose.

It was almost a foregone conclusion the Senate would not override the housing bill veto. The Democratic leadership has gained nothing from forcing the issue to a vote. It has added to the President's unbroken record of never having his veto overridden during the six and a half years in office.

Eisenhower has made clear he is open to compromise on a housing measure and Congress has an opportunity to write a passable program that will aid many large cities.

It is in spending that the principal differences lie. It can be argued that a college building plan included in the vetoed bill more properly comes under grants to education, and that more study is needed on proposals to house elderly persons.

The Senate by a vote of 47 to 45 passed the Youth Corps bill. The basic idea is development and conservation of the country's natural resources and upkeep of recreational facilities and wildlife refugees in public parks.

Supporters claimed the proposal is an investment in conservation of youth. They said it would provide useful work for youngsters between 16 and 21 and reduce juvenile delinquency.

Opponents claimed the Youth Corps is an expensive boondoggle and a depression program in an era of prosperity. They are skeptical of its value and how attractive it will be to those it is designed to help.

Beginning with 50,000 young men and women at an estimated cost of $125 million for the first year, participating States would be required to match Federal expenditures.

The bill now goes to the House, where its approval is seen as unlikely. In any event, it is probable that if it is passed the President will veto it.

Making jobs available to youngsters is something that appeals to politicians. However, it is questionable in these times if this should be the concern of the Federal Government.

Interest Cost of Foreign Aid

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 20, 1959

Mr. SMITH of Kansas. Mr. Speaker, Paul Peters, for 40 years a collector of statistics and one who can put them together so they are understandable to the average man, has collected some interesting data on the cost of foreign aid other than the direct appropriations.

Here is a table worthy of study to those who care to understand this terrific burden of foreign aid:

Analysis of cumulative and current interest cost of moneys borrowed by the Federal Treasury to finance foreign aid programs, fiscal 1941 through fiscal 1959

Fiscal year	Net foreign aid in dollars	Interest rate	First year cost	Cumulative yearly cost	Cumulative interest
1941	$545,418,062	$0.02518	$13,733,626		$13,733,626
1942	7,745,797,011	.02285	165,993,461	$179,727,087	193,460,713
1943	11,603,826,483	.01979	229,639,726	409,366,813	602,827,526
1944	19,753,800,439	.01920	381,050,810	790,417,623	1,393,245,152
1945	17,803,448,810	.01936	344,674,768	1,135,092,391	2,528,337,543
1946	5,763,513,843	.01996	115,039,736	1,250,132,127	3,778,469,670
1947	6,734,885,336	.02107	141,904,034	1,392,036,161	5,170,505,831
1948	5,715,000,000	.02182	124,701,300	1,516,737,461	6,687,243,292
1949	6,543,029,206	.02236	146,302,133	1,663,039,594	8,350,282,886
1950	5,842,592,000	.02200	128,537,024	1,791,576,618	10,141,859,504
1951	6,263,188,000	.02270	144,444,367	1,936,020,985	12,077,880,489
1952	4,595,477,000	.02329	107,028,659	2,043,049,644	14,120,930,133
1953	6,336,000,000	.02438	154,471,680	2,197,521,324	16,318,451,457
1954	4,855,495,000	.02380	115,560,781	2,313,082,009	18,631,541,466
1955	4,219,351,000	.02351	99,196,942	2,412,278,951	21,043,820,417
1956	4,648,000,000	.02576	119,732,480	2,532,011,199	23,575,831,616
1957	3,908,000,000	.02730	106,688,400	2,638,699,599	26,214,531,215
1958	4,661,000,000	.02638	122,956,180	2,761,656,180	28,976,187,395
1959	4,088,623,836	.02867	117,224,850	2,878,904,279	31,855,091,674

Sources: Computed annual interest rate from annual reports of the Secretary of the Treasury. Net foreign aid from reports on Foreign Transactions of the United States compiled by the Office of Clearing Information in the Department of Commerce.

NOTES

For the fiscal years 1941 through 1945 the foreign aid includes lend-lease after deducting reciprocal credits for reverse lend-lease and dollar returns.

For the postwar period 1946 through fiscal 1959 the net grants and credits extended under the so-called Marshall plan and other relief measures approved by the Congress.

Since in most of the wartime and postwar years the surpluses were not sufficient to pay the interest on the public debt and also furnish the dollars for the foreign-aid programs, in most years the Treasury had to borrow the moneys to meet the cumulative interest costs of over $31,800,000,000.

With a deficit in fiscal 1960 probable the annual interest burden on the American taxpayers due to the foreign-aid programs will approach $3,000,000,000 which will be a continuing burden until the Treasury is able to retire a portion of the public debt. In short the foreign aid programs cost $3,000,000,000 in interest on top of the appropriated funds.

Grain Terminal Association Daily Radio Roundup

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, August 20, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD the Grain Terminal Association Daily Radio Roundup of Friday, August 14, 1959.

There being no objection, the daily radio roundup was ordered to be printed in the RECORD, as follows:

GTA DAILY RADIO ROUNDUP OF AUGUST 14, 1959

What's the best fed country in the world? Got any idea? No, it's not the United States. And it's not Canada, although the farmers in those two countries grow more food than farmers in most other lands.

The nation where the people eat the most, believe it or not, is Ireland. That's according to a report by the Foreign Agriculture Service of the U.S. Department of Agriculture. Right after Ireland came Denmark, New Zealand, Switzerland, and Australia. You're down in 11th and 12th places before you run into the United States and Canada, respectively.

So the Irish eat the most, measured in calories, although not necessarily the best. You all know what's been happening in the United States as more and more people begin fighting the battle of the bulge. They shy away from fat meat and potatoes, pie and pastries. They eat more fruits and vegetables. And they can take their pick because probably no country in the world has farms that produce so much good food of all kinds at such reasonable prices. The USDA's survey shows that Canada and the United States lead the world in dinner table bargains.

In this country, for example, food accounts for only 24 percent of family spending. It's down to 23 percent in Canada. Of the 30 countries surveyed by the USDA's Foreign Agriculture Service, the families in these two countries eat, maybe not the most, but the best for the smallest percentage of income.

It's tough going for families in South Korea and in Ghana (that's in Africa) because there it takes 57 percent of income to eat. It's 50 percent in Ceylon and Honduras; 49 percent in Ecuador, down to less than 30 percent in Australia, Belgium, and Denmark.

Of course, the people in the United States and Canada probably have more income per capita than people in most other nations. But at the same time they are getting food at bargain rates. This all adds up to a larger share of income left over for such things as automobiles, new houses, television sets, vacations, speedboats, and so forth. That's a tremendous boost for business and industry anyway you want to look at it.

That's why we've said so many times that farmers deserve a pat on the back and national recognition for the multi-billion-dollar contribution they are making to the Nation's economic stability. But pats on the back don't pay bills, and that's where the farmers are having trouble. The only thing that will pay bills is more money. And as long as farm operating costs stay skyhigh the only way that farmers can get more income is from higher prices for their products.

What about the consumers, then? Could they still get by with spending only 24 percent of income for food? The truth is that a substantial boost in farm prices would have very little effect on consumer food prices. Economists tell us that a 10-percent increase in farm prices would increase the net income of farmers by 50 percent but food prices by only 4 percent.

This is another farm report from GTA—the co-op way.

The Carey Letters

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AYRES
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 20, 1959

Mr. AYRES. Mr. Speaker, the two letters printed below were received by Members of Congress this morning.

I hope Mr. Carey is not speaking for Mr. Meany. If his position is that of the AFL–CIO, it will harm the great labor movement. Threats are not appreciated by Members of Congress or the American people. Good union members will not approve of Mr. Carey's tactics.

Letter No. 1 was sent to Members of Congress who voted against the Landrum-Griffin amendment. Letter No. 2 was sent to those voting for the amendment:

[Letter No. 1]

INTERNATIONAL UNION OF ELECTRICAL
RADIO, AND MACHINE WORKERS,
Washington, D.C., August 18, 1959.

DEAR CONGRESSMAN: On behalf of the International Union of Electrical, Radio, and Machine Workers, AFL–CIO, I wish to express our deep appreciation for your vote against the Landrum-Griffin bill on August 13, 1959.

We are aware that terrific pressures were brought to bear on you to support that vindictive and oppressive measure in order to weaken and disrupt the trade union movement. Your vote was a concrete demonstration of your understanding of the basic issues involved, and of your courage in acting on your convictions in this matter.

This action, along with your continuing support of a progressive legislative program will, I am confident, assure you of support by the working men and women in your district.

Sincerely yours,
JAMES B. CAREY,
President.

[Letter No. 2]

INTERNATIONAL UNION OF ELECTRICAL,
RADIO, AND MACHINE WORKERS,
Washington, D. C., August 18, 1959.

DEAR CONGRESSMAN: Only you know, in the privacy of your own conscience, whether you carefully considered the possible consequences of the Landrum-Griffin bill when you voted for it on August 13, 1959. If you did, and realized that it is a punitive, respressive measure intended to weaken all labor unions and thereby all working men and women, you have much to answer for. If you did not, and merely yielded to the pressures of the chamber of commerce and the National Association of Manufacturers, your guilt is perhaps even greater.

You should realize now, if you did not during the heat of battle, that this vindictive assault on the labor movement will, in the long run, prove to your constituents that you are less interested in individual rights and democracy than in property rights and the concentration of power in the hands of big business.

You may believe that you are safe in such action because organized labor is relatively weak in your district, and cannot call you to account for the damage you have sought to do to it. You may be right—at the moment.

We wish to assure you, however, that we shall do all in our power to prove to the working men and women in your district that you have cast your lot against them and they should therefore take appropriate action at the ballot box.

Very truly yours,
JAMES B. CAREY,
President.

United Jewish Welfare Fund: What It Means

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Thursday, August 20, 1959

Mr. ENGLE. Mr. President, my attention was called recently to a very fine address by Dr. Max William Bay, 1959 general chairman of the Los Angeles United Jewish Welfare Fund. In an appearance in May of this year at the Mormon Los Angeles Stake Center, Dr. Bay told of the meaning and objectives of Jewish philanthrophy in general and the United Jewish Welfare Fund in particular. It is a stirring statement on man's obligation to his fellow man, and I commend it to the attention of my colleagues.

I ask unanimous consent that Dr. Bay's address be printed in the Appendix of the RECORD:

There being no objection, the address was ordered to be printed in the RECORD, as follows:

UNITED JEWISH WELFARE FUND: WHAT IT MEANS

(Address by Max William Bay, M.D., 1959 general chairman, United Jewish Welfare Fund of the Jewish Federation-Council of Greater Los Angeles, to the Los Angeles Stake of the Church of the Latter Day Saints (Mormon) on May 9, 1959)

I am deeply grateful to all of you for this privilege. It is an honor to be asked to participate in this program. I am particularly grateful to Dr. and Mrs. Sheranian and to Mrs. Rose Marie Reid for suggesting this get-together and for their inspiration and encouragement. I know that you are interested in fostering better intergroup relationships—that is best accomplished through the understanding which comes from learning all that we can about each other. We share much in common. We are full and equal citizens in a land blessed by the bounty of divine providence and basically we share a spiritual faith. Each of us is a minority in this land. We have each known the sorrow of oppression and we have wandered in search of a land where we could follow the dictates of conscience in freedom and in dignity. And yet there are dissimilarities, but these may not be great.

I am to talk to you about the United Jewish Welfare Fund. It is not my purpose to ask you for contributions. This is not a fund-raising event. I do want to consider with you the philosophic basis of our devotion to this community endeavor. What is its meaning? What is its purpose? We will talk about the spiritual foundation on which it rests and the practical matters it accomplishes. I must confess that I do not feel altogether comfortable in my present role. I am not a rabbi nor a social worker, and I prefer to leave the pulpit to the rabbis and ministers. But, in the tradition of our faith, it is the rabbi's duty to teach and it is the layman's privilege and obligation to affirm what he has learned—and this points up another principle we share. I know of no more proper place than a synagogue, church, temple, or chapel to speak about matters which concern the welfare fund and no more appropriate person to carry the responsibility of speaking than the chairman of the campaign.

HOLINESS THROUGH SOCIAL JUSTICE

A passionate belief in and concern for justice for all men is inherent in Judaism. It stems, not alone from the immortal utterances of the Biblical prophets, but from the fundamental nature of the Jewish faith. It stems first and foremost from the Jewish concepts of God, His universe and His greatest creation, man. In our faith, we are taught that man is created in the image of God. Therefore, man is fundamentally good and he must seek for personal holiness. In some spiritual faiths, men believe that they may attain that holiness in their devotion to God and through acceptance of the sacrifice of a man who through his sacrifice cleansed them of all sin. But in our faith, man's relationship to man may even transcend in importance his relationship to God—man's transgression against his fellow man cannot be atoned by devotion to God nor by the sacrifice of another man—he must atone to the man whom he has transgressed. Man can attain the holiness he seeks only through social morality and justice. Man is privileged to take an active role in determining the direction he follows in the path of life—he may follow the path of good or of evil. He is not the victim of predetermined destiny; he does have the right to choose his course. Man seeks the better life for himself and his family—this privilege he may enjoy only so long as he accepts a responsibility, the obligation of consideration for the rights of his fellow man. This, in simple terms, is the meaning of the fundamental concepts of our spiritual faith. This, in essence, is the tradition of Judaism, and of America.

From the fundamental concepts of individual dignity and freedom, of equality, and of universal brotherhood has grown the concept of tzedakah, the Hebrew word which means righteousness. In classical Hebrew, there is no word meaning charity. In the Torah, our Bible, and in the Talmud, there is no reference to anything meaning charity—there is reference only to tzedakah, which means righteous or just giving. So we speak only of tzedakah, not the benevolence of the generous, nor the bounty of the arrogant, but the righteousness and moral behavior of the fortunate and the humble. What we do is not pure altruism—it is the correction of inequity—the fulfillment of justice. Man is only the custodian of his worldly goods—he has the obligation of sharing his good fortune with those who are less fortunate and even he who receives, he who may be on relief, has the obligation of sharing with him who is even less fortunate.

ABUNDANCE IMPOSES RESPONSIBILITY

Through all the years of recorded history there have been assaults on our concepts of freedom and dignity. Our spiritual forefathers understood the course of history and knew well how to teach it. They taught their children, and admonished them to teach their children in turn, and to continue to repeat the story each Passover, so that each of us would remember that we were once slaves in Egypt and the Almighty brought us forth into freedom and dignity, not alone the generations of antiquity, but even you and me in this generation. Is there any more effective way to teach us humility? Is there any more compelling reason for remaining alert and on guard against the onslaughts of those who would enslave by dictatorship, persecution, or oppression? Do we, who understand justice and mercy,

need to be reminded that we must be concerned about the poverty and disease of others, of whatever color or creed, in our own midst or in distant lands? Do we need to be reminded that we must be concerned about the economic and political enslavement of others? Should we not be concerned about the status of Jews everywhere and for their security and survival in Israel? Do we not share a spiritual heritage, a common interest, and a common destiny? Does not the security of all of us and the peace of the world depend upon these concerns? Does not our own abundance and the abundance of America impose a responsibility?

And so we are guided by the moral concepts and precepts of our spiritual faith and by the principles of American democracy; we understand our responsibilities and believe in them and we demonstrate that understanding and belief by voluntary participation in and contribution to the welfare fund. Through 166 agencies, 90 of them local and national, we heal the sick; we rehabilitate the handicapped; we feed and clothe the destitute; we promote better intergroup relations; we strengthen our spiritual faith through education; we contribute to the culture of America and promote good citizenship; and, we rescue those who seek to leave the oblivion of communism. Thus we strengthen our local community, Jewish and non-Jewish; we strengthen our Nation through protection of the civil rights and liberties of all citizens; and we contribute to world peace through an extension of foreign aid and through our support of the democracy of Israel.

COMMUNITY SERVICES MAKE FOR BETTER AMERICANS

I want to mention only briefly a few of our activities in our local community. Through our health institutions, such as the Cedars of Lebanon hospital, we provide facilities for care of physical and mental illness for those who cannot afford to pay and for those who can, for Jew and non-Jew alike. We train young physicians and we contribute to knowledge through research. Through the Bureau of Jewish Education, we subsidize many of our religious schools and thus assure our children of the knowledge, blessings and security of our spiritual faith, and through our centers we make a contribution to the culture of America, and to the understanding and maintenance of good American citizenship.

Bigotry and persecution recognize no national or State boundaries. When these go unchecked, they lead to a breakdown of law and order, and lawlessness ultimately engulfs every person and every group. Few of us are made aware of the dangers which face us constantly. The bigot and hatemonger is constantly at work and alert to opportunity. If he attacks the Negro or the Jew, thinking them most vulnerable, and if he is successful, he will attack the Catholic next, and all other groups in turn. Adolf Hitler did not stop with the Jews—in fact, he attacked the Jews because they represented the very fountainhead of the Judeo-Christian civilization which he was determined to destroy. I do not need to belabor the segregation issue in the South, nor the bombings of Jewish temples and centers—these dangers to law and order are self-evident. The issue of segregation is not a Jewish issue—it is a moral issue for all Americans. When our human relations organizations, the American Jewish Committee and the Anti-Defamation League of B'nai B'rith, and others, speak out on this issue, it is because we cannot remain silent—we cannot ignore our spiritual heritage. If we permit impairment of the rights and liberties of any minority, we endanger the security of all. We must keep alive the hope and dream and reality of American equality and freedom.

Now I wish to talk about our activities in the overseas area. Through the United Jewish Appeal we give aid to peoples in 25 countries outside of Israel. I visited Morocco in February. One does not begin to visualize the full meaning of squalor and filth and stench until one visits Morocco. Even a doctor can hardly appreciate the utter destructiveness of widespread communicable disease until you see the people of Morocco. One doesn't understand the degradation of abject poverty nor the hopelessness of broad ignorance until one views Morocco. The activities of our agencies which care for the health, rehabilitative, nutritional and educational needs of the destitute Jews of Morocco are truly awe-inspiring and thrilling. Only the most phlegmatic and callous could fail to be affected by the scenes I saw. Our Government considers Morocco of tremendous political and strategic importance to the free world. I have talked to American consular and embassy officials in Morocco, France and Austria on a number of occasions during the three trips I've made in the past 5 years. They regard our activities warmly and consider them an extension of the foreign aid program carried out by our own Government.

ISRAEL A BASTION OF DEMOCRACY

What does Israel mean to America and the free world? When the ancient land of Israel was laid waste and its people dispersed, barbarism struck the very cradle of Western civilization. For 19 centuries the spiritual heirs of that civilization were assaulted and bruised for no reason other than their adherence to a faith which their assailants professed but did not practice. The carnage wrought by Nazi Germany finally outraged the conscience of the civilized world. How could man be so mad? How could the civilized world stand by and remain indifferent to the slaughter of millions of innocent men, women, children and even babies? Could we ever fully atone for this transgression? The blood of Abel did indeed cry out from the ground. Justice and mercy demanded the establishment of a land where the oppressed and persecuted could be permitted to fulfill their lives in dignity and in freedom. No event in recorded history can match in magnitude and significance the prophetic reestablishment of the State of Israel. No people in history has suffered the oppression and persecution meted out to the Jews. No people in history has had the spiritual strength to withstand such abhorrent assaults and still arise from the ashes of despair.

Ours is indeed a generation of good fortune to have lived to see the day of redemption and to have had some part in its realization. Israel is a bastion of democracy in a corner of the world which has been troubled for 2,000 years. Israel is shining proof of what even a small nation may achieve under freedom. Israel lay desolate and was virtual desert 50 years ago. It had hardly begun to show much sign of development 25 years ago. Eleven years ago when the state was reestablished, it had a population of 600,000 Jews and 200,000 Arabs. Since then it has been able to develop and thrive despite two wars and despite taking in and absorbing nearly 1 million people who had no other place to go. That is, they had little choice if they wished to survive. In the past 5 months alone, it has accepted 20,000 newcomers from Eastern Europe. Comparable figures for our own country based on relative populations would mean an immigration of 1,750,000 in only 5 months. Even we in mighty America might find the absorption of such a large number in such a short period difficult.

WHAT ISRAEL MEANS TO ME

I have visited Israel twice in the past 5 years. It is a tiny land with a mighty spirit. I have seen the miracle in action. How does one summarize Israel? Should I describe the beauty of its landscape which resembles our own familiar California—the sheer beauty of Haifa, Mount Carmel and the port which looks like San Francisco—the beauty of Lake Kinneret, known as the Sea of Galilee, which resembles Tahoe—the white sandy beaches of Tel Aviv, Herzliya, and Natanya—the lush green growth of the Jezreel Valley which is Israel's breadbasket—the heavenly majesty of Jerusalem and its hills which resemble nothing else in the world—the sheer virgin beauty of the Negev viewed from the air, mountains and rocks and desert much like our own, or the flat beach and little more than primitive port of Eilat where within 1 or 2 miles one looks at Egypt, Jordan, and Saudi Arabia as one turns in different directions?

Shall I describe the degree of industrialization which includes manufacturing or assembling all the things necessary in a modern civilization patterned on our own? Should I talk about the simple clean beauty of its homes of white, pink, or blue stucco with tiled roofs of varying colors, or the magnificent reinforced concrete apartment houses or the country club at Savyon near Tel Aviv? Shall we talk about the farms, individual, and cooperative, and the orange groves which look and smell like ours used to before we began to subdivide them?

Shall we talk about the kibbutzim and their meaning in the development and defense of Israel? Shall we talk about the development and use of natural resources, water, mining, and oil? Shall I tell you about medicine and hospitals, homes for the aged, youth Aliyah homes and camps where thousands of homeless, displaced and orphaned children returned from Europe? Shall we talk about education—the schools and universities, the breathtaking view of the new campus of the Hebrew University at Givath Ram just outside of Jerusalem—the wonderful new campus of Technion on Mount Carmel where important research work in engineering is going on, including projects under the auspices of the U.S. Navy, or the basic scientific research, including atomic research and nuclear physics, going on at the Weizmann Institute amongst the orange groves of Rehovoth?

Shall I tell you about the culture of Tel Aviv, the theater, music, and art? Shall we talk about the democratic Government of Israel, its Parliament where Jewish and Moslem representatives sit together? Shall I try to describe the emotions felt when one views Mount Zion where the tomb of King David supposedly lies, or the distant view of Bethlehem across a green valley of Jordan, or the Dead Sea scrolls in the guarded vault of the Hebrew University, or the simple well of Abraham in Beersheba, or the drive down the Via Maris which was the ancient highway between Egypt and Mesopotamia where so many historic battles were fought, or Ashkelon where lived the Philistines, or Nazareth, Cana, and Galilee so dear to the hearts of Christians, or the Crusader towers and the Roman Aqueduct, or the fortifications of Acre which Napoleon stormed unsuccessfully, or Beat Shearim near Haifa where the tombs of the Northern Sanhedrin have been uncovered in the past 3 years and where supposedly lie the sarcophaguses of two of our great rabbis, Hillel and Judah the Prince of Safad, the medieval city to which Spanish Jews returned after the Inquisition, or the simple tomb of Maimonides in ancient Tiberias?

Shall I describe the sturdy army of young men and women, the navy in the Mediterranean and Red Sea and the air force flying in modern machines over the ancient land of the prophets? Shall we talk about the unhappiness and frustration of the 90 percent on whom is imposed the burdensome dogma of the unyielding 10 percent of orthodoxy? Shall I tell you about the

miserable slums of the maabarot, the transition camps, where 18,000 families still live, or, the squalor of the oriental Jewish squatters in the slums of Jerusalem? Israel is all of these things, but above all it is people, oriental and Western, old settlers, new immigrants and refugees. But even more, it is youth, magnificent youth, born of pioneers, dedicated to a glorious cause, people of character, bearing, courage, fearlessness, and determination. All humankind must take pride in the courage, dedication, and selfless devotion of this people. Only a mind distorted by hate and fear can fail to understand the importance of Israel in the family of free nations. Only a soul without mercy can fail to want to play a part in the rebuilding of such a nation. The United Jewish Welfare Fund is devoted to that purpose.

WE CHOOSE REDEMPTION

I wish there were time to tell you about the recent exodus of Jews from Rumania. Twenty thousand people have reached Israel in the past few months and although emigration from Rumania has temporarily ceased, we have much evidence and feel assured that possibly 100,000 may reach Israel this year. The story of this exodus is a dramatic one. The impact of this tremendous mass movement of people struck us this past January—the tremendous responsibilities for ourselves and for Israel appeared heavy indeed and it was for that reason that I visited Vienna in January so that I could see for myself just what was happening. I will not go into much detail. These people are, in the main, young and vigorous, possessing extraordinary professional and scientific skills, people who have lived under communism and have seized the opportunity to reject it.

They arrive penniless in Vienna—ours is the burden of transporting them to Israel, to feed and house them, to provide for their education in Hebrew, the language of Israel and to help Israel absorb them into the economy of the nation. The financial burden on the people of Israel is tremendous but their sacrifice is gladly given. This exodus is far from being tragic. For years we have talked about cracking the Iron Curtain, about liberating the millions of enslaved souls imprisoned behind it. In the days of Hitler, the vast majority of Jews were trapped—there was precious little that we were prepared to do for them and there was no country which would admit large numbers without restriction—6 million of them were slaughtered—since then the Communists have kept the remnants of them impounded—now there is an opening in the gate, and there is an Israel which bids them to come.

Are we now to be the ones who say to them that they cannot leave lands of oppression because we refuse to help? We do not need to reopen the ovens of Hitler to see things in clearer perspective. Our choice is clear—we choose life not death—we choose redemption not oblivion.

If my talk has seemed emotional in part, I offer no apology. I believe that a little emotion helps to clarify thinking. Human reason which is not touched by human emotion often functions like a machine which has not been lubricated. Many of us do not wish to be reminded of the sordid chapters in history. We do not wish to relieve the squalor—the filth—the stench of the concentration camps and despicable brutality of the inhuman Nazi butchers. I do not suggest that we should relive these constantly but we are not permitted to forget entirely because our world has not yet reached the millenium—there are people living under despotism and there are people who are desperately hungry and ill and naked.

THE UNITED JEWISH WELFARE FUND: A WAY OF LIFE

I think it important from time to time to search one's mind for meaning and purpose in living. When in November 1957 my wife and I stood before the Paris memorial monument to the 6 million martyred Jews and viewed the documentary evidence of Nazi butchery, we wept, because these were our kin who were slaughtered. We would have been terribly angered if they had been Chinese, but we were both angered and anguished because these might have been our parents and they might have been us and our son. We were determined to do something to prevent this from happening again. There must be more in living than a constant feverish desire for oozing comfort and dripping prosperity. The words of Micah come to mind:

"He has told thee, O man, what is good; and what doth the Lord require of thee, but to do justice and to love mercy and to walk humbly with thy God?"

Can we who have so much be so unmindful of our brothers, of whatever color or creed, who need so little? We must have a sense of perspective and a balanced sense of values; we must serve our fellow men and make our contribution to the continued blessing of a world at peace. Only then can we assure these blessings for ourselves and for our children and for all others. This is not a burden—it is a responsibility. The United Jewish Welfare Fund is more than the fund-raising arm of the Jewish community. It is a great unifying force. It expresses the mind and conscience, the heart and will of the Jewish community. It serves us all, rich and poor alike. It asks of us only understanding and compassion. This we give with full sincerity. We do count our blessings. We are glad that we can help.

Traffic Safety Postage Stamp

EXTENSION OF REMARKS
OF
HON. SAMUEL N. FRIEDEL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 20, 1959

Mr. FRIEDEL. Mr. Speaker, for the past few years a Special Subcommittee on Traffic Safety of the House Interstate and Foreign Commerce Committee has been investigating the tragic deaths on our Nation's streets and highways. These investigations have certainly proved beyond a doubt that there is an urgent need for promoting safety on the highways. No one will deny that our most precious asset is the lives of our people—yet no war or calamity has taken so many of those lives as traffic accidents.

The Safety First Club of Maryland, a nonprofit organization dedicated to traffic safety, consists of a group of citizens and officials of Maryland who are doing an excellent job of making people conscious of the need to stop the slaughter on our highways.

However, traffic safety is not just a Maryland problem. We need to make each and every automobile driver conscious of the fact that it is personal responsibility to drive safely for the protection of himself and his fellow citizens.

The Traffic Safety Club of Baltimore has adopted a resolution urging that a commemorative traffic safety stamp be issued to focus the attention of the Nation on the need for safety on our streets and highways. I heartily concur in this idea and urge that the Postmaster General give this matter serious consideration. I would like to point out that a special stamp was issued to promote wildlife conservation, and certainly human life is of even greater importance.

The resolution follows:

RESOLUTION FOR A COMMEMORATIVE TRAFFIC SAFETY POSTAGE STAMP ADOPTED BY SAFETY FIRST CLUB OF MARYLAND, INC.

Whereas grim statistics show that 1,081,600 people lost their lives in the United States of America between January 1, 1925, and January 1, 1958, according to the National Safety Council; and

Whereas the tragic traffic toll for 1958 comprised 36,700 fatalities, 2,825,000 injuries, with 1 out of every 61 Americans killed or injured on the highway; and

Whereas the Safety First Club of Maryland, Inc., nonprofit organization crusading for safety on our streets and highways, is campaigning that "Murder, Incorporated" of the highways must be arrested: Be it therefore

Resolved, That the Safety First Club of Maryland, Inc., goes on record to urge the issuance of a commemorative postage stamp on the theme of traffic safety, in keeping with the idea originated by the Wisconsin State Legislature.

The Safety First Club of Maryland, Inc., recommends such a traffic safety stamp be issued so as to focus the attention of the American people on a great problem, and stimulate all citizens to join the crusade for safety to protect their own lives, their dear ones, their neighbors, and their fellow Americans.

Crucial Housing Problem Confronting Elderly Citizens

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, August 20, 1959

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an informative and effective editorial from the Oregon Journal of Portland of August 16, 1959, entitled "Housing Problem for Elderly."

This editorial effectively emphasizes the wisdom of the Senate in retaining within the new housing bill, S. 2539, the provision for a $50 million revolving fund to provide some measure of shelter for families of low income over 62 years of age.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HOUSING PROBLEM FOR ELDERLY

The 10 percent sample survey of housing units now occupied by the 5,000 elderly Portland residents who are dependent wholly or in part on old age assistance shows that 75 percent of them are substandard dwellings that violate one or more city codes. In large

measure these people live in housing that fails to meet ordinary Federal, State, and local regulations requiring "decent, safe and sanitary" quarters.

This shameful disclosure, made by Gene Rossman, manager of the Housing Authority of Portland, which made the survey at the request of Mayor Schrunk and with the cooperation of the Portland Development Commission, indicates the need for up to 200 additional units of low-rent public housing for the elderly. With other factors, it shows the need for up to 400 units. And that is without reference to persons displaced by the new urban renewal program in southwest Portland and the new freeway program throughout the metropolitan area.

The survey shows that our elderly old age assistance recipients now occupy 107 dwelling units infested with vermin, rodents, debris, filth or garbage. It disclosed 161 cases of inadequate ventilation, 137 units with unsafe stairways, 49 with sinks not in working condition, 47 with inadequate plumbing and 168 with walls and ceilings in bad repair. More than 30 percent of all dwellings checked are in violation of three or more building code requirements.

In announcing results of the survey, Rossman also disclosed that the monthly old age assistance benefits of those checked ranges from around $73 to $140 with the average gross monthly family incomes of the aged old age assistance recipients running just under $100. Thus it will be very difficult to find decent, safe, and sanitary housing within their means, unless low rent public housing is provided.

On the basis of this sample survey, it is felt by housing authority and development commission staffs that there is an actual and critical need for additional low rent housing, especially for the elderly, starting on the close-in West Side, where the largest number of old age assistance recipients is located.

Thus the housing authority is proceeding with studies of possible West Side sites, probably for multilevel structures, with the assistance of an advisory study committee made up of representatives of social agencies and community service groups.

The Journal has recognized that the housing problems of the elderly, low income group have been serious, aspecially since large numbers of them have been or are being displaced by the Memorial Coliseum project on the near East Side, the urban renewal project in the South Auditorium area, and the new freeway projects. But it had not realized until results of the on-the-ground survey became available that the problem already compels prompt remedial action without relation to displaced persons.

Now that we have the facts, the city, operating through Housing Authority of Portland and the development commission, should waste no time in completing its search for sites and the type of public housing that is suitable and feasible for its elderly, displaced, and needy citizens who cannot possibly find enough privately owned, decent, safe, and sanitary housing within their ability to pay.

Reappointment of Admiral Burke Is Tribute to His Leadership

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 20, 1959

Mr. WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the San Diego Evening Tribune of August 8, 1959.

REAPPOINTMENT OF ADMIRAL BURKE IS TRIBUTE TO HIS LEADERSHIP

The reappointment of Adm. Arleigh A. Burke to an unprecedented third, 2-year term as Chief of Naval Operations is good news.

It is welcomed by all Americans who like to see top-notch talent in top-level jobs.

It is welcomed by the admiral's many friends in San Diego and around the Nation who see in the reappointment a well-deserved tribute to Burke's handling of a complex job.

He has been Chief of Naval Operations since August 17, 1955. He was reappointed in 1957, and today for a third term which will run until 1961.

These years cover a period of fantastic technological development and of swiftly changing defense concepts.

Burke, as Chief of Naval Operations, has been an effective exponent of the Navy's expanding role in the changing world of today and tomorrow.

He has always been articulate when it comes to the Navy, the Marine Corps, and national defense.

It is fortunate that his tours as Chief of Naval Operations have coincided with the rapid development and employment of missiles. He is no newcomer to this field which is assuming an ever-larger place in the Nation's overall defense concept.

And the Navy will need a knowing and effective spokesman in working out its role in the use of missiles. Already it has proposed to the Joint Chiefs of Staff the establishment of a Joint Space Command.

This proposal makes sense. It is based on the same philosophy as the Joint Chiefs, whose combined experience and specialties give this country's defense so much vitality and flexibility.

It is a means of insuring that the looming space and missile picture won't be hogged by a single service—the Air Force, to mince no words—but that all will have a part to play in the best defense of America.

We should remember that the mere conception of a space vehicle uses a "technology which is quite familiar to the Navy."

The Navy pioneered nuclear propulsion with its atomic submarines. The nuclear-powered space vehicle of the future will draw heavily on the know-how which the Navy was first to learn and use.

The suggestion by the Air Force that the Navy's Polaris fleet ballistic missile be put under its command is the tipoff on a trend that the Navy intends to reverse with its soundly conceived unified space command.

The perils to peace, the responsibilities to ourselves and to other free peoples, are too enormous to permit the Navy, or the Army, to be relegated to brushfire organizations.

The Navy can do this job, if called upon. And it is superbly prepared for the bigger roles, too, if necessary.

Admiral Burke is the right man, as Chief of Naval Operations, to see that this capability is unimpaired. And the American people can be grateful that the right man continues to head the first line of defense in trying times.

Rioting

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, August 20, 1959

Mr. JOHNSTON of South Carolina. Mr. President, I call to the attention of the Senate an editorial entitled "Law of the Land Forbids Rioting," published in the Greenville (S.C.) News of August 15, 1959.

I think the editorial makes an excellent presentation of the general breakdown of respect for law and order in areas where integration has been forced upon people. The editorial emphasizes in a concise manner what I have been saying to the Senate for several weeks now. I sincerely regret that I have been forced to bring to the attention of the Members of the Senate various outbreaks of violations, hatred, and prejudice which have occurred in the large metropolitan areas where forced integration is practiced, but I know of no other way that I can best convince the Members of the Senate from those areas that forced integration is wrong.

Mr. President, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Greenville (S.C.) News, Aug. 15, 1959]

"LAW OF THE LAND" FORBIDS RIOTING

A large number of organizations, whose activities are coordinated in many instances, are working, so they say, for the improvement of the lot of minority groups. The best known of these are the NAACP and the Urban League.

But the great weakness of these organizations is that their efforts are devoted almost entirely to forcing Negroes into the society of whites where they are unwelcome and where the Negroes would be ill at ease at best.

They would do it despite the fact that, in the case of the schools, integration brings about a deterioration of educational standards which deprives the whites of their rights to the best possible education and helps the Negro pupils little if at all; in the case of housing, it brings only riotous protests from the whites in the invaded neighborhoods and improves the living standards of the Negroes not one bit.

These are the people who tell whites all over the country that they should integrate the races in the schools and everywhere else, wholesale and forthwith. But they heed not the fruits of integration. They have done little or nothing to prepare the people they pretend to be trying to help for social change.

They say, to the South in particular, that integration is the "law of the land" and must be obeyed.

But what say they to the repeated assaults in New York City's black Ghetto, Harlem, on police officers trying to enforce not only the law of the land but the law of the city?

Last Sunday, a mob estimated to number as many as 300 Negroes attempted to interfere with New York City police officers as they sought to arrest a Negro man and woman on whose premises they had found a large quantity of bootleg whisky. The pair, who had different names and could not have been man and wife, already were under bond for a similar charge.

Before reinforcements could be brought in, the two officers attempting to make the arrest had been manhandled, one of them was almost stabbed with a pair of shears and their clothing partly torn from their backs.

Several weeks ago, two white police officers were injured by shots from one of their own pistols as a Negro mob tried to keep them from arresting a drunken Puerto Rican woman who had gone berserk in a restaurant.

This is the kind of thing Senator OLIN D. JOHNSTON of South Carolina has been

bringing to the attention of the U.S. Senate in his heated exchanges with the liberal New Yorker, Senator KEATING.

The brutal truth is that these incidents are but symptoms of restlessness and disrespect for law and order (indeed, ignorance of what constitutes law and order, is a more accurate description). New York is ripe for the worst racial strife this country has ever seen.

Integration is not the answer to these problems. Nor is public housing to replace the slum dwellings, for the record shows that transplanted slum dwellers soon turn new public housing units into slums.

These incidents and the conditions which form their backdrop constitute a challenge to those who are genuinely interested in the advancement of colored people.

If they could forget integration lawsuits for a while and channel the funds they would thus save into educational programs, the NAACP and the Urban League would begin to make real progress. They could even count on contributions for such purposes from those who are now opposing them in the courts.

They should teach their people to cooperate with law enforcement officers in the discharge of their legitimate duties. They should attack the underlying causes of the excessive rate of illegitimate births among Negroes and the crime rates which are out of all proportion to their numbers in the total population.

Had they done this from the beginning, instead of fomenting lawsuits based on false premises to force mixing of the races, they might have achieved equal rights for all without court decrees.

President Eisenhower Should Keep a Scorecard on His Sure-Fire No. 1 Issue for Winning in 1960

EXTENSION OF REMARKS

OF

HON. HARRIS B. McDOWELL, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 20, 1959

Mr. McDOWELL. Mr. Speaker, it would be well, I think, if the President would keep a scorecard on his very own administration's record of economy which he recently described to a $100-a-plate Republican dinner in Washington, D.C., as the most important single issue for winning the election in 1960.

Here are several items which he would certainly have to include on such a scorecard. I am, of course, very interested in economy myself, and so I am quite willing to help the President keep score. In fact, I invite all of my colleagues to help me in keeping a complete account of the President's performance in respect to the issue of economy.

It is reported that the Air Force and the Navy have decided to abandon the program for the development of a high-energy aircraft fuel. The administration, according to reports, based their decision, in part at least, on the ground that they had no further requirement for the project.

Chairman OVERTON BROOKS, of the Committee on Science and Astronautics, said the other day:

> Our committee is interested in determining why it took the services 5 years and some $200 million to determine they had no requirement for the fuel.

This is, indeed, a most interesting subject. All of us, of course, are aware that President Eisenhower told the Congress earlier this year:

> Research and development in high-energy fuels for air-breathing engines continues to be a high-priority program in which NASA and other Government agencies are cooperating.

This is, indeed, a most fascinating subject. All of us, of course, received the report on the activities of the National Aeronautics and Space Administration which the President forwarded to the Congress earlier this year in which it was stated:

> Research and development in high-energy fuels for air-breathing engines continues to be a high-priority program in which NASA and other Government agencies are cooperating.

In the planning stage is the transfer of a program for building 720 M–60 tanks from the Chrysler Delaware defense plant in Newark, Del., to Detroit.

The Defense Department pleaded for months for the Congress to authorize a spending program of nearly $40 billion in the current budget.

Now that the Congress has authorized their budget the Defense Department is spending this money like it grew on a money bush.

The move from the Lenape ordnance plant at Newark would probably add as much as $5 million on the order for 720 M–60's.

If the President really believes as much in economy as he says, he is going to have to do more than make speeches on the subject to $100-a-plate rallies of the Republican Party in which he points out what a fine winning issue it is.

It is a winning issue, certainly, but if the performance rating of this administration is as low as these two items and many others we are all familiar with clearly indicate, then the President may not be on the winning team next year.

A third item which President Eisenhower should certainly look into is the recently revealed extravagance in running the White House itself. President Eisenhower spends twice as much to run this as President Truman did. During Truman's last year, his operating expenses came to $2,467,000. This is "small potatoes" compared to the $5,013,750 which President Eisenhower spent in the fiscal year ending June 30, 1959.

Or, President Eisenhower might well investigate the fact that whereas President Truman spent only $6,703,000 on the entire Executive Office—which includes the Budget Bureau, Office of Defense Mobilization, National Security Council, and the Council of Economic Advisers—this cost the country $52,736,250 last year, and the President asked the Congress this year for $91,880,000.

Another place where President Eisenhower could save money—if he really was interested in saving money and not in just trying to make a partisan issue of economy—is in the 99 limousines and heavy sedans which have been assigned to leading officials of this administration. These are the cars they use when they come to the Congress to plead for $40 billions for the defense budget, and for other billions.

At the present time, not only do the President, the Secretaries of the several Departments, and the members of the Joint Chiefs of Staff have limousines, but the Pentagon has a total of 37, of which 14 alone are assigned to various Assistant Secretaries.

If this practice were extended to the Members of Congress, and it is the Democratic Members of Congress whom the President accuses of being "spenders," then there would immediately be 436 limousines for the Members of the House of Representatives and 100 limousines for the Members of the Senate.

Senator JOHN SPARKMAN revealed recently that 20 big corporations get one-half of all defense contracts. Actually, official figures reveal that 100 firms get 74 percent of all defense contracts.

The costs of all defense contracts have skyrocketed. They have, in fact, gone higher and further than any American missile which the Defense Department has launched at Cape Canaveral, Fla.

Part of these costs, which the administration has done absolutely nothing to stop, are due to the entertainment which the companies which get these multi-million-dollar contracts lavish on high officials of this administration.

As a matter of fact, testimony was heard in Washington last week that inside influence and maneuvering by big companies was responsible for letting the Soviet Union get their sputnik missiles into the air months before we did.

It has been brought out by the investigating subcommittee headed by our colleague, Chairman HÉBERT, that the "munitions lobby," made up of over 700 high-salaried retired generals and admirals, enjoys rare and expensive privileges which are often paid for by the public.

It has been brought out that this group of high-ranking brass draws pensions as high as $12,000 annually, to which their contributions were nil. In addition, they are permitted to hold down industrial jobs paying as much as $75,000 annually.

But if some poor fellow drawing social security earns more than $100 a month on the side, he is no longer entitled to social security benefits. Incidentally, he contributed to his pension.

This is class legislation of the kind we would expect to find only in the Soviet Union.

It is a matter of record that the Congress in the past 5 years has reduced President Eisenhower's budget by $10,600 million.

The President has constantly warned about back-door financing by the Democratic Congress, but, as a matter of fact, has actually requested $6,400 million in such funds.

This session of the Congress will soon be over, and the score will be added at that time. The Eisenhower record will

be shown to be one of free spending, rather than economy.

As a political issue in 1960 the Eisenhower economy record will not be worth a plugged nickel.

Text of Declaration of Santiago

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, August 20, 1959

Mr. WILEY. Mr. President, as we know, the Organization of American States completed its conference at Santiago yesterday.

Upon adjournment, the Foreign Ministers endorsed a declaration "expressing the general aspirations of the American people to live in peace under the protection of democratic institutions, free from all interference and totalitarian influence."

Although the conference faced serious and difficult problems, I believe that, overall, it marks real progress among the nations of the Americas toward resolving differences, cementing relations and laying the groundwork for dealing with difficulties in the future.

Once again, our Secretary of State, Mr. Christian Herter, has turned in a top performance. In a brief tenure of office, the Secretary has faced most difficult problems—first at Geneva, and now at Santiago. Through these experiences—during which great responsibility rested upon his shoulders—the Secretary has demonstrated high qualities of astuteness, remarkable capability, and sound judgment. All in all, during the assumption of the position of Secretary of State under conditions which would have tried the mettle of any man, and which bore one of the great responsibilities in world diplomacy, the Secretary has continued to do honor to his high office.

The progress that was made at Santiago, I am sure, is also a tribute to the relentless efforts and dedication which he brings to his job.

We recognize, of course, that we in the Western Hemisphere still face complex problems in promoting ever-better relationships between our countries—particularly in instances where forms of government differ.

Rightly, the declaration of Santiago stressed the desirability of all governments adhering to the precept of noninterference in the affairs of other nations. Moreover, it again emphasized—as has been our own U.S. policy—that, to the greatest degree possible, the people of a nation should be allowed the greatest maximum amount of "voice in the operations of their government."

Recognizing that the conference marks one more step of progress toward resolving Western Hemisphere problems and promoting security and progress for the future, I ask unanimous consent to have the text of the Declaration printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, Aug. 19, 1959]

TEXT OF DECLARATION OF SANTIAGO

SANTIAGO, CHILE, August 18.—Following is the text of the Declaration of Santiago approved today at the Conference of Foreign Ministers of the American States:

The fifth meeting of consultation of Ministers of Foreign Affairs;

Expressing the general aspiration of the American peoples to live in peace under the protection of democratic institutions, free from all intervention and all totalitarian influence; and

Considering:

That the faith of the peoples of America in the effective exercise of representative democracy is the best vehicle for the promotion of their social and political progress (Resolution XCV of the 10th Inter-American Conference), while well-planned and intensive development of the economies of the American countries and improvement in the standard of living of their peoples represent the best and firmest foundation of which the practical exercise of democracy and the stabilization of their institutions can be established (resolutions of the special committee to study the formulation of new measures for economic cooperation);

That in Resolution XXXII, the Ninth International Conference of American States, for the purpose of safeguarding peace and maintaining mutual respect among states, among other things, resolved to reaffirm their decision to maintain and further effective social and economic policy for the purpose of raising the standard of living of their peoples, and their conviction that only under a system founded upon a guarantee of the essential freedoms and rights of the individual is it possible to attain this goal, and to condemn the methods of every system tending to suppress political and civil rights and liberties, and, in particular, the action of international communism or any other totalitarian doctrine;

That in Resolution XCV, the 10th Inter-American Conference resolved to unite the efforts of all the American States to apply, develop, and perfect the principles of the inter-American system, so that they would form the basis of firm and solidary action designed to obtain, in a short time, the effective realization of the representative democratic system, the rule of social justice and security, and the economic and cultural cooperation essential to the mutual well-being and prosperity of all the peoples of the hemisphere;

That harmony among the American Republics can be effective only insofar as human rights and fundamental freedoms and the exercise of representative democracy are a reality within every one of them, since experience has demonstrated that failure to adhere to such principles is a source of widespread disturbance and gives rise to emigration that causes frequent and grave political tensions between the state the emigres leave and the states that receive them.

That it is advisable to democratic regimes constitutes a violation of the principles on which the Organization of American States is founded, and endangers the peace and harmony of the hemisphere, and

That it is advisable to denounce, in a general way, a few principles and attributes of the democratic system in this hemisphere, so as to permit national and international public opinion to gage the degree to which political regimes and governments conform to that system, thus helping eradicate forms of dictatorships, despotism, or tyranny, without weakening respect for the right of the peoples freely to choose their own form of government declares,

1. The principle of the rule of law should be assured by the separation of powers, and by the control of the legality of governmental acts by competent organs of the state.

2. The governments of the American Republics should be derived from free elections.

3. Perpetuation in power, or the exercise of power without fixed term and with the manifest intent of perpetuation, is incompatible with the effective exercise of democracy.

4. The governments of the American States should insure a system of freedom for the individual and social justice based on respect for fundamental human rights.

5. The human rights incorporated into the legislation of the various American States should be protected by effective judicial procedures.

6. The systematic use of political proscription is contrary to American democratic order.

7. Freedom of the press, of radio and television, and, in general, freedom of information and expression, are essential conditions for the existence of a democratic regime.

8. The American States, in order to strengthen democratic institutions, should cooperate among themselves within the limits of their resources and the framework of their laws so as to strengthen and develop their economic structure, and achieve just and humane living conditions for their peoples, and

Resolves, This declaration shall be known as the Declaration of Santiago de Chile.

Diagnostic Clinic for Aged Established in Philadelphia

EXTENSION OF REMARKS
OF
HON. WILLIAM J. GREEN, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 20, 1959

Mr. GREEN of Pennsylvania. Mr. Speaker, there was recently dedicated in my district in northeast Philadelphia the first geriatric clinic to be put into active use in the United States. In these days when the life expectancy of Americans has been increased and when we have thousands of senior citizens where formerly we had only dozens, it is of great advantage to us who must pass upon legislation bearing upon these older people to have the history of this clinic, its organization and its fine work before us. The following is the history of Philadelphia's Northeast Community Geriatric Clinic:

DIAGNOSTIC CLINIC FOR AGED ESTALISHED IN PHILADELPHIA

A retired electrical engineer in Schenectady, N.Y., discerned when he read in the Schenectady Gazette of a community geriatric clinic begun in Philadelphia, what it was that made this clinic not only a worthwhile enterprise, but something different. In his congratulatory letter to Mrs. Dora N. Schatz, secretary of the newly established Northeast Community Geriatric Clinic as well as of the Disston Senior Citizens Club, he emphasized that too many projects are started by and operated by "well wishers" outside the "golden age" group. He is a strong believer in the older citizens doing things for themselves. He point out that the "golden age" group represents quite a large segment of our present population,

and urges them to exert what political and social strength is inherent in this situation.

And it is true that the unique diagnostic clinic set up in northeast Philadelphia is largely the result of the active concern and hard work of the oldsters themselves. Mrs. Schatz and her fellow members in the Diston Senior Citizens Club had often discussed the need for a facility where those on social security or on otherwise limited incomes could obtain a complete physical checkup. Experience had shown them that too often older persons neglect to obtain thorough checkups periodically because they simply cannot afford it; then, when serious illness strikes, they find that disease has made advanced inroads which could have been checked if discovered in time.

Active help in establishing such a facility finally came through a group of Christian laymen in the community who had organized the Northeast Council for Christian Social Action not too long before this need was presented to them. Individuals interested in the social application of the Christian Gospel in which they believed, this group represented various Protestant denominations in the community. Recognizing that a socially relevant Gospel could not be confined to one congregation, they had attempted to find a way of carrying their influence to the entire community through education and action in what ways they could. They had sponsored two successful community forums, one on the subject of juvenile delinquency and one presenting a Negro leader from Montgomery, Ala., with a message intended to emphasize the power of aggressive Christian love in overcoming even such obstacles as racial tensions.

These were well received by the community and represented a real contribution from an educational sense, but they had not been able to put the "action" part of their program into practice.

Mrs. Schatz read in a community paper a statement of the council to the effect that they aimed at acting as a live part of the conscience of the Christian Church in the community on social issues, and emphasizing their readiness to work with other groups, regardless of race or religious affiliation. She called the article to the attention of her senior citizens group, and urged that a delegation should present their need to the council for consideration. At the June 1958 meeting of the council, she spoke for her group and enlisted the interest of the council which agreed to establish a committee on problems of the aging and asked Mr. Schatz to chair it.

The committee made a study of what was being done in various parts of the country in this field and discussed it at later meetings of the council. In general, they found very much interest in government health circles. They found several States promulgating legislation particularly aimed at helps of one kind or another for the aging. When they consulted with local and State health authorities, they found that there was no present possibility of health department funds being used to operate a diagnostic clinic. Authorities agreed in general that such a facility was needed and expressed the opinion that public health funds would eventually be appropriated for such use—but the life expectancy of those in the senior citizens group did not tend to make them satisfied with a hope of help 10 or 15 years in the future.

Encouragement was obtained when Mrs. Schatz visited a free community clinic for children privately sponsored by Bethel Lutheran Church in Philadelphia. This clinic has operated successfully over a period of 12 years depending upon the generosity of local osteopathic physicians who staffed the clinic without fee, and donations from interested citizens and the church itself.

The council sent Mrs. Schatz to appear at a meeting of the local ministerium asking the clergy of the community to consider the possibility of donating space in one of the churches. After discussing it with their official boards, three churches volunteered space. Mainly because of its proximity to the home of the senior citizens club, the council accepted the offer of Tacony Baptist Church, and started to work on real plans.

Fortunately, Mrs. Schatz' own doctor, Sidney Richman, was extremely interested in the proposed plan and extended his active help in recruiting further doctors. In addition to other osteopathic physicians who agreed to work with Dr. Richman, offers were received from a local dentist, an eye specialist, and a foot specialist.

As soon as it appeared that the oldsters' dream might become a reality, it was decided that a separate organization should be set up. In early 1959, a board of directors was formed including representatives of the Northeast Council for Christian Social Action and Diston Senior Citizens Club as the cosponsoring organizations, doctors from the volunteer staff, and the pastor of the church where the clinic was to be located. The name "Northeast Community Geriatric Clinic" was choen. Jay B. Hurst, Jr., a member of the Christian Social Action group, was named president of the new organization, Dr. Seymour Piwoz was named medical director, and Mrs. Schatz was made secretary-treasurer. Conscious of the potential value of well-handled publicity, the group appointed one of its members (an industrial editor) to handle public relations.

Directors immediately set about soliciting funds with which to equip a small clinic. Even minimum equipment (examining tables, sterilizers, electrocardiogram, etc.) would cost a few hundred dollars. The northeast council spent what small funds it had making minor but necessary renovations in the donated space and on small equipment. The senior citizens donated their treasury of $50. Several local churches and individuals responded with donations, so that by mid-June 1959 enough equipment was on hand to open the doors.

Local business and political leaders joined nearly 100 older citizens of the community in a dedication ceremony at which Protestant clergy and a Jewish rabbi participated.

News of the planned clinic had been carried in local community newspapers, and, the week before opening, Mrs. Schatz received a call from Harriet Smith, feature writer for the Philadelphia Evening Bulletin—one of the big-city papers—asking if she could bring a photographer and do an article on the opening session. She came and interviewed the three patients scheduled for examination the first day, talked to Mrs. Schatz, the doctors, and to Hurst, and wrote a sympathetic and very effective two column article which was carried on page 3 of the Bulletin and put on Associated Press wire service to papers throughout the country.

With this national publicity came a deluge of letters from all sections of the country. Other "golden age" groups wanted to know how it was done, schools wanted stories, an Army chaplain in Annapolis, Md., sent a donation in memory of his mother, a 70-year-old man in Florida wrote to say he was planning a trip to New York and asking if he could stop off in Philadelphia for an examination, a New Jersey man wrote claiming that doctors gave him "the brush-off" when he asked for a thorough physical examination claiming that they did not have time. He wanted to come. A heartrending letter came from an elderly widow in South Dakota who evidently understood that the clinic offered resident care and offering to contribute $50 a month from her social security if she could come and be cared for. A generous friend of Hurst's in Chicago had sent a $200 donation to help the clinic get started. When the publicity was released, he wrote Hurst that he had mentioned the project to his friend, Col. Jake Arvey, nationally prominent political figure, and enclosed a check for an additional $100 from Colonel Arvey.

Originally set up to interview three new patients at each weekly session, the clinic found it had a backlog of nearly 100 applicants within the first 3 weeks. More volunteer doctors were recruited and the clinic is now doubling its capacity—but this involves additional and expensive equipment too, and general expansion is planned.

Hurst comments, "The initial success of our effort has far exceeded our anticipation. When this sort of project was first suggested to our council, I must admit it was received with a jaundiced eye by some of us to whom the obstacles seemed to loom so large that they overshadowed the challenging objective. We are thankful that we accepted the challenge nevertheless, and that God has prospered us in all ways. Considering the inadequacies and limitations of many of us who have been working with this idea, accomplishment of our objective seemed humanly impossible at times. Perhaps the fact that this objective has been essentially accomplished is simply further proof that with God all things are possible."

Diagnostic service only, not treatment, is offered to women over 62 and to men over 65 regardless of ability to pay. Where possible a nominal fee of $1 is collected. At least in the early stages of the clinic, it has not been necessary to establish any qualification except age. It is hoped that the work can be continued on that basis; however, the board recognizes that some qualification as to ability to pay may have to be established if the service is abused by those well able to pay. But they express the feeling that they will wait and see, hoping that it will not be necessary for a staff social worker to screen applicants on this basis.

In addition to general physical checkup, specialists on the staff offer gynecological examinations, cancer smear tests, and other special services. Arrangements are made for chest X-rays. Eye diseases are common among older people, and an eye specialist is on the staff. A local dentist will check on mouth or gum ailments discovered by the staff.

It is now planned for the clinic to incorporate as a nonprofit organization, and a lawyer has been the latest appointee to the board of directors, offering his services free of charge. Through incorporation, it will be possible for donations to be accepted on a tax-exempt basis, the clinic will be classified in a category enabling it to participate in Government and other help aimed to assist charitable, nonprofit organizations, and legal responsibility of the clinic and those working with it will be fixed.

All this is possible only because these doctors contribute valuable time and services without charge, because Tacony Baptist Church donated space, because many friends have cared enough to contribute toward the financial expenses involved. But, most of this became a reality because a group of older citizens acted.

World Congress

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, August 20, 1959

Mr. WILLIAMS of New Jersey. Mr. President, August 20 marks an occasion of great significance to those of the Catholic faith and indeed the entire Christian world. This is the date of

the opening of the Quinquennial World Congress of Sodalities in the archdiocese of Newark, N.J. It is only the second time in history that such a congress has been held—and for the first time outside of Rome.

I think New Jersey has been particularly honored to be selected for this second world gathering of what promises to be one of the most important and impressive gatherings of Catholic clergy and laymen in history.

More than 50,000 persons, representing 32 countries, are expected to take some part in the meetings and workshops to be held on the campus of Seton Hall University in South Orange during the 4-day conference. The deliberations will concern themselves with the role of the sodalist in a world torn by crisis and unrest.

The world will be watching these proceedings dedicated to the interest of mankind and humanity with great interest. And on behalf of all of the citizens of New Jersey I would like to extend a note of welcome and sincere good wishes for the success of this congress.

I ask unanimous consent to have printed in the Appendix of the RECORD, an article from the Advocate of Thursday, August 13, on this subject.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Newark (N.J.) Advocate, Aug. 13, 1959]

TWO CARDINALS COMING HERE FOR CONGRESS

NEWARK.—An event, historic not only for the Archdiocese of Newark, but also for the entire United States will occur here starting August 20, with the convening of the second World Congress of Sodalities of Our Lady. The first congress was held in Rome in 1954.

An episcopal host to the congress to be attended by representatives of 32 nations, Archbishop Boland will be celebrant of a Solemn Pontifical Mass at 9:30 a.m., August 20, in Sacred Heart Cathedral. The sermon will be preached by Auxiliary Bishop Leo C. Byrne, of St. Louis, executive episcopal moderator of the National Federation of Sodalities of the United States.

The Mass will formally open the conclave whose deliberations, including addresses by religious and lay dignitaries and panel-type workshop sessions, will take place on the Seton Hall University campus in South Orange.

The final event of the congress will be the World Congress Marian demonstration to be held August 23 at Roosevelt Stadium, Jersey City, with more than 30,000 attending. Auxiliary Bishop Fulton J. Sheen of New York will speak.

The importance given the congress is stressed by the fact that among the active participants will be 2 cardinals, 8 archbishops, and 25 bishops.

Most of the members of the hierarchy, led by Cardinal Spellman of New York, and Cardinal Cushing of Boston, will have specific assignments during the meeting. Cardinal Spellman will preside at the Marian demonstration closing the congress on August 23. Cardinal Cushing will preside at the public symposium Friday evening, August 21, at Seton Hall University.

The congress promises to be one of the most important and impressive gatherings of Catholic clergy and laymen in history. More than 50,000 persons are expected to take some part in the meetings, workshops, symposium and demonstrations during the 4 days. From 32 nations, representatives from Ceylon, India, and other Asian nations will join fellow Catholics from Africa, Europe, North and South America to discuss and plan their respective roles in a world torn by crisis and unrest.

Following the mass August 20 the delegates will assemble at Seton Hall University. Archbishop Fernando Ruiz y Solorzano of Yucatan, Mexico, who heads a delegation of 350 Sodalists from his country, will be moderator of the opening session.

Highlight of the first session will be the broadcast of a tape-recorded message from Pope John XXIII. The opening address will be given by Archbishop Joseph Gawlina, director of the World Federation of Sodalities. He will speak on the theme of the congress: "The Vocation of the Sodalist in the Crisis of the Modern World."

Both the Pope's message and Archbishop Gawlina's address, as well as all other major talks and documents of the congress, will be simultaneously translated into the five official languages of the conclave—English, French, German, Italian and Spanish.

Following the general session, delegates will break up into workshop groups to discuss various aspects of the general theme. Workshops will be held in each of the five congress languages.

In the evening, the National Federation of Sodalities of the United States will be host at a reception for the foreign delegations.

Procceedings on Friday and Saturday will be similar to those on Thursday, with workshops following general sessions.

A special aspect of the theme will be examined and discussed each day.

The public symposium on Friday evening at which Cardinal Cushing will preside will be one of the highlights of the conclave. The topic will be "Sodalities in International Life." Rie Vendrik, president of the Conference of International Catholic Organizations, will be chairman, and Rosemary Goldie of Australia, secretary of the Permament Committee of the Lay Apostolate in Rome, will be secretary.

Participants will include M. de Hablicht of Hungary, secretary of the Conference of International Catholic Organizations; Martin Work, executive director of the National Council of Catholic Men; Mrs. Mark Theissen, president of the National Council of Catholic Women; and Rev. Louis Paulussen, S.J., director of the International Secretariat of Sodalities in Rome.

Saturday evening will be devoted to "The Night of Nations" in which delegates from many countries of the world will demonstrate some facets of their native culture.

On Sunday delegates will meet in executive sessions before and following a Mass celebrated by Archbishop Joseph E. Ritter of St. Louis, honorary episcopal moderator of sodalities of the United States. In the afternoon they will hold the final general session of the congress at which conclusions will be read and officers installed. They will then depart by bus for the closing Marian demonstration at Roosevelt Stadium, Jersey City.

Catholics and non-Catholics throughout the East are invited to the closing ceremonies at which the message of the Holy Father will be rebroadcast.

Latin American Events

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 20, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter of transmittal from Reverend Father Joseph F. Thorning, associate editor of World Affairs, St. Joseph's-on-Carrollton Manor, Frederick, Md., with which he forwards three articles from Latin American events of Monday, August 17, 1959. The articles are: "Reunion in Santiago"; "Secret Negotiations on a Loan to Cuba"; "News and Commentaries."

ST. JOSEPH'S-ON-CARROLLTON MANOR,
Frederick, Md., August 17, 1959.

Congressman DANIEL J. FLOOD,
Washington, D.C.

ILUSTRE AMIGO Y GRAN PARLAMENTARIO: Your splendid leadership, upholding freedom and decency in the domain of inter-American relations, prompts me to suggest that you consider, for possible inclusion in the CONGRESSIONAL RECORD, the three articles I have marked in Latin American events. You are free, if you see fit, to mention that the material was brought to your attention by your undersigned friend, "the Padre."

Everything in these articles coincides with the evidence you brought to the notice of your distinguished colleagues on Thursday, August 13, 1959, by inserting the piece by Edward Tomlinson in the RECORD. I wish more U.S. leaders would become active in this cause.

In this connection, I would like to add that I have known Dr. Emilio Núñez Portuondo, former president of the Security Council of the United Nations, for many years. He is a proved friend of the United States of America and a freedom fighter of worldwide renown. No one in the U.N. worked more ardently for the brave Hungarian patriots at the time of the slaughter of people in Budapest by the Soviets.

Hoping to see you soon, I remain,
Your friend and admirer,
(El Padre) JOSEPH F. THORNING,
Associate editor of World Affairs.

[From Latin American Events, Aug. 17, 1959]

REUNION OF SANTIAGO

When in 1954, I represented Cuba in the Inter-American Conference held in the city of Caracas it became my duty to denounce before all the Americas the Communist government of Guatemala headed by Colonel Arbenz, who now directs all the conspiracies inspired by the Moscow government from Montevideo. I remember vividly that, in an animated debate with Dr. Torriello, Foreign Minister of the Red government of Guatemala, I exposed the danger that the whole continent would be subjected to by an economic-political offensive of the Soviet Union. I advocated strong measures to repress Communist infiltration in our countries.

In this Inter-American Conference the Caracas declaration was approved, by 17 votes in favor, 1 against, that of Guatemala, and 2 abstentions, that of Mexico and Argentina under Juan Domingo Perón. It was made clear in the most exact terms that the establishment of a communistic regime in the geographic boundaries of the Americas constituted a threat to its internal security. All the Latin American States were committed to comply with the obligations imposed by the passage of said declaration.

The Caracas declaration was received by international public opinion as a diplomatic triumph of the United States, who had been its most stanch supported. I remember that I privately warned the late illustrious Secretary of State John Foster Dulles, who was attending the conference, that the main responsibility for keeping it in force fell on the United States of America for obvious reasons: because they were the ones mainly interested in preventing Communist infiltration in America and fundamentally because the United States was the only Nation with enough material and economic resources to

face the Soviet Union with any assurance of victory. In my judgment, even though we were dealing with a multilateral obligation, its chance for success or failure depended upon the vigor with which the U.S. Government would back the declaration.

The Caracas declaration went the way of all declarations among the thousands that are approved in inter-American conferences and are never applied. Since 1954 until this moment when I am writing these lines, it cannot be denied that international communism has made the most extraordinary advances in the great majority of Latin American States. To deny its existence is like trying to obliterate the sun with your finger. It is enough to cite the Communist regime now existent in Cuba, and the preponderant situation enjoyed by the Communists in Venezuela, and the advantages gained in Chile, Argentina, Uruguay, Guatemala, Panama, and Ecuador to realize that I am speaking the truth. This tragic situation does not seem to be generally known by the people or by the ruling bodies of the United States and it is essential that they realize the imminent danger that we are all undergoing.

The foreign ministers of the Americas are now in session in Santiago, Chile, in an extraordinary session in order to deal with the existent tensions in the Caribbean. We feel that if the United States does not assume the responsibility in presenting the problem in its whole magnitude, declaring in all sincerity that the tensions are primarily due to Communists and the activities of fellow-travelers who follow blindly the dictates of the government of Moscow, the conference in Santiago will fail miserably and will spread discouragement among those of us who are fighting to liberate our peoples from the totalitarian and cruel yoke. A way must be found to prevent the attention of the foreign ministers to be diverted from Communist engendered arguments; that the real cause of the problems in Latin America are primarily economic in nature when all of us know that the present situation in the Caribbean is mainly political.

With a new declaration nothing practical will be gained. We must act with vigor and insist that the declaration of Caracas must be upheld. We must do this or confess our complete failure. We must close the door to international communism in the Americas with energetic and effective measures or we will confess to the world that we are impotent to defend ourselves. If this happens and we are really incapable of stemming the Communist tide we will witness the fall of each Latin American State, one by one, under the influence of the Moscow government. Realistic and effective, we could call this form of action in order to defend ourselves. To postpone such action would be an error of incalculable consequences to the cause of democracy and liberty in this hemisphere.

SECRET NEGOTIATIONS ON A LOAN TO CUBA

Before coming to Washington just recently the Prime Minister of Cuba, Fidel Castro, assured a multitude of his followers in Havana "that he was not coming to the United States to solicit money because he did not need it, and that he would never undermine the Cuban economy with onerous obligations." These very words he repeated in Washington on many occasions.

In spite of this statement by the Prime Minister, during his stay in Washington, the Secretary of the Treasury, Rufo Lopez Fresquet and the president of the National Bank of Cuba, Felipe Pazos, began talks with representatives of the World Bank and the International Monetary Fund, where they expounded on Cuba's hazardous economic situation and explored the possibility of receiving a loan. The chief difficulty in obtaining a loan is that we are dealing with a provisional government, not elected by the people, without a constitution, and a regime where one man's word is law to the point where he seats and unseats presidents at will, without regard for the Cuban public opinion. The negotiations for the loan apparently failed.

The economic situation in Cuba deteriorates more each day. The expropriations, the confiscations, the brutal laws, like the lowering of rents and the agrarian reform have produced a chaotic state and each day the government has more and more difficulties in meeting their most necessary obligations. This is well known in Cuba and the United States even though the press does not echo this situation.

Two new avenues for negotiations have been opened: Negotiations directly between the government of Cuba and Washington and in New York with private American banks. A loan of $300 million is being sought to stabilize the Cuban peso, which, in the last 6 months has lost 30 percent of its value in relation to the dollar and also the money is being sought to speed up the agrarian reform but on a much larger scale.

It is unbelievable that these negotiations could be entertained with the U.S. Government and private American banks. You could cite more than a hundred public statements by Fidel Castro which are insulting to the Government in Washington and to the United States. In a recent radio broadcast from Cuba on the anniversary of the July 26 movement (that we personally heard) he called the North American Senators that formed part of the Subcommitee of Internal Security, "Gangsters."

The Agrarian reform law robs the citizens of the United States and many American corporations of thousands of acres of land worth millions of dollars without adequate compensation. The new tariffs place onerous taxes on North American products such as automobiles, refrigerators and other hard goods. It would not make sense to give this loan to pay back in dollars those North Americans affected by the expropriations of the agrarian reform. They would be paying themselves with their own money.

There is adequate explanation for the aid that the United States gave Yugoslavia and Poland, because Tito defied the imperialistic designs of the Soviet Union and Gomulka removed Poland from direct influence of the Soviet Government. Fidel Castro, however, moves closer each day to the Soviet orbit. Recently the Excelsior, a Mexico City newspaper, said that Cuba will soon establish diplomatic relations with the Soviet Union and that it has committed itself to vote favorably or to abstain on the question of the entry of Communist China into the United Nations when the General Assembly meets in September.

There would be no rhyme nor reason to the Government and peoples of Latin America, anti-Communist, and friends of the United States, for a loan negotiated without consent of the people of Cuba and given to the most pro-Communist and most anti-American country in the Americas. It would set a tragic precedent and would cost billions of dollars to the taxpayers of the United States.

NEWS AND COMMENTARIES

Guatemala: There are persistent rumors that there is a subversive movement afoot to oust President Idigoras Fuentes who has always been a strong enemy of international communism. This movement is being organized in several Latin American countries and is being directed from Montevideo by Ex-President Arbenz who aspires to take over.

The election to the mayor's office in Guatemala City of one of Arbenz's old cronies and the known, as well as underground activities of the Communists in Guatemala together with the split among the political parties have made the sheep from Moscow think that this might be the appropriate time to undertake the coup.

Of course if the Army, as it is hoped will remain loyal to President Idigoras, this maneuver will end in a miserable failure. The experts fear, however, that the President might be too confident and that the hurricane will unleash without enough time to avoid its disastrous effects.

Venezuela: Unemployment grows in Venezuela in spite of the promises of President Romulo Betancourt. The Venezuelans complain that President Betancourt devotes more time to activities outside Venezuela than to the grave social and economic problems that are current in the land of Marshal Sucre. News of the development on a grand scale of the deposits of oil in the French Sahara and in other places, which until now have bought Venezuelan oil is disquieting to the people and businessmen of Venezuela.

Haiti: The situation in Haiti gets more complicated every day primarily because of economic reasons. With a great over population and a land which is unfertile, the truth is that poverty is extreme in the Haitian population. In order to solve this problem rapidly, international cooperation, but principally that of the United States, is needed. It is true that the Washington Government has rendered some aid to the Government of Haiti, but hunger is still prevalent in that country.

The present tensions in the Caribbean and and the internal political dicotomy contribute in aggravating the situation. There are intense conspiracies against President Duvalier inside and outside Haiti. The difficult impasse between Cuba and the Dominican Republic, the latter invaded from Cuban territory without success, places Haiti in a dangerous position because it does not have sufficient military forces to defend itself. The plans to invade the Dominican Republic via Haiti have been prepared very cautiously and carefully. They have not been put into effect for reasons known to all. This was explained in a letter to President Eisenhower from President Duvalier and handed to him personally by the Haitian Ambassador in Washington.

Haiti is actually the key point in the peace in the Americas.

Chile: A distinguished politician and diplomat has just written me a very interesting letter in which he makes the following interesting observations about the forthcoming visit of Nikita Khrushchev to the United States.

"The only justification that the Government in Washington has offered, to invite Khrushchev, the most cruel tyrant and the most bloodthirsty of our era; the fearsome executioner of the peoples of the Ukraine and Hungary, was to prove to him during his visit the military might of the United States. This proof would stop him from unleashing Soviet aggression. The truth is that Khrushchev has already said to the press in Moscow that 'he would not accept any invitations to visit any military installations while in the United States.' Why the visit then which makes all the captive peoples in Europe, and Asia lose their hopes of liberty?"

PARTIAL LIST OF KNOWN COMMUNISTS OR FELLOW TRAVELERS THAT OCCUPY IMPORTANT POSITIONS IN CUBA

Positions in the military

Augusto Martinez Sanchez, Minister of Defense.

Raul Castro Rux, Chief of the Armed Forces.

Comandante Juan Almeida, Chief of Air Force.

Armando Acosta, Chief of Navy.

Montes de Oca, Chief of Military Intelligence.

Manuel Rodiles, Second Chief of the National Police and Chief of the Bureau of Investigations.

William Galvez, Inspector General of the Army.

Comandante Garcia Morales.

Capitan Choy, Chief of Havana Prison.

Capitan Garriga, Chief of Press and Radio of the Cuban Army.

Comandante Ernesto Che Guevara, (Argentino), Chief of the Cuban Fortress.

Teniente Lavandeira (Who was in the Communist Government of Arbens), Chief of Army Espionage.

Comandante Faure Chaumont, Chief of the Student Revolutionary Directory.

Comandante Enrique Oltuski, Minister of Communications.

Comandante Odón Alvarez de la Campa, Under Secretary of Agriculture.

Capitan Ingeniero Fresneda, Chief of the Institute of Agrarian Reform.

Comandante Antonio Nuñez Jimenez, Director of the Agrarian Law Institute.

Jose Luis Masó, Chief of Publicity of the Institute of Agrarian Reform.

Positions in the administration

Dr. Oswaldo Dorticós, Provisional President of the Republic.

Carlos Franqui, Director of the Newspaper Revolution, official organ of the Government.

Vicentina Antuña, Director of Culture of the Ministry of Education.

Eduardo Corona, Secretary of the General Accounting Office and Paymaster General.

Alfredo Guevara, President of the Institute of the Movie Industry.

José Perez Lamy, president of Indemnity Board of the Civil War.

Señora Irene Viuda de José Maria Perez, secretary of the Indemnity Board of the Civil War.

Celestino Fernandez, president of the retirement fund for sugar workers.

Baudilio Castellanos, magistrate in the paymaster office.

Rosa Rivero, official lawyer of the district court in Havana.

Raquel Perez, Minister of Social Welfare.

Armando Hart, Minister of Education.

Positions in the labor movement

David Salvador, secretary general of the Workers Union of Cuba. Indoctrinated in Moscow for 3 years.

Juan Armesto, secretary general of the omnibus syndicate.

José Martinez Leira, secretary general of the shoe industry.

Juan F. Esquerra, secretary general of Shoemakers Union in the Province of Havana.

Miguel Quintero, secretary general of the Club and Beach Workers Union.

Alfredo Rancano, secretary general of the Cooks, Chefs, and Food Workers Union.

Pedro Fumero, secretary general of the Construction Workers Union in Havana.

Agapito Figueroa, secretary general of the Metal Workers Union in Havana.

Francisco Lopez, secretary general of Graphc Arts Union.

Angel Espasandez, secretary general of the Public Entertainment Workers Union.

Amado Hernandez, secretary general of the Barbers, Hairdressers, and Manicurist Union in Havana.

Ricardo Rodriguez, director of the group which controls the railroad federation.

Jesus Soto, secretary general of the Textile Workers Union.

Hector Carbonell, secretary general of the Needle Workers Union in Havana.

Luis Moreno, secretary general of the Tobacco Workers Union.

Monroney Plan

EXTENSION OF REMARKS
OF
HON. ALBERT GORE
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Thursday, August 20, 1959

Mr. GORE. Mr. President, the unusually able junior Senator from Oklahoma [Mr. MONRONEY] has made a fine contribution. It was from Senator MONRONEY that the idea came of using our accumulating piles of foreign currencies for international development. The Eisenhower administration has now endorsed his plan, and proposed it to other countries.

I ask unanimous consent that an editorial, published in the Baltimore (Md.) Sun on August 17, 1959, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Baltimore Sun, Aug. 17, 1959]

NEW DEVELOPMENT TOOL

After a slow start Senator MONRONEY seems now to have lined some of the right people up behind his plan for a new world bank to make local currency loans. Local currency is a polite way of describing the money of countries which can't readily convert it into other moneys. It stands to reason that such money doesn't make very good lending material for an international bank. The reason is that a country with nonconvertible money is likely to have little to sell and so little to offer in the way of capital materials.

But while a country with nonconvertible money may not be able to provide steel and tractors, nuclear reactors and hydroelectric equipment, it may well have other goods, even if in limited supply, which would help its friends in a development program. If it had a rice surplus, say, it might provide rice for a developing neighbor country and enable that country to turn some of its manpower from food production to more direct development employment. The new kind of bank Mr. MONRONEY has in mind would mobilize such secondary development resources. At first savored rather coolly by the international development people, the plan is now being taken up by the bankers and by the U.S. Treasury itself.

The proposed local currency bank would be set up in affiliation with the World Bank. This institution now makes strictly hard money loans on bankable terms payable in hard money in the classic business tradition. But the possibility is now seen of what you might call blended advances, with hard money from the World Bank to supply the capital equipment available only in such countries as the United States, Britain, West Germany, and local currency through the new local currency bank for such goods as were available in the more modest countries. In this way every last potential and degree of development capital would be mobilized for effective use. Were Congress, after appropriate study, to authorize American collaboration in such a plan the overall cause of world development would undoubtedly be helped.

Labor Reform a Necessity

SPEECH
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 13, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 8342) to provide for the reporting and disclosure of certain financial transactions and administrative practices of labor organizations and employers, to prevent abuses in the administration of trusteeships by labor organizations, to provide standards with respect to the election of officers of labor organizations, and for other purposes.

Mr. McGOVERN. Mr. Chairman, it is imperative that this Congress pass a strong and effective labor reform bill.

The American people are rightfully demanding an end to the disgusting tactics of racketeers such as Dave Beck and Jimmy Hoffa.

We all know that the overwhelming majority of our labor leaders and union members are honest, loyal Americans. But a small element in the labor-management field have fallen into the use of corrupt and strongarm tactics that are a disgrace to our free enterprise system.

Actually, the rotten apple in the labor barrel should have been removed long ago. The Congress was given a chance to take a long stride in that direction a year ago when the Kennedy-Ives anti-racketeering bill passed the Senate with only one dissenting vote but was choked off in the House by a cross-fire of propaganda from extremists on both sides of the issue—those who wanted no reform at all and those who wanted to use Dave Beck as an excuse to put a legislative shackle on the entire labor movement.

I believed last year, as I do now, that the overwhelming majority of the American people want legislation that is strong enough to put hoodlums like Hoffa out of business. On the other hand, the same Americans would be just as strongly opposed to the schemes of labor haters to destroy honest labor organizations. That is why as a member of the House Committee on Education and Labor last year, I did my best to secure passage of the moderate Kennedy-Ives bill.

Although I transferred from the Education and Labor Committee to the Committee on Agriculture this year, I have not lost my interest in effective labor reform legislation. Neither have I changed my belief that the public interest lies between the two extremes of either doing nothing or passing a bill designed to punish all labor, honest and dishonest alike.

For this reason, I again supported the position of moderation represented by legislation reported out of the House Committee on Education and Labor and sponsored by my respected colleague and friend, Congressman ELLIOTT, of Ala-

bama. To the left of this bill was a second bill backed by the AFL–CIO and introduced by Congressman SHELLEY, of California. On the right is the third bill now before us, backed by the National Association of Manufacturers and the U.S. Chamber of Commerce, introduced by Congressman LANDRUM, of Georgia, and GRIFFIN, of Michigan.

All of the men who have introduced these bills are respected, highly competent Congressmen who act in good faith. Actually, the Shelley bill and the Landrum bill are patterned after the Elliott committee bill in most of their provisions. All of the bills contain tough, effective machinery for cleaning out corruption, rigged elections and racketeering. The differences come on matters relating to the scope of the National Labor Relations Board, picketing, boycotts, and the "hot cargo" practice. Although the Landrum bill is virtually a copy of the committee bill in more than 80 percent of its language, it contains highly restrictive language and heavy penalties which many labor lawyers and Members of Congress sincerely believe would jeopardize legitimate collective bargaining. Robert Kennedy, the McClellan committee's able legal counsel has strongly backed the moderate Elliott committee bill as the most practical of the three bills.

Our distinguished and beloved Speaker, Mr. RAYBURN, who supports the committee's middle-of-the-road bill, put it this way:

> To cut out the cancer of corruption, we used a surgeon's scalpel instead of a butcher's cleaver.

Those of us who are doing our best to resist pressure from both sides and take a moderate position in support of the committee bill have been hit from both left and right. Quoting further from Speaker RAYBURN:

> Every time that Congress takes up the subject of labor-management relations, powerful interests move in and try to twist the legislation to give them an undue and unfair advantage in the age-old struggle between management and labor. Each side tries to shape the laws so that the Federal Government's great power will be put to work on its behalf in this continuing struggle for economic power. This is not right, for the Federal Government should serve as an impartial umpire between these great economic forces, seeking to maintain fair and free competition.

The man who has served as Speaker of the House longer than any other man in American history, speaking for those of us who support the committee bill, added:

> This middle road, the road of reason and fair play, is a hard one to walk, but more often than not it is the path of common sense and justice. When a bill is being fought by both Jimmy Hoffa and the labor haters, that, in itself, is a pretty good recommendation. * * * Let us reform without punishing. Let us cure without crushing.

Although I have preferred the committee bill, now that the Landrum-Griffin bill has been substituted, I am voting for this substitute measure on final passage.

It is essential that labor reform legislation be passed by the House. If there are errors in the legislation, let us hope that they can be corrected in the conference between the House and Senate versions of labor reform bills.

The important task for us to accomplish before the adjournment of this Congress is the passage of legislation that will set the power of the Federal Government against the racketeers without crushing legitimate collective bargaining and the rights of our working men and women.

While I have disagreed with some of my constituents who have written me on both sides of the labor reform issue, I believe these good people know that I am as sincere in my convictions as they are in theirs. I believe they know, too, that I will do the best I know how to cast my vote on the side of fair play for both management and labor and for the American people as a whole. I am most grateful for the fact that I have enjoyed the support of both labor and business, as well as the great farm population of South Dakota. I see no conflict between the best interests of all three of these basic elements of our economy, and I trust that my public record will be fair to each of them.

Trees Can Help Control Smog

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Thursday, August 20, 1959

Mr. ENGLE. Mr. President, almost everybody likes trees. And I am sure that everyone who lives in or near any of our large metropolitan centers hates smog. Yet it is possible, according to a novel scientific theory which has come to my attention, that by planting more trees and foliage we can reduce air pollution. The authority for this statement is Dr. Chauncey D. Leake, dean of the college of medicine of Ohio State University, who is the new president-elect of the American Association for the Advancement of Science.

Maybe that is one reason why we have a great deal less smog in Washington, D.C., than we do in Los Angeles. Both cities have great numbers of motor vehicles discharging large volumes of carbon dioxide and other contaminants into the atmosphere. Both cities have a share of foggy mornings. But humid Washington has a great many more trees and natural foliage than arid Los Angeles. You may recall that the mild smog spell we had here in the District in early June was dispelled before noon. If Dr. Leake's theory is proven correct by further scientific study, it could mean a great deal to many smog-plagued metropolitan areas which are virtually devoid of trees.

Dr. Leake gave a scholarly address on certain social aspects of air pollution at the national conference held in Washington last November. He recently has extended his point of view with the suggestion regarding the use of trees in fighting air pollution. An interesting article on the subject was published in the Oregon Statesman of Salem, Oreg. I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LET'S KEEP OUR BALANCE

(Chauncey D. Leake, Dean, College of Medicine, the Ohio State University)

Every great application of science carries its cost. Take the matter of transportation: Look how we have advanced from weary leg plodding, through oxcart and horse and buggy, to steam carriage and automobile, now to diesel engine, airplane, and jets. This tremendous advance has occurred within the last 50 years. It has revolutionized the world. But at a price.

The millions of automobiles, trucks, and airplanes, which we now have running all over the earth, burn up oxygen. This is a great danger. Oxygen has accumulated on the earth as a result of the photosynthesis of plants. In this process the carbon dioxide which accumulated during the days when volcanoes blew off all over the earth was converted by sunlight to sugar and oxygen. It is this oxygen that makes possible the land animals such as ourselves. We cannot live without oxygen, and we get in trouble if we produce too much carbon dioxide.

All modern transportation moves on combustion; that is, the burning of fuel with oxygen to produce carbon dioxide. Incidentally, a lot of other poisonous materials are produced also, but let's just stick to the carbon dioxide picture.

For millions of years the earth has been in a wholesome balance between oxygen and carbon dioxide: The plants use up the carbon dioxide that comes into the air from burning, or from the breathing of animals, and produce sugars and oxygen, so that animals can live. This is a very delicate balance. It is involved in maintaining the stability of weather. It is important in keeping just the right balance for heat capture from the sun and for the preservation of a balance in our water distribution, between the icecaps on the poles and the water vapor in the air. If this exquisite balance is disturbed, things can go bad.

We are disturbing this balance in a sudden and startling way. We are dumping tons of carbon dioxide, along with a lot of other poisonous material, into the air from the engines that run our automobiles, trucks, and airplanes. Meanwhile, we are also cutting down our trees, destroying our forest lands, and making deserts in our cities. We are in a fair way to get badly out of balance before we know it.

Carbon dioxide helps to build heat. With only a slight increase in the overall carbon dioxide of our atmosphere, we might add just that bit more heat that could upset our weather balance. Think what might happen if the polar icecaps were really to melt away.

Before it's too late, let's start planting trees. Certainly for every automobile we produce, we should have at least a dozen trees planted to take care of the carbon dioxide that we produce and to put back the oxygen that we need. For every truck, we need probably a hundred or more trees to keep the balance. For every airplane, and now for jets, we probably need several hun-

dred more trees. Let's start planting them; let's keep our balance.

Meanwhile, our cities are becoming more ugly, our landscapes are becoming more barren, our whole civilization is losing the natural beauty that belongs to all of us in the good regions of the earth. Let's get the trees back to preserve our watersheds, to give us the oxygen we need to breathe, to remove the carbon dioxide, dusts, and other poisonous material from the air, and let's get trees back into our cities to hide the ugliness of our buildings.

H. L. Mencken, that sharp-tongued Baltimore wit, wrote once, "On certain levels of the American race there seems to be a positive libido for the ugly * * * Here is something that the psychologists have so far neglected: The love of ugliness for its own sake, the lust to make the world intolerable." One has only to take a little stroll about any one of our big cities to see the ugliness we tolerate. Maybe our libido for ugliness is unconscious, but it certainly is there, or else we would try to bring some beauty into our cities.

This can best be done by trees. Trees can be planted and maintained along our main streets, in our business areas, in our commercial and industrial areas, as well as in our residential sections. We need lots more trees, green places and parks in our cities.

Even Vitruvius, the great architect under Augustus Caesar in ancient Rome, realized the value of trees. He indicated that they help to keep the air clean and fresh, and are more needed in the cities than they are in the country.

Trees would help enormously in our motor age. Planted along our highways they would relieve monotony and lessen fatigue; they restore natural beauty; and help maintain the roadside, particularly in the prevention of erosion and they are thus economical; they reduce noise, dust, and take out carbon dioxide from the air; they can effectively screen off the ugliness of industrial areas, and they can afford rest places for safety and recreation.

More importantly are trees needed in the cities. Here they can help in reducing noise and dust, in providing cool shade in the summer, and in hiding the ugliness of our buildings both in summer and winter. They give a refreshing look to our streets, and they can provide a lot of employment in connection with their care and maintenance.

Certainly if we are to preserve our balance in connection with our wasteful use of oxygen from the air, and with our appalling increase in the amount of carbon dioxide we are dumping into it, it can best be done by planting trees; at least 10 trees for every automobile, at least a hundred trees for every truck, and at least a couple of hundred trees for every airplane. This would promote beauty, stabilize our weather pattern, and help maintain our land in the beautiful natural way that we all enjoy.

Mrs. Helen Fleming Czachorski

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 20, 1959

Mr. DERWINSKI. Mr. Speaker, it is with a great deal of pride and inspiration that I call to the attention of the Members of Congress the achievements of a distinguished woman attorney in my district, Mrs. Helen Fleming Czachorski. Mrs. Czachorski is a unique and outstanding woman and I wish to take this opportunity to acquaint you with her background and qualifications.

Helen Fleming Czachorski was born April 27, 1828, in Buffalo, N.Y., the second of five children of Mr. and Mrs. Teofil Fleming. She was educated at Masten Park High School, Buffalo, and then entered Buffalo University, from whence she received her LL.B., the first female graduate of that university's college of law, in June of 1908. She was admitted to practice November 16, 1909, before the Supreme Court of the State of New York. Her first position was as an associate of Samuel Harris, later to become a judge of the Supreme Court of New York.

In 1914, she married Dr. John A. Czachorski of Chicago, Ill., and was admitted to legal practice in Illinois. In the same year she was elected attorney of the Polish Women's Alliance and remained general counsel of that national organization until 1936.

In 1941, Mrs. Czachorski was elected national president of the Polish Bar Association, being the first woman to hold said position. She was the founder of this association. She was also one of the founders of the Chicago Advocates Society, a local branch of the national group.

Mrs. Czachorski is unique in that she is believed to be the first woman of Polish extraction to be admitted to the practice of law anywhere in the world. It is also believed that she is the only mother associated in a law partnership with her sons. She and her sons, Eugene and John, have their law firm at 100 North La Salle Street, Chicago. Previous to this association, she was engaged in the practice of law with her brother, Edward E. Fleming. She was attorney for the Hegewisch Federal Savings & Loan Association, Hegewisch, Ill., for many years.

This most distinguished woman has been active in many civic, charitable, and professional organizations throughout the years. She is a member of Women's Bar Association, South Chicago Bar Association, Polish Women's Alliance of America, Polish Roman Catholic Union, Polish Welfare Association, Women's Auxiliary of Chicago Polish Medical Society, attorney for Polish Women's Alliance of America for 21 years.

Mr. Speaker, Mrs. Helen Fleming Czachorski is certainly a rare and outstanding professional woman and is truly deserving of all the civic as well as personal tributes that she will receive on her 50th anniversary of legal practice.

Hawaii Day in New Jersey

EXTENSION OF REMARKS
OF
HON. CORNELIUS E. GALLAGHER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 20, 1959

Mr. GALLAGHER. Mr. Speaker, Governor Meyner, our distinguished Governor of New Jersey, has proclaimed today Hawaii Day in New Jersey. I would like to join in the celebrations and extend a most joyous welcome to our new State.

I had the memorable pleasure and honor to participate in the vote for statehood for Hawaii in March. This was a living demonstration of democracy in action. It is proof of the vitality of the United States. It is the fulfillment of hope that we have long held out to the loyal people of Hawaii. The vote for statehood demonstrates that the United States offers more than the hope of freedom to the world. It is proof that the United States of America is synonymous with the word "freedom."

To my colleagues from our new State, I extend a most sincere welcome. May he find it as rewarding an experience as I have.

The Impact of Science on Our Society

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 12, 1959

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks, I should like to include an address which I delivered at the 96th commencement of Bryant College on July 31, 1959. The address is entitled "The Impact of Science on Our Society":

THE IMPACT OF SCIENCE ON OUR SOCIETY

(Address of the Honorable JOHN E. FOGARTY, Member of Congress from the Second District of Rhode Island, Veterans Memorial Auditorium, Providence, R.I., at the 96th commencement of Bryant College)

Gathered here this morning are several hundreds of young men and women who have successfully met another in the long series of challenges by which each human being is measured, from his first learned response to his last influence before or after his death.

Gathered here, too, are several thousands of men, women, and children for whom this commencement also signifies the successful meeting of a challenge. For the award of a diploma to an individual is not just tangible recognition of that individual's academic accomplishments; it is also, symbolically, recognition of the accomplishment of parents and loved ones who have given much of themselves in order that a new and potentially valuable member may be added to the family of man.

Bryant College has witnessed many occasions such as this. Thousands of students have studied here and, enlightened and enriched by the experience, gone on to productive, rewarding careers. For nearly a century, the college has been a source of pride to the community it serves by blending specialized education in business techniques and administration with the more general education required for useful citizenship in our complex and dynamic society. It has had the vision and courage to pioneer in educational methods and curriculum. Yet it has never lost sight of its primary mission: To educate the individual.

The educated individual is the key factor governing the strength and effectiveness of our democracy. The incredibly rapid sweep of events in the 20th century places a special responsibility on all of us, not only to keep abreast of our times, but in a sense to keep ahead of our times.

This is nowhere more evident than in the field of science. That is why I have chosen to share with you today some thoughts on science and its impact on society.

What image do you have in your mind when you think of the term "science"? Is it the picture of nuclear power for instruments of peace and weapons of destruction? Is it manned missiles encircling the earth or exploring the surfaces of the moon? Is it probing the depths of the ocean, the molecular structure of metals, the chemistry of the cells of the human body?

This is the kind of image most people have when they think of science. They endow science with qualities that tend to remove it from the society it serves—to set it apart as something mysterious and almost frightening in its potential for engendering sudden and unpredictable change in our way of life. In the same vein, scientists are commonly viewed as obsessively motivated, highly intellectual, socially naive individuals who spend their lives satisfying their intense curiosity to understand the phenomena of the world and the universe about them.

Such images tend to create barriers to public understanding of science, and public understanding is essential if science is to be an even more effective force for the achievement of goals that are set by society.

Textbooks tell us that the essence of science is the facts or principles or rules which are used to explain or hold together what man knows, and to help him discover what he still does not know. The abstract sciences deal with things that cannot be touched, like numbers or thoughts; the natural sciences deal with things in nature, such as men and stones and stars; and the human or social sciences deal with the way we think and act, alone or together. No mater how it is classified, however, science is characterized by what is known as the scientific method. And the application of the scientific method to the study of man and his universe has been a primary force directing and conditioning the growth of civilization as we know it.

It is easy for us today to look back over those relatively few years in which man on this planet has recorded his history and see how primitive science has evolved into modern science. The use of metals—the control of fire, the domestication of animals, the planting and harvesting of crops, the discovery of the wheel, the invention of written language—these were scientific accomplishments which had a marked effect on the subsequent history of mankind.

In the forward movement of science through the intervening centuries—movement associated with such names as Aristotle, Archimedes, Copernicus, Galileo, Kepler, Newton—there is evidence of a characteristic of science that must be understood by all of us who live today in a world that is rapidly becoming a scientific world. This characteristic is, if you will, the fallibility of science. It is the only source of knowledge whose truth can be tested by experiment. Its methods and results must be reliable or they are discarded. But what is called scientific truth is not, and must not be thought to be, always absolute and final. Often the information on which scientific conclusions are based is incomplete. Thus scientific knowledge is continually growing and continuously being revised. Science cannot answer, and it is not the answer to, all of the questions of society. It cannot tell all about man, where he came from or where he is going. It cannot tell all about the universe. And while we build and strengthen science because we expect it to build and strengthen our society, it is important that we recognize both the limitations of science and the dangers it brings along with its many blessings.

I shall not try to summarize the ways science affects our daily life. Directly and indirectly, it has made us richer—not only in material and technological miracles that are accepted as commonplace, but in leisure time, tools for study, and opportunity to create things of beauty. The tempo of scientific discovery in the 20th century has been incredibly rapid. All sciences have moved forward and literally hundreds of new sciences have been generated. Terms like supersonics, thermodynamics, plastics, biochemistry, nuclear physics and astronautics become meaningful parts of our vocabulary. And we invest heavily in programs seeking greater control of power, new forms of matter, freedom from hunger and disease. Yes, science is a dominant force in our society. Its evidences are everywhere—in our homes, in our industrial and agricultural economy, in our transportation and communications systems, in our communities, in our places of work and of learning. One has only to think of the ways science and scientific advances have influenced your own chosen field of business administration and practices to realize the extent to which science is interwoven into the total fabric of our society.

We tend to think of the product and influence of science in positive terms. But just as in the scientific process each major advance highlights other scientific problems that require solution, so the total forward movement of our scientifically oriented society is threatened by dangers which must be recognized and met.

Can we, for example, find ways to use for human betterment the powers that science has given us for weapons of destruction?

Can we use our advanced communications systems to achieve the kind of understanding that will lead to peace among the peoples of the earth?

Is there a solution for the situation which find some nations producing in excess of their nutritional needs while other nations are starving?

Although science can make nearly everything necessary for life out of certain raw materials, not all nations have a supply of these raw materials. Can we learn to share them so that no nation will have to go to war to win its share of needed substances? Moreover, there are just so many raw materials in the earth and no more. Can science find substitutes for old sources of energy before the earth's resources are depleted?

Can we find certain ways to protect ourselves against the environmental hazards and stresses that we ourselves have created?

Can we eliminate or bring under control the diseases that cause crippling and premature death?

Is there a way for society to manage its affairs so that everybody has an equal chance? Can economic and social and political forces learn how to avoid peaks and depressions in a total economy?

These are the kinds of challenges we face. Under a broad and comprehensive definition of science, they are scientific challenges—or, more precisely, challenges in the ultimate application of the scientific method.

Whether the challenges will be met is dependent upon man himself. Man lifted himself above the level of animals because he alone, of all the forms of life on earth, was able, by thought and work, to gain control over the forces of nature. He lifted himself from savagery and barbarism to civilization. This has not been a steady gradual process. Social organization and moral ideals have lagged behind the control over nature. We must use all of our talents and capacities to bridge the great gap that exists between the scientific accomplishments of man and his much less advanced social thinking and action.

This is one of the reasons why the individual and his education are of such critical importance today. For each individual member of our society is a precious resource, to be nurtured, challenged, and given every opportunity to make a contribution to the solution of the great and small problems that beset society as it moves ahead to meet—as I know it will meet—the challenges that lie ahead.

There are many ways in which the functions of an elected representative of the people to the Federal Government permit him to contribute to the achievement of the goals we all share. I, for example, have served the people of the Second District of Rhode Island for nearly two decades in the House of Representatives. There are three general ways in which that responsibility is reflected in my actions.

First, it is my responsibility to act for and on behalf of the people of my district. This means I must know them, their views, and their wishes, and faithfully reflect them on all matters of interest to my constituency.

Second, it is my responsibility to take an active and informed part in all matters of national and international consequence. In this sense, each elected representative serves the people of the Nation as a whole, as well as his own constituents.

Finally, it is my special responsibility to review and recommend appropriations for the activities of two departments of the executive branch—the Department of Labor, and the Department of Health, Education, and Welfare. This committee assignment gives me an opportunity to study in depth the work of many Federal agencies that have a direct and personal effect on the lives of all of us. Out of the complex of activities in these Departments, I have chosen to mention here today two that bear on my topic "The Impact of Science on Society."

Within the U.S. Office of Education, there has recently come into being a program which loans funds to brilliant young students in order to help them acquire higher education in the physical sciences. Called the National Defense Education Act and now in its second year, this program will help recruit and train a number of young people for careers in one segment of our Nation's total scientific endeavor.

While I gave my support to this program, and would do so again under the present circumstances, I know I will not be misunderstood if I say I wish it had not been necessary for this legislation to be enacted.

In the first place, such emergency programs are always less efficient and effective than the orderly and sustained growth in depth and in strength of the total educational system. A nation such as ours should be well able to afford a system of elementary, secondary, and higher education which would have the capacity routinely to meet our national needs; more than this, we cannot afford not to have such a system. But there are grave present inadequacies in our educational system—inadequacies which threaten to become critical deficits in the years ahead. Our educational facilities are being outdistanced by population growth and change. The salaries and other compensations for teachers are not commensurate with their services, and the teacher shortage becomes increasingly acute. And higher education is fast becoming out of reach for too many of our young men and women who should have an opportunity for such education.

The crisis in education is a local, State, and national problem. The public has a right to expect vigorous, enlightened leadership from Washington so that our full resources can be directed to its solution. I regret to say that such leadership has not been forthcoming. The administration has toyed

with the problem but has backed away from any affirmative action. As a result, little bits of the problem—like the special impetus to science education to which I just referred—have been touched. But the heart of the problem remains, and will remain until the people of the United States decide how much importance they attach to sound education and make their views known to their representatives in government at all levels.

A second scientific activity of the Federal Government with which I am closely associated is medical research. In this activity, I am happy to be able to report that the public interest is being well served. During the past 15 years, there has been gratifying and sustained growth in the Nation's investment in medical research, with about equal support from Federal and non-Federal sources. What began in 1946 as a spotty, uncertain program has emerged into a comprehensive, stable, productive effort of which every citizen can be proud. We are now able to provide for the needs of most of the competent scientists who have sound research ideas and work in an established research environment. At the same time, recognizing that investments in science are long-term investments, we have an active program for the advanced training of medical research scientists and another to assist in the construction of medical research facilities.

I am proud to say that my name is closely linked with that part of this effort which has Federal origin, particularly the National Institutes of Health, a bureau of the U.S. Public Health Service in Bethesda, Md. I have supported this program because of my deeply rooted conviction that the health of our people has a direct correlation with the strength, well-being, and productivity of our Nation—a conviction that has been borne out by the progress that has been made since we embarked on a renewed medical research activity after World War II.

There are all sorts of objective measures of the advances which have occurred when knowledge derived from medical research has been applied in medical and public health practice. There are increases in life expectancy. There are diseases that can be prevented, conditions that can be ameliorated or cured, lives that can be saved. In the health sciences as in the other sciences, an endless succession of ever more complex problems stretches out ahead. But we can be glad that we have taken and are taking and will take the necessary steps to assure that one by one, as scientific knowledge permits, the major health issues of today will crumble before the diversified and brilliant attack of our medical research workers. Perhaps not in my lifetime, but almost certainly in yours, we will see better ways to prevent or cure cancer, better ways to control heart disease, better ways to protect against and treat certain of the mental illnesses.

It is this thought—this awareness of the intimate relationship between medical research and the people's health, and between science and the fulfillment of man's total aspirations—that I would leave with you today.

You who are being honored here for the completion of your work at Bryant College have essential roles in our complex world of tomorrow. Science has made all of us world citizens. It has enlarged our spheres of activity so that neither we, our community, nor our Nation can be in fact separate or independent. This places a high premium on the responsibility of society to provide an opportunity for each of its individual members to reach his full potential. And it emphasizes the responsibility of the individual to use his full potential for the betterment of the society of which he is a part.

To you who are graduating from this fine institution—best wishes in whatever you do in the years ahead. You have been well educated here. Use your education.

To your parents and friends who have come here this morning because they love you, are proud of your accomplishment, and would not willingly be anywhere else when you are being singled out for recognition—to them, congratulations for a different kind of accomplishment, a kind you will understand better when it is your sons and daughters who are graduating from college.

To those who administer and instruct at Bryant College—a special word of gratitude. There is no finer contribution that an individual can make than to educate.

And to all of you—students, parents, staff, and friends—may I convey the abiding respect and confidence that is shared by all who have reason to know Bryant College and its graduates. The people of Providence and of Rhode Island are proud of Bryant's long and distinguished service and are proud, too, that it is numbered among this little State's large family of educational institutions.

I am sure that those who are graduating today will do honor to Bryant College as, in their work and in their daily lives, they reflect what they have learned here.

Plaudits to Bob Murphy

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Pittsburgh Press of Sunday, August 16, 1959:

PLAUDITS TO BOB MURPHY

Robert D. Murphy has been sworn in as Undersecretary of State for political affairs—making him No. 3 man in the Department, after Secretaries Christian Herter and Douglas Dillon.

This is belated recognition of an extraordinarily competent diplomat who has been a career officer for 39 years. Bob Murphy has been aptly called Uncle Sam's favorite troubleshooter.

Warships and tough infantry regiments have a tradition of inscribing on their quarter decks or battle flags the names of all engagements in which they have participated. If Bob Murphy were to attempt such a roster, it would be longer than both his arms, North Africa, Trieste, Tokyo, Lebanon—to name just a few—and everywhere he has been sent he has left a good measure of tranquillity wreathed in his broad Irish smile.

When Mr. Murphy won this year's Notre Dame Laetare Medal for achievement he was accorded the usual privilege of selecting a Latin epigram for inscription on the medal. Characteristically, he chose Martial's "Ride, si sapis"—"Laugh if you are wise."

Wise, good humor has been his redeeming safeguard in the countless crises and emergencies of foreign affairs he has faced. He is not likely to relinquish his motto now in his higher post and it will stand him in good stead.

Full Steam Ahead on the Arkansas River

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 20, 1959

Mr. EDMONDSON. Mr. Speaker, this week the Congress sent to the President the public works appropriation bill for the 1960 fiscal year, following adoption of the conference report by the House last Friday and by the Senate on Monday. This action is another momentous and historic milestone in the development of the Arkansas River Basin program of navigation and flood control—for appropriations in excess of $45 million are included for this great program for the last major undeveloped river in the United States.

Under this bill, construction funds are provided of $13.4 million for the Eufaula Dam on the Canadian River in McIntosh County, Okla.; $12.5 million for the Oologah Dam on the Verdigris River in Rogers County, Okla.; $10 million for the Keystone Dam on the main stem of the Arkansas River near Tulsa, Okla.; $3.4 million for the Dardanelle Dam in Pope and Yell Counties, Ark.; and $5 million for Arkansas River bank stabilization work in Arkansas and Oklahoma. The John Redmond—Strawn—Dam on the Grand—Neosho—River in Coffey County, Kans., will receive $1.3 million in construction funds. Also included in the bill is $2.5 million for recreational facilities at completed Corps of Engineers projects in the United States, and it is expected that more than $150,000 of these funds will be spent for recreational facilities at completed projects in the Arkansas Basin during the coming year.

In addition, the sum of $900,000 is provided for general engineering studies by the Corps of the Arkansas River and its tributaries—something of basic importance to the entire program.

In this connection, one of the finest and most thought-provoking speeches I have ever read concerning the Arkansas Basin program was made by Brig. Gen. William Whipple, Southwestern Division Engineer of the U.S. Army Corps of Engineers, when he spoke to the Rotary Club at Pine Bluff, Ark., on August 4, 1959.

Mr. Speaker, since General Whipple's speech was a most excellent and detailed analysis and report on the progress of the Arkansas Basin program and since it should be of great interest to every American who is deeply interested in the development of our national water resources, I should like to insert this most informative speech in the RECORD:

REMARKS OF BRIG. GEN. WILLIAM WHIPPLE, DIVISION ENGINEER, U.S. ARMY ENGINEER DIVISION, SOUTHWESTERN, DALLAS, TEX., TO THE ROTARY CLUB, PINE BLUFF, ARK., AUGUST 4, 1959

It is a pleasure to be with you in Pine Bluff. You already have a fine city here and the Arkansas River program should give you

an even better outlook for the future. Mr. Sanders has long been a prime mover in this undertaking and other citizens have joined with those up and down the valley to present a solid front on this far-reaching improvement. Senator MCCLELLAN, with the great respect accorded him across the Nation, continues to maintain the development of the Arkansas River as a prime objective and, rather than letting the increasing scope of his responsibilities dim his enthusiasm for this program, he applies his enormous prestige to bring progress to this basin.

We have well qualified district engineers in Colonel Jacoby at Little Rock, Colonel Walsh at Vicksburg, and Colonel Penney at Tulsa, along with experienced staffs, to carry on this challenging task. As you know, General Carter, with offices in Vicksburg, has responsibilities for the Arkansas from this point downstream. I feel most fortunate in having a man of his capabilities and an old friend and classmate besides as a teammate on this important work.

Reviewed in its simplest terms this entire project will provide barge navigation from the Mississippi River to Tulsa, a considerable degree of flood control, hydroelectric power, channel improvements, bank stabilization, improved low flows, reduction of sediment in the river, recreation oportunities and the general advantages of a controlled and developed river basin.

This will be brought about by three major storage reservoirs in the upper reaches of the integrated system, a series of navigation dams, on the main stem, cut-offs, dredging and other channel work, dikes and revetments.

The Keystone Reservoir, on the main stem above Tulsa, and the Eufaula Reservoir, on the Canadian River near its confluence with the Arkansas in eastern Oklahoma, are critically important to the whole system. These reservoirs, although they only control one-third of the stream flow above Dardanelle, control three-quarters of the sediment. It is necessary to cut off this source of sediment before we could close the downstream dams and initiate the final adjustment of the river. Closure of the Dardanelle project is not to be made until after closure on Eufaula and Keystone, in 1964, which is phased in with the overall completion date of 1972 which we use for planning purposes.

The Keystone Reservoir is reaching the point where progress will begin to show. Relocation of highways, railroads and utilities, which will constitute more than half of the $135 million cost of this project, are well underway, as is the construction of the first stage cofferdam. In all, almost $5 million in construction contracts are in effect, in addition to the work already accomplished on access roads, project buildings, land acquisition and much time-consuming planning and engineering. However, best of all, we are now in a position to advertise the first of next month for a major contract for the main dam itself, a contract of the order of $25 million.

The Eufaula Reservoir is similar to Keystone, except that it will have an initial power installation, and as yet has less construction under contract. It will cost $153 million. Bids for the three generators will be opened August 13. We expect to advertise a principal dam contract about November of this year. Completion of this project, as well as Keystone, is scheduled for 1965.

The Oologah Reservoir, a $35,100,000 project in northern Oklahoma, is further advanced, with a completion date of 1962. It will regulate flows on the Verdigris River which the navigation channel will follow from Muskogee to the vicinity of Tulsa.

The Dardanelle Dam, with which you are probably more familiar, will function for navigation and hydroelectric power and is necessarily scheduled for completion later than the storage projects upstream. Except for this lock the project will be completed in 1966; the lock will be completed in 1970. Its total estimated cost is $94,600,000. On my way to Pine Bluff this morning, I inspected the work under the $3 million contract which got underway in May. This contract is for the first stage of diversion of the river and the initial construction on the lock and dam proper. Because there was a considerable period of uncertainty in the early stages of this program, I know that many of the proponents were greatly encouraged by the fact that this contract included part of the navigation lock as well as the left bank portion of the dam. This was interpreted as conclusive evidence of the inclusion of navigation in the program under construction. There is in my own mind no doubt that navigation and all the other functions of the multipurpose program have been directed and confirmed by the Congress, and will be completed successfully at an early date.

Some indication of the growing impetus of the program is given by the appropriations being considered this year. Based on the House version of the bill, $44,200,000 will be included for the various elements of the work. Last year $30,230,000 was allotted and the year before $13,950,000. Even if the House versions are adopted, it will make a total of $124,300,000 which has been provided for this program. While the entire improvement will cost about $1.2 billion, the funds appropriated and in prospect for this year leave no doubt in our minds that this is a going program, and our only thought is to prosecute the work with all vigor. This is an answer to those who thought that Congress might never appropriate funds to complete this work.

The breakdown of the House figure for this year is $900,000 for general studies, $3,400,000 for Dardanelle, $13,400,000 for Eufaula, $10 million for Keystone, $12,500,000 for Oologah, and $4 million for bank stabilization. By districts the bank stabilization funds are $1 million for Vicksburg, $1,300,000 for Little Rock, and $1,700,000 for Tulsa. However, the Senate figures are $8 million for bank stabilization, which we can very well use.

I consider it good fortune to have been assigned to the southwestern division last year, at the time when some of the most interesting engineering questions in water resources development history were coming up for solution. There is a tendency to think of imposing structures as the most challenging for the engineer. The Arkansas River program includes the Eufaula Dam, which will produce hydroelectric power and form a very large reservoir, but the structural problems of this and other individual structures are routine compared with the interrelated complex of channel problems. I will say without qualification that the problem of how to develop the Arkansas River mainstem has been the outstanding engineering question in the entire southwestern division for some time past. One of the first things I did as coordinator for this multipurpose Arkansas project was to set up a sediment board, made up by three distinguished engineers, Dr. L. C. Straub, of the University of Minnesota; Dr. H. A. Einstein, of the University of California; and Mr. D. C. Bondurant, of the Missouri River Division of the Corps of Engineers. As an indication of the importance which I attach to this matter, I participate personally in all meetings of the board. The studies of the board are coordinated with studies in the district and division offices and with model studies at hydraulic laboratories.

Nature sets up a delicate balance in the regimen of a stream. Many forces are joined together to establish the pattern and changes in the various forces alter the pattern. Because there are so many factors involved and there are possibilities for so wide a range of change in each, it is difficult to talk about the subject without getting into technical terms. Yet, because it is such an interesting subject and means many millions of dollars in this program, I will discuss it with you today. Since your interest is in the essentials rather than in technical analysis, I will resort to oversimplification to some degree.

There will be basic changes in the regimen of the river in any event. After the multipurpose reservoirs are in operation, there will be less severe and less frequent flooding and there will be better sustained low flows. The reduced sediment loads will be carried more uniformly rather than being scooped up in great quantities by quick rises and dumped in bars by rapidly falling stages. While changes in the channel characteristics of the Arkansas are inevitable, their nature and the amount of time required to complete them are subject to some degree of control. The objective is to balance out the most economical combination of final river and structural characteristics.

If the bed of the river were to remain unchanged, the problem would simply be one of spacing the dams close enough to build up navigable depths throughout each navigation pool. These dams must not be built high enough to inundate appreciable amounts of productive land, so that the top evaluations of the dams are relatively fixed and any flexibility must come in spacing the dams and in changing the bottom elevation of the channel. We know that the regulated flows with greatly reduced sediment load will cause eventually considerable degradation in the streambeds. This natural effect, called degradation, could attack the banks and undermine our structures if not controlled; our problem is to make it work for us instead of against us.

If the new regimen of the Arkansas can be made to dig a deeper channel and keep it relatively clean, the necessary depths for navigation can be created with dams spaced further apart. This would result in fewer dams, fewer lockages for navigation and less operating cost.

The best way to make the river work for us is a two phase program. As a first phase, starting now, we will expedite the bank stabilization and contraction works which have already been advanced some way under emergency authorities. I testified to the congressional committee this spring, and I repeat to you now, that there are sound engineering reasons to get on with this work. By contracting and realining the channel now we have exactly 5 years, and that is none too much, prior to closure of Dardanelle, to complete the major portion of the work with the full natural supply of sediment, which helps us close the old chutes and meanders. After closure of Dardanelle and the upstream reservoirs, the regulated stream will rapidly scour itself deeper. In the first 2 years' time, with average stream flow, the changed river will scour out and remove from 40 to 50 million tons of sand; and if we have done our work well, a large part of this scour will be in the parts of the river where we want it to be removed.

We can then move to the second phase of the work. We will excavate, by dredging, the remaining sand in the upper depths of the pools, anticipating the further scouring of the bed which would take years if we had to wait for it. This will mean many millions of cubic yards of dredging, in fact a really major dredging program, but its cost will be much less than that of the dams which it will make unnecessary.

How can we know that the excavated channel will not fill up again after passage of the first flood?

The answer is that it would do just exactly that except for one thing—we will plan the final stabilization works so as to increase the degree of contraction in the upper ends of the pools. With a relatively slight degree of contraction, and some special features at the river crossings, the contracted channel will increase the velocity enough to hold the new condition with reasonable maintenance. It appears that, compared with previous tentative plans, we may be able to reduce the number of navigation dams between here and Dardanelle from seven to five and possibly one less above Dardanelle. The Tulsa district has already planned to reduce two dams in Oklahoma. Also General Carter is considering the possibility of eliminating one downstream from here in his reanalysis of that section of the river. These various possibilities could have considerable effect on overall costs. Just because we will be spending more than a billion dollars on this program, we have not become unmindful of economy. There is the possibility of saving many millions of dollars and producing a superior system.

I have talked primarily about channel slopes, but there are important and related questions with regard to the trace of the channel. We are studying certain new forms of channel contraction expecially for the crossings. I will not go into these today other than to say that contraction works and all other means of controlling the river must result in economical improvement of the resource before we are willing to adopt them.

We have had constructed at Vicksburg a new movable bed model reproducing 11 miles of river between here and Little Rock, and we will test in this channel in the next few months all the new plans for channel improvement which I have been talking about.

In this rosy picture of future progress there are still three big question marks. The first is the question as to whether we will satisfactorily complete the general engineering studies for which we were given $900,000 last year and again this year. This is a large amount of money; but the problems to be solved were many and complex. I believe we will complete these studies satisfactorily and on time, and produce the necessary complete solutions, including those of which I have today suggested as scheduled, of the first low-head navigation locks and dams.

The second big question is money. The appropriation indicated for this year is the largest so far and will allow fine progress. Up to now we could not have used larger appropriations except for limited features of the work. However, beginning next year and for some years thereafter, very much larger appropriations will be required if the program as a whole is to be completed as scheduled. Appropriations at the next session of Congress will therefore be of critical importance in indicating whether the work will continue with maximum economic speed for completion in 1972 or will taper off to slower progress.

The third big question mark, and I know how keenly you are interested in it, is the decision as to whether we should follow the river route or the North Bank Canal route between Pine Bluff and Arkansas Post.

As you know, a complete restudy of this entire problem has been made. I told the congressional committee this spring that I expected this question to be resolved before next year's hearings. While this matter has to be referred to the Chief of Engineers personally, I believe we will have an answer this fall.

While the corps has been concentrating on the engineering problems, we remain acutely aware that the end objective of all this work is to make the resources of the Arkansas Valley more useful to its people and the Nation. In the broader objective there is much to be done beyond the construction of river control works. Every element of Government, every unofficial organization concerned with economic advancement, and every individual with an interest in a more abundant way of life—all of us throughout the basin in each of our capacities have a stake and a responsibility in this great undertaking.

The controlled river will give you new advantages on a year-to-year basis within the present economic structure of the region. However, if this improvement is to be put to full use, you must visualize in full your new opportunities. Recreational possibilities seem more significant when considered in the light of the great national wave of interest in outdoor life. The level pools of the new dams will provide excellent water for boats. The fish and wildlife aspects of the river will be enhanced by the reduced sediment content of the water. The system will add a useful increment of hydroelectric power to the systems serving the region. The additional flood control will give new security to both urban and rural areas. The bank stabilization program will not only protect the navigation channel but will eliminate an imminent threat to many thousands of fertile acres up and down the valley, and make the protected banks more attractive as potential sites for industry. The improved low flows will offer more dilution for the urban and industrial wastes that offer a serious problem in many rapidly growing areas. The reduction in sediment will facilitate potential use of the water of the Arkansas for many purposes. Without looking too far into the future, the Arkansas Valley has a great deal to offer to new industries which must have water and waterway facilities.

Two-thirds of the benefits of the Arkansas River program are estimated to come from navigation. Water transportation can be a magnet with an active force to attract a new pattern of expansion. Barge transportation is making a phenomenal gain; in the 5 years ending with 1957 there was an increase of 22 percent in tonnage on the inland waterways of the United States. The Arkansas ties directly into the Mississippi River system, which almost doubled the national increase during the same period. I cannot say right now just how Pine Bluff will profit from this navigation; but I urge that you gentlemen get to work to evaluate the business opportunities that may appear.

This is an impressive package of new opportunities coming your way. Let me urge that you examine them and plan your course to take the best advantage of them. I would not suggest that you expect the basin to be suddenly transformed overnight, but neither would I suggest that you prepare to preserve the status quo. I have every confidence that you will pursue a sound course to a greater era in the Arkansas Valley. With you, as with us, it's full steam ahead on the Arkansas.

The Khrushchev Visit

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 3, 1959

Mr. McGOVERN. Mr. Speaker, we are soon to be visited by one of the most powerful men in modern history—Soviet Premier Nikita Khrushchev. It is of the utmost importance that while we are greeting Khrushchev, we also maintain our perspective on world affairs.

The hard job of building the peace of the world will still be ahead of us, regardless of Mr. Khrushchev's recent smiles.

I agree with President Eisenhower that Khrushchev should be treated courteously, but I know the President does not want us to close our eyes to the menacing threat of communism. Certainly, our international problems will not disappear overnight simply because Khrushchev has decided to visit us.

Mr. Khrushchev is the same ruthless dictator who ordered Russian tanks to smash the Hungarian freedom movement. He is the same tyrant who presides over a godless tyranny that no true American can ever tolerate.

While we have enough faith in our democracy to be courteous even to those whose doctrines we despise, we want to make it clear that beneath our courtesy our sense of justice cries out against the evils of Communist tyranny.

It is far better that we talk to Khrushchev than get into a nuclear war with him, but peace cannot be built simply on well-publicized trips between Moscow and Washington.

It will take all the patience, courage, and imagination that we can muster for decades to lay the basis for a durable peace.

Modern Army Readiness Through Research

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. BROOKS of Louisiana. Mr. Speaker, Lt. Gen. Arthur G. Trudeau, Chief of Research and Development of the U.S. Army, delivered such a striking and timely address to the annual meeting of the Association of the United States Army on August 4, 1959, at the Sheraton Park Hotel, Washington, D.C., that I am extending this address into the CONGRESSIONAL RECORD. General Trudeau, in statements that permit him to use vision and foresight, outlines the developments of the future U.S. Army in an age of scientific progress and space development. In such an address oftentimes scientific developments seem weird and chimerical, but in the light of progress, what may be exotic today is commonplace and ordinary tomorrow.

The address of General Trudeau is a challenge to the forward-looking personnel in the U.S. Army and certainly is worthy of our most careful study. It is as follows:

MODERN ARMY READINESS THROUGH RESEARCH

(Remarks by Lt. Gen. Arthur G. Trudeau, Chief of Research and Development, Department of the Army, annual meeting of the Association of the United States Army, Sheraton Park Hotel, Washington, D.C., August 4, 1959)

Members of the Association of the United States Army, ladies and gentlemen, the Research and Development Panel is delighted to be your host this morning to discuss with you the contribution of research to the modern Army. This is a most challenging subject at a time when science and engineering are striving to fashion new advances in power, electronics, and space while the sinister shadow of a godless, powerful opponent reaches across the oceans and the continents.

Since all of the panel members may not be familiar to you, I would like to introduce Dr. James McRae, Chairman of the Army Scientific Advisory Panel and vice president of A.T. & T.; Maj. Gen. August Schomburg, Deputy Chief of Ordnance; Mr. Tom Morrow, group vice president, Chrysler Corp.; Col. Robert Partridge, Headquarters, CONARC; and Sfc. Joseph Conroy, Headquarters, CONARC.

Our program today consists of my brief report to you on the overall Army research and development program and then answers by the panel to questions from me and from you, the audience.

Army research and development has the objective of providing effective weapons and equipment for the future Army organizations and requirements.

This objective is accomplished first by designing future weapon systems and materiel in support of our concept of new organizations and tactics, from known enemy capabilities and from our own sicentific breakthroughs and technological progress or "state of the art." Then we must be able to integrate the weapons, organizations, and missions to test and insure their effectiveness for predicted combat missions. The result is a continuing effective force to meet any future enemy threat.

I cannot emphasize too strongly that we must know the enemy. We must know what he is developing in weapons and equipment and exactly what his military capabilities are. We cannot risk basing our national defenses on his supposed intentions.

We must not forget why our strength must be maintained in the free world today. The Communist threat has increased immeasurably since World War II. They have conducted a relentless campaign to nibble the peaceful countries of the world to death—piecemeal.

Their intention is to dominate all the nations of the earth and they are coming close to having the means to accomplish their objective. Where once only America possessed the power of massive deterrence, today America and the Soviet Union share this mutual massive capability. Either side can well nigh destroy the other. With this situation in effect, Soviet air and naval capabilities coupled with the superiority of the Soviet bloc's military land forces over ours are a matter of grave concern and Soviet control of space would make this power overwhelming.

Within the framework of this Communist threat, the Army must develop the weapons and equipment to win in battle—the means to move, shoot, communicate, and defend ourselves regardless of enemy aircraft or missiles; to close with enemy ground forces and destroy them if forced into war and then to occupy the enemy homeland pending the establishment of a free government, and thus to control the land. Despite conflicting theories of strategy, I know of none brash enough to maintain that hostile or contested territory can be controlled in absentia.

Let us turn from the threat, to the Army research and development program which is my special responsibility on the Army General Staff. The scope of this research and development mission covers an extremely wide spectrum of developments and we feel our responsibility very keenly whether we are seeking better mobility, communications, firepower or logistical support. Let me review a few points:

Why is research and development important? Because it determines the future weapons and equipment that soldiers will use in combat. I have mentioned the type of threat that we can continue to expect and I would now like to describe the rest of the environment that determines the direction of our developments.

The battlefield of the next decade will be much larger than ever before and with even less clear-cut boundaries between units. Real mobility will be the key to success and combat units will move fast, concentrate to destroy the enemy, and then disperse rapidly. Soldiers will move in aerial vehicles just above the "nap" of the earth and carry with them new types of lightweight but potent weapons using not only conventional ammunition but also atomic rounds. Communications will be increased by new radios and relay systems using the latest techniques of earth satellite transmission and of bouncing signals off the moon.

Science and technology are other prominent factors in the research and development equation. Our basic research program continues to investigate the latest discoveries and inventions so that they can be integrated into the development part of the program which results in the hardware that rolls off the assembly lines of industry. We contract basic research out to industry and some 181 colleges and universities. Ten major fields and 74 subfields are covered from mathematics, human factors and medical projects to polar and arctic research. We will continue to stress this type of work because without it there would be little future development. As a matter of fact, our technological progress today is the chief determinant of the state of the weapon art during the next decade and beyond. We need to expand our basic research in the present technological race with the Communists.

What are some of the more promising results of this program that we can expect to see incorporated into future equipment? New metals with amazing characteristics have been created under extremes of temperatures and pressures. They promise to open a whole unexplored field of alloys that will be stronger, more heat resistant and lighter than anything else that we know of today. Missiles, space vehicles, and even tanks will benefit from such advances. Electronics is another field that has seen a quantum jump in the last 10 years and can be expected to surge beyond the boundaries of our imagination in the next 2 years. Electronic parts have been reduced in size through micromodularization so that instead of 7,000 parts per cubic foot we can put 700,000 parts in the same space. Applications of solid state physics have resulted in radios and electronic computers of miniature size that can perform all manner of operations to enable information to be gathered more quickly and accurately in combat.

The next step in the cycle is what we call applied research and development. The results of basic research are incorporated into weapons or equipment designed by the industrial engineer guided by the requirements of the military. This has resulted in a large spectrum of developments in the fields of mobility, communications, firepower, space and those designed to support the individual soldier.

We have some interesting vehicles under development to give us the mobility that we require for the future battlefield. On the ground we look to the "Goer" type of equipment used in the construction industry, where large wheels and tires give true, off-road mobility. New tanks and armored personnel carriers are to be operational soon to back up the striking power of powerful new weapon systems.

In the air we are looking for the type of vehicle that gives us the takeoff and landing characteristics of the helicopter and the advantages of the fixed-wing aircraft in forward flight. You have probably seen pictures of some of our flying test beds that look like disks or platforms propelled by unusual powerplants. These are the vehicles that will give us the answer to flying low and slow and quietly just above the battlefield.

Communications and electronics have enabled the Army to increase its command and control capabilities to the degree required by mobility and dispersion. Included in this area, also are the surveillance drones that will penetrate enemy lines to send or bring back information recorded by radar, infrared, photographic and TV equipment. This information will then be sorted and evaluated by automatic data processing systems to give the commander the facts needed for a decision.

Firepower is always a critical part of our programs. We have improved rifles and other small arms soon to be operational that outperform anything we have now and still better ones are in the offing. Many types of guided missiles are under development to supplement or replace those that we have now. For instance, Sergeant will replace Corporal and Pershing will replace the workhorse of our missile arsenal, Redstone. In addition, Lacrosse units now being organized will back up frontline infantrymen. These are all surface-to-surface weapons fired at ground targets.

The Army has an important mission in the air defense field, as you undoubtedly know. We have under development a shoulder-fired missile, called Redeye, for the soldier to use against attacking aircraft along with the field mobile Hawk missile to be employed against low flying aerial targets. Probably our most important contribution in the future will be Nike-Zeus, the only weapons system presently designed to attack incoming ballistic missiles. We have just successfully fired the sustainer rocket motor for this missile and are now approaching the testing stage of the complete system. In the near future we hope to fire it against our own IRBM's and ICBM's to establish its effectiveness for the air defense of our country. There is an urgent requirement for such a weapon while we are faced with the ballistic missile blackmail of the Communists. We are confident that Nike-Zeus can do this job in the 1960's.

Another thought-provoking addition to our arsenal is in the chemical field. If the Communists ever use chemicals with which they are equipped against us, we must be prepared to meet such an attack. On the other hand, recent tests with nonlethal gases have shown the really humane nature of such a weapon that incapacitates without killing, even leaving no harmful aftereffects on humans or the works of man. This is certainly an advantageous way to capture an objective without destroying needed buildings, bridges and other manmade structures.

The Army's contributions to the national space program have been substantial and we have enjoyed a good share of success in our projects for the National Aeronautics and Space Administration and the Advanced Research Projects Agency. Probably the most noteworthy of these were the space probe last March, still orbiting the sun as I stand here now, and the recent flight of the monkeys in a Jupiter missile. We look forward to participating in the Mercury astronauts' trips in space and to launching more satellites and other experiments in the future.

There is one other area that I assure you we are most concerned with. And that is with the most important factor of any battlefield at any future time—the soldier. We firmly believe that the man on the ground, well trained and well led is the key to success and still is the most necessary and most fundamental part of our national military posture. He is the man for whom we hope to develop new methods of preserving foods by radiation, requiring no refrigeration; for whom the Medical Corps has developed a "bone glue" that will enabel a soldier with a broken leg to walk out of the hospital in 48 hours; and to whom we are constantly striving to give every possible advantage in future combat so that he can perform his vital missions.

I have covered the research and development program in view of the Army staff responsibility and by describing some of the more promising results. At the same time I have deliberately omitted parts of the complete cycle which goes from the concept of the idea to production of the proven, finished hardware. The role of science, of the technical services, of industry and of the using troops is an interrelated one and essential to the accomplishment of the research and development objectives.

At this time I would like to begin the panel discussion with a series of questions intended to amplify the complete research and development cycle. After my question to each panel member, I will open the discussion to the floor before we move on to the next member. After the entire panel has had a chance to discuss their areas of interest and experience, general questions of a pertinent nature may be directed at any of us. Remember that anything that is said by the panel this morning will be on an unclassified basis, and we would appreciate that your questions be asked along those lines.

DAV Service in Washington

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 20, 1959

Mr. TOLLEFSON. Mr. Speaker, it has come to my attention that an organization in the State of Washington has furnished service to thousands of citizens without any charge for such service. This service is of a humanitarian nature and not always sufficiently appreciated by those who have benefited thereby, either directly, or indirectly. This organization is a congressionally chartered veteran organization which has a State department and local chapters in Washington. This organization is the Disabled American Veterans. The Disabled American Veterans is the only such organization composed exclusively of those Americans who have been either wounded, gassed, injured, or disabled by reason of active service in the Armed Forces of the United States or of some country allied with it during time of war.

The Disabled American Veterans was formed in 1920, under the leadership of Judge Robert S. Marx; DAV legislative activities have benefited every compensated disabled veteran. Its present national commander is another judge, David B. Williams, of Concord, Mass. Its national adjutant is John E. Feighner, of Cincinnati, Ohio. Its national legislative director is Elmer N. Freudenberger; its national director of claims, Cicero F. Hogan; and its national director of employment relations, John W. Burris—all located at its national service headquarters at 1701 18th Street NW., Washington, D.C.

Inasmuch as less than 10 percent of our country's war veterans are receiving monthly disability compensation payments for service-connected disabilities, some 2 million, the DAV can never aspire to become the largest of the several veteran organizations. Nevertheless, since shortly after its formation in 1920, the DAV national headquarters, located in Cincinnati, Ohio, has maintained the largest staff, of any veteran organization, of full-time trained national service officers, 138 of them, who are located in the 63 regional and 3 district offices of the U.S. Veterans' Administration, and in its central office in Washington, D.C. They have ready access to the official claim records of those claimants who have given them their powers of attorney. All of them being war-handicapped veterans themselves, these service officers are sympathetic and alert as to the problems of other less well-informed claiments.

The three DAV national service officers in the State of Washington are Perry E. Dye, David H. Kays, and David W. Lloyd, located at 803 Shafer Building, 523 Pine Street, Seattle. The department commander is Harold Yager, 5606 44th Avenue SW., Seattle, Wash.; the department adjutant is Merle Dihel, 3235 62d Avenue SW., Seattle, Wash.

The 5 hospitals in Washington are a 904-bed neuropsychiatric hospital at American Lake; a 320-bed general medical hospital at Seattle; a 501-bed general medical hospital at Vancouver; a 200-bed general medical hospital at Spokane; and a 407-bed tuberculosis hospital at Walla Walla. DAV representatives are: American Lake, Homer L. McLaughlin; Seattle, A. R. Thompson; Spokane, James W. Reed; Vancouver, Otto Weise; Walla Walla, Harvey Knifong.

During the last fiscal year, the VA paid out $85,488,000 for its veteran program in Washington, including $22,557,003 disability compensation to its 28,906 service-disability veterans. These Federal expenditures in Washington furnish substantial purchasing power in all communities. Only about 12 percent—3,312—are members of the 29 DAV chapters in Washington. This 12 percent record is strange, in view of the very outstanding record of personalized service activities and accomplishments of the DAV national service officers in behalf of Washington veterans and dependents during the last 10 fiscal years, as revealed by the following statistics:

Claimants contacted (estimated)	54,090
Claims folders reviewed	45,075
Appearances before rating boards	26,452
Compensation increases obtained	4,118
Service connections obtained	2,039
Nonservice pensions	1,936
Death benefits obtained	599
Total monetary benefits obtained	$2,686,638.05

These above figures do not include the accomplishments of other national service officers on duty in the central office of the Veterans' Administration, handling appeals and reviews, or in its three district offices, handling death and insurance cases. Over the last 10 years, they reported 83,611 claims handled in such district offices, resulting in monetary benefits of $20,850,335.32, and in the central office, they handled 58,282 reviews and appeals, resulting in monetary benefits of $5,337,389.05. Proportionate additional benefits were thereby obtained for Washington veterans, their dependents and their survivors.

These figures fail properly to paint the picture of the extent and value of the individualized advice, counsel and assistance extended to all of the claimants who have contacted DAV service officers in person, by telephone, and by letter.

Pertinent advice was furnished to all disabled veterans—only about 10 percent of whom were DAV members—their dependents, and others in response to their varied claims for service connection, disability compensation, medical treatment, hospitalization, prosthetic appliances, vocational training, insurance, death compensation or pension, VA guarantee loans for homes, farms and businesses, and so forth. Helpful advice was also given as to counseling and placement into suitable useful employment—to utilize their remaining abilities—civil service examinations, appointments, retentions, retirement benefits, and multifarious other problems.

Every claim presents different problems. Too few Americans fully realize that governmental benefits are not automatically awarded to disabled veterans—not given on a silver platter. Frequently, because of lack of official records, death, or disappearance of former buddies and associates, lapse of memory with the passage of time, lack of information and experience, proof of the legal service-connection of a disability becomes extremely difficult—too many times impossible. A claims and rating board can obviously not grant favorable action merely based on the opinions, impressions, or conclusions of persons who submit notarized affidavits. Specific, detailed, pertinent facts are essential.

The VA, which acts as judge and jury, cannot properly prosecute claims against itself. As the defendant, in effect, the U.S. Veterans' Administration must award the benefits provided under the laws administered by it, only under certain conditions.

A DAV national service officer can and does advise a claimant precisely why his claim may previously have been denied and then specifies what additional evidence is essential. The claimant must necessarily bear the burden of obtaining such fact-giving affidavit evidence. The experienced national service officer will, of course, advise him as to its possible improvement, before presenting same to the adjudication agency, in the light of all of the circumstances and facts, and of the pertinent laws, precedents, regulations, and schedule of disability ratings. No DAV national service officer, I feel certain, ever uses his skill, except in behalf of worthy claimants, with justifiable claims.

The VA has denied more claims than it has allowed—because most claims are not properly prepared. It is very significant, as pointed out by the DAV acting national director of claims, Chester A. Cash, that a much higher percentage of those claims, which have been prepared and presented with the aid of a DAV national service officer, are eventually favorably acted upon, than is the case as to those claimants who have not given their power of attorney to any such special advocate.

Another fact not generally known is that, under the overall review of claims inaugurated by the VA some 4 years ago, the disability compensation payments of about 37,200 veterans have been discontinued, and reduced as to about 27,300 others at an aggregate loss to them of more than $28 million per year. About 0.014 percent of such discontinuances and reductions have probably occurred as to disabled veterans in Washington, with a consequent loss of about $392,000 per year.

Most of these unfortunate claimants were not represented by the DAV or by any other organization. Judging by the past, such unfavorable adjudications will occur as to an additional equal number or more during the next 3 years, before such review is completed. I urge every disabled veteran in Washington to give his power of attorney to the national service officer of the DAV, or of some other veteran organization, or of the American Red Cross, just as a protective measure.

The average claimant who receives helpful advice probably does not realize the background of training and experience of a competent expert national service officer.

Measured by the DAV's overall costs of about $12,197,600 during a 10-year period, one would find that it has expended about $3.50 for each claim folder reviewed, or about $8.80 for each rating board appearance, or, again, about $22.70 for each favorable award obtained, or about $123 for each service connection obtained, or about $54 for each compensation increase obtained, and has obtained about $14.10 of direct monetary benefits for claimants for each dollar expended by the DAV for its national service officer setup. Moreover, such benefits will generally continue for many years.

Evidently, most claimants are not aware of the fact that the DAV receives no Government subsidy whatsoever. The DAV is enabled to maintain its nationwide staff of expert national service officers primarily because of income from membership dues collected by its local chapters and from the net income on its Idento-Tag—miniature automobile license tags—project, owned by the DAV and operated by its employees, most of whom are disabled veterans, their wives, or their widows, or other handicapped Americans—a rehabilitation project in thus furnishing them with useful employment. Incidentally, without checking as to whether they had previously sent in a donation, more than 1,400,000 owners of sets of lost keys have received them back from the DAV's Idento-Tag department, 4,871 of whom during the last 8 years, were Washington residents.

Every eligible veteran, by becoming a DAV member, and by explaining these factors to fellow citizens, can help the DAV to procure such much-needed public support as will enable it to maintain its invaluable nationwide service setup on a more adequate basis. So much more could be accomplished for distressed disabled veterans, if the DAV could be enabled, financially, to maintain an expert service officer in every one of the 173 VA hospitals.

During the last 10 years, the DAV has also relied on appropriations from its separately incorporated trustee, the DAV Service Foundation, aggregating $3,300,000 exclusively for salaries to its national service officers. Its reserves having been thus nearly exhausted, the DAV Service Foundation is therefore very much in need of the generous support of all serviced claimants, DAV members and other social-minded Americans—by direct donations, by designations in insurance policies, by bequests in wills, by assignments of stocks and bonds and by establishing special types of trust funds.

A special type of memorial trust fund originated about 3 years ago with concerned disabled veteran members of the DAV chapter in Butte, Mont., which established the first perpetual rehabilitation fund of $1,000 with the DAV Service Foundation. Recently it added another $100 thereto. Since then, every DAV unit in that State has established such a special memorial trust fund, ranging from $100 to $1,100 equivalent to about $5 per DAV member.

Each claimant who has received any such rehabilitation service can help to make it possible for the DAV to continue such excellent rehabilitation services in Washington by sending in donations to the DAV Service Foundation, 631 Pennsylvania Avenue NW., Washington, D.C. Every such serviced claimant who is eligible can and should also become a DAV member, preferably a life member, for which the total fee is $100—$50 to those born before January 1, 1902, or World War I veterans payable in installments within 2 full fiscal year periods.

Every American can help to make our Government more representative by being a supporting member of at least one organization which reflects his interests and viewpoints—labor unions, trade associations and various religious, fraternal and civic associations. All of America's veterans ought to be members of one or more of the patriotic, service-giving veteran organizations. All of America's disabled defenders, who are receiving disability compensation, have greatly benefited by their own official voice—the DAV.

The Constitution: More Than a Legal Document

EXTENSION OF REMARKS

OF

HON. JOEL T. BROYHILL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 17, 1959

Mr. BROYHILL. Mr. Speaker, a young man from Arlington, Va., in my congressional district, has written the winning speech in the department of Virginia division of the 22d annual national high school oratorical contest sponsored by the American Legion National Headquarters.

The rules of this contest, in which an estimated 350,000 high school students throughout the Nation competed, required that the speeches be the original efforts of each contestant and limited them to approximately 10 minutes in length. The assigned subject was a phase of the Constitution of the United States which gives emphasis to the attendant duties and obligations of a citizen to our Government.

Richard John Shaker, the author of the winning speech, is an honor graduate of Washington-Lee High School in Arlington. He was valedictorian of his graduating class this June, winner of four awards, including two for the highest overall marks in English and mathematics, and has been honored by several northern Virginia organizations as one of the outstanding students of the year. As a recipient of a scholarship, he will attend the University of Chicago this fall, and I anticipate a bright future for him in any of his endeavors.

I know the membership of this body will join me in congratulating young Mr. Shaker on this speech, and that they will profit, as will all who read it in the RECORD, from the thoughts and convictions of this representative of truly outstanding American youth:

THE CONSTITUTION: MORE THAN A LEGAL DOCUMENT

There is, at the present time, prevalent throughout this Nation, a false belief—a dangerous myth, one that could have, as its final result, the complete and utter destruction of every ideal for which the U.S. Constitution has become a symbol. This belief manifests itself in the feelings of many individuals across the country, who hold that the Constitution is simply a legal document and thus is subject to legal evasion.

It is true that the Constitution is and represents the supreme law of the land. This the document states itself, in its sixth article. If the citizens of America are not willing to accept this statement as fact, then they cannot, in good faith, accept any of the balance of the document. But while

expressing belief in the national supremacy clause, the people of this Nation must not and cannot afford to lose sight of the basic moral principles that resulted in the drafting of this document.

It is true that the Constitution represents the culmination of 700 years of British legal tradition. It is more important, however, that it represents the first powerful government to depend upon the consent of the governed for its sovereignty.

The basis of the Constitution did not originate in stuffy courtrooms. It was born in the minds of those visionary thinkers, who first realized that a government of, for and by the people was not only a plausability, but a necessity, if the dignity of free men was to survive.

The Constitution provides for a working system of government based on this ideal of the complete sovereignty of the people. It is not a perfect system. It is not 100 percent efficient. It may be evaded through various ingenious schemes. Possession of the Constitution within our boundaries does not guarantee that democracy will flourish throughout this Nation.

But more important than its legal shortcomings is the fact that the Constitution has become a symbol to millions of people in all parts of the world. It is the final answer to all those who held that the mob was not fit to rule. It is the vindication of the dreams of the earliest proponents of democracy, as represented by such men as Locke and Rousseau.

If then, you ask, the Constitution is all this, why cannot it in itself act to safeguard our liberties? The answer is simple. Political opportunists are willing and eager to twist the words of this document for their own personal benefit. These selfish men ignore the adverse effects their actions have on the security and well-being of this Nation.

No individual has the right to subordinate the U.S. Constitution to his own personal gain. Too many men have sacrificed their lives, their fortunes, their sacred honor for one man to nullify its purpose.

The Revolutionary patriot did not hold his position on Bunker Hill so that a voter could offer his ballot to the highest bidder.

The young militiaman did not set up a barricade of cotton bales at New Orleans so that two legal theorists could argue over whether Congress has the right to pass laws which are proper but not necessary.

The war-weary Kentucky veteran did not take up arms against his brothers so that a rebellious legislature could attempt to seize full control of governmental functions by impeaching the chief executive.

The tired doughboy did not march into the Belleau Wood so that a group of vocal solons could take advantage of legislative tactics to forestall the will of a majority.

The wounded marine sergeant did not raise Old Glory over Mount Suribachi on Iwo Jima so that a corrupt judge could interpret the Constitution according to the political pressures and influences exerted upon him.

The GI did not charge up Porkchop Hill so that State officials and individuals could openly defy sections of the Constitution that had no ready means for enforcement.

What were these men fighting for? Certainly not for a mere scrap of paper encased in helium. No, these men were fighting for something more than a mere scrap of paper. They were fighting for something more than a mere collection of laws.

On the other hand, the voter, the lawyers, the Congressmen, the Senators, the judge, the State officials, and the individuals whom I have mentioned were providing their country a great disservice. Their selfishness clouded their vision. When they gazed upon the Constitution, they saw not the great collection of American liberties but instead visualized a mass of legal details. They saw means by which they could evade these details, in a legal way of course, and thus felt that what they were doing was right. These selfish men ignore the first 10 Commandments and instead substitute an 11th one, do anything you can legally get away with. In so doing, they jeopardize the security and well-being of this Nation, for by concentrating on words they lose sight of the basic moral principles that it is the duty of every American to defend.

If these people ever become a majority; if the voters of this Nation, as they have done in the past, place these people in positions of high trust; if these people are allowed to guide this Nation's destiny; then those who lived, fought, and died in defense of the Constitution will have lived, fought, and died in vain. The paper will remain, but the true Constitution will have died.

This Nation is presently locked in a life-and-death struggle with a country whose social, religious, political, and economic ideology is in direct opposition to those principles brought forth in the Constitution. It is a battle between religion and atheism, between capitalism and communism, between democracy and totalitarianism.

But yet, the conflict between freedom on the one hand and tyranny on the other cannot be resolved through a mere comparison of the two constitutions, for the differences are not there to be found. The millions of people behind the Iron Curtain live in a police state because they have been unable to maintain the ideals they first proclaimed when they overthrew their foreign and domestic oppressors. How can we preserve our ideals?

The annual assemblage of a Congress will not necessarily safeguard our liberties. The Politburo convenes annually in the Soviet Union.

The presence of a judicial system will not necessarily safeguard our liberties. A "supreme court" is an integral part of the theoretical Russian governmental setup.

The existence of a Bill of Rights will not necessarily safeguard our liberties. The Soviet Constitution of 1936 contains such an appendage.

And finally, as I have stated before, the mere presence of a Constitution within our boundaries cannot in itself safeguard our liberties. The Soviet counterpart is as idealistic as our own. But, a conscientious legislature, representative of an appreciative and interested populace, can act as a tremendous deterrent against the rise of totalitarianism.

A militant judiciary, willing, and eager to defend the rights of those who have been infringed upon in a lawless manner, can see to it that all Americans, regardless of racial, social, political, or economic status, receive "equal justice under law."

The Bill of Rights, upheld by the combined powers of the executive, legislative, and judicial branches of Government, can nip in the bud any attempt by a would-be dictator to seize control over individual liberty.

But it is the Constitution which still stands as our first line of defense against tyranny. However, before the Constitution can act as a shield, it must be revitalized.

After all, it was written and ratified some 170 years ago. It may or it may not still be representative of the thoughts and ideals of Americans. Whether it is or isn't can only be demonstrated by the action taken by Americans of today in defense of it.

Therefore, it is the duty of every American to recognize that his Nation and his way of life are presently being challenged as they have never been challenged before.

It is the duty of every American to help prepare to meet this challenge by studying his Constitution, paying attention not so much to specific details as to those basic moral principles that have resulted in the Constitution becoming a beacon of freedom throughout the world.

It is the duty of every American to transform his faith in the democratic system into action to help preserve it.

It is the duty of every American to defy and oppose unconstitutional statutes.

Finally, and perhaps most important of all, it is the duty of every American to help dispel the myth that this Nation can afford to let selfish individuals work in direct opposition to those principles brought forth in the Constitution and still maintain national security.

For only when the myth is dispelled, only if the myth is dispelled, can the Constitution, the true U.S. Constitution, survive.

The Death of Admiral Halsey

EXTENSION OF REMARKS
OF
HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1959

Mrs. DWYER. Mr. Speaker, the death of Adm. William F. Halsey has ended the illustrious career of one of the Navy's most colorful and inspiring leaders in World War II.

His loss will be deeply felt, not only by his family whose grief all those who knew him will share, but by many others throughout the country. For "Bull" Halsey did not let retirement dull the edge of his forceful, generous personality. His fight to preserve his old flagship, the gallant carrier U.S.S. *Enterprise*, will not be forgotten. As one who joined in this effort, I know it was worthy of this great seaman and good man.

The memory of Admiral Halsey will be especially cherished, however, by those of us who take pride in thinking of ourselves as his fellow townsmen, residents of his home town, Elizabeth, N.J., and his neighbors throughout Union County.

Speaking for the people of Elizabeth, and in words of fitting eloquence, the Elizabeth Daily Journal—"Bull" Halsey's hometown newspaper—has engraved this fighting man's memory in an editorial that deserves the widest circulation.

The Journal said of the admiral, in part:

Always there were those home ties, the ties of family, of the native heath remaining strong and calling him back no matter where duty sent him and regardless of honors. One of the touching human-interest stories of the Second World War was the meeting far out on a Pacific island between Admiral Halsey and Pfc. Christy DeMaio, the stout boy from Peterstown, fondly remembered by prewar boxing fans as the "Pants House Kid." But let Christy tell it again.

"I'm standing by the side of the road and I give the thumb to a car coming straight at me. Then I'd like to die. It stopped and who looked out at me, but the big boy from Elizabeth himself—Admiral Halsey. So, he said, 'All right, Soldier, get in.' And when he found out that I was from Elizabeth too, boy, did we cut it up for 25 miles. Real pals, we were. No brass. What a guy he is!"

And "'What a guy' he was," the Journal editorialist echoed, as he recited the

story of Elizabeth "bursting with pride" on that memorable November 7, 1945 when Admiral Halsey returned to his own.

Continuing, the editorial commented:

We are bursting with pride now, even as we grieve, while newspaper headlines the world over tell the story of the Elizabeth boy who led naval forces in exploits President Eisenhower has termed "a brilliant part of American military history"—of whom Adm. Chester Nimitz has said "he has left for all of us a shining example of courage and service."

The same spirit of pride motivated editorials in other newspapers in the Union County area.

The Plainfield Courier-News, for instance, had the following to say:

Union County residents were particularly proud of Admiral Halsey and his brave exploits because he was a native son of Elizabeth. True, he lived there only until about 11 years old, but nevertheless, he was a local boy who made good in the minds of Elizabethians and Union County citizens as well. As a result, he was honored on several occasions for his enviable record as the man who chased the Japanese Navy all over—and off—the Pacific.

Admiral Halsey's record should be an inspiration not only to our younger men who follow that branch of the military service but to all Americans who place loyalty to their country above all.

And the Newark Evening News concluded its editorial this way:

Admiral Halsey, who was born in Elizabeth, was a legend years before his death at 76. His passing ends a colorful career, but the legend will live as long as fighting men roam the seas in defense of liberty.

Centennial Year Sightseeing in Oregon

EXTENSION OF REMARKS

OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 19, 1959

Mr. ULLMAN. Mr. Speaker, I wish to include a most interesting article by Paul Laartz which appeared in the August 9, 1959, issue of the Oregonian. Mr. Laartz points out the many scenic attractions of Klamath County in my congressional district. The historical data included in his article is especially interesting and I hope it will encourage my colleagues to visit Oregon during our centennial year observance.

CENTENNIAL YEAR SIGHTSEEING IN OREGON—KLAMATH COUNTY SCENIC LURES COUNT CRATER LAKE

(By Paul Laartz)

Klamath and Lake Counties are among Oregon's southern gateways, and through them have been pouring thousands of visitors—many more than in years past—to share in the State's centennial year.

Though similar in general characteristics, the two counties are distinctive in the tourist and scenic features they have to offer.

Klamath County, the first treated in this two-part series, is well known, of course, for its lumbering and business—as a leader in these fields in southern Oregon.

But it's rightfully proud of its beautiful lakes and scenic attractions.

CRATER LAKE FAMED

Topping the list is its world-renowned Crater Lake, a national park since 1902. However, along the broad back of the Cascades are also scores of other lakes, notably Diamond, Crescent, Odell, Lake of the Woods, and in the center, of course, Klamath Lake.

These lakes, along with fine fishing streams, are favorites of sportsmen, as well as the growing numbers of out-State visitors.

Another major tourist attraction in the general area, across the border in northern California, is the famed Lava Beds National Monument—scene of a crucial Indian battle that figured in early-day Oregon history.

TOURIST GAIN NOTED

All of these scenic spots are not far distant from Klamath Falls, key city of the area, and thousands of tourists are pouring northward into Oregon to view them and continue on northward and eastward to other scenic Oregon spots.

The Oregonian-Oregon State Motor Association white motorlog car found solid evidence of this tourist gain at Crater Lake. There a park ranger noted that visitors to this famed spot are up 45 to 50 percent over last year.

And the big gain, he added, is "all due to the Oregon centennial celebration."

Though all these lakes are gems in their own category, the best known of these jewels is unbelievably blue Crater Lake, the deepest lake in North America.

LAKE FORMED IN CALDERA

It's only 56 miles north of Klamath Falls, via the lush Wood River Valley—which some term one of the richest cattle-feeding areas in the world—past historic Fort Klamath and Klamath Agency, and up on the spine of the Cascades.

Crater Lake was created several thousand years ago when mighty Mount Mazama, a 12,000-foot volcano, discharged a tremendous quantity of ash and lava. The mountain top collapsed, creating a caldera which contains today's Crater Lake.

The awesome lake is about 6 miles wide, 20 square miles in area and has about 20 miles of shoreline. The uneven crater rim—about 7,000 feet elevation—towers as much as 2,000 feet above the lake.

MANY STATES REPRESENTED

Increasing thousands visit this creation of nature annually. On any day, one can see auto licenses from Virginia, Kansas, Texas, Alaska with California and Oregon predominant.

Included, too, among the visitors are many who speak accented English, here from Europe and Asia to view this internationally known spectacle of nature.

In the days before the white man, Indians regarded it as the battleground of the gods and visited it rarely, then only with awe.

It was discovered June 12, 1853, by John Wesley Hillman, a young prospector, who on his return to the early-day mining camp of Jacksonville in the Rogue River Valley, named it Deep Blue Lake.

Other discoverers later named it Blue Lake and Lake Majesty, but in 1869 the name was changed to Crater Lake by visitors from Jacksonville.

At Crater Lake, or Rim Village, there are accommodations at the lodge, dining room, campground, store, cabins, picnic area and all the necessities for the tourist. Launches and rowboats are available on the lake. Private boats are not permitted on the lake.

To the north, some 20 miles, is Diamond Lake, another beauty in the chain of lakes up and down the backbone of Oregon's Cascades, and a mecca for fishermen. Rainbow and Kamloops trout are plentiful. There are lodge, restaurant, camping and like facilities.

LAKE OF WOODS POPULAR

A longtime favorite among southern Oregonians and northern Californians is Lake of the Woods, some 35 miles west of Klamath Falls.

It's beloved for its water sports, camping, family outings.

However, one of the most amazing stops on this Oregon State Motor Association Oregonian Motorlog was a visit to the Lava Beds National Monument, 41 miles south of Klamath Falls and near Tule Lake, Calif.

Not only does it show off nature's flaming wrath of centuries ago, when volcanoes in what is now northeastern California spewed forth great masses of molten lava, which in cooling left weird and rugged masses of rock.

NATURAL FORTRESS USED

But it incorporates what might well be described as an infantry soldier's nightmare. It was in these twisted, misshapen lava belches—in 1872–73—that one of the Pacific coast's last and most famous Indian wars was fought. It was also one of the most costly Indian campaigns engaged in by the United States.

Into these lava masses, which had formed natural trenches and strongholds in solid rock, some 71 fighting Modoc Indians, under a leader known best as Captain Jack, fought off a U.S. cavalry unit 15 times their number.

The Modoc war started in 1872 when a small band of Modoc Indians, angered at having to share a reservation with their hereditary enemies, the Klamaths, clashed with U.S. troops near Lost River, in Oregon, near the Oregon-California border.

INDIANS WIN BATTLES

After raiding adjoining settlements, Captain Jack's crew retreated to the natural lava bed fortresses and, safe in the rock-ribbed trenches and caves, withstood all attempts of the whites to dig them out.

The Indians, in the process, won two battles. In one, two-thirds of the white command was killed or wounded.

Gen. E. R. S. Canby was killed during a parley with Indian leaders under a flag of truce. The Canby Cross was later erected there to his memory.

VISITOR HAS TO WALK

It was only when the white men were able to cut off the Indians' water supply that they won the final battle. The Modocs got their water from Dry Lake, since pumped dry by the white man's Bureau of Reclamation.

A few weeks later, Captain Jack was captured. In the fall of 1873, he and three other leaders of the band were hanged at Fort Klamath.

These Modocs were unlike the usual Indian bands of early western history. They eschewed the red man's beaded buckskins and instead, wore white men's clothing, spoke the white man's tongue, and used his ways.

Only on foot can today's tourist see these fortresses—a hearty walk. But it's well worth the climb up and down through these jagged lava trenches and caves.

An infantry soldier would understand clearly how the Modocs, though obliged to care for their women and children and live off the country, kept an army of regular soldiers and volunteers 15 times their number at bay for months.

The battlegrounds are said to be practically the same today as they were in 1873. Rock forts used by the Indians and white men alike still mark the struggle.

Nearby are pictographs of two types. One type of Indian symbolic writing includes paintings of red, yellow, and green mineral pigments on the walls and caves and sides of natural bridges. The other includes carvings (petroglyphs) which are confined entirely to the rocky bluffs in the Tule Lake Peninsula.

Hon. James G. Polk

EXTENSION OF REMARKS
OF
HON. MICHAEL J. KIRWAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 20, 1959

Mr. KIRWAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include therein letters and eulogies sent to the widow and family of our late beloved colleague the Honorable James Polk, who so ably represented the Sixth District of Ohio for a great many years.

OFFICE OF THE VICE PRESIDENT,
Washington, D.C., April 29, 1959.

Mrs. JAMES G. POLK,
Washington, D.C.

DEAR MRS. POLK: Mrs. Nixon and I were very saddened to learn of your husband's passing and this note brings with it our deepest sympathy.

I realize that words mean very little at times such as this, but I did want you to know our thoughts and prayers are with you in the days ahead.

With kind regards.

Sincerely,

RICHARD NIXON.

THE STATE OF OHIO,
OFFICE OF THE GOVERNOR,
Columbus, April 29, 1959.

DEAR MRS. POLK: Jim's loss will be felt by all of us, but of course not in the same way or degree as you will miss him. He was without question one of my favorite people. Kind, generous, cooperative, and extremely able. I hope that your sense of loss will be minimized in some measure by the knowledge of the great contribution he made to public service. If I can be of help to you in any way please let me know.

Sincerely,

MIKE,
Michael V. DiSalle.

JOHN W. DONAHEY,
Columbus, Ohio, May 1, 1959.

Mrs. JAMES G. POLK,
Rural Route 1,
Highland, Ohio.

DEAR MRS. POLK: Mrs. Donahey and I were in Washington last Monday and stopped by Congressman Polk's office. We were so sorry to hear that his illness was of such a serious nature.

Then, of course, we were deeply saddened when we learned of his death. You and the family have our deepest sympathy.

I know that Congressman Polk's services in Washington will certainly be missed. He had the home-spun qualities that made everyone like and respect him. These qualities are rare in political circles today.

If there is anything we can do to ease your burden, Mrs. Polk, please don't hesitate to ask.

Sincerely yours,

JOHN W. DONAHEY,
Lieutenant Governor.

U.S. SENATE,
Washington, D.C., April 30, 1959.

Mrs. JAMES G. POLK,
Rural Free Delivery 1,
Highland, Ohio.

DEAR MRS. POLK: I was indeed saddened to read about Jim's untimely passing, and want you to know how awfully sorry I am.

We served together in the House, and I considered him among my good friends. He was an able legislator and will be greatly missed by his many colleagues in Congress.

Nancy joins me in deep and heartfelt sympathy.

Most sincerely,

ESTES KEFAUVER.

CONGRESS OF THE UNITED STATES,
HOUSE COMMITTEE ON AGRICULTURE,
Washington, D.C., May 14, 1959.

Mrs. JAMES G. POLK,
Washington, D.C.

DEAR MRS POLK: Your husband was an esteemed friend of mine and I share your great sorrow. You and all of his loved ones can well be proud of the life he lived and the record he made. As you know, Jim and I served as members of the House Committee on Agriculture for many long years. At all times he was courteous, gracious, and kind and yet with foresight and vision he represented the people of his district. We, of course, knew of his long suffering, but the last sad news came as a great shock.

Enclosed is a copy of a resolution adopted by the members of Jim's committee. Madeline joins me in extending to you and your loved ones our very warm and sincere sympathy.

Cordially yours,

HAROLD D. COOLEY.

JAMES G. POLK

Whereas James G. Polk, for 21 years representative of the Sixth District of Ohio in the Congress devoted the full measure of his talents and his energy to the improvement of agriculture, especially for the betterment of the living standards of the farm families of America;

Whereas the ultimate achievement of a parity position of agriculture, with the other great segments of the Nation's economy and society, will be a monument to his memory; and

Whereas, serving with the House Committee on Agriculture and having progressed to a high rank and position, he won respect for his ability and was held in esteem by his colleagues: Now, therefore, be it

Resolved, That the committee has learned with profound sorrow and a sense of deep loss of the untimely death of James G. Polk; and be it further

Resolved, That the committee express its very sincere sympathy to members of his family; and be it further

Resolved, That the committee clerk communicate this resolution to the family of the deceased.

HOUSE OF REPRESENTATIVES,
Washington, D.C., April 30, 1959.

Mrs. JAMES G. POLK,
Highland, Ohio.

DEAR MRS. POLK: I have been immeasurably saddened by the untimely passing of your distinguished husband who was my good and respected friend.

In the years in which I have been privileged to serve with him on the House Committee on Agriculture I have come to prize his friendship and to respect him for his outstanding contribution to the public welfare.

I know that the solicitude of even his closest friends cannot lessen the sorrow which is now yours and I can only commend you to an abiding faith in the divine assurance that we shall some day be reunited with those whom we have lost for awhile.

Mrs. Dague joins me in this word of sympathy and it is our prayerful hope that you will be given the courage and strength that will be so sorely needed as you face this grievous loss.

Sincerely,

PAUL DAGUE.

U.S. HOUSE OF REPRESENTATIVES,
Washington, D.C.

Mrs. JAMES G. POLK,
Highland, Ohio.

DEAR MRS. POLK: I was terribly sorry to learn of Jim's passing for he was my good friend for many years. I hasten to extend to you and to your family my deep and heartfelt expression of sympathy on what I know is a very great loss for you all.

With kind regards, I am

Sincerely yours,

GENE KEOGH.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., April 29, 1959.

Mrs. JAMES G. POLK,
Washington, D.C.

DEAR MRS. POLK: It was with much sorrow that I learned the sadness of your husband's death. He was a very near friend of mine and I share your grief in his passing.

Jim had rare qualities of character such as modesty, friendliness, and a devotion to duty which will make him long remembered among his friends and colleagues.

Mrs. Rhodes joins me in extending deepest sympathy to you and other members of the family.

Sincerely,

GEORGE M. RHODES.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., May 1, 1959.

Mrs. JAMES G. POLK,
Washington, D.C.

DEAR MRS. POLK: One of the best friends I had in the Congress was taken when Jim died. I am grieved and saddened. However, my loss cannot compare with that of you and the children.

Each of you has the satisfaction of knowing that Jim lived a fine and useful life, and that the world is better by his having lived in it.

I wanted you and the children to know that you are in my thoughts and in my prayers in this, your hour of great sorrow. May He who loves and cares for all of us hold you and each of your loved ones always safely in the hollow of His divine hand.

Sincerely,

JIM TRIMBLE.

Mrs. JAMES G. POLK,
Highland, Ohio.

On behalf of the U.S. Air Force as well as Mrs. Douglas and myself I extend deepest sympathy to you on the passing of your husband.

JAMES H. DOUGLAS,
Secretary of the Air Force, Office Secretary of the Air Force.

Mrs. JAMES G. POLK,
Highland, Ohio.

I am greatly saddened to learn of the passing of your husband on behalf of the officers and airmen of the U.S. Air Force, I extend to you our deepest sympathy.

THOMAS D. WHITE,
Chief of Staff, U.S. Air Force.

DEPARTMENT OF THE AIR FORCE,
Washington, April 30, 1959.

Mrs. JAMES G. POLK,
Highland, Ohio.

DEAR MRS. POLK: Mrs. Fisher and I have learned with sadness of the death of your husband. While there is little one can say or do in times like these to ease your feeling of sorrow, we should like you to know that you have our profound sympathy.

Sincerely yours,

W. P. FISHER,
Major General, U.S. Air Force, Director, Legislative Liaison.

APRIL 29, 1959.

Mrs. JAMES G. POLK,
Washington, D.C.

MY DEAR MRS. POLK: Permit me to express my deepest regret to you on the passing of your husband, the Honorable James G. Polk.

As Secretary of the Army, it was my privilege to observe the patriotic devotion to duty and the sincere concern for his fellow man that motivated your husband. His passing is indeed a great loss to our country.

I wish to extend my heartfelt sympathy to you in this time of bereavement and hope that this may in some small way serve to assuage your grief.

Sincerely,

WILBER M. BRUCKER,
Secretary of the Army.

DEPARTMENT OF THE ARMY,
OFFICE OF THE SECRETARY OF THE ARMY,
Washington, D.C., April 29, 1959.

Mrs. JAMES G. POLK,
Washington, D.C.

DEAR MRS. POLK: It is with profound regret that I have learned of the passing of your husband, the Honorable James G. Polk. May I extend my deepest sympathy to you in your bereavement.

Sincerely,

J. H. MICHAELIS,
Major General, GS, Chief of Legislative Liaison.

FEDERAL BUREAU OF INVESTIGATION,
U.S. DEPARTMENT OF JUSTICE,
Washington, D.C.

Mrs. JAMES G. POLK,
Washington, D.C.

DEAR MRS. POLK: I was saddened to learn of the passing of your beloved husband, and you have my heartfelt sympathy in your great loss. While I realize that words are most inadequate at a time like this, I hope you will gain some comfort from knowing that your many friends are sharing in your sorrow. If there is anything at all we can do to be of assistance, please do not hesitate to let me know.

Sincerely yours,

J. EDGAR HOOVER.

DEMOCRATIC NATIONAL COMMITTEE,
Washington, D.C., April 29, 1959.

Mrs. JAMES G. POLK,
Washington, D.C.

DEAR MRS. POLK: Our deepest sympathy to you in your great loss and my personal condolences at this time of great sadness. Congressman Polk will be sorely missed by our party and our country for his dedicated efforts on behalf of the people.

Sincerely,

PAUL M. BUTLER.

Mrs. JAMES G. POLK,
R.F.D. 1, Highland, Ohio.

DEAR MRS. POLK: I was very sorry to note in Wednesday's New York Times the account of the death of your distinguished husband.

I knew him very well and our paths crossed frequently when I served in Washington as Postmaster General. He was a fine public servant and a fine gentleman and highly respected by all with whom he came in contact.

I know words are meaningless at a time like this but I do want you to know that you have my deepest sympathy.

Sincerely yours,

JAMES A. FARLEY.

THE AMERICAN LEGION,
JAMES DICKEY POST NO. 23,
Portsmouth, Ohio, April 28, 1959.

Mrs. JAMES G. POLK,
Highland, Ohio.

DEAR MRS. POLK: It is indeed with a sense of deep shock that I read in the Portsmouth (Ohio) Times, the report of the death of your husband, James G. Polk.

I have known Mr. Polk for a good many years and have had the pleasure of having voted for him each time he ran for Congress, and knew him personally, not alone in politics, but very closely in matters pertaining to veterans' benefits.

Mr. Polk and myself have corresponded quite frequently through the years, to and from his Washington office, in matters pertaining to individual veteran's and their claims for benefits, and never once have I ever known Mr. Polk to fail to do all in his power in each case I brought to his attention.

So from a personal standpoint, I too feel that I have lost a very great and good friend, for not only myself but for the veterans on whose claims we have worked jointly, to attain the benefits desired.

Please accept my deepest sympathy in your bereavement, and you can feel assured that God will make a place in Heaven for a man so conscientious and clean living and honest as was Mr. Polk.

I will remember Mr. Polk in my prayers.

Yours very sincerely,

LOUIS T. KRICKER,
Service Officer.

TRIBUTE TO THE MEMORY OF JAMES G. POLK

Ever since I first became acquainted with Congressman Polk, in 1932, he has been my warm, personal friend even though we were in different political camps, so to speak. He was a likeable person, a type all his own—one whom we could and did call "Jim" because of his outstanding democratic manner—never aristocratic.

After his first election and departure for Washington, I was his successor as teacher of the adult Bible class in Highland Methodist Church which I then attended, being a resident of Highland at that time.

James G. Polk, our good neighbor, will be more than missed by his many friends and by his constituents whom he has so ably served in Congress so long. His repeated reelections testify to the high esteem in which he was held by people regardless of political faith. James G. Polk was an American before he was a partisan and the effects of his good works will long follow him and be remembered.

LEESBURG, OHIO, *April 30, 1959.*

S. A. RINGER.

NICHOLS, SPEIDEL & NICHOLS,
Attorneys at Law,
Batavia, Ohio, May 2, 1959.

Mrs. JAMES G. POLK,
Highland, Ohio.

DEAR MRS. POLK: I hoped that I might be able to attend the funeral services for Mr. Polk today but circumstances will prevent me from doing so, and I felt that I must express to you my deep appreciation for the life and services which Jim has rendered to the people of this district and my sympathy to you and your family for this untimely death.

He has been my good friend over many years, and if my personal experience means anything, he certainly has been the most thoughtful, helpful, and devoted public servant this district has ever had in Washington.

With kindest regards, I am,

Yours sincerely,

RUSSELL F. SPEIDEL.

WOOSTER, OHIO, *April 29, 1959.*

DEAR MRS. POLK: My wife and I learned with sincere sadness of the death of your husband. We served many terms together in the Congress. There was no more modest or hard-working member than he was. The farmers find in Jim a true and a reliable friend. He might not always agree with the members of the various farm organizations but these farmers learned that Jim had a reason based upon his long experience and knowledge and soon learned to rely upon him.

He clearly and patiently presented farm bills upon the floor of the House. With confidence I always voted with him. He will be terribly missed both for his personality as well as for his great contribution to the legislative program.

Bob Jameson—a former pupil of mine in Wooster High School told me today that he coached the teams at Hillsboro High School while Jim was either principal or superintendent. Bob told me how wonderfully kind he was and how easy it was to work with him. All of his friends will have something good to tell you about him and I am sure this will make you proud and less sad.

I am sorry that we could not join with his many friends in paying tribute to him at his funeral. Abi joins me in this our very deep expressions of sympathy and in hoping that you will have good health and many years in which to enjoy the memory of a fine American, your husband Jim.

Most sincerely,

JOHN MCSWEENEY.

THE PENN MUTUAL LIFE INSURANCE CO.
Philadelphia, Pa., April 29, 1959.

DEAR MRS. POLK: I'd like to express to you and your family my deep regrets over the death of Jim. He was a fine husband, father, educator, legislator, and one of my earliest and best friends.

How happy I was to have him as my principal for 2 years in Hillsboro High School, 1927–29.

I visited him in his office in Washington a few times and he was a statesman and a real American and an excellent farmer.

Most sincerely,

R. B. JAMESON.

FEDERAL DEPOSIT INSURANCE CORP.,
Washington, April 29, 1959.

Mrs. JAMES G. POLK,
Washington, D.C.

DEAR MRS. POLK: It was a great shock to learn of the passing of your distinguished husband, Congressman Polk. We served together for many years, having both been elected in 1930. He was a devoted public servant and served his district and the country well. He will be greatly missed and his place will be hard to fill.

We realize the futility of words in such an overwhelming loss, but we want you to know that you are in our thoughts and prayers in these dark hours. We know that a word of comfort strengthens our faith in the rightness of the divine plan, and helps us to carry on in these difficult times.

Grace and I wish to extend to you and your fine family our sincere sympathy.

Sincerely,

JESSE P. WOLCOTT.

SPRINGFIELD, OHIO.

Mrs. JAMES G. POLK,
Highland, Ohio:

Fifty thousand members of the United Automobile Workers of Region 2–A extend our deepest sympathy. We shall always cherish the memory of the Congressman who gave his all for all of the citizens of these United States.

EDWARD B. HELLKAMP,
Assistant Director, Region 2–A, UAW.

ST. LOUIS, MO.

Mrs. JAMES POLK,
Highland, Ohio:

We extend our sincere sympathy to you in your hour of bereavement. America and its

people also lost a dear friend when your beloved husband passed away.

GEORGE FECTEAU, *President,*
ANGELO G. GEORGIAN,
Secretary-Treasurer, General Executive Board, United Shoe Workers of America, AFL–CIO.

[From the Evening Star, Apr. 28, 1950]

JAMES G. POLK DIES; OHIO REPRESENTATIVE

Representative James G. Polk, 62, Democrat, of Ohio, who was as proud of being a farmer as he was of being a lawmaker, died today at Walter Reed Hospital of cancer. He has been ill several months.

Mr. Polk listed himself in the Congressional Directory as one of the few legislators whose sole occupation was farming. A member of the House Agriculture Committee, he served for 20 years in Congress in two tours of duty.

He was first elected in 1930, the first Democrat to be sent to the House from Ohio's present Sixth District. He served five successive terms. He did not seek reelection in 1940.

From 1942 to 1946, Mr. Polk was a special assistant in the Agriculture Department. He went back to farming fulltime before running again for Congress, in 1948. He was elected, and had served ever since.

Born on a farm in Penn Township, Highland County, Ohio, Mr. Polk attended the village school in Highland and went to high school at nearby New Vienna. He graduated from the Agricultural College of Ohio State University in 1919.

After college, he became principal of the New Vienna High School in 1919, and later was superintendent of schools there until 1922.

Following a period in farming near Highland, he returned to his studies, receiving a master of arts degree from Wittenberg College, Springfield, Ohio, in 1923.

For 5 years after graduation from Wittenberg, Mr. Polk was principal of Hillsboro (Ohio) High School, serving until 1928. Two years later he ran for Congress.

He was a member of Kappa Phi Kappa, a national education fraternity, the Masons, the Elks, and the Methodist Church.

Speaker of the House RAYBURN today called Mr. Polk "a fine Member of Congress; a gentleman all around." He announced the House would adjourn out of respect to the Ohioan after eulogies.

[From the Washington Post and Times Herald, Apr. 29, 1959]

REPRESENTATIVE POLK DIES; 20 YEARS ON HILL

Representative James G. Polk, Democrat, of Ohio, a veteran of 20 years in Congress who prided himself on being "one of the few members whose sole occupation is farming," died of cancer yesterday at Walter Reed Hospital.

The Congressman, who was 62, had been ailing for more than a year and had been a patient at Walter Reed since March 21.

Agriculture was the Ohioan's chief interest in Congress where his only current assignment was on the House Agriculture Committee.

Representative Polk, the first Democrat elected from the present sixth Ohio district, divided his congressional service in two tours. First elected in 1930, he served from the 72d through the 76th Congresses. He did not seek reelection in 1940 in order to return to fulltime farming near Highland, Ohio.

Two years later, he was named a special assistant to the Agriculture Department and held the job until 1946. He returned to the "Hill" for the 81st Congress and had served there since.

The Congressman was born on a farm in Penn Township, Ohio, and graduated from the Agriculture College of Ohio State University and from Wittenberg College, with a master's degree, in Springfield, Ohio.

Dividing his time between farming and teaching in the 1920's, he served as principal of the New Vienna (Ohio) High School, superintendent of schools in New Vienna and principal of the Hillsboro (Ohio) High School.

He is survived by his wife, Mary Polk; a son, William A., and three daughters, Martha Wilhite, Helen Vara, and Lois Taylor, all of Washington.

Services will be held Saturday at the Highland Methodist Church in Highland, Ohio.

Putting aside scheduled business, dozens of House Members paid tribute to the veteran lawmaker. Speaker SAM RAYBURN described him as "a fine Member of Congress; a gentleman all around." Agriculture Committee Chairman HAROLD D. COOLEY, Democrat, of North Carolina, read into the RECORD a special committee resolution, especially praising Representative Polk's efforts to raise living standards for farmers.

[From the Portsmouth (Ohio) Times, Apr. 28, 1959]

OFFICIALS, FRIENDS JOIN IN MOURNING POLK DEATH

State and district officials joined congressional leaders and local friends of James G. Polk today in mourning the veteran Congressman's death.

They praised Mr. Polk's long service as Representative from Ohio's Sixth District and expressed a feeling of personal loss at his passing.

Democrat leaders said his knowledge and experience in legislative matters will make him difficult to replace.

House Speaker SAM RAYBURN (Democrat, of Texas), announced in Washington that the House will adjourn out of respect to Mr. Polk. The Speaker called Representative Polk "a fine Member of Congress, a gentleman all around."

Gov. Michael V. DiSalle, informed of the Representative's death, issued this statement in Columbus:

"The people of the Sixth District have suffered a great loss. Ohio and the Nation share in this deep feeling.

"Jim Polk was a kindly, able and sincere public official. He worked hard for the people of his District and he was devoted to his obligation to the national interest.

"While I was in Washington, he was serving as a member of the House Agriculture Committee. His sense of fair play was so evident that I became a great admirer and a close personal friend."

George D. Nye, of Waverly, State Democratic Committeeman from the Sixth District said he was shocked and saddened by Representative Polk's death.

Mr. Nye said, "The Sixth District has lost one of its very finest citizens. Jim Polk was a representative of all the people. He was always trying to help our county and your county and the entire area, both industrially and economically."

Arlie N. Barker, Scioto County Democrat chairman, said, "Mr. Polk certainly did his job the way it should have been done. Those who knew him well will consider his death as very much of a personal loss."

Robert R. Leedom, county commissioner, called Mr. Polk "a very good representative of the people."

"He knew what the people wanted and he always kept that in mind," Mr. Leedom said. "He will be hard to replace with his knowledge and closeness to the people."

Attorney John Alden Staker, Democrat member of the county election board, remembers Mr. Polk's first campaign visit to Scioto County in 1930.

"He never dreamed then that he had any chance of winning," Mr. Staker recalled. "He has been an able and conscientious official and has enjoyed great popularity throughout the Sixth District."

William Staiger, president of Local 2116 of United Steelworkers and president of Shawnee District, AFL–CIO: "The death of Representative James Polk comes as a shock and a feeling of deep regret to our officers and members. Representative Polk has been a true friend and excellent Representative of all people in this district.

"His always friendly approach and intelligent devotion to duty marked him as a fine example of public servants dedicated to perpetuate the American form of government. Although others will take up his work and carry on, the passing of Representative Polk leaves a void in our hearts that can never be filled."

Attorney Laurence Kimble, county Democratic leader and long-time friend of Representative Polk, said, "Mr. Polk was a great friend and advocate for the development of Scioto County and southern Ohio.

"He is irreplaceable. Personally, I feel keenly the loss of a dear friend."

Republican Municipal Judge Lowell Thompson said, "Everyone regrets the death of Congressman Polk after his many years of faithful service to the Sixth Congressional District."

REPRESENTATIVE JIM POLK DIES—SERVED FOR 20 YEARS

WASHINGTON.—Representative James G. Polk, 62, Democrat, Ohio, died of cancer today at Walter Reed Army Medical Center.

Polk had been ill for several months.

He had served in Congress for 20 years, in two tours.

First elected in 1931, he served five terms, then was out during the 77th through 80th Congresses.

Polk, whose home was in Highland, 10 miles north of Hillsboro, served the nine-county Sixth Congressional District of southwestern Ohio.

The counties in the district are Adams, Brown, Clermont, Fayette, Highland, Pickaway, Pike, Ross, and Scioto.

He listed himself in the Congressional Directory as one of the few legislators whose sole occupation was farming.

Polk was the third Member to die since the House was elected last November. The other were Daniel Reed, Republican, New York, and George Christopher, Democrat, Missouri.

Polk's death left the House membership at 282 Democrats and 152 Republicans, with 2 vacancies. Christopher's successor was chosen in a special election.

Under Ohio law, no replacement will be named for Polk until the next regular election.

House Speaker SAM RAYBURN, Democrat, Texas, announced the House would adjourn out of respect to Polk, following the usual eulogies. RAYBURN described Polk as "a fine Member of Congress; a gentleman all around."

Colleagues said Polk had been in and out of hospitals for the past 2 years and that he entered Walter Reed for the last time 2 weeks ago.

Polk divided his time between farming and school teaching after his graduation from Ohio State University's College of Agriculture in 1919.

He served briefly as a high-school principal at New Vienna, Ohio, and later was superintendent of schools in the same city; from 1923 to 1926 he was a high-school principal at Hillsboro, Ohio.

Polk didn't seek reelection to Congress in 1940 so he could return to farming. Two years later he was named a special assistant in the Agriculture Department, a job he held until 1946. He was reelected to Congress in 1948.

Representative Polk, who was a lifelong resident of Highland County, was the first Democrat ever to be elected to Congress from his district. He never was beaten in either a primary or general election.

Although he formerly was a school principal and superintendent his only business activity since 1928 had been operation of his farm near Hillsboro.

The Representative was a descendant of Robert Bruce Polk who came to Maryland from Ireland in 1672. His grandfather moved to Highland County in 1826 and his father, William A. Polk, was a banker and conducted a cattle feeding operation near Hillsboro.

Survivors are the widow, Mrs. Mary Polk; a son, William A. Polk of Washington; three daughters, Mrs. Martha Wilhide of Washington, Mrs. Helen Vera of Highland, and Mrs. Lois Taylor of Silver Spring, Md.; a half brother, Robert T. Polk, and a half sister, Miss Fannie Polk, both of Carreytown, Ohio.

Funeral services will be held in the Highland Methodist Church at 2 p.m., Saturday. Burial also will be at Highland. The body will be at the Patterson Funeral Home in Leesburg after noon Friday.

Unlike the case of a U.S. Senator, Governor DiSalle has no powers to appoint an interim Representative. He is empowered to call an election to fill the vacancy, at his discretion. A special primary could be held in the Sixth District any time so long as it is 15 days before a general election. Thus, it would be possible for a new Representative to be elected in the November election.

In Columbus, Gov. Michael V. Di Salle, informed of the Representative's death, issued this statement:

"The people of the Sixth District have suffered a great loss. Ohio and the Nation share in this deep feeling.

"Jim Polk was a kindly, able, and sincere public official. He worked hard for the people of his district and he was devoted to his obligation to the national interest.

"While I was in Washington, he was serving as a Member of the House Agriculture Committee. His sense of fair play was so evident that I became a great admirer and a close personal friend."

[From the Portsmouth (Ohio) Times, Apr. 29, 1959]

CONGRESSMEN PAY TRIBUTE TO REPRESENTATIVE POLK—FUNERAL SATURDAY AT HIGHLAND; SPECIAL ELECTION LIKELY

Funeral services for Representative James G. Polk, 62, Democrat, of Highland, will be held at 2 p.m. Saturday in the Highland Methodist Church. Burial will be in Highland.

Mr. Polk's body will lie in state in the Patterson Funeral Home in Leesburg after Friday noon until noon Saturday.

Masonic services will be held at the funeral home at 8 p.m. Friday.

Representative Polk died Tuesday in Walter Reed Army Medical Center at Washington, D.C., of cancer.

The House of Representatives was adjourned Tuesday afternoon out of respect for Mr. Polk. About 25 Members of the House, including most of the Ohio delegation, eulogized Mr. Polk. Speaker SAM RAYBURN adjourned the House after the eulogies.

Gov. Michael V. DiSalle probably will call for a special election to name a successor to Mr. Polk.

Political observers said the Governor may call for the primary election to be held in October at which time the parties will select a candidate for the general election.

The special election for Congress would be held November 3, concurrent with the general 1959 elections. The successful candidate could take office a few days after the election.

Governor DiSalle said he will sound out sentiment for a special election in the nine-county district, in light of the election expenses involved. However, he said, "it probably would not be good for the district to have no representation in Congress all through the 1960 session."

The law provides that the Governor may call for a special election, the primary of which could not be held within 15 days of the general election.

Since the party is at the height of its State and local power, Democratic leaders are expected to insist upon a special election, feeling they can elect a Democrat this year.

An incumbent has an edge on the office-ballot, hence the winner of a special election would have a better opportunity to capture the full term in the 1960 election.

Frank E. Smith, former postmaster and veteran Democratic leader, is considered a top choice of many Democrats. He is widely known throughout the district, having campaigned for himself and the party in all the counties.

Since the GOP debacle in the sixth district last November no outstanding candidate for the party nomination has emerged.

It is not considered likely that Elmer Barrett of Chillicothe, the 1958 candidate would be interested, observers said.

Mr. Barrett is now president of Photoramic, Inc., an internationally known highway engineering firm founded by Everett S. Preston, now State highway director.

Mr. Polk had been in ill health in the last 2 years. He was critical in the summer and early fall of 1958 following a major operation.

He rallied, campaigned a little and appeared on the road to recovery. In January he suffered a relapse and was hospitalized for examination.

He improved and resumed his duties. March 14 he entered the medical center for examination and treatment and carried on his office duties from his hospital room.

Mr. Polk first was elected to Congress in 1930 and served until 1940 when he decided not to seek reelection. He became a candidate again in 1948 and subsequently was reelected, winning his 11th term in 1958. He was serving his 21st year in Congress.

Mr. Polk is survived by his wife, Mrs. Mary A. Polk; a son, William Polk of Washington; three daughters, Mrs. Martha Wilhite of Washington, Mrs. Helen Vara of Highland, and Mrs. Lois Taylor of Silver Springs, Md., and a half-brother, Robert T. Polk, and a half-sister, Miss Fannie Polk, both of Careytown, Ohio.

[From the Portsmouth (Ohio) Times, Apr. 29, 1959]

REPRESENTATIVE JAMES G. POLK

Somewhere along the line in the last quarter century James G. Polk became known as the "people's representative."

He was proud of the designation and in a nutshell it sums up why the Highland County Democrat was unbeatable in Ohio's Sixth Congressional District.

He threw his hat into the political ring in 1930 as an unknown in a district that until then had been represented in Congress only by Republicans.

He astounded even his own supporters by unseating the veteran incumbent and becoming the first Democrat elected from this district. From that time to his last campaign last fall Representative Polk never lost an election.

The key to his political success was his representation of the people. Never spectacular, always in the shadow of more colorful contemporaries, Representative Polk kept in close touch with his constituents, regardless of political affiliation.

His conservative stand in the 1930's won for him Republican support which never was shaken.

He won and retained support of business and industrial leaders. He was solid with and was supported by organized labor and the farm vote.

Among the farm folk Representative Polk was synonymous with agriculture. It was his chief congressional interest and he served on the House committee in that field.

His retirement from politics in 1940 was to enable him to return to farming. And he was one of the few legislators who listed his sole occupation as farming.

Locally, Representative Polk worked quietly but efficiently to help obtain the Portsmouth Area A-plant, the city's flood defenses, the Scioto County Airport, aid for schools, surplus commodities and improvements through WPA and PWA work.

Representative Polk had been in failing health for some months, but he remained on the job in Washington representing the people who elected him.

James G. Polk had the respect of his friends and foes alike. House Speaker SAM RAYBURN calls him "a fine Member of Congress; a gentleman all around."

That is exactly how his constituents thought of him.

[From the Greenfield Daily Times, May 4, 1959]

POLK EULOGIZED FOR "LIFE OF SERVICE"

Seven Members and two officials of the U.S. House of Representatives comprised the congressional delegation to last rites for Representative James G. Polk held Saturday in Highland Methodist Church.

Mr. Polk died April 28 in Washington.

Rev. C. S. Thompson, minister of the church, in his sermon eulogized Mr. Polk as a plain, righteous, and humble man who devoted his life to the service of others.

Revs. Jack Ellsberry and C. A. Arthur offered the prayer and scripture reading. Mrs. Leroy Larrick, Sr., was at the piano.

The large congregation was accommodated by placing extra chairs in the church and on the front lawn.

Burial was made in the family lot in the churchyard cemetery. Pallbearers were James Rhodes, Charles Blackburn, Carl Fetters, Vannie Fry, Tom McFadden and Heber King.

The congressional delegation included Representatives William E. Hess, Wayne L. Hays, Gordon H. Scherer, Thomas L. Ashley, Charles A. Vanik, Robert E. Cook, and Samuel L. Devine; and Zeake W. Johnson, Jr., Sergeant at Arms, and Kenneth R. Harding, Deputy Sergeant at Arms. They were appointed by Speaker SAM RAYBURN.

Highland and Leesburg police officers and State highway patrolmen directed traffic.

Several hundred persons paid their respects during visitation at the Patterson funeral home in Leesburg.

Following the service, Patterson's sent many of the floral pieces to the VA Hospital at Chillicothe, and to the Greenfield, Washington C.H., and Hillsboro hospitals.

[From the Manchester Signal, Apr. 30, 1959]

CONGRESSMAN JAMES G. POLK, VETERAN LEGISLATOR DIES TUESDAY IN WASHINGTON, D.C.

Death wrote finish to a long and active political career Tuesday morning at 10:48 a.m., when Representative James G. Polk died of cancer in Walter Reed Medical Center, Washington, D.C.

The Highland County Democrat, representative of Ohio's Sixth Congressional District, was 62 years of age.

He had been in poor health for quite some time, having entered the hospital March 21. After examination, it was an-

nounced he was suffering from lymphoma, an inflammation of the lymph node.

Polk, after being seriously ill in the fall of 1958, recuperated in time to make a successful campaign for reelection.

His home was in Highland, 10 miles north of Hillsboro. His Sixth District is comprised of Adams, Brown, Clermont, Fayette, Highland, Pickaway, Pike, Ross and Scioto Counties.

The veteran campaigner had served 20 years in Congress. First elected in 1931, he served five terms and retired in 1940. After sitting out the 77th through 80th Congresses, he came back in the 81st and had been in the House since.

Political observers feel Gov. Michael V. DiSalle probably will call for a special election to name Mr. Polk's successor. If he does, the primary will probably take place in October to give parties an opportunity to select a candidate for the November finals. The special election for Congress would then be held November 3, with the general 1959 elections. The successful candidate would take his seat in Congress a few days after the November election.

Mr. Polk was a "people's representative." He watched over his constituents in the district with constant attention, and no matter what political affiliation a voter in his district professed, he always received the same courteous, prompt reply to a problem from Mr. Polk's office.

Survivors include his wife, Mrs. Mary Polk of Washington, D.C.; a son, William A. Polk; three daughters, Mrs. Martha Willhide, Mrs. Helen Vara, and Mrs. Lois Taylor; half-brother, Robert T. Polk and a half-sister, Miss Fannie Polk.

Funeral services will be held in Highland Saturday.

[From the Hillsboro (Ohio) Press Gazette May 1, 1959]

RITES PLANNED FOR SATURDAY—SERVED 20 YEARS AS REPRESENTATIVE

James Gould Polk, 63, of Highland, who had served 20 years as Sixth Ohio District Congressman, died of cancer about 10 a.m. Tuesday in Walter Reed Army Hospital, in Washington, D.C.

Funeral services will be held Saturday at 2 p.m., at the Highland Methodist Church, with the Reverend C. S. Thompson and the Reverend C. A. Arthur officiating. Burial will be made in Highland Cemetery under the direction of Patterson Funeral Home of Leesburg. Friends may call at the funeral home after noon, Friday.

The Representative had been in failing health for some time. He first entered the hospital last January 16, for examination and reentered the hospital on March 21 for treatment. Relatives said that he was believed to have had cancer for several years but periodic checkups failed to reveal it until a few weeks ago. He was born on Oct. 6, 1895, a son of William Alexander and Isophena Ockerman Polk. He was a veteran of World War I.

He made his home at Highland when Congress was not in session and engaged in farming. He was the owner of a 285-acre farm and took an active interest in its operation.

In Columbus, Gov. Michael V. DiSalle, informed of the representative's death, issued this statement:

"The people of the Sixth District have suffered a great loss. Ohio and the Nation share in this deep feeling.

"Jim Polk was a kindly, able, and sincere public official. He worked hard for the people of his district and he was devoted to his obligation to the national interest.

"While I was in Washington, he was serving as a member of the House Agriculture Committee. His sense of fair play was so evident that I became a great admirer and a close personal friend."

Tuesday in Washington, 25 Members of the House of Representatives, including most of the Ohio delegation, Democrats and Republicans alike, eulogized him on the Chamber floor before Speaker SAM RAYBURN called for adjournment out of respect for the gentle, soft-spoken Ohioan. "He was a fine Member of Congress, a gentleman all around," RAYBURN said. Several Senators, Senator STEPHEN M. YOUNG, Democrat, Ohio, among them, spoke of his passing. Flags on all Government buildings in Washington were at half mast.

He was born on a farm near Careytown in Penn Township of Highland County. His parents and three of his grandparents were born in the same county. The Congressman was a direct descendant of Robert Bruce Polk, woh emigrated from Scotland to Ireland, where he married and later came to the Eastern Shore of Maryland, in 1672.

Joshua Polk, the Congressman's great-grandfather, came to Highland County from Maryland in 1826 and bought a 330-acre farm in Penn and Fairfield Townships.

His ancestors were pioneer residents of Highland County. Their principal occupations were farming, teaching, and preaching. Three of his mother's cousins were ministers of the Church of the Brethren and one of his father's brothers was a minister of the Universalist Church.

The Congressman's late father, William Polk, was for many years one of the most extensive cattle feeders in Highland County and president of the New Vienna Bank.

[From the Bethel (Ohio) Journal, May 7, 1959]

JAMES G. POLK

In the death of Representative James G. Polk, the Sixth Ohio District has lost a devoted public servant. He was held in high esteem by members of both political parties.

First elected in 1930, he served for five successive terms. A humble man, his biography in the Congressional Directory refers to him as being "one of the few Members of Congress whose sole occupation is farming." He was deeply interested in and concerned about farm problems. For a time he was a special assistant to Secretary of Agriculture Charles Brannan.

After laying politics aside for 10 years, in 1948 he again ran for Congress, won back his congressional seat and, never being defeated, he continued in office until his death.

In the passing of James G. Polk, the Sixth District has lost a capable, honest public servant who was completely dedicated to the duties of his office and to the service of his constituency.

[From the People's Defender, West Union, Ohio, May 7, 1959]

THE LOSS OF CONGRESSMAN POLK

The death of Congressman James G. Polk, of the Sixth Ohio District, which came as a shock last week, is one of the greatest losses this section of Ohio had in many years.

Congressman Polk was an outstanding and well liked representative with a record in Congress that will stand for many years to come. His knowledge of the Sixth District was one that was thorough and he understood the needs of each county he represented.

As a member of the agriculture committee, he did not hesitate in asking information from his voters of the district before he came to casting his ballot on each particular issue. His interest in the burley allotment program was something that will remain in the minds of the growers forever.

His colleagues in Congress paid the highest tribute to him and said he was "kind, able and a Christian man." He had won the respect of both the Democrat and Republican members of the body.

It will be many years in the future before the Sixth Ohio District will again have such representation in Congress.

[From the Portsmouth (Ohio) Times, May 4, 1959]

THREE PASTORS PAY FINAL TRIBUTE TO REPRESENTATIVE POLK—FRIENDS OVERFLOW CHURCH AT RITES FOR CONGRESSMAN

HIGHLAND, OHIO.—U.S. Representative James G. Polk, (Democrat, Highland), was laid to rest here Saturday afternoon on the family plot in Highland Cemetery.

The career of the 62-year-old Democratic Representative came to an end last Tuesday in Walter Reed Army Medical Center, Washington, D.C.

Final services were conducted at the local Methodist Church where Representative Polk and his family worshiped when he was at home here.

The church was filled with flowers and people and many other persons were seated on chairs which had been placed on the lawn outside the edifice. A public address system was used to carry the funeral services given by three ministers who had served the Polk family.

Rev. C. S. Thompson, current pastor of the church, used the 17th psalm, 15th verse * * * "I will behold thy face in righteousness: I shall be satisfied, when I awake, with thy likeness."

SERVED OTHERS

Reverend Thompson said Representative Polk's aim was "to always serve his fellow man well. He always thought first of others, himself last."

In his tribute of the legislator, Reverend Thompson cited his service in Congress and also to the church, such as when he taught Sunday school here.

Reverend Thompson was assisted by Revs. C. A. Arthur and Jack Ellsberry.

The body of the Congressman arrived at Patterson Funeral Home in Leesburg Friday morning and from noon that day until the time it was moved to the church a steady stream of persons paid respects.

Present for the funeral were six Members of the House of Representatives, the Sergeant at Arms and the Deputy Sergeant at Arms.

The Representatives—WILLIAM E. HESS, WAYNE L. HAYS, GORDON SCHERER, THOMAS L. ASHLEY, CHARLES A. VANIK, and SAMUEL L. DEVINE—acted as honorary pallbearers.

LOCAL FRIENDS PALLBEARERS

The pallbearers were friends of the Polk family. They were James Roads, Carl Fetters, Charles Blackburn, Heber King, Tom McFadden, and Vannie Frye.

Letters, cards, and flowers were sent to the family from members of both political parties throughout the Sixth District, the State, and Nation.

"He was an American before he was a partisan," said one of his political opponents.

Similar eulogies came from his associates in Congress as they filled some seven pages in the CONGRESSIONAL RECORD last week.

The nearly 100 baskets of flowers sent were given to area hospitals and to the Veterans Hospital at Chillicothe.

Masonic services were held at the funeral home in Leesburg Friday night. He also was a member of the Elks, the Grange, the Farm Bureau, and the Farmers Union.

Farming was closest to his heart as he served on the House Agricultural Committee and owned two farms locally.

Representative Polk divided his time between farming and school teaching after his graduation from Ohio State University's College of Agriculture in 1919. He earned his master's degree at Wittenberg College in Springfield. He was graduated from there in 1923.

HEADED SCHOOLS

He served briefly as a high school principal at New Vienna and later was superintendent of schools.

From 1923 to 1928 he was high school principal at Hillsboro.

Representative Polk was born at Careytown, about 3 miles west of here, October 6, 1896, a son of William A. and Amy Isyphenia Ockerman Polk.

Surviving are his wife, 3 daughters, a son, a half-brother, a half-sister, and 11 grandchildren.

Those from Scioto County attending the funeral were:

Vernal Riffe, Jr., Arlie N. Barker, Everett Wilkerson, J. Alden Staker, Hymie Canter, Frank Smith, Russ Burns, Cleo Wiltshire, Mr. and Mrs. O. Carson Barklow, Mr. and Mrs. William Burch, and Mr. and Mrs. Oscar Peterson. Mr. and Mrs. Oscar Pyle, formerly of Portsmouth and now living in Oak Ridge, Tenn., also were present. Mr. Pyle was Representative Polk's secretary during the first 10 years of his career in Washington.

RESOLUTION BY UNION PRAISES POLK

The following is a resolution passed by the members of the Highland County Farmers Union:

Whereas Congressman James G. Polk was an active member of the Highland County Farmers Union, and a wholehearted supporter of Farmers Union policies, and

Whereas, as a member of this organization, as a farmer, as a Member of the Congress of the United States for 20 years, and as a member of the Agriculture Committee of the U.S. House of Representatives, he rendered distinguished service to agriculture, and

Whereas he regarded agriculture as a way of life, and was always a champion of legislation which would preserve and strengthen the family farm as a fundamental unit in rural life, and

Whereas his personality was a combination of those qualities of courage, kindness, friendliness, and humility which caused him to be respected and admired by all who knew him: Therefore be it

Resolved, That the members of the Highland County Farmers Union deplore the loss of the Honorable James G. Polk, and that this resolution be adopted in tribute to him, and that a copy be spread upon the minutes; and be it further

Resolved, That the secretary of the Highland County Farmers Union send a copy of this resolution to Mrs. Mary Polk, his widow, to the Clerk of the U.S. House of Representatives, and to the press.

[From the Miami Valley News, May 7, 1959]

POLK BURIED AT HOME IN HIGHLAND

The body of Congressman James G. Polk was brought from Washington to the Patterson Funeral Home at Leesburg where it lay in state last Friday afternoon and evening and Saturday morning.

Final services were conducted at the Methodist Church in Highland, the Congressman's home town two miles west of Leesburg, at 2 p.m. Saturday.

Surviving are the widow, Mary Smith Polk; a son, William Polk, Washington; three daughters, Mrs. Martha Wilhite and Mrs. Lois Taylor, Washington, and Mrs. Helen Vara, who has just returned to Ohio from Germany where her husband is serving with the Army; a brother, Robert, and a sister, Fannie Polk, both of Highland.

JAMES G. POLK DIES; OHIO REPRESENTATIVE

Representative James G. Polk, 62, Democrat, of Ohio, who was as proud of being a farmer as he was of being a lawmaker, died today at Walter Reed Hospital of cancer. He had been ill several months.

Mr. Polk listed himself in the Congressional Directory as one of the few legislators whose sole occupation was farming. A member of the House Agriculture Committee, he served for 20 years in Congress in two tours of duty.

He was first elected in 1930, the first Democrat to be sent to the House from Ohio's present Sixth District. He served five succesive terms. He did not seek reelection in 1940.

From 1942 to 1946, Mr. Polk was a special assistant in the Agriculture Department. He went back to farming full time before running again for Congress, in 1948. He was elected, and had served ever since.

Born on a farm in Penn Township, Highland County, Ohio, Mr. Polk attended the village school in Highland and went to high school at nearby New Vienna. He graduated from the Agricultural College of Ohio State University in 1919.

After college, he became principal of the New Vienna High School in 1919, and later was superintendent of schools there until 1923.

Following a period in farming near Highland, he returned to his studies, receiving a master of arts degree from Wittenberg College, Springfield, Ohio, in 1923.

For 5 years after graduation from Wittenberg, Mr. Polk was principal of Hillsboro (Ohio) High School, serving until 1928. Two years later he ran for Congress.

He was a member of Kappa Phi Kappa, a national education fraternity, the Masons, the Elks, and the Methodist Church.

Speaker of the House RAYBURN today called Mr. Polk "a fine Member of Congress; a gentleman all around." He announced the House would adjourn out of respect to the Ohioan after eulogies.

[From the Hillaboro (Ohio) Press Gazette, May 5, 1959]

TRIBUTES PAID TO REPRESENTATIVE POLK—SOLONS JOIN IN HONORING COUNTIAN

When James Gould Polk, 63, who represented Ohio's Sixth District in the U.S. House of Representatives for 21 years, died April 28, many of his colleagues paid him tribute both in the House and the Senate.

Ohio Senators FRANK J. LAUSCHE and STEPHEN M. YOUNG headed the list of those who spoke in glowing terms of their association and knowledge of Polk's service and ability.

LAUSCHE introduced a resolution memorializing Polk in the Senate and similar resolutions were adopted in the House, all unanimously.

LAUSCHE described Polk, a Democrat from Highland, as a "humble, unostentatious person * * * devoted to the people he represented. He was beloved, not only by those who believed in his philosophy but also by those who disagreed with him."

Said YOUNG, "He was a gentleman of the sweetest character. He had represented his constituency with fidelity and zeal."

Senate majority leader LYNDON JOHNSON said that Polk was "one of the good and great men I have known."

KENNETH B. KEATING, Republican, New York, who had served with Polk in the House, said, "I found him one of the soundest and most helpful Members in that body. He wore no man's colors."

Many more tributes were added by House Members, both Ohioans and those from other States.

MICHAEL J. KIRWAN of Ohio's 19th District, announced POLK's death to House Members and said:

"The people of the Sixth Ohio District loved and trusted Jim Polk, and held him in the highest esteem. He never raised his voice in anger and distinguished himself as an able, conscientious representative of his people. They understood and respected him."

Other tributes from Ohio Representatives included:

CLARENCE J. BROWN, Seventh District: "He was a true gentleman, a man of great character and ability. Jim was a kindly man; a Christian gentleman, if ever there was a Christian gentleman on this earth of ours."

WAYNE L. HAYS, 18th District: "I have never known a person more kindly than Jim Polk. He was the kind of a man that I think all of us would like to be."

THOMAS L. ASHLEY, Ninth District: "It has been said that Jim was a kind, gentle man. And, indeed, these were his virtues. But he was endowed, too, with a rare courage. * * * There will be few who will be remembered with greater love than Jim Polk for the wisdom and for all that he gave."

DELBERT LATTA, Fifth District, who, as a Member of the House, served with Polk on the Committee on Agriculture: "Jim Polk's many years of experience in the field of agriculture would have been invaluable to me. His wise counsel in this field will surely be missed by the entire Congress."

House Speaker SAM RAYBURN and Democratic whip JOHN MCCORMACK also paid tribute. Said RAYBURN:

"He served his district and his country well * * * was a fine man, of splendid ability, of the highest character."

Added MCCORMACK:

He exercised a "powerful influence in the House * * * as a result of the recognition of his unusual ability, his logical mind, and his sound advice."

RESOLUTION EULOGIZES CONGRESSMAN POLK

The following resolution eulogizing the late James G. Polk, Congressman from the Sixth Ohio District, submitted jointly by Representatives James W. (Bill) Collins, of Highland, and Jackson, Kruse, Shoemaker, Riffe, Gaines, Leist, Hook, and Wallace, was adopted by the Ohio House of Representatives, Monday, May 4, and entered in the journal of the House:

RESOLUTION

Relative to the death of the Honorable James G. Polk, Congressman from the Sixth Ohio District.

Whereas the members of the House of Representatives of the 103d General Assembly have learned with deep regret of the passing of a long distinguished Member of the U.S. House of Representatives; and

Whereas Mr. Polk was elected to Congress in 1930 and served five consecutive terms (1931–41), when he voluntarily retired to become associated with the U.S. Department of Agriculture in Washington, D.C., during the World War II period, only to be elected once again to Congress in 1948 where he served for five more consecutive terms, including the current 1959–60 term; and

Whereas Mr. Polk was graduated from the College of Agriculture, Ohio State University, and from Wittenberg College, served his country during World War I, and taught school before entering Congress; and

Whereas his public career has been marked by conscientious application to duty, sincere dedication to the service of his fellow man, and a devotion to public service of such superior quality as to demand the respect and esteem of all those who were so fortunate to come in contact with him, including fellow servants in Government and the many others in various walks of life and fields of endeavor: Therefore be it

Resolved, That the members of the House of Representatives, with the sorrow and grief that inevitably follows the deplorable loss of a remarkable man, pay tribute to the

Honorable James G. Polk, and that this resolution be adopted by a rising vote and a copy thereof be spread upon the Journal; and be it further

Resolved, That the Clerk of the House of Representatives transmit an authenticated copy of this resolution to Mrs. Mary Smith Polk, his widow.

LAST RITES HELD FOR CONGRESSMAN

Congressman James Gould Polk, who served the Sixth Ohio District for nearly 21 years in Congress, was eulogized in brief, simple rites Saturday at 2 p.m., the Highland Methodist Church.

Officiating at the last rites were the church pastor, the Reverend C. S. Thompson, the Reverend C. A. Arthur of Leesburg, and the Reverend Jack Ellsberry, former pastor of the church. Burial was in the church cemetery.

Masonic services for the late Congressman were held Friday night at the Patterson funeral home in Leesburg. Hillsboro members conducted the service.

An estimated 500 persons attended the services for the Congressman, who had served 11 terms in Congress, 1931–40, and 1949–59.

In addition to many county, district, and State officials, friends and relatives, a delegation of Ohio Congressmen was in attendance.

These included WILLIAM E. HESS, WAYNE L. HAYS, GORDON H. SCHERER, THOMAS L. ASHLEY, CHARLES A. VANIK, ROBERT E. COOK, and SAMUEL L. DEVINE. Zeake W. Johnson, Jr., sergeant at arms of the House of Representatives, and Kenneth R. Harding, deputy sergeant of arms, were also in attendance.

Pallbearers included Carl Fetters, Jim Roads, Charles Blackburn, Heber King, Vannie Fry and Tom McFadden.

Special music during the service was provided by Mrs. Leroy Larrick, Sr.

[From the Portsmouth (Ohio) Times, June 23, 1959]

CORN TO PROVIDE CHURCH ORGAN AS POLK MEMORIAL

HIGHLAND, OHIO.—A memorial to the late James G. Polk, Congressman from the Sixth Ohio District, will be purchased from funds obtained in a community project.

The project is the raising of corn on the Polk land at the family home here. Fertilizer and seed corn has been donated by various citizens while others have prepared the fields and planted.

Mrs. James Roads, a member of the finance committee, said that half of the money raised from the project will be used to purchase an organ for the Methodist Church in memory of Mr. Polk. She said he was a strong supporter of the church and worshipped there when he was home.

Mrs. Roads said that 46 acres have been planted.

COMMUNITY PROJECT IN HIGHLAND FOR MEMORIAL TO LATE CONGRESSMAN POLK

A part of the money from a community project in Highland for the Methodist Church will be used as a memorial to the late James G. Polk, Congressman from the Sixth Ohio District.

The project, raising corn on the Polk land at the family home in Highland, is one in which the labor and materials are donated.

Mrs. James Roads, a member of the church's finance committee, said 46 acres have been planted, or will be by the end of this week.

She said half of the money will go to the church fund and half will be used to purchase an organ for the church in memory of Mr. Polk. He was a strong supporter of the church and worshipped there when he was home.

Mrs. Roads said the plowing, discing, planting, etc., has been handled by Don Ingersoll, Jim Roads, Bob and Bill Manuel, LeLarrick, Jr., George Roads, John Adams, Heber King and Tom McFadden, who also has donated some fertilizer to the project.

She said others can help by donating money to buy fertilizer.

The seed corn was donated by Tom Miller, Mr. Ingersoll and Winter's Service Station.

[From the Manchester (Ohio) Signal, June 11, 1959]

CHURCH MEMORIAL TO HONOR POLK

HIGHLAND.—Part of the money from a community project in Highland for the Methodist Chuch there will be used as a memorial to the late James G. Polk, Congressman from the Sixth Ohio District.

The project, raising corn on the Polk land at the family home near Highland, is one in which labor and materials are donated.

Mrs. James Roads, a member of the church's finance committee said 46 acres have been planted.

She said half of the money will go to the church fund and half will be used to purchase an organ for the church in memory of the late Congressman. He was a strong supporter of the church and worshipped there when he was home.

[From the Chillicothe (Ohio) Gazette, May 11, 1959]

SENATOR FRANK E. MOSS OF UTAH LAUDS POLK AT DEMOCRATIC RALLY HERE

Utah's Senator FRANK E. MOSS spoke with admiration for the late Congressman Polk. "Though Jim Polk and Harry Truman were cast from different molds, they fought with equal effectiveness for the same principles," he said.

"* * * Polk was a quiet, reserved man, but a thorough, balanced, and fearless legislator. I want you people of the Sixth District to know I share your grief in his passing and I can wish you no greater blessing than the nomination and election of a Democratic successor who is even half as dedicated and effective as Jim Polk."

Municipal Court Judge William B. Brown delivered a "memorial" to the late Congressman Polk.

"Those who didn't know James G. Polk wondered why he was such a success—that quiet, unassuming, friendly man. Those who did business with him became quickly aware that outward appearances are disarming and deceiving. Those of us who knew him were devoted to him, elected him and reelected him, for, as our Representative * * * he truly labored in the vineyard."

WITTENBERG COLLEGE,
Springfield, Ohio.

Mrs. JAMES G. POLK,
Highland, Ohio

DEAR MRS. POLK: For the college and its alumni I extend sincere sympathy in the loss of your husband. His death was a great loss also to our Nation which he had served so faithfully for many years.

We at Wittenberg appreciated the generous support he gave to the college year after year and the ready manner in which he responded to various calls for help. I can recall no time when he failed to do his full share on any task we placed before him.

We were always especially proud of his honest, forthright stand on matters of principle. Our Nation, we are sure, would be stronger were it fortunate enough to have more men like him in the Congress and other positions of great responsibility.

Mr. Polk's greatest monument will be his record of loyalty, honesty and devotion to duty as he saw it.

Sincerely yours,

W. EMERSON RECK,
Vice President.

PRAYER AT FUNERAL SERVICE FOR MR. POLK

Almighty God, our Father, from whom we come, and unto whom our spirits return; Thou hast been our dwelling place in all generations. Thou art our refuge and strength, a very present help in trouble. Grant us Thy blessing in this hour, and enable us so to put our trust in Thee that our spirits may grow calm and our hearts be comforted. Lift our eyes beyond the shadows of earth, and help us to see the light of eternity. So may we find grace and strength for this and every time of need; through Jesus Christ our Lord. Amen.

Our Father who art in heaven, hallowed be Thy name; Thy kingdom come; Thy will be done on earth as it is in heaven. Give us this day our daily bread. And forgive us our trespasses, as we forgive those who trespass against us. And lead us not into temptation, but deliver us from evil. For Thine is the kingdom, and the power, and the glory forever. Amen.

MEMORIAL SERVICE FOR MR. POLK IN THE HIGHLAND METHODIST CHURCH, REV. JACK ELLSBERRY READING THE SCRIPTURES

Jesus said, I am the resurrection and the life; he that believeth in me, though he were dead, yet shall he live and whosoever liveth and believeth in me shall never die.

The eternal God is thy refuge, and underneath are the everlasting arms.

The Lord is my light and my salvation; whom shall I fear? The Lord is the strength of my life; of whom shall I be afraid?

The righteous live forever, and the care of them is with the most High; with His right hand He shall cover them, and with His arm shall He shield them.

For we know that if our earthly house of this tabernacle were dissolved, we have a building of God, and house not made with hands, eternal in the heavens.

THE 23D PSALM

The Lord is my shepherd; I shall not want.
He maketh me to lie down in green pastures;
He leadeth me beside the still waters.
He restoreth my soul; He leadeth me in the paths of righteousness for His name's sake.
Yea, though I walk through the Valley of the Shadow of Death, I will fear no evil; for Thou art with me; Thy rod and Thy staff they comfort me.
Thou preparest a table before me in the presence of mine enemies; Thou anointest my head with oil; my cup runneth over.
Surely goodness and mercy shall follow me all the days of my life; and I will dwell in the House of the Lord forever.

A PORTION OF THE 90TH PSALM

Lord, Thou has been our dwelling place in all generations.
Before the mountains were brought forth, or ever Thou hadst formed the earth and the world, even from everlasting to everlasting, Thou art God.
For a thousand years in Thy sight are but as yesterday when it is past, and as a watch in the night.
Thou carriest them away as with a flood; they are as a sleep; in the morning they are like grass which groweth up.
In the morning it flourisheth, and groweth up; in the evening it is cut down and withereth.
So teach us to number our days, that we may apply our hearts unto wisdom.

High Hope for the Valley

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Thursday, August 20, 1959

Mr. KEFAUVER. Mr. President, passage of the Tennessee Valley Authority self-financing bill, and the approval by President Eisenhower with assurance of a clarifying amendment, was hailed by millions of citizens in my home State and throughout the TVA area, along with champions of public power throughout the United States.

As an indication of the importance of the self-financing bill to the valley area, I cite two of many editorials which appeared in Tennessee newspapers immediately after the measure was signed by the President.

One article, entitled "High Hope for the Valley," appeared in the Chattanooga Times on August 7. The second excellent editorial was printed in the Memphis Commercial Appeal on the same day. I ask unanimous consent that the articles be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Chattanooga Times, Aug. 7, 1959]
1959]

HIGH HOPE FOR THE VALLEY

Presidential approval of the TCA self-financing bill, which has had a fantastic journey through Congress to the White House, has many facets of meaning. But surely the broadest, the one which means more to most people, is that the valley can now look forward to an adequate supply of electric power to serve an expanding economy.

A tremendous program of construction by the Authority itself is in the cards, given impetus by the right to issue up to $750 million in revenue bonds. It will be needed, and quickly, to pull the area from beneath the shadow of a potential power shortage in the next few years.

This is the threat with which the valley has lived for too long. It has been imposed by hostility and misunderstanding, inside Congress and out, which denied TVA the funds and the flexibility necessary to meet the rising power demands of its service area.

Happily, those binding restrictions have been removed in the measure which President Eisenhower signed despite reservations, and in the amendment which congressional leaders have promised him to remove the cause of those reservations.

The whole affair is an unusual demonstration of good faith and cooperation between the executive and legislative branches. For the valley, it couldn't have come at a better time.

Mr. Eisenhower objected to provisions which required him to transmit TVA's construction program plans to Congress without change. Congress could modify them if it chose. The President saw in this a threat to the balance of power between the executive and legislative branches, and gave notice of his intent to veto the bill for that reason.

An amendment freeing TVA from control of its construction program by either branch was proposed and found favor, but there was no feasible way to get it to the President within the time he had to act on the bill. Agreement was reached for him to sign the bill anyway while Congress rushed consideration of the amendment.

We are convinced the President was mistaken in his original distaste for the bill, and find it somewhat surprising that he agreed to a solution which relaxed congressional control without strengthening the executive reins. But we'll not quarrel over that.

The end result will be to give TVA greater freedom of action than it has ever proposed. In that sense, it imposes a new and heavier burden of responsibility upon the board of directors, one which we are confident they will discharge with integrity of purpose and efficiency of operation.

Actually, TVA is, and will remain, under the ultimate control of Washington. It is a creature of Congress with directors who are appointees of the President and responsible ot him. All the Authority or its friends have ever asked was that degree of independence and flexibility vital to the successful operation of a sole supplier of power to a growing, expanding region.

This is what the law of 1959, when it is finally on the books, will give TVA.

The region will be the immediate beneficiary, to be sure, but the Nation will feel the effects and reap the rewards of the sound growth prompted by this legislative turn.

[From the Memphis Commercial Appeal, Aug. 7, 1959]

TVA COMES OF AGE

With a stroke of his pen yesterday President Eisenhower gave the Tennessee Valley Authority freedom and self-determination.

In short: TVA has come of age.

It is a tremendous economic victory for our area. It is a personal triumph for our own Representative DAVIS and all the other Congressmen from the Midsouth who backed the bill to permit TVA to do its own financing—the bill the President signed.

Although nothing can be completely divorced from politics, the bill takes TVA close to that, closer than anyone thought possible 4 years ago when CLIFF DAVIS first tackled the job getting it through the Congress.

That is not to detract from the steering it got from Senator ALBERT GORE in the Senate, or from the other sympathetic solons from Southern States. The House was the arena of doubt this time and it took expert handling to get it by in the form agreeable to the administration.

And at long last the President fulfilled his original promise, made in 1952, that he would not knowingly do TVA harm. His action yesterday permits TVA to proceed in its endeavor to serve the region for which it was intended without further encroachment on private utilities' territory. It answers the accusations of tax free rides. It stands on its own two feet.

Indeed, TVA has come of age. And the South beams with the fondness of parenthood.

Dancey Returns From Russia—Wants Khrushchev To Visit Peoria

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 20, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial by George E. Sokolsky appearing in the August 20, 1959, issue of the Washington Post. Mr. Sokolsky refers to the fact that Charles L. Dancey, editor of the Peoria Journal Star, has returned from Russia and would like Mr. Khrushchev to visit Peoria, Ill. In so doing, Mr. Sokolsky points out, that Mr. Khrushchev would, on his trip through the Midwest, see the greatest industrial complex in the world. The editorial follows:

HOW TO SEE AMERICA

(By George E. Sokolsky)

Usually when guests of the Nation come to this country, the State Department works out an itinerary which often includes the big and spectacular cities and such places as are of special interest to the visitor. There are dinners and luncheons, and speeches are delivered. Obviously, the man who is guarded by secret police and FBI agents and the local police and who moves through the country in a storm of confetti learns very little about the American people, what they think, how they live, and what they really believe to be true. The mass demonstration for Vice President RICHARD NIXON in Warsaw gave evidence of a spontaneous friendliness to an American, but neither NIXON nor anyone in his entourage sat down to a glass of tea with a few simple proletarian families, just as Khrushchev will not have occasion to do anything like that in this country.

Charles L. Dancey, editor of the Peoria Journal Star, has made an interesting suggestion for Khrushchev's visit. He, of course, wants to have Khrushchev brought to Peoria. What, at least, could be done is to fly the Russian low from Pittsburgh to Cincinnati where he can see the greatest industrial complex in the world. He could be put down in the smaller cities of this area; it should be possible for him to visit homes. He might pick and choose so that he could not suspect that the show was set up for him.

He would find many Russian and Polish-speaking people in these areas who could tell him of their lives in this country. He would find many whose ancestors were Ukrainians. He would discover how descendants of a great many races and nationalities manage to live and work together, retaining some of their inherited customs; but in the third generation, he will find that a new breed is emerging, an American breed, somewhat different from their sires but also different from what he might see in New York or Washington, in New Orleans or Chicago, in San Francisco or Los Angeles. The Middle West like New England is the America he ought to see, in many respects more surprising than the larger cities.

There is no American type as there is no Russian type. Certainly a Kalmuck is different from a Georgian, as a Ukrainian is different from a Uzbek.

In the United States, these differences are more pronounced because here for about 300 years, races of man have been mixing in a veritable melting pot. In some areas, the basic stock was Anglo-Saxon; in others, it was French or Spanish.

There was no time, from the earliest settlements until today, when there was not an influx of Germanic peoples into this country. It is difficult to trace this kind of statistics, but there have been as many German, Dutch, and Scandinavian migrants into the United States as Anglo-Saxon. It is estimated that there are about 12 million descendants of Italians.

The Jews first arrived in 1653 and there have been Jewish immigrants ever since; also, Jews have since the earliest days been assimilated into the general population and have disappeared as Jews. That trend is impossible to study thoroughly because of

intermarriages and the Anglicization of names, but in certain areas, it must have been notably active.

All Russians have been led to believe that the Negroes are a brutally treated minority nationality without rights, practically enslaved. And if Khrushchev is taken to Harlem in New York City, he will be in the ugliest ghetto in the world where Negroes live in crowded tenements and are usually exploited by Negro and white politicians. However, there are cities in the South and in the West where Negroes live comfortably and even advantageously because they are Negroes. It would be an act of patriotism for Negro labor leaders to establish to Khrushchev the fact of the equality of pay for identical work in cities like Detroit and Pittsburgh. He should be taken to universities where he can see Negro boys and girls preparing for national leadership. The lies that have been told in Russia by American Communists need to be exploded. Perhaps Khrushchev can still learn something about the United States and the American people.

If we want to show off, this is the kind of showing off we need to do. If this visit is not for showing off purposes, what is it for? We need to establish the fact that here live some 50 races and nationalities of man in mutual interest without accentuation of differences, but with freedom to pursue their differences if they so desire. We need to show him that in our freely demonstrated differences lie our strength.

Discrimination and Mutual Security Legislation

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, August 20, 1959

Mr. MORSE. Mr. President, sometime ago I announced in the Senate that when the mutual security appropriation bill reached the floor of the Senate I would offer again the amendment which I offered at the time the mutual security authorization bill was before the Senate, which sought to place the Senate on record as being opposed to entering into mutual security foreign-aid agreements with countries such as Saudi Arabia, which follow a policy of discrimination against American citizens because of their religious faith.

At that time my proposed amendment lost by a vote of 47 to 43, but I was satisfied at the time that a considerable number of votes against the amendment were cast by those Senators who had not been present on the floor of the Senate during the debate and who were not fully aware of the import of the amendment. Several Senators who voted against my amendment at that time have come to me since and said that is exactly what happened; that they voted without fully understanding the significance of the amendment I offered.

I shall offer the amendment again, Mr. President, when the mutual security appropriation bill reaches the floor of the Senate.

In support of that amendment, Mr. President, the Jewish War Veterans of the United States of America in their 64th annual national convention assembled in New York City, August 5 to 9, 1959, passed a resolution. I am pleased to have the support of this resolution, which I shall refer to again in the course of the debate at the appropriate time.

I now ask unanimous consent, Mr. President, that the resolution be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

DISCRIMINATION AND MUTUAL SECURITY LEGISLATION

Whereas it is our understanding that certain foreign nations, some of them beneficiaries of our country's mutual security assistance, exercise discrimination against U.S. citizens, based upon race or creed, which inhibit or nullify rights of personal, commercial, diplomatic or military access to these countries, rights which are, according to our fundamental American concepts, due to all U.S. citizens without distinction; and

Whereas remarks made on the floor of the U.S. Senate as reported in the CONGRESSIONAL RECORD of July 8, 1959, indicate such restrictions specifically obtain in Iceland, which discriminates against Negroes; Norway, which discriminates against certain Catholic clergymen; and Saudi Arabia, which discriminates against Jews; and

Whereas these discriminations are repugnant to the principles of American democracy, the Constitution of the United States of America, and are derogatory to the rights of American citizens: Now, therefore, be it

Resolved by the Jewish War Veterans of the United States of America in 64th annual national convention assembled in New York City, August 5–9, 1959, That we urge the Congress of the United States to enact appropriate legislation pertaining to the mutual security appropriations bill which would prohibit disbursing any appropriated funds to any countries which practice such discrimination; and be it further

Resolved, We urge that in no instance should these practices or prejudices, with their evil consequences be permitted to become a part of the practice of any of the agencies of our Government.

Statement by David J. McDonald, President, United Steelworkers of America

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 19, 1959

Mr. DENT. Mr. Speaker, we recently were favored by receiving a report on the facts in the steel strike as the Secretary of Labor saw them.

I ask now that the House be given a chance to read President David J. McDonald's, of the United Steelworkers of America, statement on the same subject:

STATEMENT BY DAVID J. MCDONALD, PRESIDENT, UNITED STEELWORKERS OF AMERICA

The steel mills of the nation have been idle for 2 weeks because the steel companies have refused to discuss the needs of their employees until they "generate economic progress" for the companies. People who are not familiar with the astounding profit record of these companies have been given the impression that the steel industry has been suffering from a lack of economic progress. United States Steel Corp., the Nation's leading steel company, has now reported its 1959 profits. The facts disclosed by the report serve to demolish all of the claims made of inadequate progress by the steel corporation.

United States Steel Corp. reported net profits, after taxes, of over $254,900,000 in just the first half of the year, a new, all-time record high. These profits were almost 88 percent greater than a year ago and were $23½ million higher than the previous record for a 6-month period. For the first time in history the corporation succeeded in pushing its profits before taxes over the half-billion-dollar mark in half a year. And this was accomplished despite the use of several "extra charges" against profits, such as almost $16 million charged off against profits in the second quarter alone for "accelerated" depreciation not deductible for tax purposes under the law.

The criticism by the corporation of its employees' supposed lack of efficiency is best evaluated in the light of the spectacular growth of the corporation's profits on the work of each employee. Last year, the corporation's profits amounted to $2,625 per employee. In the prior record profit year of 1957, profits were $3,045 per employee. This year, in 1959, United States Steel's profits are equal to an annual rate of $4,345 per employee, an increase in profit per employee of $1,300 a year over the best previous record in 1957.

The corporation's current profits on an hourly basis are even more revealing of the hoax which United States Steel is attempting to perpetrate. The corporation tells the American people that its profit margin does not permit an increase in the hourly wage rates of its employees. But, whereas last year its profits were equal to $1.47 for every hour worked by each of its employees, and in the prior record profit year of 1957 its profits were $1.61 per man-hour, the corporation's 1959 profits are over $2.28 per man-hour. In other words, the profit margin is now over 67 cents per man-hour above the prior alltime record of just 2 years ago. This profit growth of 67 cents per hour in 2 years stands in sharp contract to the corporation's claims of inefficiency and lack of economic progress by the corporation.

In reporting on its earnings and operations in the most recent 3-month period United States Steel understandably neglected to comment on the fact that record production was achieved with fewer employees than in any year since 1939, except for recession 1958. This is understandable because the corporation's own report gives the lie to its vicious attack on the performance of its own workers. In the most recent 3-month period in 1959, the corporation shipped steel products at a record annual rate of 30.9 million tons with 250,310 employees. As recently as 1953, a good production and profit year, the corporation employed 301,560 workers and shipped 25.1 million tons, a record up to that time. In the space of 6 years, employment has been reduced by more than 51,000 and steel shipments increased by 5.8 million tons a year—an increase in steel shipments per employee of 48 percent in 6 years. In the last 2 years alone, since the prior record profit year of 1957, employment has been reduced by about 21,000 and steel shipments have risen by more than 32 percent. It is indeed shock-

ing that the corporation spreads propaganda of inefficiency and lack of corporate economic progress when its own reports disclose a record of relentless reduction of jobs, increased production and soaring profits.

Year after year the corporation has pocketed the lion's share of tremendously increased productivity and, on top of that, has piled one unjustified price increase after another (23 of them since World War II) on helpless steel consumers. The proof of this unprincipled behavior is found in the corporation's own financial reports. Although protesting that price increases have been required to meet added costs, the corporation's profit margin on each dollar sales has grown relentlessly, accompanying a fantastic growth in total sales. With total sales running at the rate of over $5 billion a year, the corporation is making a profit on each dollar of sales which is more than double the rate of profit earned on each dollar of sales when total sales were less than $1 billion a year, as in 1939. Further evidence of United States Steel's enrichment at the expense of the consumer is found in the record profit on each ton of steel shipped. If, as the corporation claims, price increases were required to meet added costs, the record would not show an ever-increasing profit per ton of steel. But the record shows precisely this fact—a profit per ton of steel shipped in the first half of 1959 which has increased by more than $3.50 a ton since the prior record profit year of 1957, by about $10 a ton since 1955, by over $17 a ton since 1953, and by almost $27 a ton since 1947. This profit record has brought the corporation's return on net worth up to the present level of 15.7 percent—a rate of return which is more than five times greater than 20 years ago.

Because of evident embarrassment at being required to disclose its phenomenal profits at a time when it is posing as the Nation's savior by forcing on its workers the hardships of a strike, United States Steel is attempting to pass off its profits as a temporary phenomenon brought on by unusual demand for steel in the first half of this year. Again the corporation's own report demonstrates that this is not true. The corporation's amazingly high profits in the first half of 1959 were achieved with about 12 to 13 percent of its capacity lying idle. United States Steel operated at between 87 and 88 percent of capacity in the first half of 1959, a rate of operations which was exceeded in 1947, 1948, 1950, 1951, 1953, and 1955. In addition, its rate of operations in 1952, 1956 and 1957 was only fractionally under its 1959 rate. Thus in 9 out of the last 12 years, the corporation's rate of operations was only fractionally under, or was in excess of its 1959 rate. Clearly this does not support the corporation's claim of an unusually high rate of operations in 1959.

The corporation's spokesman here made much of an alleged wage-cost push in their attempts to explain their opposition to sharing any part of their tremendous gains with their workers. Therefore it is not surprising that United States Steel did not comment in its report on the reduction in its employment costs in 1959. In the prior record profit year of 1957, the corporation's total employment costs amounted to 42.2 cents per dollar of sales. In the first half of 1959, this was reduced to 39.8 cents and in the most recent 3 months these costs were only 37.1 cents. This decline in employment costs in relation to sales, of course, reflects the consistent trend of reduced employment and increased production. As the reports of the American Iron and Steel Institute reveal, fewer and fewer man-hours are employed to produce a ton of steel. In the prior record profit year of 1957, a total of 16.1 man-hours were employed for each ton of steel shipped. In the most recent month for which figures are available, May 1959, only 13.3 hours were required. As a result of this constant trend, total payroll costs per ton of steel shipped are $3 a ton less than in the prior record profit year of 1957. It is pertinent to note that, despite the reduction in total payroll costs, the price of steel today is more than $7 a ton higher than it was in 1957.

What is indicated by these facts is not only the tremendous profitability of selling steel at current prices, but also the certainty of a growing profit margin as technology and efficiency steadily reduce the cost of producing each ton of steel. Accordingly, the statement of United States Steel's chairman of the board that he does not intend to raise the general level of steel prices this year is not quite the hold-the-line position that he pretends. This is so because, first of all, sharply rising productivity reduces the cost of producing steel month by month and, therefore, even a fixed steel price will result in a constantly increasing profit margin since the corporation never shares this growth with steel consumers. Secondly, it is not a hold-the-line position because steel dividends are at a new all-time high and are about to be raised still further; the compensation of supervisory employees (management incentive plan) in the steel mills is rising month after month as the result of bonuses gained as a reward for adding additional steelworkers to the ranks of the unemployed; and the compensation of steel executives, because of stock options, grows by leaps and bounds every day that the market price of steel equities rises.

As the market price of United States Steel stock rose from about $90 to $105 in the last few months, for example, the chairman of the board of United States Steel with stock options of 32,000 shares has gained about $480,000. For each 1-point rise in the price of United States Steel stock, his options increase in value by about $32,000. If he can succeed in holding the line on wages, he must be comforted by the thought that profits and stock equities will rise even further. Consequently, a successful hold-the-line policy on wages guarantees the opposite result for the chairman of the board—an increase in income from stock options, half of which is tax free. Finally, steel consumers can find little comfort in a statement that the general level of steel prices will be held this year because United States Steel is an old and practiced hand at obtaining sizable price increases without ever raising the general level of steel prices. By raising the charges for what are known as extras, the corporation has succeeded in the past in raising the average price of steel by as much a $5 a ton without ever putting into effect a general price increase.

Only those facts contained in the financial reports of United States Steel and the lesser steel corporations and in the reports of the industry's own American Iron and Steel Institute are necessary to establish that the crisis in steel has been created, for reasons known to the steel corporations, in complete disregard of those facts and of the welfare of the entire Nation. The entire position of the steel corporations in this crisis having been refuted by their own reports, it is no surprise that the steel industry shuns fact-finding and public disclosure of its sham like the plague. Sometimes truth takes time. But the union is confident that the truth will prevail.

The Atlantic Congress

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Thursday, August 20, 1959

Mr. KEFAUVER. Mr. President, the July issue of the NATO Letter, official publication of the Information Service of the North Atlantic Treaty Organization, states that the meeting of the Atlantic Congress held last June in London and attended by delegates from this body shows that NATO is growing into a community of peoples sharing common ideals, policies, interest, and activities.

"This development, as the Congress also showed, is coming about in the sturdy and healthy way that is possible among democratic people," the letter states.

Mr. President, I believe the letter is important in pointing up, as it does, the real spirit of the Congress, which drew representative peoples from all the NATO nations together, to consider their common aims and aspirations. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the publication was ordered to be printed in the RECORD, as follows:

THE ATLANTIC CONGRESS

The really important feature of the 5-day Atlantic Congress, which was opened by Queen Elizabeth II in Westminster Hall on June 5, was that it was a conference not of allied governments but of allied peoples from the countries composing the North Atlantic Alliance. It showed that the alliance between countries in Western Europe and North America which started 10 years ago as a defense against Soviet military and political encroachment in Europe, is growing into a community of peoples sharing common ideals, policies, interests, and activities.

This development, as the Congress also showed, is coming about in the sturdy and healthy way that is possible among democratic people. It is taking place, not under orders from governments and governmental officials, but through the initiative and hard work of individual citizens of the NATO countries who believe that an Atlantic Community is both natural and necessary. As the Queen said in her opening speech: "The Atlantic Community is the first real effort to give practical form to a growing desire of the peoples of this part of the world to work more closely together for their mutual security and benefit." Her Majesty went on to say that the Congress began its work "with two great advantages, for the Atlantic Community shares a common interest in security and progress, and a common European heritage. The many elements which make up this heritage are too complex to describe and too subtle to define. We cannot list them, but we know them when we meet them. However, there are two which have long been the main principles of enlightened European thought and action: respect for the freedom of the individual, for the dignity of human nature and a simple faith in God. These two principles show more clearly than anything else that the things which divide

us are very small and unimportant compared with the things which unite us. These two principles also demonstrate to our fellow members of the Commonwealth and to all our friends throughout the world that the Atlantic Community is not an exclusive club, but itself belongs to that wider brotherhood which comprises all men of good will."

The idea of holding the Congress derived from a resolution in 1957 of the annual conference of Members of Parliament from NATO countries—a nongovernmental body founded in 1955 to foster the political and economic development of the Atlantic Alliance. The preparatory work was carried out under the direction of a small international committee of Members of Parliament and other prominent people. Similarly constituted committees were responsible for national planning in the member countries of NATO.

The 640 members of the Congress came not as delegates of their governments or parties, but in a private capacity, speaking only for themselves. About one-third were Members of Parliament, others were prominent in the fields of science, technology, education, culture, religion, labor, industry and finance.

They set themselves to consider, from the experience of the first 10 years of the Atlantic Alliance, the ways in which it might develop toward a community over the next decade. They discussed the future course of relations between the NATO countries themselves, they paid even more attention to the relations of the alliance as a whole with the rest of the world. Convinced that the alliance has a positive role to play in the world, they were especially concerned in its future relationship with underdeveloped countries, particularly the newly independent states of Asia and Africa.

One of the early speakers was a distinguished Negro from the United States, the President of Howard University in Washington, Dr. Mordecai Johnson. Speaking as the child of a slave, he appealed for much greater economic aid for the peoples of Africa and Asia; aid on a scale sufficient to free them from the struggle for existence.

Dancey in Russia

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 20, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks, I wish to include the 25th, 26th, and 27th of a series by Editor Charles L. Dancey appearing in the August 13, 14, and 15 issues of the Peoria Journal Star respectively:

[From the Peoria Journal Star, Aug. 13, 1959]

WORD "SIBERIA" STUNS CROWD

(By Charles L. Dancey)

TBILISI.—There was some kind of an East German delegation in Tbilisi while I was there—also, of course, located at the Intourist hotel.

One of them in particular, a short, square, middle-aged man with thin straight hair latched on to me, eager to talk. (Mostly German, which is surprisingly easy to understand when spoken slowly. Or maybe it isn't so surprising for one raised in Pekin?)

He kept asking, every few minutes: "Are you sure you are an American?"

I would reply: "Peoria is about as American as anyone can get."

Finally, he grabbed me by the arm, leaned over, and said slowly: "East Germans are no different than West Germans—except that the way things are we have to be smarter." And then words, unmistakably in German and in intensity of manner, "Don't worry. Our day will come."

If he thought he was reassuring me, I must confess that it did not have that effect. At one point, he referred to the Russians as "those animals." This much intensity of hate, which can't be conveyed in mere words, is as disconcerting as an occasional example of unbelievable continuing fear.

Also in Tbilisi I attended a modern Russian play, in Russian, for an audience made up largely of local Russians, apparently. This time there was no special propaganda—it was a kind of romantic comedy.

At one point when two women were wrangling over the hero, one of them told the other sharply: "If you want a man why don't you go to India and marry an Indian."

For some reason, this made the audience almost hysterical. It was apparently the funniest line in the show—the idea of this good-looking blond Russian girl marrying an Indian.

This reaction hardly jibes with the government policy and propaganda line about the Russian people's true attitude toward orientals and other races.

With all the guff I'd taken from Professor Rai of India I could not help but maliciously wish he could have been there to hear what these great humanitarians really think of him.

On the other hand, I should have been very embarrassed if an Indian gentleman named Suomi, and a fine fellow, had been there.

Also in this play, home living was pretty realistically shown so far as my own limited experience and conversations indicated.

The setting was a home—i.e., a room, and there the actors, male and female, entertained, ate their meals, did their homework, and also slept (two on cots that were part of the furniture, one on a folding cot). And they were not supposed to be poor.

The third very revealing part of the play came when the hero, who was dodging marriage every which way, finally told his sweetheart that the truth was he had a job in Siberia.

Now, the move to Siberia is propagandized as a great patriotic effort in which the people are joining and volunteering with great enthusiasm.

But when the word "Seveer" (Siberia) was finally spoken on stage—although not dramatized in the stage action—the hush that fell over the audience was like a heavy curtain falling over the theater, and then a woman in front of me began sobbing.

There is more than one way to find out what feelings and emotions stir a strange, isolated people like the Soviets. I think this play was one of the most effective and revealing.

[From the Peoria Journal Star, Aug. 14, 1959]

NIGHT FLIGHT HIDES RED MISSILE BASES

(By Charles L. Dancey)

TASHKENT.—I flew from Tbilisi to Tashkent in Russia's famous TU–104 jet, but this time we took off after sundown and landed before dawn, going the whole way in darkness.

One of the stewardesses, betraying the usual giggling curiosity about Americans, sat down with me after we were airborne and began asking questions. The plane was almost empty.

When she had been quizzing me for a while, I asked a few questions myself—personal questions such as what connection did the plane make at Tashkent, and therefore, where did she fly from there, and where did she live, etc.

From this, it was revealed that this is in fact a shuttle flight between Tbilisi and Tashkent. It doesn't go anywhere else. It doesn't connect with anything else. Yet it is scheduled all at night.

Why?

(When I returned to the United States I learned—it is no great secret that we can track them—that this Caspian Sea area is where the Soviet rocket missile range and launching area is located).

The landing in Tashkent was again on a lone paved strip, and again I saw about 50 Mig fighter planes parked on the ground as well as many commercial planes.

I was met by another intourist guide, this one named Lida, who couldn't find much to show me in this central Asian city in the center of the Soviet cotton and textile area.

There is some new construction underway here, but very little, and hardly any completed. Lida explained that Stalingrad and the other cities that were destroyed in the war had to be rebuilt and this delayed housing projects in Tashkent which was unharmed in the war.

We drove through miles and miles of low, flat, mud huts, which looked like Pueblo Indian villages that were started but never got beyond the first or second story. Rarely does one see a window, and then it is just an open space in the wall with a number of sticks propped in it.

Most of the roofs are flat, and apparently earthen, too, and covered with heavy, brownish, tough-looking grass or weeds.

Lida says that when these were built the Moslems who built them and lived in them did not believe in having any windows facing outward.

She says this is a city of 1 million people of whom 60 percent are tilt-eyed oriental-Arabic Uzbeks, 15 percent Russian, and the rest Tartar, Tadjek, Armenian, and Kurd and others including various Afghan tribes.

She says there are 9 million people in Uzbekistan, and 90 percent are Uzbeks.

There are no screens here either—and plenty of flies. The central square, however is beautiful, with a fantastic hotel fronted by many statutes and blue glazed tile designs. It is new. It faces a park-like square, with a big fountain in the center, and on the other side is another very impressive new building—the Government building.

This and a few adjoining blocks, however, are a modern Russia island in a sea of mud hut Moslem homes—which Lida blithely says will all be torn down and replaced.

When, I wonder? Not in 7 years.

[From the Peoria Journal Star, Aug. 15, 1959]

GONE IS WEALTH OF SAMARKAND

(By Charles L. Dancey)

SAMARKAND.—A short hop from Tashkent lands you at Samarkand, the fly-bitten, sun-baked, God-forsaken end of the world which once was famous from Greece to Cathay for its riches and its beautiful blonde women.

Here Alexander the Great reached the borders of his conquests when he rode his horse into the river and turned back. Here he became so enamored of Asian luxury (and married Roxanne of Samarkand) that he abandoned Greek customs and habits—and murdered his best friend and general for protesting.

Where that great walled city stood, however, is still barren and sun-baked hills today. For Genghis Kahn laid siege to it and was bitterly resisted. The final insult came when the Sultan of Samarkand with 1,000 picked horsemen sallied out one of the old city's many gates, surprised the Golden Horde, cut his way through and escaped.

The great Khan leveled the city stone by stone, slaughtered its inhabitants and plowed the earth where it had stood.

Beside these barren hills, however, rose a new city, now numbering 200,000—a city which a century after the Mongols razed it became the capital of a fabulous empire that included most of what is now Russia, Turkey, all the Arabic countries, North Africa, Persia, Afghanistan, and most of India. The empire of the dreaded Tamerlane.

Tamerlane still lies buried here. In a crumbling tomb, across a barren courtyard, under a blue-tiled dome with grass growing out between the tiles stands a solid block of gleaming black nephrite—the biggest single hunk of this precious stone in the world—marking the place where Tamerlane lies.

On this is written: "Were I alive today, the world would tremble!"

The world isn't paying much attention, except that a few years back the Russians took out Tamerlane's skeletal, mummified remains, found his thick red hair and beard still preserved, checked his crippled bones (from which he got his name) and stuck him back in the crypt.

Around this crumbling tomb are the familiar cluster of mud huts with narrow baked-clay street, ditched in the middle, chattering half-naked Uzbek children, and shrouded Moslem women.

This was the Pad Square of another day—only more so. Today it is a curiosity to a visiting American, but not much else to anyone.

My guide in Samarkand is Udiol, a big, strapping handsome Tartar boy whose grandfather was a mullah of Islam.

Besides the tomb of Tamerlane, he showed me the Moslem "holy place" second only to Mecca, where three pilgrimages "purify" the believer, and a cluster of the tombs of great men when Samarkand was the world center of Moslem culture.

Many of these mosques and tombs, all in ruins or half-ruins, were built by slave labor and by architects whom Tamerlane spared from the city populations he slaughtered across half the world.

In one such great tomb built for the purpose of gaining special favor with Allah according to Moslem law, the slave workers or architect had managed to blend into the shadow effects of the fabulous tile designs—the shadows of animals at each of the four corners. This, to a Moslem (had they known the animal pictures were there), turned the tomb from a holy place into an accursed place.

In others, clever architects had worked their own names in Arabic into the complicated tile designs—thus desecrating those shrines even as they were newly built.

Udiol got a great kick out of telling me how these slaves of the dreaded Tamerlane had betrayed him and fooled him.

Castro Kills While United States Keels

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, August 20, 1959

Mr. MORSE. Mr. President, it will be recalled that immediately following the Castro revolution in Cuba, which brought Fidel Castro into power, the senior Senator from Oregon was the first in the Senate of the United States to take the floor and protest the blood bath which Castro was inflicting at that time upon Cuba, as a result of violating all the rules of morality with respect to the treatment of war prisoners. The senior Senator from Oregon was roundly criticized for characterizing the unconscionable conduct of Mr. Castro as a blood bath. However as chairman of the subcommittee of the Committee on Foreign Relations which deals with Latin American affairs, I was briefed frequently as to what was happening in Cuba, and I knew whereof I spoke.

I was soon joined by other colleagues in the Senate whose support I deeply appreciate.

From time to time, Mr. President, I have pointed out that Cuba has had visited upon it an exchange of dictators, an exchange of government heads who adopt police state methods. I think the RECORD now amply supports the forewarnings of the senior Senator from Oregon, made during those early days of the Castro regime. One does not have to have very much evidence to judge the character of a man. When it became evident that the new leader of Cuba was one who would give no heed to those principles of morality set forth in the Geneva Convention with respect to providing fair trials, I then knew that no democrat had taken over the administration of Cuba.

There has been more and more recognition of that point of view, Mr. President, in the periodicals and in the press of this country. I have noted a recent column in the Valley Times of Monday, August 17, 1959, George Todt's Opinion, entitled "Castro Kills While United States Keels."

I appreciate very much the references in the column to the early position which I took in regard to the conduct of Mr. Castro. I wish to say that I think this column is one of about four or five Mr. Todt has written in recent weeks bringing attention to the course of action which is being followed in Cuba, a course of action which certainly has not been in the interests of the United States or in the interests of the cause of freedom in Latin America.

Mr. President I ask unanimous consent that George Todt's column be printed in the Appendix of the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

CASTRO KILLS WHILE UNITED STATES KEELS

(By George Todt)

"Whoso sheddeth man's blood, by man shall his blood be shed." (Genesis 9: 6.)

Will there be another bloodbath in Castro's Cuba?

Is there to be more slaughter of human beings by drumhead courts-martial and trials which reek with lack of elementary justice for the rights of the accused?

Are we to see once more the inhumanity of man to man as expounded by Fidel Castro and his strange band of Reds and near-Reds in the wake of the recent Cuban uprisings?

It will be something in the nature of a miracle if the Caribbean would-be dictator—he even sports the fanatical mysticism of a Hitler albeit he is admittedly of pint-size proportions—doesn't go overboard again where his passions are concerned and provide the world with another modern Roman circus with all its innate cruelty.

It is too bad for that part of humanity which still remains decent in this rapidly decaying world, where morality continues to count for less and less with the passage of time, that the Cuban revolution against Castro didn't succeed. This Communist stooge is playing it right down the middle for the Kremlin and when Nikky Khrushchev visits our man after his American tour of triumph—well, more puerile doubts should become erased from the blank looks of the lunatic fringe who are unable to spot the nose on a Commie face at 10 paces.

What is the matter with us, anyway? We are the most powerful Nation on earth and still we permit punks like Castro to expropriate illegitimately and without payment the property of our nationals—and even entertain the crumby notion to give him the money from the American taxpayers to pay off other American taxpayers in the future.

Have we lost our marbles?

Why doesn't anyone speak out against such outrages?

Are we so affaid of the ants that we have become pacifists in the world jungle we are living in today?

Forbearance to use overwhelming power is to be admired, cowardice is not. Sometimes there is only a very fine line, in appearance, between the two. Let us make sure our Nation is not accused, with reason, of the latter. It could be fatal to our role as leader of the free nations on the world stage at this point of history.

With regards to the pipsqueak, Castro, one U.S. Senator is continuing to look better with the passage of time. And that is Senator WAYNE MORSE, Democrat, Oregon, who was one of the first to raise his voice in public doubt about the controversial figure.

Last January 20, and again on January 27, Senator MORSE arose in the Senate to put the finger on the Castro brand of firing-squad justice then being imposed on the defeated of the fallen regime and their friends. He was the original solon to do so, although others are fast joining the chorus.

We may be sure that more would have done so by now except for their very healthy respect of the incredible—and extremely powerful—coalition of misguided Americans who aided Castro to power.

All of which ought to be properly investigated by the Senate's Internal Security Subcommittee before too much grass grows underfoot.

Be that as it may, we are indebted in large part to the Oregon Senator for turning the spotlight of disapproval and condemnation on Castro's methods of applying justice in Cuba.

"Those of us who rejoiced at the political demise of General Batista have, for the most part, been appalled in turn by the terror turned loose by Castro," he told his Oregon audience in a January 27 radio broadcast. "Within hours after Batista fled the country, the firing squads of the rebels were lining up dozens of members of the police and the army who had been accused of crimes by the local population.

"These men had no trials whatsoever; in less than 3 weeks, Castro's execution squads killed 250 persons in what amounted to a horrible blood bath. When many of us protested against this drumhead justice, we were told, in effect, by the spokesmen for the rebels that everyone in the community knew of the guilt of these men—and so it was perfectly fair that they should be executed at once."

Senator MORSE made it abundantly clear in his earlier speech before the Senate that any military-type trial is simply a mockery of justice unless it guarantees to a prisoner four items: (1) qualified counsel, (2) right to call witnesses, (3) use of an interpreter wherever necessary, and (4) defense counsel to have at least 2 weeks to prepare the case for the accused and be furnished the necessary facilities for this purpose.

This is included, incidentally, in the Geneva Convention under articles 105 and 106.

While it is true that the Cuban rebellion was not a war between nations, and the Geneva Convention did not therefore technically apply, we might say that it reflects the moral law in this case.

But what cares the bearded one for morality, comrades?

Just a reactionary bourgeoisie expression, Nyet?

So-Called Fair Housing Legislation—The Rhode Island Story

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 13, 1959

Mr. DAVIS of Georgia. Mr. Speaker, the National Economic Council, Inc., with headquarters in New York City, issues at regular intervals its Economic Council Letter. The Economic Council Letter No. 460, dated August 1, 1959, is devoted entirely to so-called fair housing legislation. It gives the facts regarding the Rhode Island story, and the action in Rhode Island regarding this misnamed "fair housing bill." The story is written by Mr. Robert B. Dresser, of Providence, R.I., who is a nationally known lawyer.

The foreword to this Rhode Island story gives the background of the activity in the State of Rhode Island. It is a part of Economic Council Letter No. 460, and I have included is as a part of the insertion.

Under unanimous consent previously granted I insert the entire contents of Economic Council Letter No. 460 herewith as a part of these remarks:

SO-CALLED FAIR HOUSING LEGISLATION—THE RHODE ISLAND STORY

(By Robert B. Dresser)

Early last January leaders of both political parties in the Rhode Island Legislature introduced in both branches a so-called fair housing bill prohibiting discrimination because of race, color, religion or national origin in the sale or rental of housing accommodations or land, or in making loans with respect to such property.

Under the bill an owner is forbidden (1) to make any written or oral inquiry concerning the race, color, religion or national origin of a prospective purchaser or tenant, (2) to refuse to sell or rent his property for any such reason, or (3) to discriminate against an individual on any such ground in the terms of sale or lease. There are similar provisions regarding loans. Enforcement of the act is placed in the hands of the commission against discrimination, which is empowered to act on its own initiative or on complaint of an aggrieved individual or an organization chartered for the purpose of combating discrimination or racism, or of safeguarding civil liberties. Failure to obey a decree of the Court entered to enforce an order the commission is punishable by "fine or imprisonment, or both."

In short, the bill deprives a property owner of the right to enjoy the benefits of property ownership, and the right to choose for himself the persons with whom he associates in connection with his own property—both of them basic rights in any free society.

The bill was sponsored and promoted by an organization called Citizens United for a Fair Housing Law in Rhode Island, of which Irving Jay Fain is the chairman. Members of the organization include the leaders of both political parties, prominent bankers, educators, and many of the clergy of all faiths.

A substantial number of the members have since resigned.

The bill has had the vigorous support of Rhode Island's leading newspaper, the Providence Journal, which has by far the largest circulation of any paper in the State.

During the legislative session editorials supporting the bill were published by the Providence Journal, as well as a considerable number of news articles declaring the need of better housing facilities for Negroes and calling for an end of discrimination in the sale or renting of houses because of race, color, religion or national origin and for the passage of the so-called fair housing bill.

Also, numerous letters were written to the editors of the Providence Journal and Evening Bulletin regarding the bill. A majority of them supported the bill, doubtless because the proponents were well organized and had the support of many of the clergy of all faiths.

The movement is nationwide. A bill of this character has been introduced in some 13 or more States. It indicates a trend toward the ultimate abolition of the right of private property, which is the aim of socialism.

While it has been made to appear by the proponents of the measure that the controversy is purely a Negro question, this is not the fact. The bill applies to all races, and they are forbidden to discriminate against one another under penalty of fine or imprisonment.

The opponents of the measure take the position that if any race wishes to live together in a house or community, whether they are English, Irish, Italian, Jewish, Yankee, Negro, or any other race, they should be permitted to do so. They likewise hold that if individuals prefer living in mixed racial households or communities they should be allowed to do so. The rule, they say, should work both ways. It is government compulsion to which they object.

The opponents of the measure say that if a person is to be deprived by Government order of the right to choose his own associates and to have full enjoyment of his own property it is entirely logical to expect that he may eventually be deprived of freedom of speech and other rights which he now enjoys on the plea that the exercise of these rights is against the public interest. They ask, "Where is the line to be drawn?"

In their view the issue is much broader than that of housing. It is whether the American people shall have liberty or eventual serfdom imposed by Government dictatorship.

The first opposition to the bill appeared in a letter written by me to the editor of the Providence Journal, which was published on January 11, 1959, from which the following is quoted:

"This, I submit, is an outrageous and unconstitutional interference with the right of private property and personal freedom. These rights, guranteed by the Constitution of the United States, constitute the basic difference between a free society and a socialistic or communistic society in which the government dictates and the people obey.

"If a law of this sort can be passed, it is but a short step to extend it to owners who rent rooms or take in boarders. Or does the bill apply to those who rent rooms? (This paragraph was stricken from the letter as published by the Journal.)

"Is there no longer any respect for the Constitution or for the concept of private property and personal freedom?

"Have we at last reached a stage in our country's history when a person is no longer allowed to choose his own associates—no longer master of his own house and undisputed owner of his own property?

"If so, a major step has been taken toward the destruction of the great American experiment in individual liberty.

"The issue is not whether any racial or religious group is superior or inferior to another. The issue is whether a person, regardless of his race or religion, is to be free to exercise certain fundamental rights guaranteed by the Constitution. On this there should be no difference of opinion."

This was followed by a series of articles which I had published as advertisements in the Providence Journal and Evening Bulletin, from certain of which I quote as follows:

1. Advertisement dated January 26, 1959, and published February 3 and 8:

"The so-called fair housing bill is based upon the premise that there are many people in Rhode Island who are living under depressed or substandard housing conditions, and that this situation can and should be cured by prohibiting discrimination because of race, color, religion, or national origin in the sale or rental of housing accommodations or land, or the taking of mortgages on such property.

* * * * * *

"The only offense committed by the unfortunate owner is the exercise of what has heretofore been regarded as inviolable personal rights, namely (1) the right to choose one's own associates and (2) the right to enjoy the benefits of property ownership.

"If these are not rights protected by the Constitution of the United States, I am certain that it is a very different Constitution from what its authors intended and students of the Constitution have for generations supposed. It is not surprising that in the words of the Providence Journal, 'No other State in the Union has such a law.'

"And let there be no mistake, if this breach in the wall of constitutional protection is permitted, it will be only a beginning. It would be but a short step to extend the law to owners who rent rooms in their own homes or take in boarders. The history of legislation of this character is that it seldom ends with the original act. This is but a beginning.

"The restrictions upon the use of private property cited by the proponents of the bill, such as zoning legislation and the forbidding of nuisances, are obviously of a very different character.

"Who would have thought that in this land of much-vaunted freedom serious consideration would ever be given to a proposal to deprive a person of the right to sell or rent his house, or an apartment in his house, to a respectable, law-abiding citizen of his own choice, and to put him in jail if he did so? And yet this is precisely what this bill does.

"I wonder if all those who have endorsed the bill have fully understood its provisions and its possible consequences. Have they by any chance felt that they were not in a position, or not likely to be in a position, where the law would affect them?"

2. Advertisement dated February 23, 1959, and published February 25 and 26:

"Efforts are still being made to confuse the real issue involved in the controversy over the so-called fair housing bill.

"In an editorial published in the Providence Sunday Journal for February 22 under the heading 'Lippitt Hill Challenges Opponents of the Housing Bill,' it is stated that 'finding housing for 450 Negro families displaced by the Lippitt Hill redevelopment project will not be an easy job.'

"After observing that it is unlikely that the fair housing bill will be passed in time

to meet the emergency, the editorial continues: 'This fact provides an excellent opportunity for oponents of the bill to prove by their own action their thesis that the Negro housing problem can be licked without a law.'

"What an amazing statement.

"The great mass of opponents of the bill are people of modest means—the owners and occupants of small homes, many of them two and three family houses. A goodly portion of these people have invested their life savings in these houses, and are dependent upon the rents for their support. These are the people who the Journal says must provide the housing for the displaced Negroes, and not the supporters of the bill whose names appear in the literature of the Citizens United for a Fair Housing Law as the members or supporters of that organization. These include some of our leading citizens—persons of substantial means with large single homes, who no doubt feel certain that the bill will not affect them. I wonder how many of them have read the bill.

"I wonder too if they were not induced to join the organization by its appealing title 'Citizens United for a Fair Housing Law,' without realizing what they were getting into. Who could be so depraved as not to be in favor of fair housing? It is, of course, always open to a person to resign from such an organization if he feels he has made a mistake.

"It is about time that this bill be called by its right name 'A bill to destroy individual liberty and create disunity in the United States of America.'

"As I have again and again pointed out, the issue is not whether relief should be afforded the unfortunate people who need it. Of course it should be provided—but by the usual government and charitable channels, and not by the people who own houses.

"The issue, and the only issue, is whether the individual should be deprived of rights which are essential to his freedom, the loss of which would constitute a major step toward the establishment of a full Socialist state.

"If an owner, regardless of his wishes, must under penalty of fine and imprisonment accept as a purchaser or tenant a person he does not want, how can it be said that such a person is free? This is the one and only issue, and people should not be misled by all the propaganda to the contrary."

3. Advertisement dated March 17, 1959, and published March 22:

"Letters to the editor continue to be published urging the passage of the so-called Fair Housing bill and denouncing its opponents. These letters persist in ignoring the real issue, which is the right of private property and individual freedom. They continue to harp on the plight of the Negroes and the need of providing better housing conditions for them, which is not the issue at all. They further insist on integration in housing which means forcing people to live together whether they want to or not. If people wish to live together, they should be permitted to do so, but they should not be forced to do so against their will.

"'The same old line that human rights are more sacred than property rights is continually stressed, although a moment's thought would reveal the utter absurdity of such a distinction.

* * * * *

"'The Housing bill strikes at the right of private property which is the keystone of our economic system of private enterprise and of our system of constitutional government. Destroy that right and we descend to the degradation and despair of the despotic Socialist state.

"'Don't think that this is just a figment of my imagination. A very competent judge of such matters in our Nation's Capital, commenting upon the Rhode Island bill, recently wrote as follows:

" 'I had heard that similar legislation was pending in several of the States. It is, of course, competely destructive of the right of property and is a form of nationalization of private property.

" 'This assault upon the right of property in this country has prevailed in some areas and I predict that it will be quickly followed by other efforts which can but eventuate in a nationalization of property and a dictatorship akin to that which prevails in Soviet Russia.'

* * * * *

"The issue involved in the present controversy is far greater than the impact of this legislation upon the people of Rhode Island. As a countrywide movement it constitutes a serious threat to our entire economic system and our system of constitutional government under which the United States has become the richest and most prosperous country in the world with the widest distribution of wealth among its people that the world has ever known.

"Are we going to scrap this system or preserve it? Those who believe it should be preserved will oppose the housing bill, in any form whatsoever, no matter how 'watered down' it may be.

"It is unthinkable that any legislature composed of conscientious, patriotic Americans would ever pass the housing bill, whether in its present form or any other form. Even though 'watered down,' it would constitute but a beginning and the pressure would be continually renewed in the future to extend it to the utmost limits."

4. Advertisement dated April 2, 1959, and published April 5:

"An article in the Providence Sunday Journal for March 15 states:

" 'Rhode Island, which is considering fair housing legislation, is only 1 of 13 States in which similar legislation is pending.'

"And the States are named.

"It is significant that in Colorado and Massachusetts, two States in which legislative action has been taken, there was little or no opposition. The reason undoubtedly was that the real purpose and effect of the measure were not understood and that the legislation was slipped through without the people or the members of the legislature being aware of its true character. There is grave danger that this will happen in other States."

5. Advertisement dated April 27, 1959, and published April 29 and May 3:

"MASSACHUSETTS BILL

"In articles published in the Providence Evening Bulletin on April 23 and 24, the story is told of how the bill was passed by the Massachusetts Legislature on a voice vote without debate, with no recorded opposition and with little or no public opposition. The strategy used by the proponents, the Massachusetts Committee for Fair Housing Practices Legislation, was similar to that used by its counterpart in Rhode Island. The passage of the bill in Massachusetts is hailed by the proponents of the Rhode Island bill as a great victory and as establishing a precedent that should be followed here.

"Of course, the bill passed, and the reason was that the Massachusetts public did not understand its real nature and its consequences. Had they understood, the bill never would have been enacted.

"The Bulletin articles commend the clever way in which the matter was handled by the proponents. Credit for the success is attributed in large measure to the quiet gradualist approach. By 'quiet' is meant, I suppose, that as little publicity as possible was given to the matter. By 'gradualist approach' is meant the acceptance of a less drastic bill than desired as a beginning with the expectation of more later. As I have pointed out in earlier articles, this is the usual course of legislation of this sort—a small beginning with further expansion from time to time until the ultimate objective is fully achieved. Such legislation must be stopped at the beginning. It must not be accepted in any form, however harmless it may appear.

"All that is required to prevent the enactment of such legislation is for the people to understand its nature and effect. What has happened in Massachusetts and earlier in Colorado could not, I am convinced, happen here, for the reason that the public of this State are aware of the evil nature and consequences of the proposed legislation and are overwhelmingly opposed to its passage in any form.

"Incidentally, it should be noted that similar legislation failed to pass in New York this year.

* * * * *

"INTEGRATION IN HOUSING

"The proponents' continued insistence on forced integration in housing displays a callous disregard for individual freedom. To force people to live together against their wishes is a gross violation of a basic right without which a person cannot be said to be free.

"LOSS OF FREEDOM

"For some years we have seen the rights of the individual in this country being steadily whittled away and the powers of government increased. And now we have this major assault on the right of private property. Unless this trend is promptly checked, the inevitable outcome will be the abolition of the right of private property, loss of the people's liberty and the establishment of a fully socialized state with its autocratic government.

"What an end this would be to the greatest experiment in individual liberty ever tried by man.

"Seven and a half centuries ago, the barons at Runnymede wrung from King John the Magna Carta, regarded as the beginning of individual liberty among the English-speaking people. During the centuries following, a continual struggle was waged to free the individual from the domination of the state and make the people, not the government, the master.

"Our Declaration of Independence was a demand for less governmental interference in the lives of the citizens, and the Revolutionary War was fought for the purpose of enforcing this demand.

"But now in the last several decades we have witnessed the amazing and distressing spectacle of a trend back toward autocratic government advocated and promoted by persons who call themselves liberals and who denounce their opponents as reactionaries. Had anyone prior to this recent period suggested that King John was a liberal and that the barons at Runnymede and those who have since carried on the struggle to limit the power of the state were reactionaries, he would have been regarded as a fit subject for an insane asylum. How easily are the people fooled by mere titles.

"Socialism has never worked. It will ruin any nation that adopts it.

"Freedom, the antithesis of socialism, has been well defined as 'the right of the individual to work out his destiny, with whatever capacities he possesses, without interference from government beyond that necessary to prevent him from interfering with the freedom of others.' ('The Freeman,' September 1954.)

" 'Americans will not vote themselves out of freedom with their eyes open. But with their eyes half open they can be fooled and bit by bit the right of private ownership can be pulled gently away from them.' (Dr. George S. Benson, president of Harding College.)

"This must not be allowed to happen here."

6. Advertisement dated May 7, 1959, and published May 10:

"NATURE OF OPPOSITION

"There appears to be a misunderstanding on the part of some of our citizens as to the nature of the opposition to the so-called fair housing bill. It is not in any sense a matter of emotion that will disappear with the passage of time.

"The opposition is based upon a firm conviction that the real issue is the preservation of individual liberty. This was the issue that prompted the Declaration of Independence. It was the cause for which the Revolution War was fought.

"That people should be indignant at an assult upon their freedom should cause no surprise. A burglar who tries to break into a house will be resisted by any redblooded owner with all the power at his command. Further attempts will be met with like resistance. It is not a matter of emotion, but a matter olf self-defense.

"MISLEADING TITLE OF HOUSING BILL

"In these days when there are so many important and complicated issues before the country, it is understandable that persons, misled by the appealing title of a proposal, such as 'fair housing,' should endorse it without a full examination of its terms. It is to be hoped, however, that all such persons, when they have become fully aware of the facts, will withdraw their endorsement, as many have already done.

"PROPERTY RIGHTS VERSUS HUMAN RIGHTS

"The proponents of the housing bill still continue to declare that human rights are more sacred than property rights, despite the absurdity of the distinction. Property itself has neither rights nor value, save only as human interests are involved. There are no rights but human rights, and what are spoken of as property rights are only the human rights of individuals to property.

" 'The ownership of property is the right for which, above all others, the common man has struggled in his slow ascent from serfdom.

" * * * * * *

" 'A man without property rights—without the right to the product of his own labor—is not a free man. He can exist only through the generosity or forbearance of others.' (Essay by Paul L. Poirot, of the Foundation for Economic Education.)

"PERMANENT ORGANIZATION

"Many have expressed a desire to form a permanent organization to safeguard individual liberty and to oppose the passage of legislation designed to destroy or restrict that liberty. The housing bill in its present or any other form is a measure of this character.

"Such an organization should be formed. It would, I am confident, attract the support of thousands of our citizens who would on all occasions and without regard to political affiliations make the preservation of individual liberty paramount to all other issues.

"It is my intention to submit for consideration a plan for such an organization."

During the legislative session a petition opposing passage of the so-called fair housing bill in any form whatsoever was circulated, and coupons were attached to newspaper advertisements expressing the individual's opposition to the bill and his desire to join in the petition against it. By means of the petitions and coupons over 5,400 signatures were secured. Mimeographed copies of the petition with the signatures obtained from time to time were sent to the Governor of the State, to the members of the general assembly, and to certain other individuals. In all, seven batches of signatures were mailed to this list.

Also, an excellent pamphlet containing a list of questions and answers on the so-called fair housing bill was prepared for the Rhode Island State Association of Real Estate Boards and the Home Builders Association of Rhode Island by John V. Kean, a law partner of mine. This was published as an advertisement during March, and was also widely distributed.

On May 26, 1959, the general assembly ended its session without the bill being reported out of either the senate or house committee to which it had been referred.

The proponents, however, have publicly stated that they "are more determined than ever" to push for its passage next year.

During the legislative session the proponents were given two hearings before the house judiciary committee.

The opponents were given a hearing before that committee on February 20. It was an evening hearing, held in the house chamber, and was attended by more than 500 persons, the largest number ever to attend a legislative committee hearing in the State of Rhode Island. Twenty persons spoke against the measure.

On February 10 the Pawtucket Real Estate Board voted 26 to 2 to oppose the bill. Frank A. Martin, Jr., the president, and Charles H. Lawton, Jr., a prominent member, with a number of other associates, became greatly interested, and with John V. Kean played a prominent part in defeating the legislation. One of the highlights of the campaign was a mass meeting at the Tolman High School in Pawtucket on the evening of March 25, arranged by them, which was attended by about 500 persons.

Throughout the controversy very effective work against the bill was done by Edwin T. Scallon, of Providence.

The proponents of this legislation are well organized, apparently well financed, and determined to secure the enactment of this legislation throughout the country.

An organization called National Committee Against Discrimination in Housing, located at 35 West 32d Street, New York City, appears to be taking a leading part in the movement.

The following is quoted from a letter sent out by that organization under date of May 26, 1959, signed by Eleanor Roosevelt and Jackie Robinson:

"DEAR FRIEND: Have you heard the good news? Colorado, Massachusetts, Oregon, and Connecticut have just joined New York City and Pittsburgh in passing State laws barring discrimination in private housing. Ten years ago even the most starry-eyed would not have predicted this.

"Today communities across the Nation are stirring, neighbors are organizing, articles are appearing in national magazines. There is a coast to coast movement to break down the barriers.

"The National Committee Against Discrimination in Housing has for 10 years played a key roll in alerting, educating, informing, and stimulating communities over the Nation to combat residential segregation.

"We believe the NCHD program is basic to the whole civil rights challenge."

On the reverse side of this letter appears the following list of the committee's member organizations:

"Amalgamated Clothing Workers of America, AFL–CIO; American Civil Liberties Union; American Council on Human Rights; American Ethical Union; American Friends Service Committee; American Jewish Committee; American Jewish Congress; American Newspaper Guild, AFL–CIO; American Veterans Committee; Americans for Democratic Action; Anti-Defamation League of B'nai B'rith; Congregational Christian Churches, Council of Social Action and Race Relations Department, Board of Home Missions; Cooperative League of the USA; Friendship House; International Ladies' Garment Workers' Union, AFL–CIO; International Union of Electrical, Radio, and Machine Workers, AFL–CIO; Jewish Labor Committee; League for Industrial Democracy; The Methodist Church, Woman's Division of Christian Service; Migration Division, Puerto Rican Department of Labor; National Association for the Advancement of Colored People; National Association of Intergroup Relations Officials; National Council of Negro Women; National Council of Churches of Christ, Race Relations Department; National Urban League; Presbyterian Church, USA, Department of Social Education and Action; United Auto Workers of America, AFL–CIO; United Steel Workers of America, AFL–CIO.

This legislation is also supported by the National Lawyers Guild, as appears from the spring 1958 edition of its publication, the Lawyers Guild Review, "Special Issue on Integration in Housing."

An organization called the Committee for Individual Liberty has just been formed in Rhode Island, having as its initial objective "to prevent the passage of any measure prohibiting discrimination because of race, color, religion, or national origin in the sale or renting of housing accommodations or land, or in making loans with respect to such property."

The issue is one of the most important before the country today. It involves no less than the preservation of individual liberty.

This legislation can be defeated if a sufficient effort to inform and arouse the people is promptly made. Otherwise, its passage is inevitable.

Certainly there must be enough people in the various States to provide the leadership and organization necessary to check this movement.

A Report to President Dwight D. Eisenhower

EXTENSION OF REMARKS

OF

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 19, 1959

Mr. DENT. Mr. Speaker, in a speech delivered earlier this year I talked about the importation of Japanese stainless flatware and the destructive effect of unfair competition on American industry and American jobs.

Recently, the flatware producers of America addressed an open report to the President.

If any Member of Congress doubted my figures or questioned my conclusions, I would suggest reading the attached statement by these American industrial representatives:

A REPORT TO PRESIDENT DWIGHT D. EISENHOWER

On January 10, 1958, the U.S. Tariff Commission was unanimous in finding serious injury had been caused the domestic flatware industry, by imports of stainless steel flatware and made certain recommendations for relief.

On March 7, 1958, you wrote the Tariff Commission stating you thought it inadvisable to take action on the Commission's recommendations at that time. You further stated:

"I request the Commission, however, to keep this matter under review and to report to me as soon as practicable after December

31 with particular reference to the experience of the domestic industry in 1958 during which the Japanese limitations on exports to the United States will have been in effect."

Tariff Commission report of July 1959 proves:

1. The Japanese 1958 voluntary quota was a failure: Quota, 5,500,000 dozens; receipts, 8,760,874 dozens.

2. Japanese stainless flatware took a greater share of U.S. market in 1958 than in 1956.

3. The domestic industry's position deteriorated still further between 1956 and 1958.

We first formally asked the U.S. Government for relief from the serious injury caused by excessive imports of stainless steel flatware on July 18, 1956. It is now August 10, 1959. Three years have passed during which time the U.S. Government has failed to take any action to remedy this serious injury. Instead the injury has increased year after year. An expensive, disillusioning, and disheartening experience for this U.S. industry and its employees.

The Japanese poured 2,739,442 more dozen of stainless steel flatware into the United States in 1957 than they did in 1956, reaching the fantastic total of 10,200,000 dozens in 1 year.

The bulk of the extra 2,739,442 dozen was shipped after the escape clause hearing on July 16, 1957 and during the time the Japanese Government was negotiating a voluntary quota for 1958.

The Tariff Commission, on January 10, 1958, basing its decision on the record through 1956 when Japanese imports totaled 7,460,558 dozen, was unanimous in finding the domestic industry seriously injured by imports of stainless steel flatware.

At the Tariff Commission second hearing April 21, 1959, citing the drop in receipts of Japanese stainless flatware in 1958 from 1957, the Japanese claimed the "voluntary restraint was and continues to be effective."

This in spite of:

1. The deliberate buildup of shipments in 1957.

2. The fact that receipts in 1958 were 1,300,316 dozen in excess of 1956 imports on which the Tariff Commission declared the U.S. industry to be seriously injured.

3. The fact that receipts in 1958 were 3,260,874 dozen in excess of the 5,500,000 dozen quota which they themselves proposed.

Mr. President, on January 10, 1958, the U.S. Tariff Commission unanimously found the U.S. flatware industry to be seriously injured by imports. This decision was based on the record through 1956. In July 1959 the Tariff Commission stated:

"The most important factor tending to increase losses and reduce profits from (U.S.) stainless steel table flatware production in 1957 and 1958 was competition from imported Japanese flatware."

We believe there is no justification for prolonging further the well-established injury to the U.S. flatware industry. We believe the facts prove this industry is justly and legally entitled to immediate and effective relief. We ask you to provide such relief in the only form it can be truly effective, by proclaiming a global quota of 4 million dozen annually on all imports of stainless flatware having a foreign value up to and including $3.50 per dozen.

Very respectfully,

U.S. STAINLESS STEEL FLATWARE MANUFACTURERS ASSOCIATION.

The following table tells a graphic story of the disaster that must obtain to an American union if this impracticable and utterly simple misconception of reciprocal trade continues:

Stainless steel and silver plated flatware serve the same market—U.S. consumers buy one or the other—Japanese stainless steel flatware rapidly absorbing total U.S. market

	Total U.S. consumption, stainless steel flatware	Percent Japanese of total U.S. stainless consumption	Percent Japanese to U.S. manufacturers' sales	Total U.S. consumption, stainless steel and silver-plated flatware	Percent Japanese of total U.S. stainless and plated flatware consumption
	Dozens	*Percent*	*Percent*	*Dozens*	*Percent*
1951	11,626,000	3.3	3.3	27,389,000	1.4
1952	9,474,000	2.9	2.9	21,298,000	1.2
1953	11,563,000	6.5	7.0	24,520,000	3.1
1954	12,050,000	9.1	10.2	24,334,000	4.5
1955	18,081,000	17.3	21.4	29,027,000	10.7
1956	22,309,000	33.4	51.8	31,856,000	23.4
1957	23,725,000	43.0	77.2	30,473,000	33.5
1958	22,775,000	38.5	58.8	29,253,000	30.0

Japanese stainless flatware took an even greater share of U.S. marekt in 1958 than in 1956. Japanese 1958 percent of total U.S. stainless consumption was 5.1 percent more than in 1956. Japanese 1958 percent to U.S. manufacturers stainless sales was 7 percent more than in 1956. Japanese 1958 percent of total U.S. stainless and plated flatware consumption was 6.6 percent more than in 1956. The situation in stainless flatware is not unique nor isolated. This is becoming the "story of our tradition and life" in this country.

Very respectfully,

U.S. STAINLESS STEEL FLATWARE MANUFACTURERS ASSOCIATION.

Medical Societies Versus Polio Vaccine

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, August 20, 1959

Mr. MORSE. Mr. President, in this morning's Washington Post and Times Herald, in the Drew Pearson column, was an account of a very serious situation which has developed with respect to the dissemination of Salk vaccine. It will be recalled when the Salk vaccine, the wonderful discovery of Dr. Salk, was first made available to the American people, the senior Senator from Oregon proposed on the floor of the Senate that we set up a Government program of distributing it and making it available, in the interests of the general health of the American people, under a Government distribution system. The Senator from Oregon was roundly criticized because he was seeking to interfere with the rights of the private practice of medicine.

The Senator from Oregon said then, Mr. President, that the public interest was so great that the medical profession should be told, and told very clearly, the public interest should come ahead of the financial interests of the medical profession. I predicted then, Mr. President, as the CONGRESSIONAL RECORD will show, that we would have difficulties with regard to this program, unless a course of action such as I proposed at that time was followed.

I read Mr. Pearson's column with a great deal of interest, Mr. President, because it bears out a good many of the things which I forewarned of at the time. I ask unanimous consent that the portion of Mr. Pearson's column dealing with the Salk vaccine problem be printed in the Appendix of the RECORD.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

MEDICAL SOCIETIES VERSUS POLIO VACCINE

(By Drew Pearson)

The American public isn't being told the whole story about the shocking rise of polio which caught the Nation with a Salk vaccine shortage in many areas.

Officially the U.S. Public Health Service explains the situation by saying that community inoculation drives, spurred by the rising incidence of polio, have drained off vaccine supplies.

However, what the people aren't being told is that the alarming increase of the crippling disease, plus the vaccine shortage, might have been avoided, or at least lessened, if many local medical societies had not blocked mass Salk vaccine immunization.

One of the worst outbreaks of polio this year occurred in Des Moines, Iowa, where 2 years ago the Iowa State Medical Society went on record against mass immunization without (doctor) fees for administration.

In other words, the Iowa Medical Society wanted Iowans to go to the office of each individual doctor and pay a $4 or $5 fee for each Salk vaccine shot, rather than have the shots administered on a mass, cut-rate basis by nurses under the supervision of a doctor.

It is a well-known fact that many people, especially lower-bracket families, will not go to a doctor's office to be inoculated against polio or any other disease.

A similar situation occurred in Washington, D.C., in 1957, when the District of Columbia Medical Society balked at supplying

medical supervision for the antipolio inoculation of 1,600 Capitol employees. They claimed it was socialized medicine. The Navy Department finally had to provide an attending physician.

Dr. Leroy Burney, Director of the U.S. Public Health Service, when interviewed last week on NBC, did not reveal that the opposition of medical groups to mass Salk vaccine immunization—so-called socialized medicine—was the chief reason for the current polio epidemic. And NBC did not press him. In fact, commentator Morgan Beatty stated that Salk vacdine shots have been free—which was anything but the case in most cities until the present emergency.

However, public health doctors working under Burney are less discreet. They are emphatic that had the medical societies of all States cooperated in mass inoculation programs, instead of crying about "socialized medicine," there would be no polio epidemic today. Also, with planned mass inoculations, the supply of Salk vaccine would be more closely stabilized to demand, since manufacturers can then gage the market.

(NOTE.—Not all doctors oppose mass vaccinations. In some States, notably North Carolina, local medical groups enthusiastically endorsed the idea.)

Pittsburgh Press Favors Kennedy-Ervin Bill Provisions

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 22, 1959

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

NO MAN'S LAND

Practically everyone, including the AFL–CIO, seems to agree that Congress has to do something about the no-man's land of labor relations. Several plans have been suggested. The one most likely to work is in the Kennedy-Ervin bill, passed by the Senate.

There are literally thousands of labor disputes which the National Labor Relations Board declines to handle because they are too small or have too small an effect upon interstate commerce. The States are forbidden to intervene under a Supreme Court decision. This leaves both employees and employers without orderly, legal recourse in case of differences. It encourages strikes and protects racketeers.

The House committee bill would meet this situation by adding two members to its regional directors and requiring it to handle all cases over which it has jurisdiction. Provisions of the Shelley bill, which was rejected by the House yesterday, were similar.

While this might be an improvement, it has two main flaws: (1) It would enlarge an already unwieldly Federal bureaucracy, and (2) there would be question of its jurisdiction over cases obviously not involving interstate commerce.

The Kennedy-Ervin bill and the Landrum-Griffin bill are a lot alike, differing in one important respect. The Landrum-Griffin bill would permit State agencies to handle all cases refused by the NLRB, under State laws and with appeal to State courts. The Kennedy-Ervin bill would require the State agencies to operate under Federal labor law, with appeal through the Federal courts.

Either system could be made to work. The Kennedy-Ervin plan seems preferable because it would establish a uniform system for handling all disputes. Under the Landrum-Griffin plan there would be two sets of regulations in each locality, possibly leading to confusion and a sense of injustice. It would mean, in effect, one set of laws for the big companies and another set for the little ones.

Indians Angered by Prime Minister Nehru's Appeasement of Red China

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 20, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news story written in India by the correspondent of the Manchester Guardian. Many in India apparently are learning the hard way what it took so long for others also to learn; namely, that attempts to please or appease Communists leads to more trouble with them, not less.

The article follows:

INDIANS WEARY OF NEHRU'S WISDOM, ANGERED BY APPEASEMENT OF CHINA

(By Taya Zinkin)

BOMBAY.—For the first time since 1937, when Jawaharlal Nehru became India's expert on foreign affairs, Indian opinion has affirmed itself instead of waiting to hear what Nehru wants India to do. It is not a case of the chick teaching its mother to suck eggs but a measure of the extent to which Indians are fed up with China and weary of Nehru's wisdom.

The issue are twofold: the admission of China to the United Nations and India's policy toward China on the one hand, and developments in Laos on the other.

On Laos the Times of India is categoric. "Mediation is no more to the point than in Tibet," it says, going on to prove that the Pathet Lao crisis is entirely China's and North Vietnam's making and that there is "nothing to justify exaggerated references to Laos as an American base."

The paper concludes by warning the Indian Government, which is keen to negotiate and resuscitate the International Control Commission, that "a commission of sorts might have its uses in certain conditions, but as things are it is surely advisable to avoid any course that imparts even by implication a definite status to the Pathet Lao insurrectionaries."

Distaste for China has gone deep. The Indian Express, in a leading article on India and China, launches a direct attack on Nehru's foreign policy over the years and accuses him of making India the laughing-stock of the world by meekly turning a new cheek to every Chinese slap. It says:

"The Prime Minister confessed in Parliament that China has dealt most perfunctorily with our protests against Peiping's treatment of our nationals in Tibet. What else did we expect after our humble gestures in the tradition of appeasement which Mr. Nehru so roundly condemned two decades ago."

The Times of India lists step by step India's appeasement of China over Tibet, from the recognition of suzerainty and preventing United Nations discussion by an assurance of the restoration of peace, to believing the assurance from Chou En-lai about Tibetan autonomy. It adds:

"Experience, they say, is the name men give to their mistakes, but experience seems to have taught our rulers nothing. Now, with Indian currency declared illegal in Tibet, with Indians being bundled out of the country and Indian traders harassed, New Delhi has thought fit to sponsor Peiping's admission to the United Nations. Why? Is there no limit to the humiliations, we are prepared to accept at China's hands?"

In the Hindustan Times the news that the Chinese want to liberate Sikkim is prominently displayed. The paper's special correspondent states that, according to reports reaching Delhi, the Chinese have begun a propaganda war for the absorption of Sikkim, Bhutan, and Ladakh, and that Chinese troops have been massed along the border of Sikkim and Bhutan, which are both Indian protectorates.

The correspondent does not say that Delhi has been trying to suppress the news that the Chinese have built a road in Ladakh and occupied a chunk of Ladakhi territory.

Dancey in Russia

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 20, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks, I wish to include the 28th, 29th, and 30th—the last—of a series of articles by Editor Charles L. Dancey on his 30-day tour of the Soviet Union appearing in the August 16, 17, and 18 issues of the Peoria Journal Star, respectively:

[From the Peoria Journal Star, Aug. 16, 1959]

DRUNKS FOUL STREETS TAMERLANE RODE IN GLORY

(By Charles L. Dancey)

SAMARKAND.—At Samarkand, my Tartar guide, Udiol, showed me besides the Moslem shrine and the tomb of Tamerlane, all that is left of the ancient observatory of one Ulug Bek.

Ulug Bek, at this place, charted the stars in the sky, cataloging accurately more of them than Isaac Newton of western fame cataloged when he launched modern science—and Ulug Bek lived 500 years before Newton.

Udiol said that legend tells us that the Moslem priests murdered Ulug Bek, chopped off his head, and tore down his observatory—all but the great underground arched sextant that he used. This they simply buried.

It has been dug out again— and the arch of this sextant is 150 feet long, carefully notched and marked with accurate figures, with a double track in the stone for carrying the instrument along its curved length.

In charting the courses of earth and sun, Ulug Bek calculated the actual length of the solar year to within 1 minute of the exact length only accurately figured in recent years.

When the great tombs hereby were exhumed a few years back (the same time Tamerlane was taken out and restored), the tomb of Ulug Bek was opened. Sure enough, the skeleton revealed a sharply cleaved neck bone—the skull was beside the body instead of at its top—and the body was clad in silk, not linen wrappings, in short—he was not only murdered but buried as an unbeliever, not as a Moslem.

The Soviets, of course, are interested in making a hero of him, and of attacking the

Moslem religion as in conflict with science and as brutally stamping out true knowledge.

Only now is an archeological effort beginning here, plus the rebuilding of some of these buildings apparently as tourist attractions eventually—and antireligious propaganda opportunities.

These efforts a few weeks hence turned up ancient ivory chessmen dating back to 500 years before Christ but the Soviets were really excited over one glass chess knight of the same vintage because this indicates that at that ancient date not only rich nobles played chess, but also there were cheap chess sets.

What of modern Samarkand?

Like Tashkent only more so. A small modern area, with a rather nice park, no nice buildings—a miserable, dirty, fly-infested hotel (a plywood public toilet was all that was available in filthy condition with torn-up newspapers as the only towels or tissue provided.

The rest—the same endless mud huts crawling with people. Many, many people here wear either Uzbek national dress or Moslem white headpieces.

I saw a great many crippled men, arms or legs cut off, four men so drunk they were lying helplessly on the sidewalk mumbling, others staggering about, and several beggars.

Here were fewer police than anywhere.

But the Tartar guide, Udiol, was good-looking, clean, young, smart and eager for knowledge, like most of the young folks I met.

People with his drive and desire could work great changes in the years ahead—but I wonder how many like him there are in this miserable place.

[From the Peoria Journal Star, Aug. 17, 1959]

WEATHER IN MOSCOW SEEN AS COVERUP

(By Charles L. Dancey)

Moscow.—The flight from Tashkent to Moscow took 8 hours even in the TU-104 jetliner, but they went hundreds and hundreds of miles out of the way to land at Sverdlovsk in the Ural Mountains.

There's something peculiar about that. We landed and a woman boarded the plane, came to me and escorted me out while everyone else waited. I was told the stop would take 40 minutes.

My occupation there was a good deal different than Vice President NIXON's recently. I was taken into the airport, through the lobby, up a stairs, through two sets of doors, through another door that had to be unlocked, and advised that I should wait there, "it would be cooler."

There was an iron grille design on a sort of inside window where I could sit and watch the activities in the lobby, which I did for 40 minutes. Then the lady returned, led me back through the empty rooms, down the steps, through the lobby and back aboard the plane. The rest of the passengers then boarded. It was exactly the same group as before.

And off we went to Moscow.

Landing at Moscow, a little girl aboard, about 2 years old, began to cry and hold her ears. They fussed around for a while, and she kept crying and holding her ears. Finally, I went up and gave her a piece of gum and told her to chew with big bites.

She chewed with wide, wet eyes fixed on me, quit crying, and everybody relaxed. When we had landed, this curly-haired tot walked off waving a tiny hand and saying, "Dos v dahnye" (goodby).

Everyone smiled and nodded.

At the Ukraine hotel in Moscow, I ran into Mr. Peoples whom I had last seen at Sochi. I asked if he had made it to Tashkent, as he had also planned. He said he had.

In the ensuing conversation, he remarked on the way back to Moscow on the jet from Tashkent, they had word of "weather" in Moscow, and detoured to make a 40 minute stop at Sverdlovsk.

This was about a week before we had the same kind of weather for exactly the same amount of time on my trip.

Only 2 days remained before my visa would expire, and checking in at this last stop I am finally completely stripped of my trip documents. They have taken my passport, the last of my papers relating to the paid contract for meals and hotel space, and even my foreign plane tickets home.

Actually, except for my tickets on the U.S. airline, they've done this every place, but by this time one becomes a bit fed up with the repeated propaganda themes plus this bland way of stripping you of your credentials, any evidence of your status, and even your means of assuring transportation back to the United States.

After almost a month here, it doesn't worry me but it annoys me—and it is a practice that sets many tourists on their ear completely.

It just caused me to be a little nasty to the poor little girl who was my guide in Moscow.

For example: She took me inside the Kremlin walls, through the fantastic museum there, and the great cathedrals.

In the cathedrals with their rich and costly icons, she gave me the tired old standard pitch about how silly, wasteful, and worse it was to spend the people's money on this fancy stuff.

When we left there and got on the subway, she proudly showed me the marble subway or Metro station with its mosaic pictures over the long row of arched openings to the cars—and asked me what I thought of it. These all showed Communist themes.

"I think you people still like icons," I said.

It was not a popular remark.

[From the Peoria Journal Star, Aug. 18, 1959]

SOVIETS CAN TEACH LESSONS IN WASTE

(By Charles L. Dancey)

Moscow.—My harassed Moscow guide took me to the big Soviet trade exhibit where thousands of people poured through to see the wonders that are someday to be theirs in the workers paradise.

My disposition was still not as good as it had been through most of the trip, and when the guide pointed out to me the wonders of synthetic materials in one exhibit—the new wash and wear—I agreed with her that this was wonderful stuff and remarked that both the slacks and shirt I was wearing were made of such material.

It didn't help that this exhibition was in the outskirts of the city and our car didn't arrive for 4 hours from when I was scheduled. We called the Intourist office and all they could do was insist that it had left on time. After a few hours they might have suspected something had gone wrong, but there is no two-way shortwave radio system in the Intourist or any other taxi setup in Moscow.

We took the Metro finally.

Again, another fantastically ornate station. Now the Metro is a remarkable achievement with tremendous 150-foot-long escalators sliding underground at a steep angle and great speed. The trains run like clockwork with great efficiency. However, the stations are ornate to the point of the ridiculous.

Like their river canals, like the Black Sea resorts, like the sanitariums, they put out a great deal of material, time, and skill into making monuments out of these useful projects. The piles of statuary, and other ornate decorations lauding the regime for these great accomplishments are especially irksome when one sees that there is so much that needs to be done for these people—and ought to come before fancy decorations.

So, when my guide asked if we have anything like this in the United States I said that if any government built anything this ornate there would be a scandal and they'd be drummed out of office for wasting the people's money on show.

(I forgot about the new Senate Office Building.)

I got a surprise. Instead of being insulted again, she replied: "Khrushchev is ending the waste in building. There will be no more 'sky-buildings' for example. Too much is wasted on fancy construction."

(Moscow University, and the Ukraine hotel where I stayed, are two of Moscow's six sky-buildings.)

This last evening in Russia, I took a stroll in the hotel area, and a young man with horn-rimmed glasses fell in step.

"You're an American," he said.

"Yes."

"I can always tell. European coats have no split in the bottom at all. The English have two. The American ones split in the middle."

Then he tried to persuade me to sell him American dollars offering me 20 rubles for the dollar.

When I turned this down, he asked if I had any extra clothes to sell.

When I said "No," he asked if I had any books in English to sell.

Then, he suggested again the dollar-ruble deal saying I could buy fine old silver with the rubles and sell it at good prices in the United States.

I asked him what use he could make of dollars in this country.

He said: "I've a friend who's leaving the country."

Me, too.

Red China Unfit for Membership in United Nations

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 20, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Star of August 19, 1959. It is the best brief statement I have seen of the reasons why Red China must be kept out of the United Nations because of its own lawless behavior:

UNFIT FOR MEMBERSHIP

By a vote of 368 to 2, the House has once again placed itself on record as opposed to Red China's admission to the United Nations. In and of itself, this carries no legal weight internationally, but it does reaffirm with great and significant vigor a sentiment which Congress as a whole has repeatedly expressed in the past. And it is a sentiment shared by both the executive branch of our Government and the overwhelming majority of the American people—a fact that cannot be shrugged off elsewhere in the world, on either side of the Iron Curtain.

The reasons for the House action are not hard to find. They are as obvious as they are compelling. To begin with, as our State Department has made clear on numerous occasions, the Communist regime in Peiping has yet to meet the primary qualifications for U.N. membership—namely, that the applicant must be peace loving. The Chinese Reds simply do not measure up on that

basis. On the contrary—wholly apart from their unpurged crime of aggression in Korea and their continuing threatfulness in the Formosa area—their recent brutalities in Tibet and their current pressures on Laos leave no room for doubt that they are still bent upon becoming masters of all Asia through a policy of subversion and naked armed force.

In such circumstances, the United States cannot possibly acquiesce in having Communist China become a U.N. member unless or until the Peiping Government changes markedly for the better—a prospect that seems remote in the extreme right now. Accordingly, when the General Assembly convenes in New York next month, and when the issue is revived again by proadmission countries like India, our American representatives will have to do everything they can—including possibly even a resort to the veto—to prevent favorable action. This is the more true because such action, almost as much as if America were to extend diplomatic recognition to the Chinese Reds, would have a profoundly demoralizing psychological effect throughout Asia.

This is indisputable. For any such recognition would so enhance Peiping's prestige that the Chiang Nationalist Government on Formosa would suffer a mortal blow, and nearly all the free nations on Red China's perimeter would experience a terrible new sense of abandonment and desperation. More than that, the so-called oversea Chinese in the affected area would feel impelled to shift their allegiance to Mao. These are basic realities. They explain why it is imperative for our Government to act in keeping with the resolution just enacted by the House.

Jefferson Through the Fog

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 20, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter of transmittal from Mr. Julian P. Boyd of Princeton University, enclosing a copy of the address delivered by Mr. James Russell Wiggins, publisher of the Washington Post, at Monticello on April 13, 1959, on the anniversary of Thomas Jefferson's birth. Mr. Boyd is a member of the Board of Directors of the Thomas Jefferson Memorial Foundation.

THE PAPERS OF THOMAS JEFFERSON,
PRINCETON UNIVERSITY LIBRARY,
Princeton, N.J., August 13, 1959.

The Honorable DANIEL J. FLOOD,
U.S. House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: I am most grateful for your kindness in making an inquiry of Colonel Poutre at Tobyhanna Signal Depot, and for letting me know.

The enclosed address by Mr. James Russell Wiggins of the Washington Post, delivered at Monticello last April on the anniversary of Thomas Jefferson's birth, may be of interest to you.

With much gratitude for your thoughtfulness, and with all good wishes, I am,

Sincerely,

JULIAN P. BOYD.

JEFFERSON THROUGH THE FOG

(An address delivered at Monticello, April 13, 1959, by James Russell Wiggins)

Of this spot, Richard Rush in 1816, in the letter only recently come into the possession of the Historical Society of Pennsylvania, wrote. "The fog * * * never rises to the level of his mountain."

It is a pleasure and a delight to stand here on a day, and in a time, when the fog upon lower elevations is especially impenetrable. This eminence in such times is seen through the mists that shroud its approaches with new advantage. No one could hope to bring to an audience that would gather here on this day anything new about Thomas Jefferson or any hitherto undiscovered thing that he said.

Our annual reexamination of Jefferson will divulge to us nothing changed or new in him. Still, each day in our round of years brings us to a new perspective from which to look toward that elevated place in our history which he continues to occupy; just as when we traverse the plain below this mountain, and see from time to time, through valley mists and spring foliage, a hitherto unperceived delight in the architecture of Monticello.

This is what brings us back, again and again, to read the same Jeffersonian documents. So frequently, the weeks and months and years since last we read them give them a new application and meaning, so at variance with earlier understanding and appreciation that, although well aware of having previously perused the same texts, we read again as in a fresh discovery.

It may be said of Jefferson as Sir John Myres said of Homer; "it is we, and our tools and methods that change, not the genius of Homer."

When we repair to the genius of Jefferson for advice and counsel in the causes of our day, we need to be warned that a man out of his generation may be as misleading as a paragraph out of context. And those who quote such scriptures to their own purposes run the double risk of lifting wisdom out of its time and out of its place.

So much depends upon time and place and context that the application of Jeffersonian truths to contemporary problems leaves the individual latitude enough so that each of us, in a sense, can have his own Jefferson. I apply to the fogs of our day, I warn you, my own Jefferson; and if you do not like him, I cheerfully give you leave to summon to your own examination of contemporary problems, your own Jefferson.

In the State of Virginia, on April 13, 1959, it would be to deny the universality of Jefferson, if one did not repair to what he said and did for illumination upon the issue that has produced, in the last few years, more agitation than any other. That issue, however it might distress him, in a curious way would gratify him. He surely would not be dismayed to discover that Virginians are spending a great deal of their time in arguments about education. They could argue about things of less consequence. It is some consolation that they think it important enough to argue about, and I believe Jefferson would be wryly pleased about that.

The common impulse of so many Virginians, of all shades of belief, to preserve the educational institutions of this State, in spite of all hazard, surely must have arisen in part from the foundations that Thomas Jefferson laid. The Virginians who labored so long and so hard to salvage the educational system struggled in a cause that Jefferson commenced in 1776. Neither Virginia, nor any other State, has yet caught up with the ideas that Jefferson put into his "Bill for the More General Diffusion of Knowledge." As everyone knows, he thought this the most important of all the revisal bills and put upon it a higher estimate than he placed upon his bill for religious freedom.

In the difficult months through which Virginia has just passed, many of her citizens must have repaired to the Jefferson papers to read the admonition he voiced to his friend George Wythe in 1786, in a letter in which he said:

"Preach, my dear sir, a crusade against ignorance; establish and improve the law for educating the common people. Let our countrymen know that the people alone can protect us against these evils and that the tax which will be paid for this purpose is not more than the thousandth part of what will be paid to kings, priests, and nobles who will rise up among us if we leave the people in ignorance." [1]

In his emphasis on education, he never wavered. In his second administration as President, he recommended that the accumulating Federal surplus be spent for a system of education (even though he had some doubts on constitutional grounds). We are still trying to catch up with him, in this area. Recent events in Virginia and the Nation, indicate, however, that his beliefs have widely pervaded the thinking of our own generation and his admonitions and injunctions have not been wasted.

Partisans in contemporary political disputes always mine the papers of Thomas Jefferson at their own peril because his mind was not fixed in its outlook or inflexible in its commitment, but open to the persuasion of discovery, invention, imagination, information, and fresh argument.

At first, he thought America's role in the world should be that of a primary producer, and its polity that of a rural society of independent husbandmen, free of the complications of urban masses. His hostility toward manufactures subsequently was overcome and in the years preceding the War of 1812 he took delight in the country's industrial growth. Antipathy toward Great Britain was a Jeffersonian constant from revolutionary days until long after he left the White House; but when the proposals of Canning were laid before Monroe, he became an advocate of the Monroe Doctrine. Once he rejoiced in the country's isolation from the broils of Europe, but he foresaw a future time when this policy might change, and he did not hesitate in the midst of his philosophical infatuation with isolation, to advocate an 18th century sort of NATO to cope with the pirates of north Africa.

His views on racial problems greatly changed, over the years. He incorporated into his revisal of the laws of Virginia the most inhumane features of the colonial slave code. He did so because he thought there were real distinctions which nature has made between the races. While making allowancs for differences of condition and education, he felt the Negroes were an inferior race. He was for the gradual extinction of slavery, but wished to settle the freed slaves abroad because he pessimistically thought that 10,000 recollections by blacks of injuries they have sustained would make it impossible for the races to live together under the same government. The editors of "The Papers of Thomas Jefferson" note that though Thomas Jefferson endeavored to view this problem with the reasoned humanity that characterized his liberal thought in almost all other realms, he was, on this issue, inflexible in opinion and conservative in legislation.

Many of his contemporaries found him conservative in these matters. David Ramsay, on May 3, 1786, wrote him:

"I admire your generous indignation at slavery; but think you have depressed the

[1] Papers of Thomas Jefferson, vol. 10, p. 245.

Negroes too low. I believe all mankind to be originally the same and only diversified by accidental circumstances."[2]

As early as 1785, evidences of a slightly changing view began to appear. In a letter of Chastellux, written on June 7, 1785, he declares:

"I believe the Indian then to be in body and mind equal to the white man. I have supposed the black man, in his present state, might not be so. But it would be hazardous to affirm that, equally cultivated for a few generations, he would not become so."[3]

By 1788, he was making a very remarkable proposal to Edward Bancroft. Bancroft had written Jefferson to confirm a conversation about some reportedly unsuccessful experiments in manumission in Virginia. In his reply, written January 26, 1788, Jefferson said:

"Notwithstanding the discouraging result of these experiments, I am decided on my final return to America to try this one. I shall endeavor to import as many Germans as I have grown slaves. I will settle them and my slaves, on farms of 50 acres each, intermingled, and place all on the footing of the Metayers of Europe. Their children shall be brought up, as others are, in habits of property and foresight and I have no doubt but that they will be good citizens."

Some of his letters indicate his delight at the discovery of evidence that his earlier apprehensions as to the innate racial inferiority of the Negro were mistaken. To the Marquis de Condorcet, he wrote on August 30, 1791:

"I am happy to be able to inform you that we have now in the United States a Negro, the son of a black man born in Africa, and a black woman born in the United States, who is a very respectable mathematician. I procured him to be employed under one of our chief directors in laying out the new Federal city on the Patowmac, and in the intervals of his leisure, while on that work, he made an almanac for the next year, which he sent me in his own handwriting and which I enclose to you. I have seen very elegant solutions of geometrical problems by him. Add to this that he is a very worthy and respectable member of society. He is a free man. I shall be delighted to see these instances of moral eminence so multiplied as to prove that the want of talents observed in them is merely the effect of their degraded condition, and not proceeding from any difference in the structure of the parts on which intellect depends."

He traveled quite a distance from 1776 to 1791 and his intellectual journey was accomplished in a society that changed its deeply held views in these fields even more slowly than such views are changed in our own time. I own to the relatively optimistic view that, in spite of all the trying difficulties of which we know, these problems will be solved. I am more worried about another race—the race to which all of us belong—the human race.

Does it stand upon the edge of extinction? Has its scientific and mechanical ingenuity outrun its political invention so far that its destruction awaits nothing but a mishap or a maniac? Have we stumbled upon forces so far beyond control that a mere miscalculation might alter our planetary environment in such a way as to make it unfit for human habitation? These are questions that must plague any thoughtful and reflective citizen. And the more he is plagued by them, the more he must wish that we could have Jefferson at hand in the 20th instead of, or as well as in the 18th century.

We have often comforted ourselves by the reflection that Providence has seemed to produce for this country, in each of its crises, men fitted by nature and experience to deal with each of them.

The right man has appeared at the right place in the right time, generation after generation. But when we look at the combination of difficulties that now confront us, it must be borne in upon us that what we really need is Jefferson. Of all the men who occupied the White House, he was the foremost in his knowledge of science. Of all the men who led the Nation in a crisis, he was certainly among the first in his diplomatic experience and facility. Of all our national leaders, surely he was unrivaled in his ability to articulate the political aspirations of free people. What we have now is a crisis compounded of dangerous international political rivalry, diplomatic difficulty, and scientific challenge.

Now that all the living Democrats—or nearly all of them—have been nominated for the Presidency—I trust it will not be offensive if we proceed to some no longer living. But, of course, we cannot do that. We cannot trade Thomas Jefferson's 18th century political career for a new one in the 20th century. And we cannot have him in both centuries. We cannot nominate him to lead us in a time, the perils of which seem curiously devised to call forth precisely those gifts of leadership in which he excelled.

Were he available, I think we could cinch his nomination—and election—with a single letter—that which he wrote on June 18, 1799, to William Munford. In it speaks the scientist, the sociologist, the politician, and the patriot—in a combination the like of which I cannot discover in the current political lists. He wrote:

"I have to acknowledge the receipt of your favor of May 14, in which you mention that you have finished the 6 first books of Euclid, plane trigonometry, surveying, and algebra, and ask whether I think a further pursuit of that branch of science would be useful to you. There are some propositions in the latter books of Euclid, and some of Archimedes, which are useful, and I have no doubt you have been made acquainted with them. Trigonometry, so far as this, is most valuable to every man, there is scarcely a day in which he will not resort to it for some of the purposes of common life. The science of calculation also is indispensable as far as the extraction of the square and cube roots; algebra as far as the quadratic equation and the use of logarithms are often of value in ordinary cases. * * * There are other branches of science, however, worth the attention of every man: astronomy, botany, chemistry, natural philosophy, natural history, anatomy. Not indeed to be proficient in them; but to possess their general principles and outlines, so as that we may be able to amuse and inform ourselves further in any of them as we proceed through life and have occasion for them. * * * I am among those who think well of the human character generally. I consider man as formed for society, and endowed by nature with those dispositions which fit him for society. I believe * * * that his mind is perfectible to a degree of which we cannot as yet form any conception. It is impossible for a man who takes a survey of what is already known, not to see what an immensity in every branch of science yet remains to be discovered, and that, too, of articles to which your faculties seem adequate. * * * While the art of printing is left to us, science can never be retrograde; what is once acquired of real knowledge can never be lost. To preserve the freedom of the human mind, then, and freedom of the press, every spirit should be ready to devote itself to martyrdom; for as long as we may think as we will, and speak as we think, the condition of man will proceed in improvement."[4]

When we find utterance such as this commonplace among the public men of our 20th century, we can have more confidence in our ability to surmount our problems. Perhaps it is true that not since the 18th century has there been a time when a single man could hope to get a glimpse of the sum total of human knowledge, and acquire, as did Jefferson and Franklin, a speaking acquaintance with all that was best in art, literature, science, and philosophy. The ideal of the complete man of the 20th century indeed may be unattainable. I sometimes think I would settle for the complete man of the 18th century. I am not sure that he would not tower like a giant upon the public stage.

Are our public men diminished by the awful dimensions of the problems of the nuclear age so that they seem less than they are against the vastness of the challenges that confront them? Perhaps.

Still, it is not possible to prowl the papers of Jefferson and his colleagues without sensations of disquiet. One must make allowances for the greater distractions of modern life—but can you avoid wondering if Americans today think as hard, work as hard and worry as much on public problems as did the Americans of the 18th century.

There are plenty of public officials today who are wearing themselves out in the country's business, but I am not talking only of the transactions of public office during intervals of public employment. To Thomas Jefferson and literally hundreds of his colleagues, life, from beginning to end, was a process of learning and studying, of thinking, and reflecting on the affairs of society. From earliest youth onward, an astonishing proportion of waking time was spent in the contemplation of the country's welfare. The consideration of public affairs occupied hours of rest, recreation, and leisure. Conversation centered upon the business of the State and the Nation, wherever citizens were drawn together.

Not the least of the things that made Thomas Jefferson's contribution so great was the sheer habit of industry—from earliest youth until declining age. Native wit, genius, and perception he owed to fate—but the discipline which made his waking hours productive for himself and for society was his own.

These habits continued into his declining years and a letter he wrote in 1810 discloses how he identified even his "repose" with a level of usefulness few men could maintain now in the prime of life. I would like to quote a little from this letter:

"I am retired to Monticello, where, in the bosom of my family, and surrounded by my books, I enjoy a repose to which I have been long a stranger. My mornings are devoted to correspondence. From breakfast to dinner, I am in my shops, my garden, or on horseback among my farms; from dinner to dark, I give to society and recreation with my neighbors and friends; and from candle light to early bedtime I read. My health is perfect; and my strength considerably reinforced by the activity of the course I pursue; perhaps it is as great as usually falls to the lot of near 67 years of age. I talk of ploughs and harrows, of seeding and harvesting with my neighbors, and of politics too, if they choose, with as little reserve as the rest of my fellow citizens, and feel, at length, the blessing of being free to say and do what I please, without being responsible for it to any mortal. A part of my occupa-

[2] Papers of Thomas Jefferson, vol. 9, p. 440.
[3] Papers of Thomas Jefferson, vol. 8, p. 186.
[4] Original in Teachers College Library, Columbia University.

tion, and by no means the least pleasing, is the direction of the studies of such young men as ask it. They place themselves in the neighboring village, and have the use of my library and counsel, and make a part of my society. In advising the course of their reading, I endeavor to keep their attention fixed on the main objects of all science, the freedom and happiness of men. So that coming to bear a share in the councils and government of their country, they will keep ever in view the sole objects of all legitimate government."

Well, we cannot nominate either Jefferson or any of his colleagues for 20th century roles. The best we can do is to repair to their accumulated wisdom, and there discover if we can the secrets of their greatness. What we cannot nominate, we can imitate. Thanks to the endeavors of historians who are now at work upon the orderly presentation of the papers of our 18th century intellectual and political giants, we can put before us a fairer and a clearer model of Jefferson and his contemporaries.

Thanks to the Thomas Jefferson Memorial Foundation and the University of Virginia, young men, now as in 1810, in the words of Jefferson "place themselves in the neighboring village" of Charlottesville to profit by his instruction. The Thomas Jefferson Memorial Professorship, now held by Dumas Malone, is giving to several Thomas Jefferson fellows, our generation's closest possible approximation of the 1810 opportunity to share in Jefferson's counsel and to become a part of his society.

May they keep their attention fixed, as did the young men who studied with Jefferson himself, upon the "main objects of all science, the freedom and happiness of man."

How appropriate it is for Monticello to sustain a teacher and to bring young students of history and politics from all parts of the country to sit under him. This is the kind of memorial Jefferson himself would have most esteemed. It is the kind of memorial that is especially fitting for a man who among all his distinctions was first of all a great teacher.

It is through our historians and teachers that we can avail ourselves of the 18th century's Thomas Jefferson in this our own 20th century.

We cannot place him at the conference tables where the fate of mankind upon this planet may be at stake; but we can place his philosophy there.

The power of that philosophy to influence the hearts and minds of men is undiminished by either the passage of time or the progress of science and may yet make a contribution to our survival more profound than all the material resources that the inexhaustible wealth of a continent can amass.

Against Seating of Communist China in the U.N.

SPEECH
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 17, 1959

Mr. JUDD. Mr. Speaker, the only reason I take this time is because I think there ought to be in the RECORD a more accurate statement of what the position of the United States on Red China is, and why.

To begin with, it is the same under this administration as it was under the previous administration. When the Communist attacks on Quemoy began a year ago, the former President of the United States, Mr. Truman, was among the first to identify himself with the policy of the present President on this issue.

Those favoring membership for Communist China in the United Nations generally give about three major reasons. Two of them have been mentioned today. One is the realism argument. Red China is there, it exists, it is a fact; therefore we should admit it to the United Nations to represent the Chinese people in that organization. It is said that not to do so is unrealistic; we are hiding our heads in the sand; or, as the gentleman from Vermont has put it, we are trying to deny its existence. Now nobody denies the existence of Communist China. We are very acutely aware of its existence and its danger. That is precisely why we do not want to build it up. We recognize it for what it is—a dedicated enemy of the United States. Every instinct of self-preservation—that is, realism—requires that we not do anything to make it stronger or give it greater stature, influence, power—as acceptance into the U.N. would certainly do.

Gangsters are a fact in some of our own cities. Should we, therefore, take them into the FBI, the agency charged with maintaining law and order against the gangsters? Does anyone ask, How can the FBI plan its operations against the gangsters unless it has the gangsters in it to help it plan and carry out its operations against the gangsters? Of all courses, that would be the most unrealistic.

No one in this Government denies the existence of Red China. On the contrary, we have been dealing with it officially for years. We have had 87 official negotiations with its representatives in the last 4 years, at Geneva and at Warsaw. We have negotiated with it on two main issues, and only two. First, we have been trying to get the Chinese Reds to release American prisoners of war captured in Korea, or to account for them. We have tried to get them to do that in accordance with their pledges at Panmunjon, for two reasons. One, we care about our boys. Two, we would like to find out if, just once, they will keep their word. We accepted a military draw in Korea, the first time in our history that we ever took less than a victory. Part of the reason was in order to get back thousands of American boys who were in their cruel hands. Everybody remembers Little Switch and later Big Switch. But they held back on some 900 men. Little by little word has come through that at least half of those are dead. But there are still 450 who we know were in their hands at one time, and alive. They spoke over the Communist radio from Peiping in their own voices, and their folks here heard them. They sent postal cards home at Christmastime in their own handwriting. When John Jones was released he said that Bob Smith was in the bunk next to his, but Smith could not be exchanged because his leg had just been cut off. And so on. We know they had them. Why will they not release them? Maybe they are all dead now. But their mothers will not believe that. Why will not the Reds account for them?

Mr. Speaker, we paid a great price in exchange for those promises. We have been trying to get them to keep the promises. If just once they would do that, then the question asked by the gentlewoman from Oregon about changing our policy would be more pertinent. There might be some sense then in going on to a next step.

The other issue on which we have been negotiating with them is the issue of conquest by the use of force. We have tried to get them to agree to refrain from using war as an instrument of national policy in the Taiwan Straits and in Asia, without prejudice to their positions on the various disputes there. They have adamantly refused to renounce force as the way to get what they want, and yet they demand membership in the United Nations.

That brings up the second argument, namely that the United Nations is a universal organization and therefore all existing governments should be members. Of course the United Nations was never intended to be a universal organization. That idea was debated and rejected at San Francisco. It was to be a union of peace-loving nations which would accept certain obligations. They are very plain; you can read them.

Article IV reads:

> Membership in the United Nations is open to all other peace-loving nations which accept the obligation contained in the present charter and, in the judgment of the Organization, are able and willing to carry out these obligations.

What is the first obligation?

> All members shall settle their international disputes by peaceful means.

And—

> All members shall refrain in their international relations from the threat of use of force against the territorial integrity or political independence of any state.

We have been trying to get them to agree to accept those obligations. They would then be eligible for membership.

The United States is not stubbornly, capriciously, arbitrarily keeping Communist China out of the United Nations as you are told by some. It keeps itself out. It simply will not qualify. Whenever Red China is willing to qualify by accepting the obligations of the charter and will demonstrate in a dependable way that it is able and willing to carry out its international obligations under the charter, it will unquestionably be admitted at the next session of the U.N. General Assembly.

You may argue if you wish that the United Nations ought to be a universal organization. Then you should work to amend the charter and make it that. But please don't nullify the charter and make a mockery of it. Do not drag the United Nations down to the level of the lawless, but call upon the lawless to bring their conduct up to the standards of the charter, if they want the benefits of membership.

Somebody will raise the objection, "If you are not going to let Red China in, why do you not kick out the Soviet Union?" That is a fair question; but it is a useless question. Because you cannot kick the Soviet Union out. She can veto her own expulsion. So there is no use arguing about what cannot be done.

When the Soviet Union was admitted at the formation of the U.N., she was pretending to be democratic and peace loving. She agreed to accept and carry out the obligations of the charter. Her breaches of faith came after her admission. It is bad enough to have been fooled by Russia then. What excuse is there for taking in Red China now, when we know before admission that she had no intention of keeping the obligations of the charter? At the negotiations last year at the time of the Quemoy aggression, she insisted on four goals: Quemoy, Matsu, Formosa, and expulsion of the United States from the Western Pacific.

No one can appease Red China by giving it Quemoy, or even Formosa. It is destruction of our position in the Western Pacific that it is after, in order then to take over the rest of Asia, easily.

Mr. Speaker, ours is not an arbitrary action of prejudice or stubbornness. It is, first of all, hardheaded concern for the security of the United States.

It is said that since the Chinese are the most numerous people on the globe, they are entitled and ought to have representation in the U.N. Certainly, but the Peiping government does not represent the Chinese people. It is not working for their well-being. It is making war on them and on everything they hold dear, on order to use them for its world objectives. When a person becomes a Communist, he ceases to be a Chinese patriot, or a French patriot, or an American patriot. He is a world revolutionist. A Communist government does not operate in terms of national interests; it operates in terms of an international conspiracy.

Whenever the Reds will let the Chinese people choose their own representatives in free elections, these representatives will promptly be admitted to the U.N.

Let me ask three questions.

First. Would admission of Communist China to the U.N. make that regime weaker or stronger? The answer is obvious. Why would every Red sympathizer in the world be moving heaven and earth all these years to get Red China admitted if such admission would weaken the Communists?

Second. Would admission decrease or increase Red China's prestige, power, and influence with its neighbors in Asia—Japan, the Philippines, southeast Asia, India—and the neutrals everywhere? The answer again is obvious.

Third. Would admission make Red China a lesser or a greater danger to ourselves and to genuine peace in the world? Once more the answer is obvious.

To build up an avowed enemy, as admission to the U.N. would undeniably do, could only be described as an act of folly. The future of our Nation and the cause of free men everywhere require that this not happen, unless or until the Communist government in China is willing to qualify for admission by meeting the requirements for admission, particularly the requirement of "refraining from the threat or use of force against the territorial integrity or political independence of any state."

It is not a blind and stubborn United States that is blocking admission; it is Red China's stubborn refusal to change her lawless international conduct.

Let me sum up the reasons why the United States resolutely opposes admission of Communist China to the United Nations. They are not founded on emotional prejudice. They arise from the true character of the Chinese Communist regime.

First. Such admission would destroy the United Nations as an effective instrument for justice and freedom and peace in the world. It would make a mockery of both the letter and spirit of the charter.

Almost all Americans want to see the United Nations succeed as an instrument to insure justice, and security, and peace in the world. To convert it from a union of peace-loving nations into a league with lawless gangsters could only destroy it.

Second. Admission of Communist China would weaken our own security and that of the free world. The Communist world conspiracy is openly dedicated to our destruction. We are at war with it in every sense except open hostilities. If we are not at war with it, then why are we straining ourselves so dangerously to help about 60 other countries in the world build up their strength and maintain their security against its pressures and threats? If we are at war with it, then how can anybody justify our taking an action that would greatly strengthen it?

Admission to the United Nations would give the Communist dictatorship in China legitimacy, respectability, enormously increased prestige, and influence, and power. It would lead to recognition by most, probably all, other governments and thus enable Peiping to turn every Chinese embassy and consulate in the world into a center of espionage, sabotage, and conspiracy against the governments and peoples still free and independent.

Third. Admission of Communist China to the United Nations would represent the bandonment to Communist enslavement of almost one-fourth of all the human beings on this planet. That we are not willing to do.

We cared enough about freedom of choice for Communist prisoners of war to delay the Korean truce for months, secrificing thousands of American lives in the process. How can we accept for 600 million Chinese people the enslavement we rejected for 15,000 Chinese prisoners of war in Korea?

Such a course would be not only morally wrong, it would be shortsighted and a foolish abandonment of the national character that has given us greatness and the terrible responsibility of world leadership.

Century 21 Exposition Waste of Taxpayers Money

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 14, 1959

Mr. WOLF. Mr. Speaker, yesterday Congress voted on a bill, H.R. 8374, which would authorize the expenditure of over $12.5 million for participation of the Federal Government in the Century 21 Exposition to be held in Seattle, Wash., beginning in 1961.

I feel that this is a waste of the taxpayers money. The project is not one which has particular merit and has little, if any, international significance.

I would have voted against this bill if a rollcall would have been taken on it. I am a bit dismayed that a rollcall was not taken on this bill which will cost the American taxpayers over $12.5 million for what amounts to little more than a State fair.

I believe that the Federal Government should participate in all activities which promote cultural and scientific understanding between nations of the world. This necessarily includes participation in activities such as international expositions, cultural and scientific exchanges.

However, I do not believe that the Federal Government should participate in programs, such as the exposition contemplated in this case, which are not, in fact, a part of the fiscal year budget of the Federal Government.

If the Department of Commerce was seriously interested in this project it would have made the request as part of its yearly budget. Indeed, it is very unusual that a department would send a bill down to the Congress asking for an authorization of money (in this case $12.5 million) without including that amount in its yearly budgetary request in view of the fact that the Bureau was aware of this item when planning the budget.

Certainly no one will argue that this is must legislation in the sense that school construction is must legislation, or housing development is must legislation, or road construction is must legislation, or economic foreign aid is must legislation, or urban renewal and slum clearance is must legislation.

Yet the Congress is placed in a position where it is supposed to support a project which is clearly not a necessity, and its national or international significance is dubious on its face. Under the terms of this authorization, $7.5 million would be used directly for the construction and supplying of scientific exhibitions whereas $5 million would be used for building an exposition building.

I have been informed that public buildings already exist which could be used for such scientific exposition on the proposed grounds. Hence, I must question the need for building another such building. Furthermore, upon comple-

tion of this exposition in 1962, it is unclear as to what the status of that building would be. Under the present arrangements it may well be necessary for the Federal Government to buy the land from the city of Seattle if it is to protect its $5 million investment in the building. If proper safeguards are not taken, it can be safely predicted that the building will be sold at a great loss by the Federal Government at the close of the exposition.

Therefore, I submit that an expenditure of money such as is contemplated in this bill is a questionable use of the taxpayer's money when we are trying so hard to balance the budget. There is no need to build a $5 million building for this exposition; and any $7.5 million administration request for authorization of a scientific exhibition such as the one contemplated here should appear in the President's budget.

Supposedly Smart and Hardheaded American Businessmen Continue To Be the Easiest Pushovers for the Communists

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 20, 1959

Mr. JUDD. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following disturbing article by Edgar Ansel Mowrer:

ON WORLD AFFAIRS—COMMUNIST, AMERICAN BUSINESS "DEAL" SEEN

(By Edgar Ansel Mowrer)

If as an American citizen you have been perplexed by the cordial, even enthusiastic welcome shown to Bolsheviks Mikoyan and Kozlov by part of the American business community and are sadly wondering just why the President of a business administration in Washington should be turning out the red carpet for a sworn enemy of the United States, I call your attention to a remarkable document which has just come to my desk.

It is a market letter dated August 4 by Shields and Co. of the New York Stock Exchange, penned by one Walter K. Gutman. This presumably routine letter reveals, it seems to me, not only what is behind the perverse pro-Soviet attitude of the Canadian-American tycoon, Cyrus Eaton, but the kind of thinking that is inspiring the relaxed attitude toward the Soviet danger by the businessmen who horsed about with Mikoyan and Kozlov—and will, if given a chance, do the same with the bloody handed Khrushchev.

Here are excerpts from Mr. Gutman's analysis of the situation:

"Vice President NIXON's trip revealed that East and West don't want to fight. Just as the Communist people have revealed to us their true feelings and these feelings seem to have a depth which cannot be ignored by their leaders, so NIXON has revealed to them our true feelings which have greater depth than we have been aware of.

"NONEMOTIONAL

"What NIXON revealed was that the new leaders of American politics do not have the same emotional dislike of communism that the old leaders had. The new leaders don't approve of communism and will resist its spread insofar as it threatens us, but they don't have the emotional feeling of the old generation that it must be exorcised.

"To the new leaders communism is just a practical thing. The old leaders felt communism was unethical—they felt it was evil not just because it suppressed individual liberties—after all some of our best allies have demonstrated a remarkable ability in this respect—but because it challenged our teleology. Over the years just what this was has gotten lost.

"Both sides now agree, although they may not be entirely aware of it, that material success * * * cannot be a total solution. However material success * * * is a good thing. What has happened is that the competition between communism and capitalism has been reduced to a sporting event. It is a tremendous sporting event—greater even than the America's cup—and we might get mad enough to fight—but after NIXON's visit it does not look that way.

"If this analysis of what NIXON's trip revealed is correct * * * there will be a growing willingness to acknowledge Russia's preeminent interest in certain geographic areas. This will depend upon Russia's tact in asserting these interests. However, if Russia can develop the same sort of tact which we have developed in Latin America, we will withdraw not only from Berlin but from the eastern Mediterranean.

"We are still strong enough to force Russia to stop where she is if she plans to take over the Near East militantly but we don't have the will to contest the issue if it is done in a sporting manner and if our purely commercial interests are not jeopardized. It is obvious that if such a spirit of practicality develops, armament expenditures will be cut back."

This, I repeat, is the prediction of things to come made by a Wall Street forecaster. Obviously, he has no feeling of the enormity of what he describes as a spirit of practicality. For he does not appear to grasp that such a division of the world is what the U.S.S.R. has planned since World War II; that it would gradually cost us all our Allies beginning with Greece and Turkey and force us back upon Fortress America, that the present Communist bloc plus West Europe is far stronger than the Western Hemisphere can become in any foreseeable period, and that after we had retreated "in a sporting manner," Moscow's monstrous empire could compel us to fight or submit to Communist tyranny.

Nor is it (yet) true that our leaders foresee any such retreat. Certainly the Pentagon does not, the State Department does not, and I cannot believe that the President does.

What seems more likely is that a portion of the American business community—the same that applauded Mikoyan and Kozlov and will be charming to Khrushchev—hopes for such a development and that by describing their hope as the wave of the future, Mr. Gutman is helping make it come true.

KEY PHRASE

I fear the key to this aspiration lies in the phrase "if our purely commercial interests are not jeopardized." Well, that is the spirit in which fat merchants brought Carthage to ruin. That is the spirit which Lenin tipped off the comrades they could always take advantage of. That is the spirit which the wily Khrushchev hopes further to promote during his visit.

It is the spirit with which some American businessmen welcomed the advent of Adolf Hitler in 1933—"good for Germany and a stabilizing influence on Europe."

It is the spirit which led short-sighted British business circles to blunder into World War II. It has regularly led to disaster, yet here it bobs up again in the United States.

One can therefore be thankful to Mr. Gutman for bringing it into the open where the still sound part of American business may recognize it as defeatism and move to counter it in time.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY
